An Analysis of ʿAbd al-Bāsiṭ al-Ḥanafī al-Malaṭī's Description of the Year 848: On the Process of Writing History in the Late Fifteenth Century

Introduction

In the field of Islamic historical studies, the Mamluk era offers a relatively vast amount of material. In recent times, many historical sources and some revised editions of these sources have been published. It is thus becoming easier to study the Mamluk era from a variety of perspectives. However, other historical materials, such as *waqf* documents, require further attention. In addition, systematic analysis of a broad range of sources requires close attention to how the texts were produced.

The focus of this article is the process by which ʿAbd al-Bāsiṭ al-Ḥanafī (844–920/1440–1514) wrote his historical work *Al-Rawḍ al-Bāsim fī Ḥawādith al-ʿUmr wa-al-Tarājim* (hereafter referred to as al-Rawḍ). The manuscript deals with the period between the mid and late ninth century/the mid fifteenth century. I look specifically at the descriptions of the year 848 (20 April 1444–8 April 1445). In order to show how ʿAbd al-Bāsiṭ used other historical sources in writing his book, his descriptions in al-Rawḍ will be compared with notes he made in the margins of another manuscript. Then, in order to understand how his book was received, I will examine how the information in his book was transmitted to the next generation.

The Author of al-Rawḍ and the Method for Analyzing his Writing Process

Ghars al-Dīn Khalīl ibn Shāhīn al-Ẓāhirī (813–73/1410–68), father of ʿAbd al-Bāsiṭ al-Ḥanafī, wrote a well-known book titled *Zubdat Kashf al-Mamālik.* According to Ibn Iyās, Khalīl had an exceptional career, considering he was one of the descendants of the mamluks *(awlād al-nās)*. He also obtained an *ijāzah* in hadith from Ibn Ḥajar.[1] His son, ʿAbd al-Bāsiṭ ibn Khalīl ibn Shāhīn, was born in 844 in Malaṭīyah, a town in Asia Minor, where his father Khalīl served as *nāʾib*. ʿAbd

---

[1]J. Gaulmie and T. Fahd, "Ibn Shāhīn," *The Encyclopaedia of Islam*, 2nd ed., 3:934. The life of Ghars al-Dīn Khalīl ibn Shāhīn al-Ẓāhirī was addressed in my article "My Father Khalīl ibn Shāhīn—Comparative Study of Descriptions by ʿAbd al-Bāsiṭ al-Ḥanafī" (in Japanese), *Seinan Asia Kenkyu* 47 (1997): 53–73, which is a comparative study of al-Rawḍ's description of 873, the year that Khalīl died. Ibn Iyās, *Badāʾiʿ al-Zuhūr wa-Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Wiesbaden, 1960–75), 3:25 (hereafter referred to as *Badāʾiʿ*).

al-Bāsiṭ accompanied his father to his various posts in such places as Tripoli, Damascus, and Cairo, and on his pilgrimages. At the age of 28, ʻAbd al-Bāsiṭ left for the Maghrib and al-Andalus to study medicine (866–71/1462–67). Later, he resided in Cairo and became acquainted with a number of intellectuals there. ʻAbd al-Bāsiṭ wrote several books on Hanafi law, medicine, and history. He died in 920/1514 in Cairo.[2]

As mentioned above, the main focus of this article is ʻAbd al-Bāsiṭ′s al-Rawḍ. The extant manuscript is preserved in the Vatican Library and is bound in two volumes (Vatican Arabo 728, 729) A filmed version of this manuscript is preserved in the Egyptian National Library (Dār al-Kutub MS 2403 tārīkh Taymūr). The manuscript in the Vatican Library was not given much attention when it was bound, with the result that the folios were not arranged according to their page numbers. However, the pages of the filmed version in the Egyptian National Library were arranged correctly.[3]

This two-volume manuscript contains information about events spanning the 30-year period from 844 to 874 (1440–69/70). However, there is a considerable gap in the chronology. The first volume contains only six years, from 844/1440 to 850/1446–47, and the second volume contains only nine years from 865/1460–1 to 874/1469–70. Thus, coverage of fourteen years (i.e., 850–64) is missing from the two volumes. Each year comprises two sections: a chronicle section and an obituary section. The description of only one year is complete in the first volume.[4]

(Beirut, 1987); ʻAbd al-Raḥmān Ḥamīdah, *Aʼlām al-Jughrāfīyīn al-ʻArab* (Damascus, 1416/1995; 1st ed., 1984). On the importance of al-Rawḍ as a historical source, see Carl F. Petry, *Twilight of Majesty: the Reigns of the Mamlūk Sultans al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī in Egypt* (Seattle, 1993), 8–9; Li Guo, ″Mamluk Historiographic Studies: the State of Art,″ *Mamlūk Studies Review* 1 (1977): 21; Muḥammad Kamāl al-Dīn ʻIzz al-Dīn, *ʻAbd al-Bāsiṭ al-Ḥanafī Muʼarrikhan* (Beirut, 1410/1990).

[3]MS 2403 tārīkh Taymūr is bound in four volumes. In this version Vatican Arabo 728 was arranged chronologically from fol. 1r to fol. 19v, and fol. 48r to fol. 66r (the end of Vatican Arabo 728), and then fols. 20r to 47v (there is a missing part between fol. 39v and fol. 40r), and re-paginated. In this article, the folio number is quoted from Vatican Arabo 728.

[4]Vatican Arabo 728 consists of a chronicle and a part of the biographies of 844, a part of a chronicle and biographies of 845, a part of a chronicle of 846, a chronicle and biographies of 848, a chronicle and part of the biographies of 849, and a chronicle and part of the biographies of 850.

The two-volume manuscript is unique, and assumed to have been written during the period between 887 and 890.[5]

‘Abd al-Bāsiṭ made notes in the margin of another manuscript, the ″Inbā’ al-Ghumr bi-Anbā’ al-‘Umr,″ Topkapı Sarayi Müzesi kütüphanesi MS Ahmet III 2941/2, the famous chronicle written by Ibn Ḥajar al-‘Asqalānī (hereafter referred to as Inbā’[T]). The notes in the margins of the first volume, MS Ahmet III 2941/1, are quoted in the annotations of the edition published in Damascus, but they have not been studied in detail.[6] The catalog of manuscripts preserved in the Topkapı Library shows that this manuscript was written in 880/1475 and that it ends in the year 849.[7] In fact, the final folio (198r) of Inbā’(T) has more information added at the end. While two other editions—the Cairo edition and the Hyderabad edition—end in the chronicle section in Muḥarram of the year 850,[8] Inbā’(T) has three added lines that give an account of Monday, 12 Rabī‘ I 850, as well as some concluding sentences. Then, biographies of five people who died in that year are

---

However, Vatican Arabo 729 ends with the biographies of 874, and in this part at least one folio between a biography of Yashbak min Ḥaydar al-Ashrafī and a biography of the historian Yūsuf ibn Taghrībirdī is missing.

5‘Abd al-Bāsiṭ wrote about a person in fol. 48v of Vatican Arabo 728: ″I will write about the man who died in (8)87, the year I started writing this book;″ cf. al-Rawḍ, fols. 18v, 52r. In fol. 260r, the final folio of Vatican Arabo 729, there is the sentence ″I finished writing the second volume on Monday 18 Rabī‘ I 890,″ although ″the second volume″ is written in red and is unclear. After this sentence though, there is writing that indicates the year 895, but the meaning is uncertain. (Brunschvig, *Deux recits,* 10, does not mention this writing.)

6Ibn Ḥajar al-‘Asqalānī, *Inbā’ al-Ghumr bi-Anbā’ al-‘Umr,* ed. Muḥammad Aḥmad Duhmān, vol. 1 (Damascus, 1399/1979).

7F. E. Karatay, *Topkapı Sarayı Müzesi Kütüphanesi Arapça Yazmalar Kataloğu* (Istanbul, 1966), 3:391.

8Ibn Ḥajar al-‘Asqalānī, *Inbā’ al-Ghumr bi-Anbā’ al-‘Umr,* ed. Ḥasan Ḥabashī (Cairo, 1969–98), hereafter referred to as *Inbā’(C);* Ibn Ḥajar al-‘Asqalānī, *Inbā’ al-Ghumr bi-Anbā’ al-‘Umr fī al-Tārīkh* (Hyderabad, 1967–76; repr. Beirut, 1406/1986), hereafter referred to as *Inbā’(Ḥ).* The manuscripts that were the basis of these two editions are as follows: *Inbā’(Ḥ)* was edited by using the manuscript in al-Maktabah al-Sa‘īdīyah Library in Hyderabad as the main text, and comparing it with the manuscript in the Egyptian National Library and two manuscripts in the Bibliothèque nationale in Paris, although the numbers of these manuscripts are not quoted. *Inbā’(C)* was edited using al-Maktabah al-Ẓāhirīyah MS 231 tārīkh as the main text, comparing it with seven additional manuscripts: (1) Maktabat al-Azhar MS 710 tārīkh (2) MS Ahmet III 2942/1 (3) Bibliothèque nationale MS 1601 (4) al-Maktabah al-Sa‘īdīyah MS 94 tārīkh (5) a manuscript in Medina, MS 523 Madīnah (6) a manuscript in Ṣan‘ā’ of which a microfilm copy is in the Egyptian National Library (7) British Museum MS 1601. Manuscripts (3), (4), and (6) are thought to be used for both editions. The second volume of the manuscript (2), MS Ahmet III 2942/2, is not used. According to Dr. Ḥasan Ḥabashī, an editor of the Cairo edition, *Inbā’(C),* manuscript (4) includes notes by al-Biqā‘ī, while the editor of the Hyderabad edition, *Inbā’(Ḥ),* did not identify the author of these notes but noted the differences in the texts of the manuscripts in his footnotes.

given, followed by additional concluding remarks. At the very end, there is a sentence which states that this is the end of the second volume, with the date Tuesday, 6 Rabīʿ II 886. This is 34 years after the author, Ibn Ḥajar, passed away and one year before ʿAbd al-Bāsiṭ began to compose al-Rawḍ. A variety of notes are found in the margins of the manuscript Inbā'(T), some of which are signed ʿAbd al-Bāsiṭ al-Ḥanafī. Other notes are not signed and seem to have been written by different people. A careful comparison between these notes in the margins of Inbā'(T) and the text of al-Rawḍ provides a clear insight into ʿAbd al-Bāsiṭ's writing process. (The part on which this article is based is from fol. 192r to fol. 194v of al-Inbā'[T].)

The Purpose and Method of Writing al-Rawḍ

At the beginning of al-Rawḍ, ʿAbd al-Bāsiṭ wrote:

> I started writing this history with a description of the year 844, the year I was born. This is to accurately depict the chronicle sections *(al-ḥawādith al-mutajaddidāt)* and the obituary sections of people who died in the same year *(al-wafayāt)*. I decided to describe daily events, noteworthy happenings, and biographies *(tarājim)* of famous people in this era and obituaries *(wafayāt)* in detail. I sometimes deviate from the main topics, especially in biographies or appointments to offices or other accounts, and I tell life stories and careers of famous living people. I tried not to treat anything lightly but tried to describe their biographical information carefully in detail. I also made some notes *(taʿlīq)* with red ink in the margins *(hāmish)* which show the contents of biographies and obituaries in order for people who want to know the details to find corresponding accounts easily. I instructed scribes of this book not to forget to write these notes for easy searching of information.
>
> We hope that this history book will be a continuation *(dhayl)* to the great useful famous history books written before: the two great history books by Chief Qadi Badr al-Dīn al-ʿAynī, a history book by Shaykh al-Islām Ḥāfiẓ al-ʿAṣr Ibn Ḥajar al-ʿAsqalānī, a history book by al-Taqī al-Maqrīzī, and many other great history books written by many masters. Although I am hoping that this book will be a continuation to the aforementioned historical books, I think it is appropriate for me to cover the same several years that have already been covered in those books. In my book I added useful information to the narratives in these overlapping years. When this method was carried out and complete and this book came to fruition,

> I named this book ″Al-Rawḍ al-Bāsim fī Ḥawādith al-ʻUmr wa-al-Tarājim.″
>
> In this book I tried to include information which has been transmitted by reliable masters, events that I myself witnessed, and detailed accounts of transmitted information that are worthy of belief. God—praise to Him—please help me to accomplish my purpose. Almighty God, please lead me to use appropriate language, not to defame people, not to hold prejudiced views, and not to misunderstand matters. Please also help make me [by writing this book] entitle all the appropriate people with appropriate rights, bring prestige to appropriate people, and lead us away from vices committed by people who led shameful lives. These are the purposes of my writing this book. (al-Rawḍ, fols. 1v–2r)

In the statement above, ʻAbd al-Bāsiṭ named master historians whose examples he followed. His explanation of why he started his book in the year he was born and why his book should be a continuation *(dhayl)* to past history books is especially influenced by Ibn Ḥajar, who had started his book from the year 773, the year he was born.[9]

The method described in this preface can be found strictly observed throughout his work. ʻAbd al-Bāsiṭ quoted details of daily events from previous historians, whose names he mentions. When he did not mention his sources by name, he began his quotations with ″one man wrote,″ mostly specifying where they were from. As he wrote in the preface, some chronicle sections contain events that he witnessed himself, information that he heard from his acquaintances, and biographical information of people related to these events. Similar to other history books written in the same era, he tried to organize the chronicle by month, date, and day of the week.

Following the chronicle sections, the biographies of people who died in the year are recorded alphabetically according to their *ism,* which is written in red. In some cases, he added the titles of offices and various pieces of information about living sons and grandchildren of the individuals mentioned in these sections. Because he began his work from the year he was born, he had personal contacts with individuals who were contemporaries with, and had direct knowledge about, his subjects. One of the characteristics of his writing is, as explained in the

---

[9] *Inba'(C),* 1:3–5. See Caesar E. Farah, *The Dhayl in Medieval Arabic Historiography* (New Haven, 1967) on the category of *dhayl,* and Wadad al-Qadi, ″Biographical Dictionaries: Inner Structure and Cultural Significance,″ in *The Book in the Islamic World,* ed. G. N. Atiyeh (Albany, 1995), 93–122, on the changes in the content of biographical information in the field of biography studies.

preface, that in both the chronicle and the biography section, notes and personal names are indicated in red in the margins.

Another characteristic is that he added aspects of his own personal history to some narratives.[10] In a chronicle section, he described his journey to the Maghrib and al-Andalus among other events, which were also arranged by dates.

ANALYSIS OF THE DESCRIPTIONS OF THE YEAR 848

A reliable method by which to analyze the process of al-Rawḍ′s composition would be to compare descriptions in al-Rawḍ and those in Ibn Ḥajar′s history, especially before and after 850, with other historical sources written in the same era, such as al-Sakhāwī′s book. This article deals with the year 848 for two reasons: first, only the description of the year 848 has a complete chronicle section and obituary section for the whole year. Second, I hope to establish a model for ʻAbd al-Bāsiṭ′s process for treating events before 850. Many important events occurred in 848, which had significant historical consequences. In addition, Ibn Ḥajar, al-Sakhāwī, and ʻAbd al-Bāsiṭ himself all went through several important personal experiences in that year. The descriptions of the year 848 start at 20r and end at 31r in the manuscript of al-Rawḍ.[11]

I have compared the chronicle section of al-Rawḍ with the following sources: accounts in Ibn Ḥajar′s *Inbāʼ,* which ʻAbd al-Bāsiṭ hoped to continue (the two editions published in Hyderabad and Cairo, *Inbāʼ(Ḥ)* and *Inbāʼ(C),* and the Topkapı manuscript Inbāʼ[T]), and notes in the margins of Inbāʼ(T), most of which were signed by ʻAbd al-Bāsiṭ himself at the end; accounts in Ibn Taghrībirdī′s *Al-Nujūm* and *Ḥawādith;* accounts in al-ʻAynī′s *ʻIqd;* accounts in *Nuzhah* by Ibn Dāwūd al-Ṣayrafī; accounts in *Al-Tibr* by al-Sakhāwī; and accounts in *Badāʼiʻ* by Ibn Iyās.[12]

---

[10]Cf. Otfried Weintritt, ″Concepts of History as Reflected in Arabic Historiographical Writing in Ottoman Syria and Egypt (1517–1700),″ in *The Mamluks in Egyptian Politics and Society,* ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 188–204; *Interpreting the Self: Autobiography in the Arabic Literary Tradition,* ed. Dwight F. Reynolds (Berkeley, 2001), 80–82, 241.

[11]In the margin above the main text of 20r, there is a note reading, ″And al-Sirāj ibn al-Mulaqqan″ in handwriting different from that of the main text. This seems to be a catchword indicating that this part is followed by 19v. If we consider the contents of 19v, however, which are biographies for the year 844, 19v cannot follow 20r; cf. above, n. 3.

[12]Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963–72), hereafter referred to as *Al-Nujūm;* idem, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. Muḥammad Kamāl al-Dīn ʻIzz al-Dīn (Beirut, 1410/1990), hereafter referred to as *Ḥawādith;* idem, *Al-Dalīl al-Shāfī ʻalá al-Manhal al-Ṣāfī,* ed. Fahīm Muḥammad Shaltūt (Mecca, 1399/1979; repr. Cairo, 1998), hereafter referred to as *Al-Dalīl*; idem, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʻda al-Wāfī,* ed. Muḥammad Muḥammad Amīn (Cairo,1985–2002), hereafter referred to as *Al-Manhal;* al-ʻAynī,

The analysis of information gained from these sources indicates how ʻAbd al-Bāsiṭ crafted his own work. He first added notes in the margins of Inbā'(T) based on the accounts from *Al-Nujūm, Ḥawādith,* and al-ʻAynī's *ʻIqd,* and also added original information he obtained himself, before beginning to write al-Rawḍ. It seems that *Nuzhah* and *Al-Tibr* were being written around the same time. I will also analyze how the information by ʻAbd al-Bāsiṭ was transmitted to *Badā'iʻ*.

I will discuss several events that happened in the year 848 to illustrate characteristics of ʻAbd al-Bāsiṭ's writing process. This year started with an epidemic which had begun the previous year. In al-Rawḍ, ʻAbd al-Bāsiṭ wrote,

> The *dīwān al-mawārīth al-ḥashrīyah* reported 120 people died per day in Cairo, but it was said that 200 more people died and these numbers were not reported to the *dīwān.* I personally think that there were more deaths because many of the dead people were children and slaves and the *dīwān* did not know the conditions of most children or slaves. This means that 300 or 400 people died. The situation grew worse and after the pilgrims returned [from Mecca] at the end of this month, many children and slaves in the caravan died of the epidemic. 1000 people died in one day.[13]

From this account, we can tell that ʻAbd al-Bāsiṭ used a brief description from the *Inbā'* and referred to *Al-Nujūm, ʻIqd,* and other materials for additional information.[14]

At that time Ibn Ḥajar, author of *Inbā',* was Shafiʻi chief qadi. In his own book, he recounts that he became sick. The same description can be found also in al-Rawḍ and *Al-Tibr*. Ibn Ḥajar wrote about the epidemic in a book completed in that year.[15] According to many accounts, he started working actively again after he

recovered from the disease. In al-Rawḍ, there is another interesting account that Ibn Ḥajar attempted to obtain the release of ʻAbd al-Bāsiṭ′s father Khalīl when he was arrested and put in prison. However, neither *Inbā'* nor *Al-Tibr* record this incident, so it is not clear whether it is true or not. Al-Sakhāwī only wrote that Khalīl was dismissed from office and expelled on 4 Rabīʻ II. He did not mention the attempt to release him, despite the fact that in *Al-Tibr* he remarked on other personal affairs such as his marriage to a merchant′s daughter on 8 Rabīʻ II in the presence of his teacher, Ibn Ḥajar.[16]

Regarding the Mamluk expeditionary force sent to Rhodes, al-Rawḍ has more detailed descriptions than any other historical work. ʻAbd al-Bāsiṭ first wrote that *Inbā'* claims 22 Muḥarram as the date of departure of the expeditionary vessels, but that this was a misunderstanding *(wahm)* by his teacher Ibn Ḥajar, and the real month of departure was Rabīʻ I. Al-Sakhāwī referred to the date of the expedition based on *Inbā'* while al-Rawḍ is based on Ibn Taghrībirdī′s accounts.[17] The information about this expedition seems to have been gathered from the letters of Burhān al-Dīn al-Biqāʻī, a historian who joined the expeditionary force.[18] The descriptions of the battles are very lively compared to other histories.

This expedition was planned following the success of the expedition the previous year to the small island of Qashtīl (Castellorizzo) located east of Rhodes. After the expedition force arrived in Rhodes in August, 1444, they besieged the fortress in vain for 40 days. This failure led to the conclusion of a peace treaty the following year, ending Mamluk attempts to expand their military power to Rhodes.[19]

ʻAbd al-Bāsiṭ wrote vividly about the arrival in Cairo of a delegation from the Timurid ruler Shāh Rukh between Shaʻbān and Ramaḍān of 848. They had an audience with Sultan Jaqmaq in the citadel and presented him with the *kiswah.* When this was revealed, mamluks and citizens were roused to anger. The delegation was attacked and their lodging house was looted. Al-Sakhāwī wrote in *Al-Tibr* that a famous qadi accompanied this delegation and that he was present when Ibn Ḥajar gave this qadi an *ijāzah,* but in *Inbā'* Ibn Ḥajar did not mention this audience at all. In the margin of Inbā'(T), ʻAbd al-Bāsiṭ wrote of the approval the sultan

---

[16] *Al-Tibr,* 93.

[17] *Al-Tibr,* 87; *Al-Nujūm,* 15:360–63; *Ḥawādith,* 1:104.

[18] *Inbā'(Ḥ),* 9:223–24; *Inbā'(C),* 4:226–27. Dr. Ḥasan Ḥabashī quotes al-Biqāʻī′s private notes in the footnotes of his edition, which shows that he did not consider them part of the main text of *Inbā'*. However, since the editor of *Inbā'(Ḥ)* did not recognize that these notes were written by al-Biqāʻī, they are included in the main text.

[19] Ettore Rossi, ″The Hospitallers at Rhodes, 1421–1523,″ in *A History of the Crusades,* ed. H. W. Hazard (Madison, 1975), 3:319–20; Hassanein Rabie, ″Mamluk Campaigns Against Rhodes (1440–1444),″ in *The Islamic World,* ed. Clifford Edmund Bosworth et al. (Princeton, 1989), 281–86.

had given the previous year, which was quoted from *Al-Nujūm.* In al-Rawḍ, he also added that the sultan was enraged and chastised the viceregent (*walī al-salṭanah* [sic]). This information was gathered from a witness who happened to be there.[20]

In *Inbā'*, there is no description of the campaign to Varna (10 November 1444), in which Murad II defeated the Hungarian and Slavic army. The note in the margin of Inbā'(T) is quoted exactly from *Al-Nujūm.*[21] It was written in al-Rawḍ that a delegate of al-Malik Murād ibn 'Uthmān, who was the ruler *(mutamallik)* of Adrianople (Edirne), Bursa, and the land of Rum behind Adrianople and Bursa, arrived and was said to have defeated the *Banū al-Aṣfar* known as al-Anukrus (Hungarians). It was also written in al-Rawḍ that the sending of prisoners would be described later, but no description of their arrival in Dhū al-Ḥijjah is found.[22] Other historical sources, however, have descriptions of the arrival of many gifts and prisoners that the Ottomans sent to flaunt their power.[23] The Ottomans sent many gifts and prisoners to the Aqquyunlu and the Timurids. This campaign was considered the first move toward the conquest of Constantinople (857/1453).[24] This battle as well as the failure of the Rhodes expedition had a great impact on the future of the Mamluks.

There is no mention in *Inbā'* about the above-mentioned events, except a simple description of the expedition to Rhodes. 'Abd al-Bāsiṭ gathered new information related to these events, added it in the margin of Inbā'(T), and arranged it in al-Rawḍ. Toward the end of *Inbā'*, we find only short and simple descriptions.

Notes written in the margins of Inbā'(T) tell us that 'Abd al-Bāsiṭ gathered information from either *Al-Nujūm, Ḥawādith,* or *'Iqd*. In the descriptions of the appointments and dismissals of government officials, the content and order of sentences are exactly the same as in *Al-Nujūm*, but they are not attributed to *Al-Nujūm.* On the other hand, information quoted from *'Iqd* is followed by the phrase ″as al-'Aynī wrote.″[25] Quotations are found throughout the period from Ṣafar to the end of the year, but more quotations are made in the months after

---

[20]*Al-Tibr,* 96; *Al-Nujūm,* 15:364.

[21]*Al-Nujūm,* 15:366.

[22]The details of this campaign were described in the account of the conversion to Islam of the prisoners who were sent to Cairo in early Muḥarram of the next year, 849. (al-Rawḍ, fols. 31r–32v); Ibn Iyās also briefly mentioned the prisoners′ conversion in the same month. See *Badā'i',* 2:247.

[23]*Ḥawādith,* 1:112; *'Iqd,* 2:631–32; *Nuzhah,* 4:311–12; *Al-Tibr,* 98–99.

[24]Deno J. Geanakoplos, ″Byzantium and the Crusades, 1354–1453,″ in *A History of the Crusades,* ed. Hazard, 3:96–97; Colin Imber, *The Ottoman Empire 1300–1481* (Istanbul, 1990), 129–36.

[25]The same method of quotation is also used in al-Rawḍ. When raising objections, 'Abd al-Bāsiṭ sometimes mentions Ibn Taghrībirdī by name. Other times he simply writes, ″someone says the following.″

Ramaḍān.[26] Since the main text of fol. 193v of Inbā'(T) is about the events which happened in Dhū al-Ḥijjah, the text of fol. 193r is filled with information about events before Dhū al-Ḥijjah, actually leaving no blank space. And this may be the reason why accounts of happenings after Ramaḍān are dated only as ″the same day,″ ″the same month,″ or ″the same year.″ This careless dating method seems to be one of the causes for mistakes in al-Rawḍ when quoting information from the margins of Inbā'(T).

Comparing the notes in the margins of Inbā'(T) with al-Rawḍ, it is clear that ʻAbd al-Bāsiṭ tried to fix the exact dates of incidents to avoid mistakes by using phrases such as ″in the same month, that is, [the name of the month].″ Some accounts in the margins of Inbā'(T) cannot be found in the corresponding parts of al-Rawḍ, which means that these accounts might have been left out or moved to other places in al-Rawḍ. For example, the biographies of individuals found in the margins of the chronological section of Inbā'(T) were moved to the obituary sections of the years of their deaths.

The dates of all the events after Rajab 848 in al-Rawḍ, with only one exception, match exactly with other historical sources. The only exception is the campaign against the Bedouins of al-Buḥayrah. In the margin of Inbā'(T), ʻAbd al-Bāsiṭ wrote that this happened on 16 Dhū al-Ḥijjah, but in al-Rawḍ, the date given is the 26th. This is probably due to a slip of the pen while writing the Arabic numeral.

There are great differences between al-Rawḍ and other historical sources, however, in their descriptions of the three months of Rabīʻ II, Jumādá I, and Jumādá II. Ibn Taghrībirdī included no event for Jumādá I and Jumādá II, noting that nothing worth mentioning happened in these months.[27] In al-Rawḍ, on the other hand, ʻAbd al-Bāsiṭ described the details of his father Khalīl′s dismissal and arrest, a very important event in ʻAbd al-Bāsiṭ′s life.

As will be shown below, it seems that many accounts of events which occurred in Rabīʻ II were dated after Jumādá I. I now will analyze the descriptions of these dating differences.

First, the date of the Nile inundation is given as Tuesday, 9 Rabīʻ II in *Inbā'(Ḥ),* but both in *Inbā'(C)* and in the main text of Inbā'(T), it is written as Tuesday, 19. In al-Rawḍ, however, the date is 19 Jumādá II. ʻAbd al-Bāsiṭ always wrote notes in the margins when he had to add new information to the main text of Inbā'(T). However, he did not write a note for a change of the month for this entry. This means that the date of the Nile inundation in al-Rawḍ should have been Tuesday, 19 Rabīʻ II. It is likely, therefore, that probably he or his scribe

[26]The notes in Inbā'(T), fol. 193r are the quotations from *Al-Nujūm,* 15:363–67.

[27]*Ḥawādith,* 1:107.

made a mistake in writing and misdated it as 19 Jumādá II. *Badā'i'* also has this event misdated as Jumādá II, which indicates that this date in *Badā'i'* was taken from al-Rawḍ.[28]

Next, there are two accounts that were written by 'Abd al-Bāsiṭ himself in the margin of Inbā'(T). The first account is the appointment and dismissal of the *nā'ib* of the Damascus citadel. The second account is the appointment and dismissal of the *nā'ib* of Malaṭīyah, which is thought to have resulted in the incident related to his father Khalīl. Both the appointments and dismissals are dated 3 Rabī' II. But in al-Rawḍ he dated them in Jumādá I and Jumādá II.

The date of these two accounts can be analyzed by considering his style in other parts of his book. When 'Abd al-Bāsiṭ changed the date or contents of the notes in the margins of Inbā'(T), he wrote special notices in al-Rawḍ. The description of how the fleet departed for Rhodes from the port of Alexandria is one example. This account is not found in the main text of *Inbā'*. However, in the margin 'Abd al-Bāsiṭ included this account under 16 Rabī' I. In al-Rawḍ 'Abd al-Bāsiṭ dated this departure 17 Rabī' I and began his description by saying that ″on Saturday, 17, which Ibn Taghrībirdī wrote as 16.″[29] This shows clearly that 'Abd al-Bāsiṭ at first gathered information from Ibn Taghrībirdī′s description and corrected the date when he wrote al-Rawḍ.

The description of the appointment and dismissal of the *nā'ib* of the Damascus citadel can be analyzed in the same way. In al-Rawḍ he wrote ″On Monday, 2 Jumādá I, which a man miswrote as 3.″ The man he was referring to was Ibn Taghrībirdī. 'Abd al-Bāsiṭ, therefore, corrected this date from 3 to 2. Ibn Taghrībirdī included the description of this incident under the date 3 Rabī' II. He also wrote the description of the appointment and dismissal of the *nā'ib* of Malaṭīyah under the same day.[30] The next problem is the difference of the month between 'Abd al-Bāsiṭ′s account and the accounts of Ibn Taghrībirdī and other historians. That is, when did the incident happen, in Rabī' II or Jumādá I?

In his *Nayl,* 'Abd al-Bāsiṭ organized the events and obituaries according to month, and did not write dates and days of the week. Although the dating is sometimes obscure, the date for the appointment and dismissal of the *nā'ib* of Damascus is clearly written as Rabī' II.[31] The fact that he gave the exact date of this incident, therefore, means that he changed it from 3 Rabī' II to 2 Rabī' II.

---

[28] *Inbā' (Ḥ),* 9:222–23; *Inbā' (C),* 4:226; Inbā'(T), fol. 192v. It seems that it was forgotten, and *'asharah* (10) was written between the lines above 9; *Badā'i',* 2:242.

[29] *Al-Nujūm,* 15:360.

[30] Ibid., 363; *Ḥawādith,* 1:105; cf. *Al-Tibr,* 90.

[31] 'Abd al-Bāsiṭ, *Nayl al-Amal fī Dhayl al-Duwal,* ed. 'Umar 'Abd al-Salām Tadmūrī (Beirut and Sidon, 2002), 5:188 (hereafter referred to as *Nayl[T]*).

The descriptions of the appointment and dismissal of the *nā'ib* of Malaṭīyah and the *atābak* of Aleppo are found under 3 Rabīʻ II *(Nujūm, Ḥawādith, Nuzhah)* or 4 Rabīʻ II *(ʻIqd, Al-Tibr)*.[32] These accounts are not found in the main texts of Inbā'(T), *Inbā'(C)* or *Inbā'(Ḥ)*. In the margin of Inbā'(T), ʻAbd al-Bāsiṭ dated these two incidents as 3 Rabīʻ II. He also added about his father Khalīl, the former *atābak* of Aleppo, that ″my father was put in prison without any reason.″

But in al-Rawḍ he did not include these three accounts under Rabīʻ II, although he recorded them under 2 Jumādá II and added that Qānbāy al-Ḥamzāwī, a *nā'ib* of Aleppo, slandered Khalīl and made allegations to the sultan, resulting in his dismissal as *atābak* of Aleppo and his imprisonment in the jail of the citadel.[33] In his *Nayl* ʻAbd al-Bāsiṭ gives short accounts of the same appointment and dismissal, as well as his father′s arrest, under Jumādá II. *Badā'iʻ* includes the account of this appointment and dismissal only under Jumādá II, without mentioning the former *atābak* of Aleppo, Khalīl. Therefore, it can be presumed that Ibn Iyās, author of *Badā'iʻ,* got his information from al-Rawḍ.[34]

These analyses prove that the three accounts of appointment and dismissal of the *nā'ib* of the Damascus citadel, the *nā'ib* of Malaṭīyah, and the *atābak* of Aleppo in Rabīʻ II were divided into an account under Jumādá I and two accounts in Jumādá II in al-Rawḍ. ʻAbd al-Bāsiṭ added the incident involving his father under Jumādá II.

There are some indications of how ʻAbd al-Bāsiṭ gathered information for his book and how these incidents related to his own life. Ibn Ḥajar was dismissed from the chief judgeship in Rabīʻ II. Muḥibb al-Dīn Abū al-Barakāt al-Haythamī,[35] a Shafiʻi deputy judge *(nā'ib),* approved the matter. The sultan, however, was dubious about his decision, and summoned witnesses who were involved in the case. These witnesses were astonished that they were summoned, and changed their testimony. The sultan, therefore, decided to punish the deputy judge, and put him in prison. Because he was Ibn Ḥajar′s deputy judge, Ibn Ḥajar was ordered to stay in his house, which was tantamount to dismissal from office. Ibn Ḥajar was later given an opportunity to plead his case. After listening to his plea, the sultan made him promise that the number of deputy judges would not exceed ten, and reinstated him. This case was closed when the sultan also reinstated the deputy judge after a recommendation from Ibn Ḥajar. The detailed descriptions of this

---

[32]*Al-Nujūm,* 15:365; *Ḥawādith,* 1:106; *ʻIqd,* 623; *Nuzhah,* 4:302; *Al-Tibr,* 93.

[33]Regarding this incident, Dr. ʻUmar ʻAbd al-Salām Tadmūrī indicates a different reason in another source in *Nayl(T),* 1:14–15.

[34]Ibid., 5:190; *Bada'iʻ,* 2:242.

[35]Only *Nayl(T),* 5:187, and *Badā'iʻ,* 2:242, referred to this person as Shams al-Dīn Abū al-Barakāt al-Haythamī.

incident and the punishment of the deputy judge are not found in Ibn Ḥajar′s *Inbā' (Ḥ)* and *Inbā' (C)*.[36] In the margin of Inbā'(T), however, ʻAbd al-Bāsiṭ quoted sentences from ʻ*Iqd,* which mention al-ʻAynī′s name, and wrote about the penalty that the sultan imposed on the deputy judge, i.e., to remove his turban and walk to the citadel gate to be handed over to the chief of police *(wālī al-shurṭah)* and enter the felony prison.[37] ʻAbd al-Bāsiṭ continued with the quotation of a related account and then his own comment in the margin: as someone who served the sultan, ʻAbd al-Bāsiṭ added how much the sultan was enraged. ʻAbd al-Bāsiṭ ended with a comment that al-ʻAynī described this incident well. This is an example of his attitude toward his writing: he contacted witnesses and confirmed information. In al-Rawḍ, however, the information from the witness and his own comment on this incident are not included.

How the sultan issued and retracted his order is interesting. The order to keep Ibn Ḥajar confined to his house was conveyed by one of the sultan′s mamluks *(khāṣṣakīyat al-sulṭān)* of the executive secretary′s assistants *(al-dawādārīyah al-ṣighār)*. Then, Shams al-Dīn al-Kātib al-Rūmī, an attendant *(jalīs)* who also served the sultan, visited Ibn Ḥajar and told him how sorry the sultan felt about his dismissal, and ordered him to visit the sultan early the next morning.[38] This attendant, according to the notes in the margin of Inbā'(T), served Sultan al-Ẓāhir Ṭaṭar before his enthronement and also served Sultan Jaqmaq. ʻAbd al-Bāsiṭ wrote that he was not very knowledgeable but was a very good negotiator. He also wrote that the man was well acquainted with his father, depicting him favorably.

Descriptions of the following incident are found in all the sources referred to in this article, with the exception of Ibn Taghrībirdī′s books. The detailed descriptions are found only in *Nuzhah.* According to its author, Ibn Dāwūd al-Sayrafī, this incident happened when a rich man died and left a large inheritance to his heirs. Since his children were young, the matter was brought before a Shafiʻi deputy judge. This judge approved the request for a bride price *(ṣadāq)* to one of the wives of the deceased. One of the trustees of the will raised an objection and petitioned the sultan for a ruling. Ibn Dāwūd al-Sayrafī remarked on how strange it was that this deputy judge did not resign his office even though he was said to be rich, earning 600 dirhams a day.[39]

At the end of this year, the sultan heard a rumor about al-Furriyānī (or al-Ghurriyānī), a self-proclaimed Mahdi, and sent a letter to the *nā'ib* of Jerusalem

---

[36]*Inbā' (Ḥ),* 9:221–22; *Inbā' (C),* 4:225–26.

[37]ʻ*Iqd,* 2:622.

[38]*Nuzhah,* 4:300–1 has a different explanation: after the incident, Ibn Ḥajar resigned on his own, and when the sultan heard about the resignation he despatched al-Rūmī.

[39]Ibid.

ordering him to bring this man to Cairo. He was supported by the Bedouins of Jibāl Nābulus (Jabal Ḥumaydah). He presented himself to the *nā'ib,* after which he stopped his activity and was not brought to Cairo, thus ending the matter. This man was born in Tunis in 780 and later stayed in Cairo, where he provided al-Maqrīzī with some information about the Maghrib. He was, therefore, mentioned in many sources.[40] *Inbā'(Ḥ), Inbā'(C),* and *Al-Tibr* describe his stay in Cairo before going to Jibāl Nābulus.[41] However, the notes in the margins of Inbā'(T) continue the story of this man′s life after he stopped his activities. ʻAbd al-Bāsiṭ quoted the same stories from these notes in al-Rawḍ. According to these descriptions, this man moved between Damascus and Tripoli, and in Tripoli always stayed at the house of Sharaf al-Dīn Mūsá ibn Yūsuf,[42] an army inspector *(nāẓir al-jaysh),* who treated him kindly. Many of his books were stored in this house. It is also mentioned that he died in Latakia in 862.[43] The reason why ʻAbd al-Bāsiṭ was able to obtain such details is that his father Khalīl was living in Tripoli with his family when he was an amir of twenty. ʻAbd al-Bāsiṭ was 18 years old and probably remembered stories of this man vividly. ʻAbd al-Bāsiṭ added in al-Rawḍ that this man knew a great deal about the Mahdist movement of ʻUbayd Allāh and Muḥammad ibn Tūmārt in the Maghrib.

Adding a bit of his own family history, ʻAbd al-Bāsiṭ wrote that the sultan had the exchequer give his father Khalīl Madīnat Qāqūn as *iqṭāʻ* and the village named Yaṭṭah bi-Murabbaʻah (?) as *rizqah* to compensate him after being falsely accused and imprisoned. The family later sold these lands at a comparatively low price of 1,000 dinars, though the annual profit was about 800 dinars at the time. In the year 848 ʻAbd al-Bāsiṭ was four years old. There is a note in the margin of Inbā'(T) that he was stabbed in the chest this year, but this description is not included in al-Rawḍ. He probably considered this incident too personal.

Next I will analyze the obituary section (biographies) of nineteen people listed in al-Rawḍ. Among historical sources, al-Sakhāwī′s *Al-Tibr* included the largest number of people (thirty-six people) in the obituaries. It is written in *Inbā'* and in

---

[40]*Al-Ḍaw',* 7:67–70; *Al-Dalīl,* 2:600; *Al-Manhal,* 9:308–9.

[41]*Inbā'(Ḥ),* 9:226–28; *Inbā'(C),* 4:228–29; *Al-Tibr,* 102–3.

[42]According to *Al-Ḍaw',* 10:192, he came from a Christian family in al-Shawbak and was an army inspector in Tripoli. The relationship with this person is not mentioned; *Al-Tibr,* 422. For his death in 862, see ʻAbd al-Bāsiṭ, ″Nayl al-Amal fī Dhayl al-Duwal,″ Bodleian Library MS Hunt 610, fols. 121r–v (hereafter referred t as *Nayl*); *Nayl(T)*, 6:41; *Al-Dalīl,* 2:754; *Wajīz,* 2:714.

[43]Al-Rawḍ, fol. 26r. On the other hand, it is written in *Nayl,* fol. 56r, that this man died in Bilād Ṭarābulus after 860. In *Nayl(T)*, 5:198–99, the name of this man involved in the incident of the year 848 appears as al-Ghurriyānī. In the later part of *Nayl(T)*, 6:32, there is an obituary of the man named al-Furriyānī in the year 862 without mentioning of the place of his death. There is no indication of any connection between these two similar names.

al-Rawḍ that four more people died or were said to have died this year. If these four were added, the total would have been forty (cf. the Appendix).

First, in analyzing how ʻAbd al-Bāsiṭ composed his biographies, I will compare al-Rawḍ with two editions of *Inbā'*, namely *Inbā'(Ḥ)* and *Inbā'(C),* and the main text and notes in the margins of Inbā'(T). I would also like to discuss the characteristics of two editions of *Inbā'* and their problems.

Inbā' itself does not contain much information in the obituary section. The main text of Inbā'(T) includes the obituaries of only three people. *Inbā'(Ḥ)* includes accounts of only six people. *Inbā'(C)* has accounts of ten people, among whom nine died in the year 848. About the manuscript of *Inbā'* which includes notes by al-Biqāʻī, Dr. Ḥasan Ḥabashī, the editor of *Inbā'(C),* says that there are biographies of only four people. He included all the names found in eight manuscripts that he used to edit this book and explained the differences among these eight manuscripts in the footnotes. This example can be found in the obituary of Abū Bakr ibn Isḥāq in *Inbā'(C)*. Other historical sources date this man's death to 847. *Inbā'(C)* itself gives his obituary under 847. But in one manuscript his death was dated 848, so the editor of *Inbā'(C)* quoted this in the main text and explained the details in the footnote. *Inbā'(Ḥ)* annotated these differences in the footnotes for 847. These footnotes of the two editions reveal the relationships among the manuscripts of *Inbā'* and provide useful clues as to how this information is related to the composition of al-Rawḍ.[44]

In comparing Inbā'(T) and al-Rawḍ and analyzing how ʻAbd al-Bāsiṭ composed the obituary section, the entry for Aḥmad ibn Muḥammad that appears in the first part of the obituary section of al-Rawḍ proves that Inbā'(T) was the book that ʻAbd al-Bāsiṭ read and relied upon for his description.[45] In al-Rawḍ, ʻAbd al-Bāsiṭ wrote, "Aḥmad ibn Muḥammad ibn Ibrāhīm, while Ibn Ḥajar inadvertently miswrote *(sahá)* Aḥmad ibn Ismāʻīl." Neither *Inbā'(Ḥ)* nor *Inbā'(C)* has this description.[46] According to the footnotes of these two editions, there is no manuscript which contains the name Aḥmad ibn Ismāʻīl. Inbā'(T), however, has exactly the same sentence in its main text. This means the signature "ʻAbd al-Bāsiṭ al-Ḥanafī" in the margins of this manuscript was written by ʻAbd al-Bāsiṭ al-Ḥanafī himself. This man, Aḥmad ibn Muḥammad ibn Ibrāhīm, was a Maliki qadi and the older student of Ibn Ḥajar. His life is described in detail by al-Sakhāwī in *Al-Tibr* and *Al-Ḍaw'*.[47] In al-Rawḍ, ʻAbd al-Bāsiṭ consulted an acquaintance of this person and corrected his birthdate in al-Sakhāwī's book.

---

[44]*Inbā'(C),* 4:230; ibid., 218; *Inbā'(Ḥ),* 9:215.

[45]Al-Rawḍ, fol. 26r; Inbā'(T), fol. 193v.

[46]*Inbā'(Ḥ),* 9:239–40; *Inbā'(C),* 4:240.

[47]*Al-Tibr,* 106–7; *Al-Ḍaw',* 2:69–70.

The nineteen obituaries for the year 848 in al-Rawḍ can be categorized into three groups. The first group includes the biographies that ʻAbd al-Bāsiṭ seems to have gathered from al-Sakhāwī´s book. The above-mentioned Aḥmad ibn Muḥammad is an example of the entries in this group. In most cases he did not mention the sources of his information. According to its contents, and due to the fact that there is no other clue as to the ultimate source of this information, al-Sakhāwī´s book will for now be considered the source. There are ten biographies in this group.

The second group includes the biographies that ʻAbd al-Bāsiṭ gathered from al-ʻAynī´s *ʻIqd* and from Ibn Taghrībirdī. He also added some information himself. There are seven biographies in this group.

The third group includes the biographies that ʻAbd al-Bāsiṭ selected independently. There are two of these.

Six out of ten biographies in the first group did not appear in Inbāʼ(T) and until today the information can be traced only to al-Sakhāwī´s works. For example, the account of the Hanbali shaykh Muḥammad ibn ʻAbd Allāh can be found only in *Al-Tibr* and *Al-Ḍawʼ*.[48]

Three of the biographies in the first group are found in the unsigned notes in the margin of Inbāʼ(T). Two of them are found only in *Inbāʼ(C).*[49] They are the Shafiʻi shaykh Muḥammad ibn ʻAbd al-Raḥmān and Muḥammad ibn ʻAlī ibn Abī Bakr, a famous merchant in Syria. Their biographies appear in *Al-Tibr,* making it clear that this information was the basis of the unsigned notes in Inbāʼ(T).[50] Al-Rawḍ includes an anecdote about the famous Muḥammad ibn ʻAlī ibn Abī Bakr that ʻAbd al-Bāsiṭ heard from a merchant in Tunis in 867 on his way to the Maghrib. It is also stated that ʻAbd al-Bāsiṭ´s father was on good terms with this man when he and ʻAbd al-Bāsiṭ were living in Damascus. The biographical account of the Shafiʻi shaykh Muḥammad ibn Yaḥyá Abū Zuhrah, who wrote many books, is not found in either *Inbāʼ(Ḥ)* or *Inbāʼ(C),* though *Al-Tibr* and *Al-Ḍawʼ* have detailed descriptions of the relationship between the teacher and student. Al-Sakhāwī also wrote that he met this man´s son ʻAbd al-Wahhāb in Tripoli.[51] ʻAbd al-Bāsiṭ wrote in al-Rawḍ that he saw the book of this Muḥammad written in his own hand and attended lectures given by his son, ʻAbd al-Wahhāb, at a Tripoli mosque, when ʻAbd al-Bāsiṭ´s family lived in that city from 862 until approximately 865. He also added a short biography of this son and quoted a verse of his poetry,

---

[48] *Al-Tibr,* 112; *Al-Ḍawʼ,* 8:159.

[49] According to *Inbāʼ(C),* neither of them are in the manuscript that includes notes by al-Biqāʻī. Their names do not appear in *Inbāʼ(Ḥ)* either.

[50] *Al-Tibr,* 112, 112–13, respectively.

[51] Ibid., 113–14; *Al-Ḍawʼ,* 10:70–71.

information not found in the biography of this son in *Al-Tibr*.

In the second group, two obituaries clearly show the relationships between historical sources. The descriptions of ʻAbd al-Raḥīm ibn Abī Bakr (or ʻAlī) al-Ḥamawī Zayn al-Dīn, a famous preacher, appear in the main text of Inbāʼ(T) and in the signed notes in its margin. ʻAbd al-Bāsiṭ started his description in al-Rawḍ by writing:

> ʻAbd al-Raḥīm ibn Abī Bakr ibn Muḥammad ibn ʻAlī ibn Abī al-Fatḥ ibn al-Muwaffaq al-Ḥamawī al-Qādirī al-Qāhirī al-Shāfiʻī, al-Shaykh Zayn al-Dīn. Ibn Ḥajar inadvertently miswrote *(sahá)* ʻAlī for his father's name *(ism)* and Nāṣir al-Dīn for his honorific title *(laqab)*. Ibn Taghrībirdī miswrote *(wahama)* both the *ism* and *laqab* and wrote Shams al-Dīn Muḥammad.

In the main text of Inbāʼ(T), his father's *ism* was written as ʻAlī and his *laqab* as Nāṣir al-Dīn. Both *Inbāʼ(Ḥ)* and *Inbāʼ(C)* give his father's *ism* as ʻAlī and *laqab* as Zayn al-Dīn. This description in al-Rawḍ is evidence that it was Inbāʼ(T) that ʻAbd al-Bāsiṭ himself read. In *Al-Nujūm* Ibn Taghrībirdī called this man Shams al-Dīn Muḥammad. *Al-Tibr* gives the name of this man's father as Abū Bakr, as does al-Rawḍ.[52] ʻAbd al-Bāsiṭ, therefore, seems to have read the main text of Inbāʼ(T) first and examined the information in *Al-Nujūm* critically, referring to sources like *Al-Tibr,* before starting to write his book. He also made notes in the margin of Inbāʼ(T) about ʻAbd al-Raḥīm's son, Maḥmūd, and grandson, Ibrāhīm, who also acquired a good reputation. Their descriptions also appear in al-Rawḍ with slight differences in word order and composition.

A man named Muḥammad al-Ḥamawī appears in unsigned notes in the margin of Inbāʼ(T). These unsigned notes have two different styles. The first part of the notes gives a brief biography of this man. Then, a note in a different hand says that this is about this ʻAbd al-Raḥīm. ʻAbd al-Bāsiṭ, therefore, concluded that this man was ʻAbd al-Raḥīm, who is described in the previous paragraph, and did not include him in al-Rawḍ. In *Inbāʼ(C),* there is a brief biography of Muḥammad al-Ḥamawī with an editor's footnote saying that this information was not found in the manuscript with notes by al-Biqāʻī.[53] In this footnote, the descriptions in *Al-Nujūm,* which are also referred to in the previous paragraph of this article, are quoted. In the main text of *Inbāʼ(C),* there is a description in parentheses saying "ʻAbd al-Raḥīm has previously been mentioned; his name was written already." The editor wrote in his footnote that this sentence did not make sense. However, I

---

[52] *Inbāʼ(Ḥ),* 9:229; *Inbāʼ(C),* 4:231; *Al-Nujūm,* 15:506; *Al-Tibr,* 108–9.
[53] *Inbāʼ(C),* 4:231–32.

believe the biographical description under the name of Muḥammad al-Ḥamawī is the summary of a biography under the name of ‘Abd al-Raḥīm despite some differences. A difference between the two is the date of death: 2 Dhū al-Qa‘dah and Wednesday 3 Dhū al-Qa‘dah. *‘Iqd*, however, has the same death date of ‘Abd al-Raḥīm and even the same day of the week.[54] Thus I conclude that this was the same person. *Inbā’(Ḥ)* does not include a biography of this person. *Nuzhah* gives a description of him under the name Muḥammad ibn ‘Alī al-Ḥamawī. This is probably because its author gathered information from both *‘Iqd* and *Al-Nujūm,* but included information primarily from *Al-Nujūm.*[55]

Another typical description of this second group is Fayrūz al-Ṭawāshī, a cupbearer *(sāqī)* of Sultan al-Mu’ayyad Shaykh. The description of this cupbearer is found in both an unsigned note and a signed note in the margin of Inbā’(T). The signed note is quoted from *‘Iqd*. These descriptions were arranged in al-Rawḍ in order to make its meaning clear. A part of *Al-Nujūm* is also quoted, prefaced by the phrase ″Someone says that.″[56]

The third group contains obituaries of two people. Neither of them are found in the main text or the margin of Inbā’(T), in *Inbā’(Ḥ),* or in *Inbā’(C)*. One is the Shafi‘i shaykh Muḥammad ibn ‘Alī. ‘Abd al-Bāsiṭ wrote that he did not know much about him and only mentioned that this man died that year in Mecca. I cannot find any description of this man in other historical sources. The other is Yūsuf ibn Khalīl ibn Shāhīn, ‘Abd al-Bāsiṭ′s half brother, an older brother who died at the age of five in that year. He added that his brother′s mother was released from slavery by his father and, as of the writing of the book, was almost 70 years old living with his own mother. These two people did not appear in his *Nayl,* nor in Ibn Iyās′s *Badā’i‘*.

Among the obituaries of the nineteen individuals in al-Rawḍ, only three are mentioned in ″Majma‘,″ a collection of biographies written by ‘Abd al-Bāsiṭ, of which only a part remains.[57] He chose fourteen obituaries in *Nayl.* Ibn Iyās selected all eleven people out of these nineteen people and wrote short versions of their obituaries for the same year in *Badā’i‘*.[58]

The above analyses of the obituary section (biographies) reveal two characteristics of ‘Abd al-Bāsiṭ′s writing. Firstly, he used firsthand information

---

[54] *‘Iqd,* 2:632.

[55] *Nuzhah,* 4:312–13; *‘Iqd,* 2:632; *Al-Nujūm,* 15:506.

[56] *‘Iqd,* 2:633; *Al-Nujūm,* 15:506–8.

[57] ‘Abd al-Bāsiṭ, ″Majma‘ al-Mufannan bi-al-Mu‘jam al-Mu‘anwan,″ Maktabat Baladīyat al-Iskandarīyah MS 4448/800b musalsal 5 tārīkh. As for the three individuals mentioned in ″Majma‘,″ see Appendix.

[58] *Nayl(T)*, 5:184–200; *Bada’i‘*, 2:241–47.

from acquaintances of his subjects in vividly depicting people and the era in a narrative form. Secondly, he included aspects of his own personal history, which can be considered inextricably related to the method of using firsthand information. He also explained the meaning of Turkish names, which can be considered a distinct characteristic of his writing. The information on ulama relationships between teacher and student is more detailed in al-Sakhāwī's *Al-Tibr* than al-Rawḍ. One could say that al-Sakhāwī merely showed greater interest in this issue, but I believe that 'Abd al-Bāsiṭ used a version of *Al-Tibr* that did not have as much detailed information as the one we know today. Al-Sakhāwī wrote that out of forty people, obituaries of six of them, which are not included in al-Rawḍ, were based on the descriptions of Ibn Fahd, who was well versed in information about Mecca.[59] This reveals that al-Sakhāwī's history which 'Abd al-Bāsiṭ used to compose al-Rawḍ did not contain information from Ibn Fahd.

Conclusion

One of the manuscripts of Ibn Ḥajar's *Inbā'*, which is preserved in the Topkapı Library (Inbā'[T]), was the manuscript that 'Abd al-Bāsiṭ used. He made notes in the margins of this manuscript based on other sources and on his own research. In this article I have analyzed these notes and examined how the author used the information in *Inbā'* when writing al-Rawḍ. First, the notes written in the margins by 'Abd al-Bāsiṭ or others were made based on information from Ibn Taghrībirdī, primarily his *Al-Nujūm.* Second, 'Abd al-Bāsiṭ added information from '*Iqd* and his own research. It was concluded, through studying the descriptions in al-Rawḍ, that these notes were used as the bases for the accounts and their dates in al-Rawḍ. In the descriptions of the year in question, some events were misdated or miswritten. These same mistakes also appear in Ibn Iyās's book.

In the margin of the obituary section of Inbā'(T), there are several biographies of people who are not listed in the main text, some of which seem to be clearly based on information from *Al-Nujūm*. In these descriptions, 'Abd al-Bāsiṭ added new information and included biographies of sons or grandsons of the people mentioned in the book, who would have been alive at the time. All these biographies in the main text and in notes in the margins of Inbā'(T) are included in al-Rawḍ and their descriptive details tell us that Inbā'(T) was also used as a basis for the creation of this part of al-Rawḍ. 'Abd al-Bāsiṭ added information by al-Sakhāwī in composing this part of al-Rawḍ. He also selected some accounts of his personal and family histories from the notes in the margins of both the chronicle and obituary sections of Inbā'(T) and incorporated them into al-Rawḍ.

Ibn Iyās was a student of 'Abd al-Bāsiṭ and he included descriptions of 'Abd

[59] *Al-Tibr,* 105–6, 108, 110, 113.

al-Bāsiṭ in his book while he was still alive.[60] When Ibn Iyās referred to Khalīl ibn Shāhīn, he wrote, ″He is the father of the author of a book titled *Al-Rawḍ al-Bāsim.*″ Ibn Iyās also described him as ″his father.″[61] All the accounts with ʿAbd al-Bāsiṭ′s name, with only one exception, are quoted from his poems.[62] This may be the reason why the influence ʿAbd al-Bāsiṭ had on Ibn Iyās has not been studied. This article has focused on the accounts of only one year, but the analyses of this year′s descriptions makes it clear that al-Rawḍ had a great influence on Ibn Iyās′s descriptions of events and biographies, as well as his basic chronological framework. Al-Sakhāwī also wrote about his student ʿAbd al-Bāsiṭ. He mentioned ʿAbd al-Bāsiṭ′s journey to study, his other teachers, and his journey to the Maghrib. He wrote, ″He excelled in many fields. He wrote, composed poetry, and showed an interest in history.″ He continued, ″Therefore, he visited me very often.″[63] As an additional piece of information related to al-Sakhāwī, ʿAbd al-Bāsiṭ seems to have used a simple version of al-Sakhāwī′s history that had less information than the version of al-Sakhāwī′s book we know today. Al-Sakhāwī′s book was presumably revised after ʿAbd al-Bāsiṭ wrote al-Rawḍ. This, I believe, also helps us understand al-Sakhāwī′s own writing process.

The Rank and Status of Military Refugees in the Mamluk Army: A Reconsideration of the *Wāfidīyah*

The existence of military refugees from Mongol territory during the Bahri Mamluk period was of great importance for the history of the Mamluk Sultanate politically, diplomatically, and culturally. David Ayalon studied this group over fifty years ago in his article "The Wafidiya in the Mamluk Kingdom"[1] and his theory has been widely accepted, together with his term *wāfidīyah,* an Arabic "collective formation from *wāfid* 'one who comes, makes his way, in a delegation or group.'"[2] In his study, he criticizes A. N. Poliak, who stated that the *wāfidīyah* enjoyed high positions in the Mamluk army because of the vassal character of the Mamluks' relationship to the Golden Horde.[3] Rather, Ayalon claims, the *wāfidīyah* were constantly discriminated against in the Mamluk military system throughout the Mamluk period because they were not mamluks, i.e., of slave origin.

In the view of the present author, however, his study is too narrow. First, he connects the arrival of the *wāfidīyah* only to the political situation inside the Mamluk Sultanate, and neglects the situation outside it. For example, he characterizes al-Ẓāhir Baybars and al-ʻĀdil Kitbughā, the two sultans who received the largest and second largest number of Mongol immigrants, according to his counting, as "an admirer of the Mongol regime" and "a member of that ethnic group" respectively, as if these factors caused these immigrations. The *wāfidīyah*'s influx, however, must not have had much to do with the reigning sultans; rather, it was caused by internal factors within the Ilkhanid state. Second, Ayalon states that the *wāfidīyah*'s inferior status is proved by the fact that most of them joined the *ḥalqah* unit.[4] Yet, in another place, he points out the prominent position of the *ḥalqah* in the early Mamluk period.[5] These two claims seem contradictory. Third, his survey tends to look at the *wāfidīyah* as a unit, so he fails to grasp their diversity. We must differentiate their commanders from their soldiers, the Mongol

tribesmen from indigenous groups within Mongol-ruled territory, and groups who came in the early Mamluk period from groups who came in relatively later periods.

All of these problems resulted from the lack of adequate published sources in Ayalon's time. In the present day, because research in Mamluk historiography has progressed and more Arabic sources have been published, we have access to more thirteenth- and fourteenth-century contemporary sources. The present state of research "simply demands that this part of his work be redone."[6]

ARRIVAL OF THE MILITARY REFUGEES

WHO WERE THE *WĀFIDĪYAH*?: IBN SHADDĀD'S CATEGORIZATION

Actually, the term *wāfidīyah* is not found frequently in the contemporary sources, and though there are references to a *wāfidīyah* in the Mamluk army, the designation must have been temporary and indefinite. Ayalon uses this word in the extremely wide meaning of "immigrants, those coming from outside" and includes not only al-Khwārizmīyah and the Kurdish Shahrazūrīyah, who came before the Mongols, but also Frankish and Maghribi refugees, and even those who came from the Ottoman state. On the other hand, later scholars use this term in a narrower sense, as "individuals and groups of tribesmen who fled to the Sultanate from Mongol controlled territory."[7] We shall also follow the latter definition in this study. Accordingly, this study generally limits itself to the period from the formation of the Mongol state in Iran until its end, i.e., from 1258 to 1335.

But before we proceed to the main subject, we must make clearer who the *wāfidīyah* were by referring to a contemporary account. ʻIzz al-Dīn Ibn Shaddād, the author of Sultan Baybars' biography, *Tārīkh al-Malik al-Ẓāhir,* lists the names of 201 refugees who entered the sultanate during his reign in a section titled "Those who came to him" *(man wafada ʻalayhi)*. He classifies them into the following groups:[8] (a) those from Medina and Yanbuʻ (19 persons); (b) those from al-ʻIrāq (21 persons); (c) those from al-Mawṣil (17 persons); (d) amirs of al-ʻArab and al-Turkumān (46 persons); (e) Muslims who were displaced by the Mongols *(al-Tatār)* (21 persons); (f) those from Bilād al-Rūm (35 persons); (g)

Mongols (40 persons); (h) those from Māridīn (1 person); and (i) notables of the Franks (2 persons).[9]

Among these, groups (a) and (d) should be excluded from this study, because they came to the sultanate and then returned to their country; they never became regular members of the Mamluk army.[10] All the refugees of groups (e) and (h) and a part of those of (c) were Ayyubid princes in Syria and Saljuqid *atābak*s.[11] Therefore they did not come from ″Mongol-controlled territory″ any more than group (i), the Frankish refugees. The other three groups, which can be regarded as *wāfidīyah* for this study, represent three types of *wāfidīyah* during Baybars′ reign: indigenous soldiers who came from areas newly occupied by the Mongols (b), subordinates of the Rūm Saljuqs (f), and Mongol tribal units (g).

CHRONOLOGY OF THE *WĀFIDĪYAH*′S DEFECTIONS

Other contemporary sources do not indicate when or under what circumstances all those listed by Ibn Shaddād arrived in the Mamluk Sultanate. This shows that the sources do not transmit all the information about the *wāfidīyah.* Still, we have twenty-four examples during the period covered in the present article of groups of refugees whose arrival times are known. The following list shows the arrival year of these groups, their leaders′ names, and the size of the group.

(1)	660/1262	Shams al-Dīn Salār al-Mustanṣirī, a ruler of al-ʻIrāq 300 horsemen[12]
(2)	660/1262	Ṣaraghān Āghā, a commander of the Golden Horde 200 horsemen[13]

During Baybars′ reign, four groups were indigenous groups from Mongol-occupied areas (nos. 1, 4–6), one group came from the Rūm Saljuqs (no. 7), and two groups were Mongol tribesmen (nos. 2–3). Ibn Shaddād calculates the *wāfidīyah* from the Mongol tribesmen to have numbered about three thousand horsemen, while the chronicles state that there were two groups, of 200 and 1,300 men, respectively. These two groups, which some historians count more accurately as three groups,[36] are often combined as a single group under sixteen commanders in the sources.[37] It is noteworthy that in all cases these defections of the Mongol *wāfidīyah* were unexpected events for the Mamluk Sultanate; we can find no evidence that the Mamluks enticed them to immigrate. On the other hand, some of the indigenous *wāfidīyah* from areas newly occupied by the Mongols had had connections with the Mamluk Sultanate, and Baybars seems to have pursued a ″head-hunting″ policy toward them.[38] The defections of the Rūm Saljuq *wāfidīyah,* whose arrivals spanned a long term, were caused by Baybars′ military campaign against al-Rūm.

Although a large number of refugees arrived during the reign of Baybars, the

role of his policy of encouraging the *wāfidīyah* to immigrate should not be overestimated. Most of their defections reflected the situation of Mamluk-Mongol relations in those days rather than Baybars′ admiration of the Mongol regime and military organization.[39]

Further, even in the post-Baybars period refugees in some number came to the sultanate continually. In the reign of al-Manṣūr Qalāwūn we find four groups of refugees (nos. 8–11), one of which consisted of four thousand horsemen, and the total number of these refugees is larger than the total number in Baybars′ reign. Afterwards, Sultan Kitbughā received the famous Oirat *wāfidīyah* (no. 12), and al-Manṣūr Lājīn accepted a group of refugees led by Sulāmish, a Mongol lieutenant of al-Rūm (no. 13). During al-Nāṣir Muḥammad′s second reign, three groups arrived (nos. 14–16). Among these, it is true that the Oirat *wāfidīyah* was ″the greatest wave of Tatār horsemen immigrating to the Mamluk kingdom.″[40] Their defection itself, however, probably had nothing to do with the fact that Kitbughā was also a Mongol mamluk, contrary to Ayalon′s suggestion, since no evidence of ″head-hunting″ on Kitbughā′s part is found.[41]

Most of their defections were motivated by disorder upon the deaths of Ilkhan rulers and purges carried out by the Ilkhans. Mu'min Āghā (no. 8) was suspected of the murder of the Ilkhan Abaghā′s brother.[42] The *wāfidīyah* in 683/1284 (no. 11) came because of the internal disorder in the Ilkhanid state after Arghūn′s enthronement.[43] Ṭaraghāy, Sulāmish, and Jankalī ibn al-Bābā (nos. 12–14) were escaping the purge instituted by the Ilkhan Ghāzān. Some groups of the *wāfidīyah* consisted of family members of the Mamluk elite (nos. 16, 18–21), especially the relatives of the sultans, who arrived around the year 722/1323, in which the Mamluks and the Mongols came to an agreement on a peace treaty. Tamurtāsh (no. 22), who rebelled against the Ilkhan Abū Sa'īd and defected, had been on friendly terms with a Mamluk amir, Sayf al-Dīn Aytamish.[44] But, in spite of their friendship, Tamurtāsh was executed by the sultan in conformity with the treaty. The defections of the last two groups of *wāfidīyah* (nos. 23–24) were caused by the political disorder after Abū Sa'īd′s death. Khalīfah ibn 'Alī Shāh (no. 24) was

also an associate of a Mamluk amir, Sayf al-Dīn Tankiz, and when the Ilkhan Abū Saʿīd died, Khalīfah first sought refuge with Tankiz.

The *wāfidīyah* defections reviewed here can be characterized as follows: first, most of them were caused by the internal political situation of the Ilkhanids, rather than that of the Mamluk Sultanate. Second, especially in the later period, the *wāfidīyah* often had some connections with the Mamluk elite before their defections.

STARTING ASSIGNMENTS

THE HIERARCHY OF ASSIGNMENTS: ACCOUNTS FROM THE REIGN OF BAYBARS

Ayalon states in his article that "most of them joined the *ḥalqah,* whose status . . . was greatly inferior to that of the Mamluk units."[45] This statement has formed the basis for the idea that the military refugees were a group discriminated against in the Mamluk Sultanate. In this section we shall see if most of them actually joined the *ḥalqah* unit or not.

Here let us refer to Ibn Shaddād again. He states that those who sought refuge from al-Tatār during the reign of Baybars were assigned positions as follows:

> Among them some were assigned exceptionally to the *khāṣṣakīyah;* others were assigned to the unit of *silāḥdār* (armor bearers), the unit of *jamdār* (wardrobe keepers), and the unit of *sāqī* (cupbearers).[46] Others were made amirs of *ṭablkhānah,* others were made amirs given from ten to twenty cavalrymen, and others were incorporated into amirs′ units.[47]

In this account, we find a somewhat hierarchical order of treatment of these newcomers. This can be categorized as follows:

(a) Recruited into the sultan′s units: *khāṣṣakīyah, silāḥdār, jamdār,* and *sāqī:* All of these units are regarded as consisting of Mamluks.[48]

(b) Appointed to the rank of amir, i.e., amir of *ṭablkhānah* or an amir having

---

[45]Ayalon, "Wafidiya," 90.

[46]For translation of the words *silāḥdār, jamdār,* and *sāqī,* see William Popper, *Egypt and Syria under the Circassian Sultans 1382–1468 A.D.: Systematic Notes to Ibn Taghrî Birdî′s Chronicles of Egypt* (Berkeley, 1955), 95.

[47]Ibn Shaddād, *Tārīkh*, 337–38. A similar passage can be found in al-Yūnīnī, *Dhayl*, 3:256–57, and Ayalon cites the latter ("Wafidiya," 98-99). However, the former is more first-hand information.

[48]For the *khāṣṣakīyah*, see Ayalon, "Studies on the Structure of the Mamluk Army," pt. 1, *Bulletin of the School of Oriental and African Studies* 15 (1953): 213–16. But one finds among the *khāṣṣakīyah* those who were not mamluks. See ibid., 215.

from ten to twenty cavalrymen: ″Amir of *ṭablkhānah,*″ generally translated as ″amir of forty,″ derives from the word ″band″ *(ṭablkhānah)*. It is the second highest rank of amir after ″amir of one hundred and commander of one thousand″ *(amīr mi'ah wa-muqaddam alf)*.[49]

(c) Integrated into the units of various amirs.

(d) Retained in the unit of their original leader: though this group is not mentioned specifically by Ibn Shaddād, its existence is reasonable, given (b).

As far as we can see from this passage, there is no requirement that they join the *ḥalqah* units, which Ayalon regards as the main destination of the *wāfidīyah.* But in another place, Ibn Shaddād cites the regulation that non-Mongol *wāfidīyah* who came from al-ʻIrāq and other regions join the *ḥalqah* unit.[50] We can thus add provisionally to the four above-mentioned categories a fifth category:

(e) Assigned to the *ḥalqah* unit.

In order to consider whether assignments to all five of these categories were actually made in practice, let us take two examples from events that occurred in the reign of Baybars.

The first example is Shams al-Dīn Salār al-Mustanṣirī′s group, who arrived in Egypt in 660/1262 and were the first military refugees in the reign of Baybars (see no. 1 in list above). According to Ibn Shaddād, when Baybars received them, ″he made him [Salār] amir of fifty cavalrymen, took into service one hundred persons from those who arrived with him, and divided the rest among amirs.″[51] In this passage, we find mention of those who were appointed to the rank of amir, i.e., Salār himself, those who were assigned to the sultan′s own unit, and those who were divided among amirs′ units. Salār′s ″fifty cavalrymen″ meant that he could retain his own followers within the limit of fifty. Those who were taken ″into service″ would have joined either the mamluk unit or the *ḥalqah* unit, but it is unclear which they joined in this case. Thus, of Salār′s three hundred followers, one-sixth stayed under their original leader (case d above), one-third joined the mamluk unit or *ḥalqah* unit (case a or e), and half were assigned to various amirs′ units (case c).

The next example is the first group of Mongol refugees which came in 660/1262, one of the leaders of which was Sayf al-Dīn Ṣaraghān Āghā (see no. 2 in above list). When they arrived at Cairo, Sultan Baybars ″made their leaders amirs with one hundred cavalrymen or less and assigned the rest to his Baḥrīyah unit and to his mamluks.″[52] It is clear that Ṣaraghān and other anonymous leaders were permitted

[49]See Ayalon, ″Studies on the Structure,″ pt. 2, 467–71.

[50]Ibn Shaddād, *Tārīkh,* 331.

[51]Ibid., 330.

[52]Ibn ʻAbd al-Ẓāhir, *Rawḍ*, 138.

to keep more than one hundred of their followers in total. Since this group consisted of two hundred cavalrymen,[53] we can conclude that more than half of them stayed in the service of their original leader (case d) and that less than half joined the mamluk unit (case a).[54]

These two examples show that the five categories of Ibn Shaddād can be substantiated by fact, even though the difference between (a) and (e) is unclear. As this categorization applies to the reign of Baybars only, let us examine the cases of all other *wāfidīyah* we know about in the period under discussion.

The Starting Rank of the *Wāfidī* Amirs

First, let us investigate the military refugees who were appointed to the rank of amir in the above category (b). Ibn Shaddād ranks this category as second to those who were recruited into the sultan's unit. But we treat them first here because they were commanders of the various *wāfidīyah* groups originally. Although some of the soldiers under them reached the rank of amir during their later careers in the Mamluk army, we shall treat them in a later section and here look at the starting rank to which the commanders were appointed on their arrival.

Although Ibn Shaddād states that the commanders were made amirs of *ṭablkhānah* and "from ten to twenty cavalrymen," Shams al-Dīn Salār al-Mustanṣirī was made amir of "fifty cavalrymen," as seen above. The fact that not forty but fifty cavalrymen were allowed to Salār means in those times there was a lack of the strict uniformity of rank of later times, i.e., amir of one hundred, amir of forty, amir of ten. In 672/1273–74, Shams al-Dīn Bahādur from Sumayṣāṭ (see no. 6 above) was made amir of twenty cavalrymen, which is also not in accordance with the normative size of Mamluk amirs' units, as R. Stephen Humphreys has shown, at least during the reign of Baybars.[55]

On the other hand, Sayf al-Dīn Ṣaraghān Āghā and other leaders of the first Mongol refugees in 660/1262 were made "amirs with one hundred cavalrymen or less," as seen above. If we take this as appointment to the rank of "amir of one hundred," they can be regarded as having gotten a higher rank than Ibn Shaddād's generalization. On this point, while Ayalon states that "Baybars' reign is also marked by the absence of a single appointment to the rank of Amir of a Hundred,"[56]

---

[53]Ibid., 137.

[54]The Baḥrīyah unit here means the Mamluk unit that Baybars founded, namely al-Baḥrīyah al-Ẓāhirīyah. See David Ayalon, "Le régiment Bahriya dans l'armée mamelouke," *Revue des études islamiques* 19 (1951): 137.

[55]R. Stephen Humphreys, "The Emergence of the Mamluk Army," pt. 2, *Studia Islamica* 46 (1977): 165–66.

[56]Ayalon, "Wafidiya," 99.

as Sato Tsugitaka points out, Ayalon's statement is a mistake, "although the example of such an appointment was indeed rare."[57] Reuven Amitai-Preiss regards the report of this appointment as "mere hyperbole" because the appointment of one of the *wāfidīyah* to this rank "is not substantiated by one concrete example from the sources."[58] In my view, there is no logical reason for denying this appointment itself, although we should not regard it as to the highest rank of amir because of the lack of a strict uniformity of rank in the early Mamluk period. At least one of these Mongol *wāfidī* amirs must have been appointed to a relatively high rank in Baybars' reign.

However, it is true that most of the *wāfidī* amirs were appointed to the rank of amir of *ṭablkhānah*. The following list shows the starting rank of twenty-two *wāfidī* commanders.[59] The number in parentheses is the number of the group they were associated with in the list above.

1. Shams al-Dīn Salār (1)	Amir of fifty cavalrymen
2. Ṣarīm al-Dīn Ṣaraghān (2)	Amir of one hundred cavalrymen
3. Sayf al-Dīn Karmūn and others (3)	Amir of *ṭablkhānah*
4. Sayf al-Dīn Baklak (4)	Amir of *ṭablkhānah*
5, Muẓaffar al-Dīn Washshāḥ ibn Shahrī (4)	Amir of *ṭablkhānah*
6. Jalāl al-Dīn Bashkar ibn al-Dawādār (5)	Amir of *ṭablkhānah*
7. Shams al-Dīn Bahādur (6)	Amir of twenty cavalrymen
8. Aqūsh (10)	Amir of *ṭablkhānah*
9. Ṭaraghāy (12)	Amir of *ṭablkhānah*
10. Ulūs (12)	Amir of ten cavalrymen
11. Badr al-Dīn Jankalī ibn al-Bābā (14)	Amir of *ṭablkhānah*
12. ʻAlī (14)	Amir of ten cavalrymen
13. Nīrūz (14)	Commander (*taqdimah*)
14. Ṭāyirbughā (20)	Amir of *ṭablkhānah*
15. Yaḥyá ibn Ṭāyirbughā (20)	Amir of ten cavalrymen
16. Muḥammad Bīh ibn Jamaq (21)	Amir of *ṭablkhānah*
17. Tamurtāsh ibn Jūbān (22)	Amir of one hundred
18. Najm al-Dīn Maḥmūd ibn Sharwīn (23)	Amir of *ṭablkhānah*
19. Fakhr al-Dīn Maḥmūd (23)	Amir of *ṭablkhānah*
20. Ḥusayn (23)	Amir of ten cavalrymen

[57] Sato, *State and Rural Society*, 101–2.

[58] Reuven Amitai-Preiss, "The Mamluk Officer Class during the Reign of Sultan Baybars," in *War and Society in the Eastern Mediterranean, Seventh-Fifteenth Centuries,* ed. Yaacov Lev (Brill, 1997), 286. See also Ayalon, "Wāfidiyya," 27.

[59] For the personal data of each amir, see the Appendix.

21. Kābik (23)	Amir of ten cavalrymen
22. Nāṣir al-Dīn Khalīfah ibn ʻAlī Shāh (24)	Amir of one hundred in Syria

We find that most of them initially held the rank of amir of *ṭablkhānah*. Only three commanders (nos. 2, 17, and 22) were made ″amir of one hundred″ when they arrived.[60] Six commanders (nos. 7, 10, 12, 15, 20, 21) were appointed to a lower rank like ten or twenty cavalrymen, but in the case of five of them (nos. 10, 12, 15, 20, 21) their colleague commanders from their same group were given *ṭablkhānah* rank.

This tendency seems to reflect the idea in those days that the rank of *ṭablkhānah* was the one suitable for refugee commanders. For example, Sultan Kitbughā welcomed the Oirat refugees, who arrived in 695/1296, and intended to appoint their commander Ṭaraghāy amir of one hundred and commander of one thousand. But when he consulted with the amirs, they suggested to him that he should give Ṭaraghāy the rank of *ṭablkhānah* at first and promote him later.[61]

What the rank of *ṭablkhānah* actually means, however, must be considered. Some sources other than Ibn Shaddād state that Salār al-Mustanṣirī was made an amir of *ṭablkhānah*.[62] Therefore he became an amir of fifty cavalrymen and amir of *ṭablkhānah* concurrently. Moreover, when Jankalī ibn al-Bābā (11) arrived in Cairo in 703/1304, Sultan al-Nāṣir Muḥammad ″made him an amir of *ṭablkhānah* and granted him one hundred cavalrymen.″[63] In these two examples, the rank of ″amir of *ṭablkhānah*″ is obviously not equal to having forty cavalrymen. Humphreys points out the honorary meaning of the rank of *ṭablkhānah* bestowed on foreign vassals in the earlier years of Baybars′ reign and states, ″this title signified less a specific rank than one′s entry into the political-military elite of the Kingdom.″[64] We must distinguish between the honorary meaning of the rank of *ṭablkhānah* and the number of cavalrymen that they could accommodate, at least in the second reign of al-Nāṣir Muḥammad.

Furthermore, we must pay attention to the fact that appointment to the rank of

---

[60]But three more amirs (nos. 11, 14, and 18 in the above list) were raised to amir of one hundred soon after their arrival. See below.

[61]Al-ʻAynī, *ʻIqd,* 3:306.

[62]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 123; al-Nuwayrī, *Nihāyah,* 30:55; al-ʻAynī, *ʻIqd*, 1:333.

[63]Baybars al-Manṣūrī, *Tuḥfah*, 175. In fact, Jankalī was appointed amir of *ṭablkhānah* upon arrival, and then was raised to amir of one hundred. See below.

[64]Humphreys, ″Emergence of the Mamluk Army,″ pt. 2, 169.

amir in the Mamluk Sultanate always involved distribution of an *iqṭāʻ*.[65] Consider the following passages:

> [Al-Nāṣir Muḥammad] appointed him [Jankalī] amir of *ṭablkhānah* upon the *iqṭāʻ* of the amir Bahā' al-Dīn Qarāqūsh, who was transferred to Damascus.[66]

> The amir Bahā' al-Dīn Qarāqūsh was transferred to amir of Ṣafad, and Jankalī was granted his rank of amir, which is *ṭablkhānah*.[67]

> [Al-Nāṣir Muḥammad] ordered him [Jankalī] to live in the citadel, and on his settling down, ordered the amir Bahā' al-Dīn Qarāqūsh to leave for Ṣafad and granted his *iqṭāʻ* to this Jankalī.[68]

All these three passages describe the same event. Although they have diverse information about the new post of the amir Qarāqūsh, in this case it is obvious that the rank of amir which he had held was connected with a certain *iqṭāʻ* and that Jankalī was granted both at the same time. As for the correspondence between the rank of amir and an *iqṭāʻ*, another example can be found in the case of Maḥmūd ibn Sharwīn (no. 15). Upon his arrival, this Maḥmūd was made only an amir of *ṭablkhānah,* but when the amir Ṭāyirbughā, who was one of the commanders of one thousand and was himself a *wāfidī* amir, died, Maḥmūd was raised to commander of one thousand in his place, and at the same time he received Ṭāyirbughā's *iqṭāʻ*.[69]

These examples show that there was a one-to-one correspondence between each rank of amir and a certain *iqṭāʻ* in this period. In order to recruit a commander of the military refugees, it was necessary for the sultan to transfer another amir or to wait for some amir's death. This rule can also be substantiated by the following two examples: Tamurtāsh (14) gained the rank of amir of one hundred in the place of Amir Sanjar al-Jamaqdār,[70] and Khalīfah ibn ʻAlī Shāh (19) was appointed commander of one thousand in Damascus in the place of Amir Barsbughā al-ʻĀdilī.[71]

---

[65]For the *iqṭāʻ* distribution to the *wāfidīyah* during the reign of Baybars, see Sato, *State and Rural Society,* 99–103.

[71]Ibid., 446.

We can observe a result of the redistribution of *iqṭā*ʻs carried out by al-Manṣūr Lājīn and al-Nāṣir Muḥammad[72] in the examples after Jankalī's defection in 703/1304. Because of the reform of the *iqṭā*ʻ system, it became impossible to bestow high rank and large *iqṭā*ʻs upon *wāfidī* amirs when they arrived. Instead, the sultan consistently gave them the rank of amir of *ṭablkhānah* as an honorary rank. Accordingly, it is meaningless to compare their starting ranks, most of which were amir of *ṭablkhānah*. Rather we must investigate their ranks later in their careers.

WĀFIDĪ SOLDIERS ASSIGNED TO UNITS

THOSE RECRUITED INTO THE SULTAN'S MAMLUK UNIT

During the reign of Baybars, there are statements that a part of the *wāfidī* soldiers were incorporated into the sultan's mamluk unit (category [a] above). Baybars assigned fewer than half of the first Mongol *wāfidīyah* "to his Baḥrīyah unit and to his mamluks," as seen above, and when the number of military refugees increased after that, Baybars "divided all groups among twice their number of royal mamluks" *(wa-yufarriquhum kull jamāʻah bayna aḍʻāfhā min al-mamālīk al-sulṭānīyah).*[73] Further, Qalāwūn assigned some of the followers of Shaykh ʻAlī (no. 10) to his own mamluk unit or to the *khāṣṣakīyah*.[74]

Sato states, "It is not clear whether the Mongols who were incorporated into the Mamluk corps became slaves or not."[75] In my opinion, they did not become slaves, but remained free men, for one would expect some evidence of the conflicts that would have occurred if they had been enslaved. Rather, the sources emphasize their honorable positions within the Mamluk army: Ibn Shaddād ranks this group as first on the above-mentioned list, and Ibn ʻAbd al-Ẓāhir states, "Each one of them became like an independent amir attended by soldiers and slaves *(ghilmān)*."[76] We also noted above the *wāfidīyah* of Salār, one hundred of whom were taken into service, but we could not determine whether they joined the mamluk unit or the *ḥalqah*. Thus, the historians of the early Mamluk period seem to have regarded the fact that they were assigned to the immediate control of the sultan as important, while they disregarded whether or not they became slaves.

Among those in this category in the later period, Aydamur al-Khaṭīrī and Bahādur al-Damurdāshī (nos. 15 and 25 in the Appendix) were the most successful. These two came to Egypt under the command of *wāfidī* amirs, were assigned to

[72] For the result of the redistribution of *iqṭā*ʻs *(rawk),* see Sato, *State and Rural Society,* 152–61.

[76] Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 138.

the sultans′ mamluk units, and reached the rank of amir of one hundred and commander of one thousand in their later careers. Amitai-Preiss regards Aydamur al-Khaṭīrī as a ″non-affiliated″ amir, i.e., neither al-Manṣūrīyah nor al-Nāṣirīyah.[77] However, Aydamur′s biography states that he was ″the greatest of al-Burjī amirs″[78] and many sources call him ″al-Manṣūrī.″ Bahādur al-Damurdāshī was one of the twenty-four commanders of one thousand at the time of the death of al-Nāṣir Muḥammad, and he was classified among ″his (i.e., al-Nāṣir′s) mamluks and *khawāṣṣ*″ and was called ″al-Nāṣirī.″[79] We can consider that these two were not only *wāfidīyah* but also mamluk amirs. Thus, even in this later period, the difference between free men and slaves in the Mamluk army was not always clear.

Those Divided into the Amirs′ Units

This category (category [c] above) can be found in the case of Salār′s group, half of whom were divided among amirs′ units. When Mu'min Āghā (no. 8 in list beginning on p. 57) and his followers sought refuge with Qalāwūn in 681/1283, his two sons were assigned to serve under the amir Sayf al-Dīn Ṭurunṭāy, *nā'ib al-salṭanah* of Qalāwūn.[80]

Ibn Shaddād ranks this category as the last on the list shown above, and its minor position within the Mamluk army is substantiated by the following two examples. First, when al-ʻĀdil Kitbughā was dethroned, the new sultan al-Manṣūr Lājīn arrested three commanders of the Oirat refugees, Ṭaraghāy, Kaktāy, and Ulūṣ. As for the rest of them, ″some of them came to serve under amirs [in Egypt] and others went to Syria and sought to enter the service of amirs.″[81] Second, when six hundred followers of Tamurtāsh arrived at Egypt in 728/1328, al-Nāṣir ″was antipathetic towards those who were in Tamurtāsh′s service and divided a part of them among amirs, so that they served under them without *iqṭā*ʻs.″[82] Both examples show that this category did not provide favorable conditions for the military refugees, and the latter shows that they were assigned without being given *iqṭā*ʻs.

Those Retained in the Unit of Their Original Leader

Before seeking refuge, the *wāfidīyah* had been part of a military organization, very different from that of the army of the Mamluk Sultanate, stationed in Mongol-controlled areas. After they sought refuge, most had to accept being dispersed into

various units of the Mamluk army, but a part of them (case [d] above) were able to remain in the service of their original commanders, who had gained the rank of amir.

As seen above, Salār al-Mustanṣirī was allowed to keep his followers up to the limit of fifty persons out of three hundred, and Ṣaraghān Āghā kept at least one hundred out of two hundred. For the later *wāfidīyah,* we have little information on how many followers remained under their commanders. But I suppose that a certain number of them remained in their original leaders′ units and that these units constituted the various *wāfidīyah* groups in the Mamluk army, as will be seen later.

Those Assigned to the Ḥalqah *Unit*

Let us return to the previous question: did most of the *wāfidīyah* join the *ḥalqah* unit (case [e] above)? Here also let us start with the reign of Baybars. During his reign, Ibn Shaddād states, none of the Mongol *wāfidīyah* were assigned to the *ḥalqah* unit, as seen above, and no other contemporary sources report their assignment to the *ḥalqah* either.[83] It is uncertain whether those of the *wāfidīyah* from al-ʿIrāq commanded by Salār al-Mustanṣirī who were ″taken into service″ were assigned to the *ḥalqah* unit or the mamluk unit. As a whole, no *wāfidīyah* groups are described as assigned to the *ḥalqah* during the reign of Baybars, except for a few ʿIrāqī *wāfidīyah.* Ayalon points out that the amir Sayf al-Dīn Qunqur al-Tatarī, who came to Egypt in the reign of Baybars but whose arrival year is unknown, ″was assigned a good *iqṭāʿ* in the *ḥalqah.*″ [84] If we consult with more contemporary sources, however, we find no account like this.[85]

After the reign of Baybars, also, we find only a few cases of *wāfidīyah* who were assigned to the *ḥalqah.* Al-Maqrīzī states that about 300 commanders of the Oirat refugees, except for Ṭaraghāy and al-Luṣūṣ (Ulūṣ), were made commanders in the *ḥalqah (taqādum fī al-ḥalqah),*[86] but this information is not found in any contemporary source. According to al-ʿAynī, who cites al-Yūsufī, Nīrūz, a brother of the amir Jankalī, was appointed *taqdimah,* which was possibly *taqdimat al-ḥalqah* (commander of the *ḥalqah*). Through all the period covered in the present article, we find no indication that the *wāfidīyah* in general joined the *ḥalqah* unit, contrary

[86]Al-Maqrīzī, *Khiṭaṭ,* 2:22; Ayalon, ″Wafidiya,″ 90, n. 10.

to Ayalon′s statement.

Besides, it is necessary to clarify what the term *ḥalqah* meant in this period. Here, Ayalon and Humphreys′ argument about the *ḥalqah* is helpful. They both accept the fact that the *ḥalqah* in the army of Saladin was an elite force under the personal command of the sultan. Ayalon considers that the *ḥalqah* kept its high position at least until the reign of al-Nāṣir Muḥammad and that it gradually declined because of the redistribution of *iqṭā‘*.[87] On the other hand, Humphreys argues that the *ḥalqah* was already weak at the beginning of Baybars′ reign, because ″it comprised the bulk of the provincial Syrian troops.″[88] The basic disagreement between these two is whether there was much continuity between the Ayyubids and the Mamluks, or not.[89]

Ayalon and Humphreys, however, agree that the *ḥalqah* in the Bahri period was still attached to the sultan as royal troops.[90] This seems to be a key to the solution of the obscure treatment of the *wāfidīyah*. As seen above, the Mongol *wāfidīyah* in the reign of Baybars were assigned to the sultan′s mamluk unit without being enslaved, supposedly. We can just say that they joined the royal troops. The expression *khāṣṣakīyah* used by Ibn Shaddād can be used whether they were mamluks or free men. As for the troops of Salār al-Mustanṣirī, there is no designation whether they joined the mamluks or the *ḥalqah;* they are simply described as being taken ″into service.″

In my view, during the reign of Baybars, the *ḥalqah,* the *khāṣṣakīyah,* and even the sultan′s mamluks constituted one royal troop, and there was no distinction among the terms. The distinction between mamluks and free men inside this troop would not have mattered in this period. So I disagree with Humphreys on the point that he regards the *ḥalqah* of Baybars as second-class royal troops. Rather, I agree with Ayalon′s view of the early Mamluk *ḥalqah,* but disagree with him on the point that regards the *ḥalqah* as a separate troop from the mamluks.

It is true that the *ḥalqah* became second-class royal troops but only in a later period. Furthermore, we have found little connection between the *wāfidīyah* and the *ḥalqah.* Accordingly, we cannot support Ayalon′s statement that we know the *wāfidīyah* were discriminated against because they joined the *ḥalqah.*

Advancement in the Mamluk Army

So far we have only dealt with the rank assigned to military refugees when they

[90] Ibid., 163.

had just arrived. But we can also identify those who were later promoted to higher rank. Especially, we can identify nine amirs of one hundred from the *wāfidīyah* (nos. 1, 4, 12, 15, 20, 23, 24, 25, and 27 in the Appendix), while Ayalon counts only four amirs of one hundred.[91] Besides, other *wāfidī* amirs seem to have reached politically important positions at the Mamluk court, although they are not described as amirs of one hundred in any source (nos. 2, 5, 6, 11, 13, and 22 in the Appendix). *Wāfidī* amirs in high positions can be seen throughout the period in question. If we divide this period into two phases, with the third enthronement of Sultan al-Nāṣir Muḥammad in 1310 as a dividing point, we can see that the reasons for their advancement were different in the two phases.

THE FIRST PHASE (1262–1310)

In the first phase, from the outset of the Mamluk Sultanate until 1310, i.e., before the third enthronement of al-Nāṣir Muḥammad, most of these refugees remained with their own military units which maintained their solidarity. Let us look at some groups which arrived at various times.

The Mongol *wāfidīyah* who come in the reign of Baybars (nos. 2–3 in the list) often appear in the sources as a group under Mongol commanders afterwards. For example, in 680/1281, when Sultan al-ʻĀdil Sulāmish, a son of Baybars, was dethroned and Qalāwūn became sultan, a group called *al-tatār al-wāfidīyah* fled from Cairo, under command of their leader Sayf al-Dīn Karāy (no. 6 in the Appendix) and his sons.[92] This episode shows that they had still kept their Mongol tribal bond for about twenty years. Since this Karāy and his unit returned to Cairo later and submitted to the authority of Qalāwūn,[93] it seems they maintained their unit during the reign of Qalāwūn. There are also some accounts in the chronicles stating that one of their leaders, Sayf al-Dīn Nūkāy (no. 4 in the Appendix) participated in several expeditions against the Crusaders and the Mongols until 699/1299, so we can suppose that their unit continued to exist as a viable military unit no less than thirty-six years after their arrival.

The Rūm *wāfidīyah* (no. 7 in the list) left little trace in the sources after their defection. But two of their leaders (nos. 11 and 12 in the Appendix) achieved high positions in the reign of al-Manṣūr Lājīn and the third reign of al-Nāṣir Muḥammad. Therefore it can be supposed that this group also maintained its political power for a long time.

As for the famous Oirat refugees (no. 12 in the list), they retained not only their tribal solidarity, but also their religious creed and lifestyle during the reign of

[91]See Ayalon, "Wafidiya," 93.

[92]Baybars al-Manṣūrī, *Zubdah,* 193.

[93]Ibid., 200; al-Nuwayrī, *Nihāyah,* 31:36; Ibn al-Furāt, *Tārīkh,* 7:221.

Sultan Kitbughā. For example, it is reported that they did not observe the fast in the month of Ramaḍān, and that they ate the meat of horses that they had not slaughtered according to Islamic conventions, but had been beaten to death, as was their custom.[94] Yet this situation did not continue for long, as seen above. After their leaders were arrested, they could no longer remain a strong military faction and we find only a few accounts about them, such as the short-lived riot in 1299.[95]

We can generalize the first phase using the five categories mentioned above as follows: a large number of category (d) soldiers continued to serve under category (b), i.e., *wāfidī* amirs. These amirs were advanced for reasons of their military ability and the large number of category (d) soldiers under their command, for the sultans in this phase needed these military refugees in order to solidify the newborn Mamluk state as well as to bolster their own authority.[96] *Wāfidīyah* of categories (a) and (c), i.e., those taken into the units of the sultan or other amirs, are also found in this period, but these categories produced no high-ranking amirs.

On the other hand, the *wāfidīyah* in this phase are also characterized by their marital ties to the sultans. For example, two of the four wives of Baybars at the time of his death were daughters of Mongol *wāfidī* amirs who came to Egypt in 661/1263, and a daughter of Karmūn, the leader of these *wāfidīyah,* had been another of his wives. Qalāwūn married another daughter of Karmūn, who gave birth to his son al-Ṣāliḥ ʻAlī, and also the daughter of one of the Rūm *wāfidīyah.* She is known as the mother of al-Nāṣir Muḥammad. Besides, Qalāwūn married his two sons, al-Ṣāliḥ ʻAlī and al-Ashraf Khalīl, to the daughters of Mongol *wāfidīyah.*[97]

What was the reason for these close marital ties between the *wāfidī* amirs and the Mamluk elite? As for the Oirat, Ayalon points out their physical beauty and states, ″Many Mamluks married Oirat wives.″[98] In my opinion, however, the Mamluk elites′ preference for the daughters of *wāfidī* amirs had rather to do with their fathers′ military ability. The sultans wanted marriage with their daughters for political reasons: they regarded the *wāfidīyah* as reliable supporters.

THE SECOND PHASE (AFTER 1310)

In this phase, i.e., the third reign of Sultan al-Nāṣir Muḥammad and afterwards, unlike the first phase, we can find no unit that consisted of military refugees

[98]Ayalon, ″Wafidiya,″ 92, 100.

alone, and only those amirs who had personal connections with the sultan could reach high rank.

The amir Badr al-Dīn Jankalī ibn al-Bābā (no. 20 in the Appendix) advanced to the highest rank in the Mamluk Sultanate, but when he arrived in Egypt in 703/1304, he had brought only several horsemen with him. So when he was made an amir of one hundred, his unit could not have consisted of Mongols only. The reason for his advancement is unknown, but it is clear that it depended on his personal connection to Sultan al-Nāṣir rather than his troop′s strength. This connection is reflected in the fact that his daughter married a son of al-Nāṣir.

If we again take an example from the Oirat *wāfidīyah,* the amir Qararnah (no. 18 in the Appendix) is noteworthy. After the dissolution of this group, most of the Oirat were divided among the amirs′ units, and it is not clear how this amir Qararnah was treated. But during the third reign of al-Nāṣir Muḥammad, Qararnah was sent to the Ilkhanids as an envoy, and during the reigns of the sons of al-Nāṣir, he was sent to post-Ilkhanid Baghdad twice. These appointments were presumably due to his geographical knowledge of Iran or his skill as an interpreter of the Mongol language. He eventually reached the rank of amir of *ṭablkhānah,* thus becoming the most successful Oirat in the Mamluk Sultanate.

The group commanded by Tamurtāsh (no. 24 in the Appendix) was welcomed by al-Nāṣir Muḥammad at first, but when al-Nāṣir arrested Tamurtāsh and executed him, the men were divided among Mamluk amirs.[99] Bahādur al-Damurdāshi (no. 25 in the Appendix) had been under this Tamurtāsh′s command, as his *niṣbah* shows, and then was assigned to al-Nāṣir′s mamluk unit. Afterwards, though his former colleagues vainly rose in revolt in 732/1331–32,[100] he reached the highest rank of amir, and his prosperity continued until his death in 743/1343, in the reign of al-Ṣāliḥ Ismā‘īl. He married a daughter of al-Nāṣir, and it is clear that his advancement was closely related to his personal connection to the sultan. Similarly, the brothers Badr al-Dīn and Sharaf al-Dīn ibn Khaṭīr (nos. 13–14 in the Appendix) were promoted to high ranks, despite their original affiliation, the Rūm *wāfidīyah.*

One of the last refugees, Najm al-Dīn Maḥmūd ibn Sharwīn (no. 26 in the Appendix) was supposedly advanced because of his skill as an administrator. Before coming to Egypt, he had been a vizier of Baghdad,[101] and that is why he was treated favorably by Sultan al-Nāṣir. And then, in the reign of al-Manṣūr Abū Bakr, a son of al-Nāṣir, he was appointed vizier.

Thus, throughout the second phase, we can find several *wāfidī* amirs (category [b]), who kept only a few of their original soldiers (category [d]) under their

---

[99] Al-‘Aynī, ″‘Iqd,″ MS Süleymaniye 835, fol. 97v.

[100] Ibid., fols. 171v–172r.

[101] However, I could not find any evidence that he was a vizier in Baghdad in Persian sources.

command. These amirs were able to reach high rank, not by their military importance, but by their strong connections to the sultan or by their skill as administrators. In this phase, we also find high amirs recruited into the sultans′ units (category [a]) whose advancement owed to personal factors.

In this second phase, we still find several examples of marital ties between *wāfidī* families and the Mamluk elite.[102] These ties, however, were based on the sultans′ favoritism toward them, while those in the first phase were based on the *wāfidīyah*′s military importance.

CONCLUSION

The present study has clarified that the *wāfidīyah*′s status was higher than scholars have realized. A certain number of them were recruited into the royal troops, not into the *ḥalqah,* a minor unit in the Mamluk army. Some of the *wāfidī* amirs reached the highest rank in the Mamluk army.

Of course, their status was not unchanging from the beginning to the end, and the change in their status closely reflected the change of structure of the Mamluk Sultanate. At the outset of the Mamluk Sultanate, the *wāfidīyah* could retain their tribal units because the sultans needed to make use of their capable forces to strengthen the newborn state and to solidify their own authority. Owing to this tribal solidarity, their leaders could reach high positions in the Mamluk military system. In the third reign of al-Nāṣir Muḥammad, however, the centralization of power was achieved, and the sultan no longer needed to depend on strong units of military refugees. He could advance his favorite retainers whether they were sultan′s mamluks or not.[103] Therefore, in this phase, several highly advanced *wāfidī* amirs emerged from *wāfidīyah* groups which had only a small number of personnel or which had collapsed and completely dissolved.

It is true that the *wāfidīyah* were not mamluks, i.e., those who were brought to the Mamluk Sultanate as slaves or captives. But differences between free men and slaves in the Mamluk army seems to have been less significant than has been realized, at least in the early Mamluk period. The *wāfidīyah* were outsiders to the sultanate, just as the mamluks were. The *wāfidīyah* often shared with the royal mamluks the sense of belonging to a certain sultan,[104] because their only base of

APPENDIX: THE LIST OF THE *WĀFIDĪ* AMIRS

(The number after the name is the number of the group in the previous list with which the individual was associated.)

1. Sayf al-Dīn Ṣaraghān Āghā (no. 2): His name is found only in the account of 661/1263 (Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 180; al-Nuwayrī, *Nihāyah,* 30:89–90) and in the allocation list *(maktūb jāmiʻ bi-al-tamlīk)* of 663/1265 (Baybars al-Manṣūrī, *Zubdah,* 98–99; al-Nuwayrī, *Nihāyah,* 30:276–81; Mufaḍḍal, *Nahj,* 1:479–86; al-Maqrīzī, *Sulūk,* 1:532–34). Amitai-Preiss identifies him as a leader of the Mongol *wāfidīyah* of 660/1262. See Amitai-Preiss, ″Mamluk Officer Class,″ 295.
2. Sayf al-Dīn Karmūn al-Tatarī (d. 664/1266, no. 3): His biography is found in Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 264; Shāfiʻ ibn ʻAlī, *Ḥusn,* 111; al-Nuwayrī, *Nihāyah,* 30:130. He sought refuge in Cairo in 661/1263 accompanied by another thirteen Mongol commanders and their men, and his name is also found in the allocation list of 663/1265. One of his daughters married al-Ẓāhir Baybars and then the amir Sayf al-Dīn Kunduk al-Ẓāhirī, while another married al-Manṣūr Qalāwūn and gave birth to his son al-Ṣāliḥ ʻAlī. Shāfiʻ ibn ʻAlī, *Faḍl al-Maʼthūr min Sīrat al-Malik al-Manṣūr* (Sidon, 1998), 111; Baybars al-Manṣūrī, *Zubdah,* 164, 228; idem, *Tuḥfah,* 56, 87. See also Amitai-Preiss, ″Mamluk Officer Class,″ 296.
3. Badr al-Dīn Baktāsh ibn Karmūn (no. 3): Ibn Shaddād, *Tārīkh,* 338. His name is found only in the account of the battle of Ḥimṣ in 679/1280 (Baybars al-Manṣūrī, *Zubdah,* 197; idem, *Tuḥfah,* 100; al-Nuwayrī, *Nihāyah,* 31:33–34; Ibn al-Furāt, *Tārīkh,* 7:216).
4. Sayf al-Dīn Nūkāy al-Tatarī (d. 699/1300, no. 3): He was one of the fourteen Mongol commanders of 661/1263. He was arrested in Baybars′ reign but later was released and appointed amir of one hundred by Qalāwūn. He died at the battle of Wādī al-Khāzindār (al-ʻAynī, *ʻIqd,* 4:17). One of his daughters married Baybars (Ibn al-Dawādārī, *Kanz,* 8:219; al-Nuwayrī, *Nihāyah,* 30:368; al-Maqrīzī, *Sulūk,* 1:640–41; Ibn Taghrībirdī, *Nujūm,* 7:179). Another daughter, named MNKBK, married al-Ṣāliḥ ʻAlī ibn Qalāwūn in 681/1282 (Ibn ʻAbd al-Ẓāhir, *Tashrīf,* 20; Baybars al-Manṣūrī, *Zubdah,* 228–29; al-Nuwayrī, *Nihāyah,* 31:90; al-Maqrīzī, *Sulūk,* 1:709) and gave birth to a prince, Mūsá (al-Nuwayrī, *Nihāyah,* 32:170). A third daughter, named Ardukīn (Urdutakīn), married al-Ashraf Khalīl ibn Qalāwūn in 682/1284 (Ibn ʻAbd al-Ẓāhir, *Tashrīf,* 44; Baybars al-Manṣūrī, *Zubdah,* 232–33; al-Nuwayrī, *Nihāyah,* 31:99; al-Maqrīzī, *Sulūk,* 1:717.), and after his death married al-Nāṣir Muḥammad and gave birth to a prince, ʻAlī, who died at an early age. She died in 724/1324. Mufaḍḍal, *Nahj* in Kortantamer, *Ägypten,* 23; Ibn Ḥajar, *Durar,* 1:347–48;

al-ʻAynī, "ʻIqd," MS Veliyyüddin 2394, fol. 481; Howayda al-Harithy, "Turbat al-Sitt: An Identification," in *The Cairo Heritage: Essays in Honor of Laila Ali Ibrahim,* ed. Doris Behrens-Abouseif (Cairo, 2000), 103–21.

5. Jamāl al-Dīn Khaḍir ibn Nūkāy (d. 728/1328, no. 3): He was an amir of *ṭablkhānah.* Biography: al-Nuwayrī, *Nihāyah,* 33:275; Ibn Ḥajar, *Al-Durar al-Kāminah fī Aʻyān al-Mi'ah al-Thāminah* (Hyderabad, 1972–76), 2:205; al-Maqrīzī, *Sulūk,* 2:304; al-ʻAynī, "ʻIqd," MS Süleymaniye 835, fol. 109r; Ibn Taghrībirdī, *Nujūm,* 9:275. See also Sato Tsugitaka, "The Proposers and Supervisors of al-Rawk al-Nāṣirī in Mamluk Egypt," *Mamlūk Studies Review* 2 (1998): 86.
6. Sayf al-Dīn Karāy al-Tatarī (no. 3): He was one of the Mongol refugees, but only later historians list his name (Baybars al-Manṣūrī, *Zubdah,* 84; idem, *Tuḥfah,* 51; al-Maqrīzī, *Sulūk,* 1:501; al-ʻAynī, ʻ*Iqd,* 1:365). One of his daughters married Baybars. When Qalāwūn became sultan, Karāy joined the amir Shams al-Dīn Sunqur al-Ashqar in Ṣaḥyūn, and returned to Cairo with al-Baḥrīyah al-Ẓāhirīyah and al-Tatār al-wāfidīyah in 680/1281 (Baybars al-Manṣūrī, *Zubdah,* 193, 195, 200; al-Nuwayrī, *Nihāyah,* 31:36; Ibn al-Furāt, *Tārīkh,* 7:214, 221). He had two sons, Shams al-Dīn Āqsunqur and Alṭunṭāsh (Ibn Shaddād, *Tārīkh,* 114, 338).
7. Sayf al-Dīn Jabrak al-Tatarī (no. 3): He was one of the fourteen Mongol commanders of 661/1263. His name is found only in the account of the battle of Ḥimṣ in 692/1293 (Baybars al-Manṣūrī, *Zubdah,* 181; al-Nuwayrī, *Nihāyah,* 31:33; Ibn al-Furāt, *Tārīkh,* 7:215; al-Maqrīzī, *Sulūk,* 1:692).
8. Ḥusām al-Dīn Bījār al-Bayburtī (d. 681/1282, no. 7): He and his son Bahādur came from al-Rūm in 675/1276, following Saktāy (no. 10 below) (Ibn Shaddād, *Tārīkh,* 155). Biography: al-Yūnīnī, *Dhayl,* 4:168; Ibn al-Ṣuqāʻī, *Tālī Kitāb Wafayāt al-Aʻyān* (Damascus, 1974), 54–55; al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt* (Wiesbaden, 1961–), 10:360; al-Maqrīzī, *Sulūk,* 1:711.
9. Badr al-Dīn Bahādur ibn Bījār al-Bayburtī (d. 680/1281, no. 7): His wife was a daughter of Saktāy. Biography: al-Yūnīnī, *Dhayl,* 4:107; al-Nuwayrī, *Nihāyah,* 31:84–85; al-Ṣafadī, *Wāfī,* 10:295; al-Maqrīzī, *Al-Muqaffá al-Kabīr* (Beirut, 1991), 2:500; Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʻda al-Wāfī* (Cairo, 1986–), 3:427.
10. Saktāy (no. 7): He was the first refugee from al-Rūm, who came in 675/1276 with his brother Jāwrajī. His daughter Ashlūn married Qalāwūn in 681/1282–83 and gave birth to his son al-Nāṣir Muḥammad (Ibn ʻAbd al-Ẓāhir, *Tashrīf,* 110; Baybars al-Manṣūrī, *Zubdah,* 229; al-Nuwayrī, *Nihāyah,* 31:90, 267; al-Maqrīzī, *Sulūk,* 1:709; Ibn Ḥajar, *Durar,* 1:459).
11. Mubāriz al-Dīn Sawārī ibn Tarkarī, Amīr Shikār (d. 704/1304–5, no. 7): He was one of the Rūm *wāfidī* amirs (Ibn Shaddād, *Tārīkh,* 154–55; al-Yūnīnī,

Dhayl, 3:166; Mufaḍḍal, *Nahj,* 2:407–8). He is also known as one of the sixteen amirs who supported al-Manṣūr Lājīn in 696/1296 (Baybars al-Manṣūrī, *Zubdah,* 313). Biography: Baybars al-Manṣūrī, *Zubdah,* 382; al-Maqrīzī, *Sulūk,* 2:14; Ibn Ḥajar, *Durar,* 2:275; Ibn Taghrībirdī, *Nujūm,* 8:217.

12. Sharaf al-Dīn Ḥusayn ibn Jandarbak (d. 729/1328, no. 7): He was one of the Rūm *wāfidī* amirs. He served the amir Lājīn (later sultan) and became an amir of one hundred in the third reign of al-Nāṣir. Biography: Ibn al-Dawādārī, *Kanz,* 9:352; al-Nuwayrī, *Nihāyah,* 33:288; al-Ṣafadī, *A'yān al-'Aṣr wa-A'wān al-Naṣr* (Beirut and Damascus, 1998), 2:259–64; Mufaḍḍal, *Nahj* in Kortantamer, *Ägypten,* 44; al-Maqrīzī, *Muqaffá,* 3:649; idem, *Sulūk,* 2:313; al-'Aynī, "'Iqd," MS Süleymaniye 835, fol. 128v; Ibn Taghrībirdī, *Manhal,* 5:152; idem, *Nujūm,* 9:276–77. See also Amitai, "Remaking of Military Elite," 162.
13. Badr al-Dīn Mas'ūd ibn Awḥad ibn Khaṭīr (b. 683/1284–85, d. 754/1253–54, no. 7): He was a son of the Rūm *wāfidī* amir Niẓām al-Dīn Awḥad ibn Khaṭīr (Ibn Shaddād, *Tārīkh,* 174–75, 337; Ibn 'Abd al-Ẓāhir, *Rawḍ,* 462). His grandfather Sharaf al-Dīn Mas'ūd ibn Khaṭīr was a prominent amir in the Rūm Saljuqid sultanate. Born in Damascus, he was favored by al-Nāṣir and held the posts of grand *ḥājib* and governor (*nā'ib*) of Ghazza and Tripoli. Biography: al-Ṣafadī, *A'yān,* 5:417–27; Ibn Ḥajar, *Durar,* 6:110; Ibn Taghrībirdī, *Nujūm,* 10:292–93.
14. Sharaf al-Dīn Maḥmūd ibn Awḥad ibn Khaṭīr (d. 749/1249, no. 7): He was a brother of the above Badr al-Dīn Mas'ūd. He served also as *ḥājib* in Damascus and Cairo. Biography: al-Ṣafadī, *A'yān,* 5:364; Ibn Ḥajar, *Durar,* 6:80.
15. 'Izz al-Dīn Aydamur al-Khaṭīrī al-Manṣūrī (d. 738/1337–38, no. 7): Originally he was one of the mamluks of Niẓām al-Dīn Awḥad ibn Khaṭīr (father of the amirs numbered 13 and 14 above) and was later assigned to the Burjīyah unit by Qalāwūn. He reached the rank of amir of one hundred in the third reign of al-Nāṣir. Biography: al-Yūsufī, *Nuzhah,* 384; al-Ṣafadī, *A'yān,* 1:660; idem, *Wāfī,* 10:17; Ibn Ḥajar, *Durar,* 1:511–12; Ibn Taghrībirdī, *Manhal,* 3:180–82; idem, *Nujūm,* 9:312. See also Amitai, "Remaking of the Military Elite," 161; Sato, "Proposers and Supervisors," 82.
16. Ṭaraghāy (no. 12): He was a leader of the Oirat refugees in 695/1296. For his career under the Mongols, see Rashīd al-Dīn, *Jāmi' al-Tawārīkh* (Tehran, 1995), 1262, and also Shimo Hirotoshi, *The Political Structure of the Mongol Empire: The Core Tribes of the Ilkhanid* (in Japanese) (Tokyo, 1995), 275–76. He was favored by al-'Ādil Kitbughā, but in the reign of al-Manṣūr Lājīn he and the Oirats were purged (al-'Aynī, '*Iqd,* 3:356). His brief biography is found only in Ibn Taghrībirdī, *Manhal,* 6:381–82.
17. Ulūṣ (d. 699/1300?, no. 12): After the purge of the Oirat, among their leaders,

he was the only one released, for unknown reasons. In 699/1300, he conspired with Sayf al-Dīn Buriltāy, one of the sultan's mamluks, and ʻAlā' al-Dīn Quṭulūbars al-ʻĀdilī, a mamluk of Kitbughā, and revolted, but they were soon put down and executed (Baybars al-Manṣūrī, *Zubdah,* 330; idem, *Tuḥfah,* 156; al-Nuwayrī, *Nihāyah,* 31:381; Ibn al-Dawādārī, *Kanz,* 9:15; Mufaḍḍal, *Nahj,* 2:632; al-Maqrīzī, *Sulūk,* 1:883).

18. Qararnah (d. 749/1348–49, no. 12): One of the Oirat refugees, he was appointed amir of *ṭablkhānah* by al-Nāṣir. He was sent as envoy to the Ilkhanids several times. Biography: Ibn Ḥajar, *Durar,* 4:290.
19. Sulāmish (d. 698/1299, no. 13): He was the governor of al-Rūm under the Ilkhanids and sought refuge in Egypt in 698/1299. Leaving his brother Quṭquṭū, who was given an *iqṭāʻ* in Egypt, he went to al-Rūm, where he was caught and executed by the Ilkhanid army. See Rashīd al-Dīn, *Jāmiʻ,* 1287, 1289; Shimo, *Political Structure,* 129.
20. Badr al-Dīn Jankalī ibn al-Bābā (d. 746/1346, no. 14): His daughter married Ibrāhīm, the son of al-Nāṣir, and he became one of the twenty-four amirs of one hundred in the third reign of al-Nāṣir. Biography: al-Ṣafadī, *Aʻyān,* 2:163–66; idem, *Wāfī,* 11:199–200; Ibn Ḥajar, *Durar,* 2:89–91; al-Maqrīzī, *Khiṭaṭ,* 2:134–35; idem, *Muqaffá,* 4:75–77; Ibn Taghrībirdī, *Nujūm,* 10:143–44; Ayalon, "Wafidiya," 93; Amitai, "Remaking of the Mamluk Elite," 163; Sato, "Proposers and Supervisors," 80.
21. Nāṣir al-Dīn Muḥammad ibn Jankalī (b. 697/1297–98, d. 742/1342, no. 14): He was born in Diyār Bakr and came to Cairo with his father Jankalī. He became a Hanbali jurisprudent *(faqīh)*. Biography: al-Ṣafadī, *Aʻyān,* 4:379–95; idem, *Wāfī,* 2:310–13; Ibn Ḥajar, *Durar,* 5:155; al-Maqrīzī, *Muqaffá,* 5:508; Ibn Taghrībirdī, *Nujūm,* 9:325.
22. Sayf al-Dīn Dilanjī (d. 751/1350, no. 14): He was a nephew of Jankalī. He arrived at Cairo in 730/1329–30 and later held the post of governor of Ghazza. Biography: al-Ṣafadī, *Aʻyān,* 2:356–57; idem, *Wāfī,* 14:28–29; Ibn Ḥajar, *Durar,* 2:228; Ibn Taghrībirdī, *Nujūm,* 10:249.
23. Sayf al-Dīn Ṭāyirbughā (Ẓahīrbughā) (d. 738/1337, no. 20): He was one of the relatives of Sultan al-Manṣūr Qalāwūn. When he arrived with Ilkhanid envoys in 726/1326, he was made amir of *ṭablkhānah*, and was raised to the rank of amir of one hundred before long. He read and wrote the Mongol language in the sultan's court. Biography: al-Ṣafadī, *Aʻyān,* 2:635–36; Ibn Ḥajar, *Durar,* 2:234.
24. Tamurtāsh (Damurdāsh) ibn Jūbān (d. 728/1328, no. 22): He was the governor of al-Rūm in Ilkhanid territory, and he sought refuge in Egypt in 728/1328. He was made amir of one hundred, but al-Nāṣir executed him seven months after he arrived, on account of the peace treaty with the Ilkhanids. Biography:

al-Ṣafadī, *A'yān,* 2:111–15; idem, *Wāfī,* 10:400–3; Ibn Ḥajar, *Durar,* 2:62; 2:228–29. See also Shimo, *Political Structure,* 150–53.

25. Bahādur al-Damurdāshī al-Nāṣirī (d. 743/1343, no. 22): He was originally a mamluk of Tamurtāsh and was later assigned to al-Nāṣir's mamluk unit. He became amir of one hundred in the latter half of the third reign of al-Nāṣir. Biography: al-Shujā'ī, *Tārīkh,* 252–53; al-Ṣafadī, *Wāfī,* 10:299; idem, *A'yān,* 2:62–63; Ibn Ḥajar, *Durar,* 2:36.
26. Najm al-Dīn Maḥmūd ibn 'Alī ibn Sharwīn (d. 748/1347, no. 23): Known as "the vizier of Baghdad." He sought refuge from Baghdad accompanied by some officials and their families in 738/1337. He was made amir of one hundred and after al-Nāṣir's death he held the post of vizier three times. Biography: al-Ṣafadī, *A'yān,* 5:399; Ibn Ḥajar, *Durar,* 6:90; al-Maqrīzī, *Sulūk,* 2:755; Ibn Taghrībirdī, *Nujūm,* 10:183; Ayalon, "Wafidiya," 93.
27. Ḥusām al-Dīn al-Ḥasan ibn Muḥammad ibn al-Ghawrī (no. 23): He came to Egypt with the above Maḥmūd ibn Sharwīn and was appointed Hanafi qadi (al-Shujā'ī, *Tārīkh,* 19). Biography: al-Ṣafadī, *Wāfī,* 3:22; Ibn Ḥajar, *Durar,* 3:430.
28. Nāṣir al-Dīn Khalīfah ibn 'Alī Shāh (d. 749/1348, no. 24): He was a son of Tāj al-Dīn 'Alī Shāh, a *ṣāḥib al-dīwān* in the Ilkhanid state. He sought refuge in Damascus in 738/1337, counting on the support of the amir Sayf al-Dīn Tankiz al-Ḥusāmī, governor of Syria, and was appointed commander of one thousand of Damascus. Biography: al-Ṣafadī, *A'yān,* 2:324–25; idem, *Wāfī,* 13:383–84; Ibn Ḥajar, *Durar,* 2:218; al-Maqrīzī, *Sulūk,* 2:794; idem, *Muqaffá,* 3:767.

Cairene Cemeteries as Public Loci in Mamluk Egypt

Introduction

After the conquest of Egypt, the Arab Muslims located their graveyards in the area beneath the Muqaṭṭam Mountain, stretching outward from the southeast side of their new capital, al-Fusṭāṭ. This older and larger cemetery area became known as al-Qarāfah al-Kubrá (the Greater Qarāfah). Subsequently, the cemetery area developed around several famous mausolea, including the mausoleum of Imām al-Shāfiʻī, extended to the Muqaṭṭam as well, and came to be called al-Qarāfah al-Ṣughrá (the Lesser Qarāfah). Also, outside the Naṣr Gate, there stretched another cemetery area, eventually swallowed by the so-called al-Ṣaḥrā' that prospered most during the Mamluk period, and had stronger ties with the Mamluk ruling elites. There were several other smaller graveyards, and in this article, I include all cemetery areas in the region surrounding Cairo/Fusṭāṭ in the term ″Cairene cemeteries,″ although al-Qarāfah al-Kubrá preceded the construction of Cairo.

These cemetery areas were primarily sanctuaries where people came to console the souls of the dead, or to seek help for worldly difficulties and pray for entrance into heaven through the fulfillment *(ijābah)* of the *duʻā'* (supplicatory prayer). Likewise, crowds including women and children went there on excursions, leading to the depiction of these areas by the historian al-Maqrīzī (d. 845/1442) as ″the greatest meeting place of the Egyptian people, and their most popular pleasure resort.″ [1]

Literature detailing these cemetery areas and the practice of visitation *(ziyārah/ziyārāt)* among Egyptian Muslim society were prominent in the Mamluk era and continued even through the nineteenth century. Yet, in vicissitude of time, these works tended to focus on the *ahl al-bayt* (the Prophet Muḥammad′s holy family), arranging information about them into chapters. Al-Qalʻāwī (d. 1815), al-Shablanjī (d. 1883), and al-Mushkī (published in 1919), for instance, composed treatises of this sort, and al-Nabhānī′s (d. 1931–32) compilation of *karāmāt* (miracles and virtues) achieved by ″saints″ should be recalled in this regard.[2] Ḥasan Qāsim,

in addition, listed famous mausolea in 1936.[3] Meanwhile, scholarly investigations in the Western academy were initiated by A. F. Mehren in the latter half of the nineteenth century,[4] followed by R. Guest and L. Massignon, primarily focusing on topography.[5] Great breakthroughs were made by Yūsuf Rāghib, who, after completing an inventory of *ziyārah* guidebooks of the cemeteries, published many substantial studies on this subject.[6] Since the 1980s, Christopher Taylor and the present author have engaged this subject from social-historical or historical-anthropological perspectives, detailing customs and the social background and trying to reconstruct the social milieu.[7] More recently, new studies seem to be flourishing in this field.

This article is an attempt to reconsider the historical characteristics and illuminate actual conditions of these cemetery areas, where any Muslim could participate in various activities, each in his or her own way, irrespective of their position in the social strata, place of origin, gender, or age.[8] Particularly, primary consideration is focused on the various ways in which people participated, based on their social positions or strata, and the supervision of that area by the Mamluk government.

[8]The main historical sources of this article have already been referred to orally at the Annual Meeting of the Historical Society of Japan in 1991, also partly published in Japanese as "The City of the Dead and Egyptian Society from the 12th to the 15th Century."

As a result, I hope to elucidate the various roles that these cemeteries played in the Cairo/Fusṭāṭ region, and how the public loci in Islamic Egypt functioned for members of Egyptian society, by reconsidering the relationships between cemetery areas and the people of various strata of society in Cairo, as well as the interactions among those people.[9]

CEMETERIES AS RESIDENTIAL AND LEISURE PLACES

Cairene cemeteries, including the two Qarāfahs and al-Ṣaḥrā', were primarily huge areas where the dead of Cairo and al-Fusṭāṭ, from sultans to paupers, were entombed. These were graveyards for all Muslims, who probably requisitioned them as their burial land from Coptic Egyptians after the conquest. Copts were allocated a spot near the Ḥabash Lake as their cemetery, although the higher stratum of Copts, such as the pope or some bishops, were buried in churches like al-Mu'allaqah of Old Cairo, or, in some cases, the pope's body was relocated to the monastery of Abū Maqār in Wādī Naṭrūn.[10] The main cemeteries for Jews and Samaritans may have stood next to the Coptic ones beside the Ḥabash Lake, which the 56th Coptic Pope Khā'īl III (880–907) sold to them. Perhaps this measure was taken due to the construction of the *maydān* (square) in a new capital, al-Qaṭā'i', by Ibn Ṭūlūn. Other *dhimmī*s interred their dead within churches, such as the Melikites, who also buried their dead in the Quṣayr Monastery on the Muqaṭṭam, the Armenians, and the Nestorians.[11] Thus, Muslim cemeteries were adjacent to *dhimmī* graveyards, although from a shari'ah point of view, they should have been kept separate by great distances.[12]

[12]Although not written in the Mamluk period, see al-Damanhūrī (d. 1192/1778), *Iqāmat al-Ḥujjah al-Bāhirah 'alá Hadm Kanā'is Miṣr wa-al-Qāhirah* (Berkeley, 1975), 63 (text).

At the same time, since the Cairene cemetery areas were located on the periphery of the Cairo/Fusṭāṭ region, they were vulnerable to easy plunder by raiding outsiders. The invasion of the areas of al-Qarāfah or by the Qarmatians and Fatimid Maghribians, and later by the Ottomans, may be recalled in this regard.[13]

People from all across the social stratum, regardless of gender or age, visited the tombs of their acquaintances or "saints"; these activities were termed *ziyārah*.[14] Also, travelers from outside of Egypt came to visit the cemeteries, drawn by such sites as the mausoleum of Imām al-Shāfiʻī.[15] Many of them stopped on their Meccan pilgrimages. While visiting famous mausolea, visitors would often form groups, each led by a shaykh of *al-ziyārah,* an authority and guide, making a circuit of the holy mausolea following their own routes. In 845/1442, for instance, eleven groups went on tours of the two-Qarāfahs simultaneously. The shaykhs of *al-ziyārah,* who might be considered tour leaders, wrote guidebooks for tomb visitation, termed "*kutub al-ziyārah*" (books of visit) as well. These treatises, which are utilized in this article, detailed the customs of visitation, and cited abundant anecdotes about the late saints.[16] The *ziyārah* was made not only by visiting groups (sing. *ṭā'ifah*), but also by individuals or groups with specific motives. For instance, at the tomb of al-Shāṭibī in al-Qarāfah al-Ṣughrá, verses of the deceased and the Quran were recited by shaykhs and their pupils on the first Tuesday of each month.[17]

The sanctity of the Qarāfah cemeteries was assumed to be strengthened by their location beneath the holy Muqaṭṭam Mountain. The word al-Qarāfah is employed interchangeably with *safḥ al-Muqaṭṭam* (the foot of al-Muqaṭṭam Mountain) in historical sources. The Muqaṭṭam itself attracted the reverence of

[14]The term "saint" in this article is employed to denote an analytical concept, which is applied to any person who won veneration from others, including those who were called *walī*/*awliyā',* *ṣāliḥ*/*ṣāliḥūn,* etc. Concerning various terminological problems on "saints," see Tetsuya Ohtoshi, "'Saints' and 'the Cult of the Saints'" (in Japanese), in *The Handbook of Islamic Studies* (Tokyo, 1995), 240–48.

[15]Before the Mamluk period, in the middle of the twelfth century, al-Shaykh Ibn al-Ṣābūnī, who was living in Damascus, asked Nūr al-Dīn Maḥmūd, the Zangid ruler, for permission to visit Imām al-Shāfiʻī in al-Qarāfah, and his hope was realized. See Abū Shāmah, *Kitāb al-Rawḍatayn* (Cairo, 1956–62), 2:68.

[16]For more detail on the manners and customs which prevailed in Egyptian cemeteries and their visits, and also on the *shaykh al-ziyārah* and *kutub al-ziyārah,* see Ohtoshi, "The Manners, Customs, and Mentality"; idem, "The Egyptian City of the Dead and Visits to Holy Graves"; and Taylor, *In the Vicinity of the Righteous.*

[17]Shihāb al-Dīn Aḥmad al-Qasṭallānī, "Al-Fatḥ al-Mawāhibī fī Tarjamat al-Imām al-Shāṭibī," Dār al-Kutub MS 1766 Tārīkh Taymūr, fols. 90–93.

Egyptians of various religions—Copts cherished their own legendary memory of moving the Muqaṭṭam Mountain. A person entombed in this area may have been believed to have escaped Judgment. Muslim literature often depicted al-Muqaṭṭam through personification, and every important historical figure was said to have had a relationship with it. Later, the *ziyārah* tract of al-Shuʿaybī (seventeenth century) even illustrated its cosmological position by ranking it with Mount Arafat, the Kaʿbah, and Jerusalem.[18] Al-Muqaṭṭam was therefore described as *″al-muqaddas″* (holy) by both Muslim and Coptic literature.[19]

As a result, a *duʿā'* (supplicatory prayer) performed there was thought more likely to be fulfilled. The fulfillment *(ijābah)* of individual *duʿā'* constituted a crucial concern of visitors to graveyards, and its content tended to concentrate on worldly affairs or entering heaven.[20] Moreover, mass prayers conducted by rulers were often held there, mainly in the back enclosure of Sultan Barqūq′s religious complex in al-Ṣaḥrā', seeking the abatement of the plague or the rising of the Nile. People, including Copts and Jews, were urged to go there to pray, and huge amounts of bread, meat, and other items were distributed on those occasions.

After the death of a relative, the bereaved family would stay for long periods at the graveyard to comfort the soul of the deceased.[21] Additionally, visitors from in and out of Cairo/Fusṭāṭ came to visit these cemetery areas. As time went on the infrastructure in al-Qarāfah was improved, with numerous walled tomb structures enabling people to live there, and it consequently became inhabited by the common people.

As early as the Tulunid period, histories already suggest the presence of inhabitants, particularly those who enjoyed the benefits of an aqueduct from the Ḥabash Lake to al-Maʿāfir (al-Qarāfah al-Kubrá), constructed by Ibn Ṭūlūn (d. 270/884).[22] In the Ikhshidid period (935–69), the situation seems to have remained

the same.[23] From the Arab conquest to the Fatimid period, the development of the al-Qarāfah al-Kubrá area, first as a suburb of al-Fusṭāṭ and then as a graveyard area, is evidenced by archeological research as well.[24] When they entered Egypt, the Fatimids were reported to have made al-Qarāfah al-Kubrá a residential area, and they built mosques, large pavilions, monuments, and cisterns, and so many moved there that it eventually became congested.[25] There were, however, also struggles between the Qarāfah resident Egyptians and al-Maghāribah, who came with the Fatimids. Notably, in 363/973, the Maghāribah invaded the Qarāfah district, evicting Egyptians, and plundered or occupied it.[26] In those days, the natives of al-Qarāfah may have been known as al-Qarāfīyah, who went so far as to send robes of honor to a swindler named Shurūṭ, possibly a converted Copt, when the Banū Qurrah of the Arab Bedouins supported him as their caliph.[27] Nevertheless, the Fatimids later distributed to the Qarāfah residents a great deal of meat and sweets through the mosque, and built a free mill complete with working beasts and fodder.[28] Sufis were reported to seclude themselves in the Muqaṭṭam, though the reliability of this passage in the text is uncertain.[29] Although it suffered disasters in al-Mustanṣir′s reign (427–87/1036–94), and in 564/1168, the area revived in the Ayyubid period, with many new buildings, such as Ribāṭ Fakhr al-Dīn and the *muṣallá* (oratory) of Ibn al-Arsūfī. Most famous of all was the rebuilding of the mausoleum of Imām al-Shāfiʿī in al-Qarāfah al-Ṣughrá with an aqueduct built by Sultan al-Kāmil.[30] The custom of *ziyārah* seems to have been established in this period, as indicated by the appearance of *ziyārah* tracts.[31]

Geographical works of this period also confirm the existence of inhabitants in the Qarāfahs.[32]

The Bahri Mamluk period is considered one of the high points of the Qarāfahs; they are thought to have been fully developed to accommodate both sojourners and inhabitants. The residents of Cairene cemeteries were too numerous to be mentioned. According to the sources, accommodations for residents and sojourners included mosques, *khānqāh*s, *zāwiyah*s, *ribāṭ*s, *madrasah*s (colleges), *mashhad*s (mausolea), *turbah*s (mausolea), *maqbarah*s (graveyards), and *qubbah*s (cupolaed mausolea). This situation was made possible through equipment and development of religious institutions in this period based mainly on the *waqf* (religious endowment) system. Other facilities recorded were a *muṣallá* (oratory), *sūq*s, *furn*s (baking ovens), public bathhouses, an aqueduct, and wells. Residents and sojourners consisted of people concerned with religious institutions, Sufis, superintendents and employees of the above-mentioned public facilities, persons related to the cemetery industry such as grave diggers, and so-called "*fuqarā'*," assumed to be living with their families.[33] Al-Maqrīzī 's description of this situation is widely known: "Then amirs of al-Nāṣir Muḥammad's dynasty rebuilt this cemetery area. . . . The soldiers and the rest of the people followed them, and built mausolea, *khānqāh*s, *sūq*s, mills, and public bathhouses as far as the area from al-Ḥabash Lake to al-Qarāfah Gate, and the residential area of Fusṭāṭ to Muqaṭṭam Mountain became built up.[34]

Subsequently, as al-Qarāfah also attracted the governing elite of the dynasty, it became inhabited by them, for instance, Vizier Shams al-Dīn Ibn al-Sal'ūs (d. 693/1294), Tāj al-Dīn Ibn Ḥinnā (d. 707/1308), and *qāḍī al-quḍāh* (chief justice) Ibn Bint al-A'azz (d. 695/1295–96). Also, the area began to produce notable scholars of the age, such as Shihāb al-Dīn al-Qarāfī (d. 682/1283–84), Aḥmad ibn 'Abd Allāh al-Qarāfī (d. 802/1402), and Ibn al-Hā'im (d. 815/1412).[35] Bearers of

the *nisbah* ″al-Qarāfī,″ or ″native of al-Qarāfah,″ were recorded in rather large numbers.[36] It is interesting to note that, before around 844/1440–41, visits to the mausoleum of al-Sayyidah Ruqayyah were hindered because people—including Shihāb al-Dīn Ibn Taqā—had taken up residence there.[37] In this manner, the commoners were a driving force for the custom of living in the Qarāfahs, and thereafter the elites of the dynasty followed suit.

As places of residence, the two Qarāfahs, al-Kubrá and al-Ṣughrá, suffered severe devastation due to recurring pestilence, but ironically, at the same time, they expanded as graveyards. In 806/1403–4, the inhabitants were reduced in numbers by a disaster, then in 833/1430 and 864/1460, a huge number of deaths resulted from pestilence reported in the areas included in the two Qarāfahs.[38] Among the dwellers of al-Qarāfah, al-Sūdān al-Takārirah, who originated in an area which may have stretched from western Sudan to Mali, were well known to have become the greatest victims. According to the sources, only a handful of the three thousand al-Takārirah survived the pestilence, notwithstanding the fact that they sought refuge in the Muqaṭṭam Mountain.[39] These al-Takārirah seem mostly to have settled there on their Meccan pilgrimages, as exemplified in the case of the well-known King Mansā Walī, al-Malik Mūsá ibn Abī Bakr, who stopped in Egypt (724/1324) accompanied by a retinue of ten thousand. He enjoyed the hospitality shown there, famously dispersing a large quantity of gold, and stayed in al-Qarāfah al-Ṣughrá.[40]

On the other hand, the Ṣaḥrā' area developed toward the northeast of the

Levtzion, ″Mamluk Egypt and *Takrûr*,″ in *Studies in History and Civilization* (Jerusalem, 1988), 183–207.

citadel in the Mamluk period, and the graveyard, which appeared in the Fatimid period outside the Naṣr Gate, combined with this area.[41] Although this area was famed for its closeness to the ruling elite, who filled the place with religious complexes, people of all classes began to live there over the course of time. We find, since the Bahri Mamluk period, many ulama bearing the *nisbah* of al-Ṣaḥrāwī, such as ʻAbd al-Ṣamad al-Ṣaḥrāwī (d. 879/1475) and Muḥammad al-Abūdarrī (d. 844/1440–41). They were born and raised or lived in structures there that included *zāwiyah*s, *turbah*s, and houses.[42]

Qubbat al-Naṣr and al-Raydānīyah must have marked the northeast limits, as indicated by the situation of 749/1349: ″Graveyards were filled up lengthwise from the Naṣr Gate to Qubbat al-Naṣr, and to the Muqaṭṭam Mountain breadth-wise. Also the area from the Ḥusaynīyah cemetery to al-Raydānīyah was filled up. . . .″[43] Qubbat al-Naṣr, established in the Fatimid era, originated in a *zāwiyah* where *fuqarā'* (poor, Sufis) abided. Following the reconstruction by Sultan al-Nāṣir, ruling elites of the dynasty, notably the Mamluks, made much use of this Qubbah. The place became an overnight stop for sultans and amirs, and communal supplicatory prayers *(duʻā')* were conducted here for rainfall or the abatement of pestilence. Al-Raydānīyah was also associated strongly with the ruling elite, and was frequently utilized by them, mainly after Sultan Barqūq′s reign. Near the *masṭabah* there, military exercises, such as polo and horse races, were held. The function and characteristics of these two spots bear much similarity; birds for communication or hunting were bred there, and they also marked places for receiving visitors from the north or seeing them off. Since both places offered a suitable gathering place for members of the army and amirs, they became strategic points for rebels as well as rulers.[44] Possibly due to their strong relationship with the ruling elite of the dynasty, and the alienation felt by the common people, these two places seldom appear in *ziyārah* books, but appear very frequently in the chronicles.

As has been seen, the custom of living in cemeteries has a long history in Egypt, contrary to what is usually believed. Therefore we need to investigate this custom by extending the span of our study, taking the Egyptian view of the hereafter into consideration. In addition, it can be noted that there was a certain interrelationship between the funeral prayers held at Muṣallá Bāb al-Naṣr (Bāb al-Naṣr Oratory) and burials conducted in the Ṣaḥrā' area.[45]

Another important aspect relating to cemeteries, shared by the whole population, was pleasure seeking. Since *ziyārah* books made an effort to situate the visiting of cemeteries within the framework of Islamic pious activities, they never mentioned that visits were often made for pleasure. Yet, if we look at visitors′ behavior, we can easily discern the tendency to pursue pleasure. The common populace *('āmmah)* went on moonlit nights, bringing sweets and drinks, while influential people were fond of enjoying the moonlight of summer nights in the courtyards of mosques in the Qarāfah. In winter, they preferred to stay overnight under the minbar (pulpit). Even women and children could stay out openly until late at night, which was ordinarily quite exceptional.[46] For travelers from outside Cairo the Qarāfahs, which included the mausolea of Imām al-Shāfi'ī and al-Sayyidah Nafīsah, were the first place to be visited. Egyptians, too, may have ushered travelers there, as in the case of an Ilkhanid mission.[47] Meccan pilgrims who stopped in Egypt made visits there and left accounts of the Cairene cemetery regions. They include Ibn Jubayr, Ibn Baṭṭūṭah, al-Tujībī, al-Balawī, al-'Abdarī, and al-Qalṣādī.[48]

The *wā'iẓ* (religious preacher) preached from pulpits in the City of the Dead, and the *qāṣṣ* (storyteller) narrated Arab heroic epics, such as *Sīrat 'Antar* and *Sīrat Dhāt al-Himmah,* among the graves or near the Qarāfah Gate. Quran reciters recited in singsong tones, creating additions and subtractions, or stresses, arbitrarily.[49] From the following account quoted in *ziyārah* treatises regarding Shaykh Fakhr al-Dīn (d. 622/1225), we can well perceive the situation:

> One of the *ṣāliḥūn* (pious men) who resided in al-Qarāfah had died, so his comrades had prepared the funeral ceremony *(waqt,*

[45]Al-Ḥalabī, *Al-Qabas al-Ḥāwī,* 1:295, 360, 2:99, 121, 204, 326; al-Biqā'ī, *Iẓhār al-'Aṣr li-Asrār Ahl al-'Aṣr* (Riyadh, 1993), 1:187, 206; etc.

[48]Ibid.; Ibn Jubayr, *Al-Riḥlah* (Beirut, 1980), 20. As for Ibn Baṭṭūṭah, al-Tujībī, al-Balawī, al-'Abdarī, and al-Qalṣādī, see Ohtoshi, ″Visits to the Holy Tombs in the Egyptian City of the Dead,″ 1, 4, 9, 42.

[49]Ibn al-Ḥājj, *Madkhal,* 1:268.

> *'urs)* in the Zāwiyah al-Gharābilī. There a *qawwāl* (religious singer) named al-Faṣīḥ, handsome and preeminent in singing in that era, was engaged. In their hearts, the people assembled there had come to hear him sing. Then the shaykh Fakhr al-Dīn, who was held in awe, was informed of this event, and arrived on the scene with his attendants, urging al-Faṣīḥ to desist. Al-Faṣīḥ fled, fearing the shaykh, and the audiences were practically dying with deep disappointment at the passing of the reason they had gathered [abridged].[50]

Moreover, the ruling elite occasionally enjoyed singing and drinking at the southern border of al-Qarāfah al-Kubrá.[51] Thus the activity of singing and dancing performed in the cemeteries varied from mere entertainment to more religious appearances. In either event, ulama condemned them for the mingling of the sexes and immorality as a sort of *bid'ah* (deviation from correct religious practice).

Celebration feasts for saints′ birthdays (sing. *mawlid, mawṣim, waqt,* etc.) were held in the cemeteries as well, although this is not reflected in *ziyārah* tracts.[52] In the case of the well-known shaykh Muḥammad Wafā' (d. 765/1364), his tomb was ″famed for hosting a *waqt* (celebratory occasion), yearly on the twenty-second night of Rabī' II [for commemorating the deceased]. Plenty of money was spent, and crowds flocked there.″[53] On the other hand, the *mawlid* of al-Sayyidah Nafīsah at her mausoleum began in 889/1484, and became known as ″*mawlid al-khalīfah*″ (the caliph′s *mawlid*), since the caliph, who resided close to this mausoleum, took care of it.[54]

THE ATTACHMENT OF THE COMMON PEOPLE TO THE CAIRENE CEMETERIES

One way in which the common people involved themselves in the Cairene cemeteries was through the creation/fabrication of tombs of famous persons, or forging/rewriting their names on tombstones. Among the many objects of cemetery visitors, prominent targets were mausolea of the *ahl al-bayt* (the Prophet

[53]Al-Maqrīzī, *Durar al-'Uqūd al-Farīdah* (Beirut, 2002), 3:414.

[54]Ibn Iyās, *Badā'i',* 3:206.

Muḥammad′s family) and *ṣāliḥ*/*ṣāliḥūn* (pious figure[s]) who acquired veneration from the masses. Yet, in reality, many popular mausolea which attracted visitors were fake, and the names on tombstones were frequently misattributions. *Ziyārah* treatises repeatedly made accusations of such inventions.[55]

Concerning the invention of holy tombs or mausolea, one premise is that the practice of disinterment may have prevailed in Egyptian society in that period, which is supported by this statement from a *ziyārah* book: ″many *ṣāliḥūn* who were entombed in an Egyptian cemetery were disinterred after several years.″[56] People would excavate deserted graves and build new mausolea with purportedly-discovered skulls or relics, such as the robe of the Prophet Muḥammad, with invented anecdotes. Similarly, several mausolea were built based on people′s dreams. Mausolea built on the basis of skulls were called *mashāhid al-ru'ūs,* while those based on dreams were known as *mashāhid al-ru'yā*.[57]

The following is the gist of an anecdote concerning the invention of mausolea, which occurred in the first half of the fifteenth century. An old man named Mubārak al-Takrūrī (d. 871/1467) retired from his work as a dough kneader at a baking oven located in Bāb al-Lūq, and began living in al-Qarāfah. Then, removing the soil of a mound little by little, he began to construct holy tombs. Whenever he saw grave posts while walking around through the cemeteries, he brought them back to one of his tombs in progress. His first creation was a tomb named Shukran, and he brought its *sitr* (cover cloth) from the gate of al-Manṣūrī hospital to al-Qarāfah al-Kubrá, in Barsbāy′s reign. When the mausoleum of al-Sayyidah Fāṭimah al-Ṣughrá was destroyed by malefactors, he took its tombstone and put it on one of his invented graves, calling it ″the tomb of Fāṭimah al-Ṣughrá.″ Also, he carved stones, naming his tombs whatever he liked. Then he turned to the construction of that area, and as the place of Mubārak′s holy tombs gained fame, even Sultan Jaqmaq and his wife were said to have supported Mubārak.[58]

Let us now look at examples of Cairene mausolea, which were built upon skulls, dreams, bodies of the deceased, or even complete fiction. If we focus on the periods of creations/fabrications, it is notable that the Fatimids stand out. Specifically, viziers of the later Fatimids or the caliphs themselves were the main inventors. Yet we need to add that this practice continued to occur beyond the Fatimid era. Second, objects of creation tended to center around the *ahl al-bayt,* chiefly ʻAlī′s descendants, and also great prophets, such as Moses. Among them,

[55]For a detailed analysis on the creation and rewriting of holy tombs, see Ohtoshi, ″Visits, Holy Tombs and Relics in the Medieval Egyptian Muslim Society,″ 231–51.
[56]Ibn ʻUthmān, ″Murshid,″ fol. 41b.
[57]Ohtoshi, ″Visits to the Holy Tombs in the Egyptian City of the Dead,″ 23–24; Ibn al-Zayyāt, *Al-Kawākib,* 184; al-Sakhāwī, *Tuḥfah,* 298.
[58]Al-Sakhāwī, *Tuḥfah,* 180–81.

we have many traces of Moses in al-Muqaṭṭam and the Qarāfahs, such as the Aqdām mosque, which contained a footprint attributed to Moses.

The reascription of tombstones was another prevailing practice. For instance, someone rewrote the name on a tombstone as al-Mustanṣir, the caliph, but in fact it was the tomb of al-Mustatir, the onion merchant. Examples of contrived names on tombstones are: the Umayyad Caliph Yazīd, Mu'āwīyah, Bilāl, the muezzin of the Prophet Muḥammad, one of the famous *ṣaḥābah,* Abū Hurayrah, the Prophet Daniel, the son of the Abbasid Caliph Hārūn al-Rashīd, etc. The pattern of these reascriptions can be summarized as being based on famous historical figures or even fictitious characters. The former includes the Prophet Muḥammad's holy family, persons linked to the Prophet Muḥammad like the *ṣaḥābah,* other prophets, "saints," and historically well-known individuals. The latter category comprises fictitious offspring of famous people, such as Muḥammad ibn Zayn al-'Ābidīn. Concerning the way names were invented, it often depended on name similarity, but sometimes this was totally irrelevant. Numerous acts of fabrication and mis-transmission resulted in the production of a huge amount of misnaming, where both the tombstones and their supporting legends were false, and the views of *ziyārah* books varied as a result.

Thus seen, the list of invented names of "false" mausolea rather represents the wishes and expectations of commoners, and it is in these falsely attached names that we may perceive their mentality and intentions. Through this method of positive participation in the dynamic life of cemeteries, we see an outburst of energy in the common people engaged in visiting cemeteries or inventing tombs.

Next, as stated above, cemeteries provided inhabitable places for the people, where they could enjoy benefits, or could hope for relief from economic hardships in their daily lives.[59] Large scale banquets, for instance, were held on occasions of celebration for the completion of distinguished buildings or to commemorate recovery from illness. Banquets were also held at communal prayers for the rise of the Nile or the abatement of the plague, at funerals, and feasts, where great quantities of food and money would be dispensed. Moreover, through various religious institutions, both *waqf* income and direct contributions from the state reached Sufis, the needy, and orphans. Numerous visitors to graveyards, needless to say, gave alms and made offerings. Under such circumstances, the masses apparently understood the cemeteries to be a place for sustenance. They could visit cemeteries in times of privation, and were advised to do so. Some of them went even further in order to obtain money or goods from visitors to al-Qarāfah.[60]

---

[59]The following argument was detailed in Ohtoshi, "The Manners, Customs, and Mentality," 34–39.
[60]Ibn al-Nāsikh, "Miṣbāḥ," fol. 68.

Thus, ″many people desired to live there, because of . . . the frequency of alms and acts of charity toward the people of al-Qarāfah.″ It was also recorded that on Fridays, ″all the poor of Cairo go there to eat and to receive money which is given to them.″[61] I have previously analyzed this situation, and have explained it as a symbiotic relationship, wherein the wealth and good deeds of visitors were exchanged for rewards from Allāh, through the intercession of those who received them.[62] Indeed, this exchange was nicely depicted by Shu'ayb ibn al-Ḥurayfīsh: ″The poor man is the rich man′s messenger, since when the rich man exercises almsgiving to the poor man with alms on behalf of his [deceased] parents or relatives, it will reach to the deceased; thus the poor man is the rich man′s messenger.″[63]

Tomb robbery would have been committed primarily by the common people. According to *ziyārah* treatises, *kafan* (the winding sheet for the deceased), *tābūt* (coffin), and tomb poles were stolen, and other sources list silver candlesticks, carpets, *sitr* (cover-cloths of a grave or coffin), copies of the Quran, lumber from a mausoleum′s ceiling, and windows. It was in 827/1427 and 918/1512 that the scandal of selling disinterred corpses to Europeans was publicized.[64] As for the plundering of graveyards, there was great unrest in 864/1459, and again in 901/1495, when natives of al-Ṣaḥrā' fled en masse to Cairo, due to plundering by bands of robbers. Some destruction of tombs was carried out as a result of political embroilments or private grudges. In one example, which occurred in 748/1347, a mob opened the grave of Amir Shujā' al-Dīn, stripping off his *kafan,* and burnt his remains.[65] When criminals were apprehended, rulers punished them severely, through methods such as beheading, cutting off their hands, whipping, crucifixion, or flaying of the face.[66]

Since al-Qarāfah comprised large open spaces, it offered refuge in times of emergency. For instance, ″in 702/1303, there was a great earthquake in Egypt and

Syria with collapsing houses, and a lot of people died under the debris. A tsunami ensued due to the earthquake, and wrecked many ships. The earthquake lasted for forty days; people fled to al-Qarāfah and pitched tents for themselves. It so affected Alexandria that the sea rose to the middle of the city."[67] Also, in 699/1300, a large number of troops conscripted by the Mamluk government stayed in the Qarāfah and other places due to a shortage of housing.[68] The stopping place for the aforementioned king of al-Takrūr was al-Qarāfah al-Ṣughrá, and the *wālī* (governor) of al-Qarāfah and Fusṭāṭ, Amir Abū al-Ḥasan ʻAlī ibn Amīr Ḥājib took care of him. Similarly, in 783/1338, the daughter of the Marinid ruler Abū al-Ḥasan ʻAlī, known as al-Ḥurrah, stayed in al-Qarāfah with a group of four hundred Meccan pilgrims. These facts reveal that the cemeteries not only contained open spaces, but also were supplied with sources of water and food.[69]

The Ulama's Attachment to Cemeteries

For the ulama, Mamluk society offered more positions in religious institutions than in previous times, and some of them were established in Cairene cemeteries.[70] That is to say, cemetery areas provided places for their employment and education. To take some examples, al-Madrasah al-Nāṣirīyah (or al-Ṣalāḥīyah), near Qubbat al-Imām al-Shāfiʻī, was of crucial importance, as is shown by the fact that al-Qalqashandī regarded it as one of the positions suitable for high-ranking *mudarrisūn* (professors).[71] *Mudarrisūn* and shaykhs were employed there, as we can see in the historical literature.[72] Names of *khānqāh*s in the Qarāfahs, whose positions for ulama were known, included those of Tuquztamur, Baktamur, al-Karīmīyah, al-Ṭaydamurīyah, (Arghūn al-ʻAlāʼī and Najm al-Dīn Maḥmūd), and notably Khānqāh Qawṣūn (near the Qarāfah Gate) which comprised a shaykh and fifty Sufis with abundant *waqf*s at its opening in 736/1335.[73] Also, *khānqāh*s and *turbah*s in al-Ṣaḥrāʼ

---

[67]Al-Suyūṭī, *Kashf al-Silsilah ʻan Waṣf al-Zilzilah* (Medina, 1404 A.H.), 118. Cf. Ibn Abī al-Faḍāʼil, *Al-Nahj al-Sadīd,* 592–94.

[68]Al-Maqrīzī, *Al-Sulūk,* 1:3:898.

[69]Ibid., 2:2:447–48; Ibn Ḥabīb, *Tadhkirat al-Nabīh,* 2:142–43; Levtzion, "Mamluk Egypt and *Takrûr.*"

[70]According to the assertion of I. Lapidus, ulama of relevant age included *fuqahāʼ* (jurists), judges, scholars, teachers, Quran reciters, hadith reciters, Sufis, functionaries of religious institutions, professional witnesses, and so on. Moreover, many ulama were appointed by the state as bureaucrats, or could be part-time merchants. Even workers, craftsmen, or people of lower strata could become ulama. Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, 1967), 107–15.

[71]Al-Qalqashandī, *Ṣubḥ,* 9:256.

[72]Examples are too numerous to be listed, including al-Maqrīzī, *Durar al-ʻUqūd al-Farīd,* 1:377; *Al-Sulūk,* 1:1:302; al-Dāwūdī, *Ṭabaqāt al-Mufassirīn,* 2:135; Ibn al-Ṣayrafī, *Nuzhat al-Nufūs,* 4:229; and Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah* (Damascus, 1977), 1:2:174.

[73]K. V. Zetterstéen, *Beiträge zur Geschichte der Mamlûkensultâne* (Leiden, 1919), 190–91, 227–28.

included Khānqāh Ṭaybughā al-Ṭawīl, Turbat Khushqadam, and Turbat Barqūq.[74] The shift from a shaykh post in one *khānqāh* to another was a frequent occurrence.[75] Other institutions in these cemeteries, to which appointments are recorded, included Mashhad al-Sayyidah Nafīsah, *zāwiyah*s, *turbah*s, *ribāṭ*s, *jāmi'*s, etc.[76] In those foundations, ulama found employment in positions such as *shaykh* (leader), *mudarris* (teacher), *nāẓir* (administrator), *khaṭīb* (preacher), hired Sufis, *khādim* (servant), and so forth. Further, other institutions in these cemetery areas might have employed ulama in operating positions, such as Jāmi' Ibn 'Abd al-Ẓāhir, Ribāṭ Fakhr al-Dīn ibn Quzul, Jāmi' al-Afram, and Jāmi' Ibn al-Labbān.[77]

For ulama as well, Cairene cemeteries were places for visiting tombs, being entombed, and occasionally living, as noted earlier. Even a well-known biographer of the age such as Ibn Khallikān (d. 681/1282) visited the cemetery frequently, and left eyewitness observations in his *Wafayāt*. In addition, in his chronicle, Ibn al-Furāt (d. 807/1405) repeatedly cites the words of his comrades who visited al-Qarāfah.[78]

Cemetery areas also provided employment for Sufis, as mentioned above, and there were several magnet spots for Sufi practices, centering around certain *zāwiyah*s, such as Zāwiyat Abū al-Su'ūd and Zāwiyat (or Ribāṭ) Ṣafī al-Dīn Ibn Abī al-Manṣūr, in addition to *khānqāh*s, *turbah*s, and *zāwiyah*s founded by the ruling elite. These examples were strongly related to the *ṭarīq*/*ṭarīqah* (way) of al-Shādhilīyah. *Zāwiyah*s in the Qarāfahs are thought to have provided places of contact between ulama and visitors to cemeteries, whereby the visitors could participate in the religious gatherings and rituals conducted there. Moreover, ascetic practices in the Muqaṭṭam region and the cemeteries beneath it were conducted by Sufis.[79]

Furthermore, it was significant that ulama intervened in cemetery areas through

---

[79]For more detail, see Ohtoshi, "*Taṣawwuf* as Reflected in *Ziyāra* Books and the Cairo Cemeteries." The meaning of the term "Sufi" widened during this period, and many ulama were encompassed by this term, hence I included Sufis in this section.

their juridical and religious functions; for example, they criticized the manners of visiting tombs and the tombs′ appearance, judged how to inter the dead, and so forth. Ulama could express their judgments based upon shari‘ah (Islamic law), which often took the form of condemning *bid‘ah* regularly performed by the people, such as visits by women or their mingling with strangers, *nadhr* (an offering often accompanied with a vow), praying to entombed ″saints,″ leading to their veneration, ostentatious graves, singing and dancing with musical instruments at the cemetery, walking on graves with shoes, etc.[80] Through these accusations, the ulama established their ″authority,″ and retained their sphere of activity. To cite a well-known incident in this regard, al-‘Izz Ibn ‘Abd al-Salām, the *sulṭān al-‘ulamā’* (d. 660/1262), criticized the existence of ostentatious tombs in Cairene cemeteries and activities that took place there, and reportedly succeeded in persuading Sultan Baybars to have all such tombs razed, although it was never enforced.[81]

CEMETERIES AND THE DYNASTIC ELITE[82]

In this section, I will attempt to show how the ruling elite interrelated with Cairene cemeteries in ways not connected to their supervision, which will be discussed next. First are the *ziyārah*s of sultans or their entourages, which had a long history among the Muslim rulers of Egypt. From the time of the legendary Ibn Ṭūlūn (d. 270/884) and his son Khumarawayh (d. 282/896), and Kāfūr al-Ikhshīdī (d. 357/968), through the Fatimids (al-Ḥākim, al-Āmir, Amīr al-Juyūsh al-Afḍal, Vizier al-Ma’mūn, al-Ẓāfir, and al-‘Āḍid), to the Ayyubid sultan Kāmil, rulers and their retainers are said to have engaged in the *ziyārah*.[83] The tradition is assumed to have persisted during the Mamluk period, for Sultan Baybars is portrayed as having followed their example.[84] Even if we confine ourselves to the Burji Mamluk period, we can see the *ziyārah* of sultans occurred frequently, i.e., Barqūq (786/1384, 796/1394, 797/1395), Faraj (812/1409), Mu’ayyad (*al-du‘ā’* at al-Ṣaḥrā’ in 822/1419), Barsbāy (841/1438), Jaqmaq (845/1442), Īnāl (865/1461), Aḥmad ibn Īnāl (865/1461), Khushqadam (866/1462, 870/1465, 871/1466, 871/1467),

Qāytbāy (872/1468, 874/1469, 874/1470, 876/1471, 876/1472, 882/1478, 885/1480, 885/1481, 886/1482), Muḥammad ibn Qāytbāy (901/1496), Ghawrī (913/1508, 914/1508, 915/1510, 918/1512, 920/1514, 922/1516), and Tūmān Bāy.[85] Some retainers followed suit on *ziyārah* activities, or even took the initiative, such as Yūnus ibn ʿUmar, who is reported to have visited al-Qarāfah every Friday.[86] Along with these visits, the ruling class performed charitable activities such as distributing *ṣadaqah* (alms) and food. Even when they could not visit the cemeteries personally, they arranged for these distributions. Since these cemetery areas contained the sepulchers of the elites′ relatives, frequent reports of visits to them can also be found.

Further, as mentioned above, members of the ruling elite also competed in the building of architectural works in cemeteries.[87] They constructed madrasahs, mosques, and *khānqāh*s in their names, and *turbah*s for their own entombment. Those buildings and institutions obviously reflect the religious policy or the personal attitude of each member of the ruling elite, and they also can be considered to be closely related to their *ziyārah* activities and the development of the northeast al-Ṣaḥrā' area.

It is widely known that these religious institutions were administered by the *waqf* system. A large number of tombs in the cemeteries were devastated in the vicissitudes of time, and crumbled into the soil. In order to avoid this, considerable efforts were exerted. The first method taken, under Ṣalāḥ al-Dīn Ayyūbī, was the government′s direct commitment to the administration of holy sepulchers by nominating managers to live there, paying them stipends *(jirāyāt),* and also making monthly payments to *faqīr*s (poor, Sufis) and *awliyā'* (″saints″), and enabling

travelers to stay there.[88] Second, the operations of tomb structures were carried out with *waqf* income. The elite and others endowed their property as *waqf* for the maintenance of tombs, mausolea, or *khānqāh*s, and appointed overseers *(nāẓir, mutawallī)* of these institutions. *Waqf* endowments were no longer designated exclusively to the public infrastructure, nor to the mausolea of those who had won the veneration of the populace. On the contrary, influential families increasingly administered their own *turbah*s through the *waqf* system, diminishing the social redistribution aspect which this system originally boasted.[89]

Specifically, the list of persons who were recorded as having established *waqf*s included sultans, high-ranking amirs, qadis, ulama, and so-called saints *(awliyā')*. We are able to confirm the sources of *waqf* income as *iqṭā'*s of certain lands, or rent from buildings. Structures founded by *waqf*s included the famous mausolea of Imām al-Shāfi'ī, Ikhwat Yūsuf, and Ibn al-Fāriḍ, *turbah*s of sultans or member of the ruling elite, and the facilities of religious institutions.[90] Sultan Baybars was famed for establishing a *waqf* for the ritual washing, *kafan,* and burial of the dead who had no relatives.[91]

An illustration of tomb management according to the *waqf* system can be found in the mausoleum of Ibn al-Fāriḍ (d. 632/1235). In the days of Sultan Īnāl (r. 857–65/1453–61), Amir Tamur and his descendants managed the operation, building a mausoleum with *waqf* donations, holding a banquet, performing charity works, and paying stipends *(jāmakīyah)* to the *khādim.*[92]

As for the administration of the mausoleum of al-Sayyidah Nafīsah, the Abbasid caliphs, who had immigrated to Cairo due to the Mongol invasion of Baghdad, took charge of it. The first caliph to be buried in al-Qarāfah near al-Sayyidah Nafīsah was al-Ḥākim (d. 701/1302), and afterwards this became the practice.[93] They began to live near the mausoleum of al-Sayyidah Nafīsah, a holy area suitable for caliphs. This is understandable since she might have been one of the

most admired people in pre-modern Egypt, and also, in a broad sense, they could be regarded as of the same lineage.[94] Then, after the caliph al-Mu'taḍid (r. 753–63/1352–62), sultans began to entrust its *naẓar* (superintendency, controllership) to successive caliphs instead of appointing administrative officials.[95] Since caliphs stood to benefit a great deal from *nudhūr* (offerings) to this mausoleum, when they were deprived of this post during the years 766–88/1365–87, and after the Ottoman conquest, it caused them a great loss.[96] They benefited from donated objects such as candles and oil, and also from offerings of money placed in the box beneath the head end of al-Sayyidah Nafīsah's tomb.[97] Additionally, the *mawlid* of al-Sayyidah Nafīsah began to be known as "the caliph's *mawlid*," as he was a main part of this celebration. It should also be noted that, notwithstanding the fact that caliphs were in charge of the mausoleum, the management of its *waqf* was assigned to the *mustawfī* (accountant), and one of them might have been a Muslim convert from among the Copts. The names of a *khādim* and a *shāhid al-khizānah* employed there are also mentioned in the sources.[98]

Let us now move on to more details of *waqf* operations in Cairene cemeteries. As shown above, expenses for managing mausolea through the *waqf* system included specified items, such as *ṣadaqah,* banquets for the "poor," and stipends for supervisors and Quran reciters. It should be added that payments were made from *waqf* income to visitors to the Qarāfah, as I have detailed elsewhere.[99] For example, the *waqf* document of Amir Mithqāl mentions stipends of twenty dirhams per month to two reciters at the mausoleum of Ibn Labbān in al-Qarāfah al-Ṣughrá. In the *waqf* document of Sultan Barsbāy, the *waqf* was reserved for a *zāwiyah,* a *sabīl* (public fountain), Quran reciters, etc.[100]

The following case is from the *waqf* document of a leading historian, Ibn Taghrībirdī (d. 874/1470), through which we attempt to trace the details of administration of a mausoleum according to the *waqf* system.[101] This was not a

mausoleum of saints, but rather a mausoleum run by an influential family for themselves.

The *waqf* endowments for this mausoleum in al-Ṣaḥrā' consisted of several properties, including buildings in the Barjawān quarter of Cairo and on the Nile shore at Būlāq, and shares from two parcels of land in the Gharbīyah district of the Delta. The structures of this mausoleum described in the *waqf* document were *īwān al-qiblah,* used as a mosque, four *fasāqī* (family vaults) for the endower's four families, a wide *ḥawsh* (courtyard, walled enclosure) for burial, a *qā'ah* (hall) and *riwāq* (portico, apartment), toilets, an *isṭabl* (stable), a *maṭbakh* (kitchen), *ṭibāq* (living units) and *khalāwī* (Sufi cells) for employees of the mausoleum, a *sabīl* (fountain) and a *ṣihrīj* (cistern) under it, and a *maktab* upstairs in the *sabīl* as a place for children to study. All of these were to meet the demands of residents of the mausoleum and visitors, particularly the families of the *waqf* endowers.

Regarding duties and allowances for operating the mausoleum, the following conditions were set in the *waqf* document: 400 (dirhams per month; the same monetary unit is employed hereafter) for the *bawwāb* (gate-keeper); the *muzammalātī,* who was in charge of the *sabīl,* was given 300, also 300 for the water suppliers, 500 for the *farrāsh* (janitor), who would clean up or sweep the mausoleum and prepare the lamps and frankincense, 150 each as scholarships for ten young orphans and sons of needy people, 300 for their teacher, 150 each for two Quran reciters for the tomb of the *waqf* endower; 200 each for the *shādd* (superintendent) of the *waqf* and its buildings, and *khāzin al-kutub* (librarian). The repair and maintenance of the mausoleum cost 200, 500 for the supervisor *(nāẓir)* of the mausoleum and its *waqf,* 300 for shaykhs who recited the Quran every morning in shifts at the *īwān* of the mausoleum; also 150 each for nine other Sufis, and so forth. Moreover, stipulations set by the *waqf* endower reveal that, for instance, Sufis and their shaykh in the mausoleum should not leave their posts or neglect their duties, except in cases of illness or the pilgrimage to Mecca. Likewise, the *bawwāb* and other employees should live in the mausoleum.

As seen from this document, the mausoleum of Ibn Taghrībirdī combined various functions including a mosque for prayer, locations for Sufi practices and education, and tombs. Thus, it should be pointed out that the number of religious complexes, which were variously known as *khānqāh*s, *ribāṭ*s, *zāwiyah*s, *turbah*s, *qubbah*s, madrasahs, and mosques, expanded in this age. In Cairene cemetery areas the growth of these institutions was widespread, to the point where shaykhs with their disciples, employees, and their families dwelled together, as exemplified in the aforementioned case of the Khānqāh Qawṣūn near the Qarāfah Gate, which comprised a shaykh and fifty Sufis, supported by abundant *waqf*s.

The ruling elite of the Mamluk dynasty would conduct collective prayers in

cemeteries, for the rising of the Nile River, or the abatement of plague.[102] Given that pestilence raged, people in Egypt tended to flee from the land in defiance of *fatwá*s telling them to remain, or rely on talismans, yet there was no better plan than to implore Allāh who presides over all things. Some of them, however, not only considered this prevalence of pestilence as the fury of Allāh, but went so far as to destroy places of amusement, alcohol, and hashish, prohibiting women from going out, and attacking Christian quarters, in the name of eradicating corruption.[103] An account of a communal prayer in the Ṣaḥrā' area is described as follows:

> [In 822/1419] the pestilence prevailed and sudden death increased so that people began to tremble. Hence, the sultan Mu'ayyad Shaykh proclaimed three days of fasting through the *muḥtasib*. After three days′ fasting, people went out to the Ṣaḥrā'. The caliph, *fuqarā',* ulama, major Sufis, judges, and common people with the vizier and an *ustādār* (steward) marched to the mausoleum of al-Malik al-Ẓāhir (Barqūq). They lifted a caliph′s banner and the Quran, raising invocations to Allāh. Groups of Jews and Christians also attended raising the Torah and the Gospels, respectively. The sultan wore wool like a Sufi; on his horse was a plain cloth. As the sultan arrived at the back enclosure of Barqūq′s mausoleum, he prayed tearfully, rubbing his face on the ground. Enormous amounts of food and slaughtered beasts were distributed to the poor. More than thirty thousand pieces of bread were also dispensed, and the people kept on praying [abridged].[104]

Similar events were repeated in 749/1349, 775/1373, 806/1403, 818/1416, 822/1419, 823/1420, 833/1430, and 854/1450, whenever the plague was rampant, or the Nile failed to rise. Al-Ṣaḥrā' and the fringe of al-Qarāfah, al-Raṣad and al-Āthār al-Nabī were spots used for such events.[105] Collective marching and prayer beneath al-

Muqaṭṭam carried out by a combination of Muslims, Copts, and Jews can be traced back to the Tulunid period, in 270/884.[106] The above quotation brings up at least five points at issue, when collated with other historical sources. The first is that the official character of the Ṣaḥrā' area, and in particular, the back enclosure of the Barqūq mausoleum should be underscored. Collective prayers led by the ruling elite would have been held in this northeast area, whereas most of the common people would pray in the more southern al-Qarāfah area, except perhaps when they were recruited to the northeast. Second, Jews and Copts were mobilized in these official prayers, without fail. This may have been rational, as many Copts were employed in the financial offices of the government, and this mass ritual itself was held by the ruler and his government. Yet, without the entire set of these *dhimmī*s, I have suggested, the total image of ″Egypt″ would not have been complete, which might have made the ritual less effective.[107] Third, related to the second point, the attendance and support of the masses was vital. Their participation was indispensable for the pious deeds of almsgiving and food distribution to gain merits, whether in the mundane world or the hereafter. Viewed from the point of view of the commoners who were associated with this ritual, what they obtained there could be regarded as wages or remuneration for their attendance. Fourth, rituals performed in times of the Nile′s failure to rise and the prevalence of pestilence bore a close resemblance; countermeasures for the plague were considered to be of the same dimension as natural disasters, and all these were believed to be ultimately under the control of Allāh. Fifth, the sultan dressed like a Sufi, expressing himself as sincere and humble; his manner can be interpreted as behaving as an intercessor to Allāh for all the people in the land.

Meanwhile, banquets *(walīmah, simāṭ)* on a large scale were often given by the ruling class in the cemetery areas. As stated earlier, rulers and the military elite were ardent in their support of construction activities in cemeteries, and every celebration for the completion of a building such as a *khānqāh,* for the recovery of health, or collective prayers, was marked by this sort of banquet. It was considered more a religious ritual than an amusement, and included recitation of the Quran, almsgiving on a large scale, and the distribution of food and slaughtered

[106]Ohtoshi, ″Muslims and Copts as Reflected in the *Ziyāra* Books and *Qarāfa*s,″ 42–43.

[107]Additionally, Copts performed communal prayers for the swelling of the Nile yearly in churches, holding festivals along the Nile. All this may have created the impression of Copts as having a special relationship with this river. See Abū Ṣāliḥ al-Armanī (attributed), *Tārīkh,* 75–76, 96; Ibn al-Muqaffá (attributed), *Kitāb Siyar al-Ābā' al-Baṭārikah,* 2:3:213.

beasts. Many people of influence, those connected to religious institutions, and *faqīr*s assembled there.[108] All these factors, including the above-mentioned *ziyārāt* and the construction projects of rulers, lead to the conclusion that Cairene cemeteries formed a legitimate stage for rulers to act justly and generously. Moreover, on this stage one could be sanctified through the solemn atmosphere of the Cairene cemetery areas. At the same time, these places offered points of close contact between the ruling class and the common people, on occasions such as *ziyārah, ṣadaqah,* and *walīmah.* Through the information networks among people of religious affairs, and hearsay among the commoners, news of the good deeds of the ruling elite may have spread from the cemeteries throughout the domain. If we look at it from the governmental point of view, notwithstanding that they might have sincerely aspired to the fulfillment of their prayers, such banquets could also be taken as a measure to win popularity among the masses.

The Ṣaḥrā' area was included in the itineraries of sultans′ parades, for the area seems to have played a significant symbolic role in solemnifying the parades. Sultans, in their customary parade of enthronement, would first head for the Qubbat al-Naṣr in al-Ṣaḥrā', then enter Cairo from the northern Naṣr Gate, and after marching through the decorated city, they would go out from the southern Zuwaylah Gate to return to the citadel, traversing a counterclockwise arc. Some of these parades are reported to have included Copts and Jews in their company. The shorter version of this parade, which made a circuit only around the citadel, also attached importance to the parade from the Qarāfah Gate. These courses were proper in a practical sense, but also served to demonstrate dignity, authority, and sanctity.[109] Moreover, in 659/1261, Sultan Baybars held a ceremony of enthronement in the vicinity of al-Qarāfah, which is understandable given the Qarāfah′s function as a solemn stage, and its open spaces. Furthermore, in 677/1278, the ceremony of mourning one year after the death of Sultan Baybars was held in al-Qarāfah, and meals were served in tents, and ″people of different classes assembled therein.″[110] Likewise in 814/1411, Sultan Faraj held an appointment ceremony for a caliph, a qadi, and others at the mausoleum of Barqūq, indicating the official ceremonial characteristics of this area, as well as recognizing the majesty of his late father (Barqūq), and demonstrating legitimacy to his subjects.[111]

Another important aspect of cemetery areas was military training and the games of horsemen. In the Mamluk period, games combined with military exercises, such as the lancers′ exercises (sing. *la'b rammāḥ*), polo, and *qabaq* (a game in which a rider shoots arrows at a standing guitar-shaped target), were put in force as the practice of *furūsīyah* (chivalry), and some of their playing fields *(mayādīn)* were located in the cemetery districts. They included Maydān al-Qabaq in al-Ṣaḥrā', Maydān al-Nāṣirī on the periphery of al-Qarāfah al-Kubrá, and the space in front of the mausoleum of al-Ḥarrār in al-Qarāfah al-Kubrá alongside the Ḥabash Lake.[112] Maydān al-Nāṣirī was recognized as the playing field for polo, and Maydān al-Qabaq was known, as the name indicates, for the playing of the *qabaq* game. Notably, at circumcision ceremonies for sons of the ruling class, as well as games of *qabaq,* robes of honor were bestowed on principal figures of the dynasty, and a plenitude of goods was dispensed.[113]

Furthermore, lancers′ exercises were repeated before the mausoleum of al-Ḥarrār. This custom began being conducted at the time of *dawrān al-maḥmil* (the ceremonial city circuit of the pilgrimage palanquin sent to Mecca), and on the first occasion, which was in the month of Rajab (there were two annually), was carried out in al-Qarāfah. Lancers in red garments and their horses, both armored, took part in mock battles. Young troopers standing on clogs fixed on their horses swung lances in both hands in staged combat. Upper class and common people alike would take pleasure in watching the games.[114] This exercise of lancers during the *dawrān al-maḥmil* became established as an annual observance, and as early as in 822/1419, it served to amuse Cairo/Fusṭāṭ inhabitants. Consequently, when it was cancelled, such as in 836/1433, 839/1436, and 848/1444, due to demoralization or military expeditions, the people were greatly disappointed and grew indignant. Conversely, their delight in the revival of this event was all the greater, yet when it resumed in 857/1453 after a ten-year interval, the details had already been forgotten, and, in 910/1505 and 920/1514, it was viewed as an old custom.[115]

During lancers′ practices, the *mu'allim* (commander) of the band of lancers, accompanied by four pashas *(bāshāt al-arba'ah),* led the army corps. Qāytbāy, the amir of one thousand, was noted as a master at this practice; he would always perform this exercise at al-Qarāfah al-Kubrá, aside from the *maḥmil*′s circuits. In addition, he innovated a new ceremony in which the Mamluks, four pashas, and a *mu'allim* would dismount in the order named and kiss the ground in front of the sultan.[116]

These exercises of military training and games denote not only that Cairene cemetery zones contained wide open spaces and were located beneath the citadel, which was the base for the troops, but also that they provided a place for contact with the common populace, as in cases of royal parades and rituals, which served as another measure for cultivating personal popularity and for impressing upon the people the rulers′ dignity and legitimacy.

Despite the fact that Cairene graveyards were primarily sanctuaries comprised of sepulchers and religious institutions (as they occupied the area around the citadel, and also contained many open spaces), they became arenas for political actions of the ruling elite, particularly amirs and Mamluks.[117] Accordingly, one of the several gates of the citadel, Bāb al-Qarāfah, became a strategic point of the dynasty, manned by Mamluks and even blockaded if necessary.[118] These political actions can be summarized as follows: First, *turbah*s, madrasahs, and a *burj* (tower) in the Qarāfahs were utilized for informal confinement. In 678/1280, for instance, after his dismissal, Vizier Burhān al-Dīn was ordered to confine himself in a madrasah in the Qarāfah. Then, in 723/1323, the qadi Karīm al-Dīn was subjected to arrest and confiscation, and was placed under confinement in a mausoleum.[119] Second, during struggles for supremacy or for other reasons, several members of the elite concealed themselves within mausolea, their *fisqīyah,* or *zāwiyah*s, in ways that can be interpreted as a demonstration of the asylum aspect of Cairene cemeteries. Amir Lājīn (693/1294), Yashbak (803/1401), and Jarbāsh

(865/1461) typify this aspect, and one of them was besieged and arrested there.[120] Third, examples of assassinations and murders there are too numerous to count. The two Qarāfahs and al-Ṣaḥrā' were advantageous in that corpses could be buried there immediately after a homicide. In 648/1251, 746/1346, and 748/1348, amirs assassinated sultans and entombed them there.[121] Fourth, battles in cemetery sections were best exemplified in the case of 804/1402, whereby a force of Amir Nawrūz took up a position near the Ḥabash Lake, were defeated by Sultan Faraj at the periphery of al-Qarāfah, and some major personnel were captured.[122]

As seen here, Cairene cemetery areas, which had been essentially the sanctuary of Egyptians, took on some aspects of what could be called, in my expression, ″the courtyard of the Mamluks,″ which the military elite frequented as a result of their location (surrounding the citadel and being situated between the two cities of Cairo and Fusṭāṭ). Nevertheless, the government made vigorous efforts to supervise graveyard areas, which I will discuss next.

Further, regarding the interrelationships between big merchants and the cemetery districts, they were interred there, visited tombs of acquaintances or mausolea, and might themselves become objects of *ziyārah* if they became venerated by the people. What is more, they dispensed alms, or at least the people hoped that they would, as with the aforementioned merchant who was surrounded by the needy in the cemetery.[123] Some of them might have built religious institutions or shops, yet these sites would not primarily be for profit, but for the spending of profit.

Government Supervision of Cemeteries[124]

Crime, political activities, the reputation of cemeteries as pleasure resorts where people of both genders and all ages and social strata mixed, and vulnerability to outside invasion: all these characteristics may have led rulers to regard Cairene cemeteries as disquieting and dangerous spaces. In addition, their location just beneath the citadel, the focal point of Mamluk rule, containing tombs of the ruling

[123]See note 60. One of the Kārimī merchants, Ṣalāḥ al-Dīn Aḥmad (d. 769/1368), built a large *turbah* in al-Qarāfah (al-Maqrīzī, *Khiṭaṭ,* 2:369).

[124]Ohtoshi, ″The City of the Dead and Egyptian Society from the 12th to the 15th Century,″ 182–84.

elite themselves and their relatives, made them important. Through the supervision of solemn spaces where people came into contact with holiness, rulers may have endeavored to show their dignity. The Mamluk government, therefore, made strenuous efforts to supervise the cemeteries, and repeatedly took measures such as prohibiting women's visits.

The memorandum *(tadhkirah)* of the amir Kitbughā should be reexamined in this context. Issued in 679/1281 by Sultan Qalāwūn to Vice Sultan Zayn al-Dīn Kitbughā, the memorandum was also directed at all subjects by its being read at each minbar (pulpit). It contained directives regarding the two Qarāfahs, such as "*mujarradūn* (night watches) are to be customarily arranged around both Cairo and Fusṭāṭ, as well as in the district of al-Qarāfah. . . . It should not be neglected even for one night, and *mujarradūn* are not to leave their posts except at dawn or in complete daylight," or "on Friday nights, men and women should not assemble at the two Qarāfahs; particularly, women are prohibited from this."[125]

The *muḥtasib* (inspector of markets and public morals) should also inspect graveyards and their moral order, as is reflected in the *ḥisbah* treatises. Namely, he should oversee the selection of burial sites, methods concerning ablution of the dead, burial, visiting of tombs, as well as the shape of tombs, and he should also prevent women from ostentatious lamentation, visiting graves, and following the bier.[126] The ulama of all the schools of law supported enforcing discipline in cemetery areas, or even took the initiative in enforcement. Some of them cooperated with the governing authorities, and undertook to investigate alleged holy tombs outside the mortuary zones, moving them into a cemetery if they were legitimate.[127]

Furthermore, although executions were ordinarily carried out in the citadel and other places, graveyards, too, could function as execution grounds. This should be reinvestigated in relation to the supervision of cemetery regions. Mainly grave robbers were executed therein; however, in 793/1391, some influential amirs, who had been imprisoned, were beheaded in al-Ṣaḥrā'.[128] Yet, a more consistent and systematic measure for supervising cemeteries was created: the establishment of the office of *wālī al-Qarāfah* (governor of al-Qarāfah).[129]

According to al-Qalqashandī (d. 821/1418), the police districts *(wilāyāt al-*

shurṭah) of Mamluk Cairo and its surroundings were divided into three quarters: *wilāyat al-Qāhirah* (Cairo), *wilāyat Miṣr* (Fusṭāṭ), and *wilāyat al-Qarāfah.* An *amīr ʿasharah* was appointed as the *wālī* of al-Qarāfah under the supervision of the *wālī Miṣr;* nonetheless, at the time *Ṣubḥ* was written, the Qarāfah district was incorporated into the Fusṭāṭ district. After the annexation, the Fusṭāṭ *wālī* was upgraded and the office assumed by an *amīr ṭablkhānah,* still less than the Cairo *wālī.*[130] We will attempt to collate this account with those in other chronicles of the same period that show some discrepancies.

In 786/1385, ″the first″ (according to al-Maqrīzī) *wālī al-Qarāfah* (a separate position from *wālī Miṣr*) the amir of ten Sulaymān al-Kurdī, was nominated by Sultan Barqūq.[131] Perhaps before this, the governors *(wālī, mutawallī)* of al-Qarāfah were appointed occasionally, as noted in historical sources, such as in the Fatimid period (Ibn Shuʿlah al-Kutāmī), 672/1274, 724/1324 (Amir Abū al-Ḥasan ʿAlī ibn Amīr Ḥājib, who was said to have been *wālī* of al-Qarāfah and Fusṭāṭ), and 737/1336–37 (Ibn ʿUsaylah); yet they might have been in lesser positions, or under the superintendence of other *wālī*s, like the *wālī Miṣr.*[132] Then, in 792/1390, Sulaymān was assigned as *wālī Miṣr,* so there is a possibility that he might have held both positions concurrently.[133] In 801/1399, the two-Qarāfah district was added to the jurisdiction of the *wālī Miṣr,* Amir Ṣārim al-Dīn Ibrāhīm, who took the position of Sulaymān, and also in the month of Rajab in 803/1401, Nāṣir al-Dīn Muḥammad, the *amīr ṭabar* (hatchet), assumed the position of *wālī al-Qarāfah.*[134] Eventually, in the month of Dhū al-Ḥijjah in 803/1401, the Qarāfah district was transferred to the *wālī* of Cairo, Amir Nāṣir al-Dīn al-Ṭablāwī.[135] It is in this way that the Qarāfah *wālī*'s position was separated from or united with that of Fusṭāṭ or Cairo, possibly influenced by the individual situation of persons appointed as *wālī,* or the intention of the ruler.

After 803/1401, accounts regarding *wālī al-Qarāfah* disappear from the chronicles. Instead, the function of *naẓar al-Qarāfah* (supervisorship or controllership of al-Qarāfah), or its supervisor, *nāẓir al-Qarāfah,* began to be recorded.[136] In 856/1452, for instance, Abū Bakr al-Muṣāriʿ died; he was ″*nāẓir* of

[135]Al-Maqrīzī, *Al-Sulūk,* 3:3:1069; Ibn Iyās, *Badāʾiʿ*, 1:2:633; Ibn al-Ṣayrafī, *Nuzhat al-Nufūs,* 2:118.
[136]Al-Biqāʿī, *Iẓhār al-ʿAṣr,* 1:199, 341; Ibn Taghrībirdī, *Ḥawādith*, 124, 161; al-Sakhāwī, *Wajīz*

the Imām al-Shāfi'ī mausoleum, the Layth mausoleum, and all of al-Qarāfah. And the sultan had bestowed on him the controllership for mausolea of al-Qarāfah." Abū Bakr al-Muṣāri', mentioned here, was originally one of the *awbāsh* (riffraff), but Sultan Jaqmaq promoted him to this position, whereby he was said to have enriched himself. Yūsuf Shāh (d. 876/1471), who was in fact *mu'allim al-bannā'īn* (the master of royal builders), took over Abū Bakr al-Muṣāri''s post of *naẓar al-Qarāfah* in 856/1452 and remained until 857/1453 when the sultan's son-in-law Amir Burdbak seized it. In 892/1487, a qadi was dismissed from the *naẓar al-Qarāfatayn;* meanwhile in 897/1492, *anẓār* (pl. of *naẓar*) and similar offices, such as al-Baybarsīyah, al-Sa'īdīyah, *waqf* al-Ṣāliḥ, and al-Qarāfatayn, were under the jurisdiction of the *ustādār* Taghrībirdī, and then were transferred to the *dawādār* Taghrī Barmish. In 901/1495, (qadi) Shams al-Dīn Muḥammad (d. 912/1506) was appointed to the position of *naẓar al-Qarāfatayn* (the two-Qarāfahs), as well as *naẓar* of *waqf*s. If we compare this account side by side with others, we can make the conjecture that the function of this *naẓar al-Qarāfah* (or *al-Qarāfatayn*) would be to inspect or administer mausolea and *zāwiyah*s in the two Qarāfahs, including those of Imām al-Shāfi'ī and Imām Layth. Thus, this position likely concentrated on the administration of mausolea, but its relationship with fiscal duties and control of *waqf*s in each mausoleum remains rather obscure. Yet, seen from other *nāẓir*s' duties, *naẓar al-Qarāfah* can be assumed to have dealt in some way with *waqf* administration and the financial affairs of mausolea in the Qarāfah.

On the other hand, regarding the Ṣaḥrā' area, we find only the function of *naẓar,* such as *naẓar turbat al-Ẓāhir Barqūq* (superintendency of Barqūq's mausoleum), but not the *wālī*. In 856/1452, Sultan Jaqmaq nominated al-Shaykh 'Alī al-Muḥtasib for *naẓar turbat al-Ẓāhir Barqūq,* following the dismissal of al-Muḥibb ibn al-Ashqar, who was its *nāẓir* according to the stipulations set by the *waqf* founder. Al-Shaykh 'Alī (d. 862/1458) had experience as the *muḥtasib* of Fusṭāṭ and of Cairo successively, and al-Muḥibb ibn al-Ashqar, who was *kātib al-sirr* (confidential secretary), held the *naẓar* of *khānqāh* Siryāqūs after his dismissal from Turbat al-Ẓāhir Barqūq. The *naẓar* of the Ṣaḥrā' area seems likely to have been concerned with supervising mausolea financially and administratively through the management of *waqf*s, as seen through *waqf* documents as well as chronicles or biographies.[137]

---

al-Kalām, 2:856, 3:1005, 1265; idem, *Al-Ḍaw',* 11:100–1; idem, *Al-Tibr,* 385; Ibn al-Ṣayrafī, *Inbā' al-Haṣr,* 469; Ibn Iyās, *Badā'i',* 3:317, 4:97.

[137]Ibn Taghrībirdī, *Ḥawādith*, 125, 196, 383; idem, *Al-Nujūm,* 16:194–95; al-Biqā'ī, *Iẓhār al-'Aṣr,* 1:206, 340, 350, 440, 2:386; al-Sakhāwī, *Al-Ḍaw',* 11:185, 6:47. The complexity of who controlled the madrasah of Barqūq, and the share of the *kātib al-sirr* therein, are depicted in J. Berkey, *The Transmission of Knowledge in Medieval Cairo* (Princeton, 1992), 65–66. Cf. S. L. Mostafa, *Madrasa, Ḫânqâh und Mausoleum des Barqûq in Kairo* (Glückstadt, 1982). Also regarding *nāẓir*

To conclude, *nāẓir*s of al-Qarāfah and Turbat Barqūq, especially the latter, seem more to be involved in the financial and administrative management of mausolea, in contrast to the *wālī al-Qarāfah,* whose function rather laid stress on the policing and supervision of the districts. The aforementioned *naẓar* of al-Sayyidah Nafīsah′s mausoleum, which was undertaken by caliphs, should be viewed in this respect.

WOMEN′S ASSOCIATION WITH CEMETERIES

During the Mamluk period, women′s visits to cemeteries can be clearly observed. These visits became a focus of harsh diatribes by ulama and of supervision by *muḥtasib*s. Their criticism pertained mainly to the mingling of women and men, and moral laxity.[138] According to Ibn al-Ḥājj (d. 737/1336), ″on Thursdays they go out to the tombs, and stay there on Fridays, then return home on Saturdays; likewise on the day of ʻĀshūrā' (10th of the month of Muḥarram), two Feasts (*ʻīdān*) and the night of mid-Ramaḍān.″ Moreover, they went out visiting the mausoleum of al-Ḥusayn on Mondays, al-Sayyidah Nafīsah on Wednesdays or Saturdays, and on Thursdays and Fridays to Imām al-Shāfiʻī in al-Qarāfah, and also the tombs of their relatives.[139] It should be recalled that al-Tīfāshī (d. 651/1253) had already portrayed al-Qarāfah in his compilation of anecdotes as a place where women assembled.[140] The Mamluk government repeatedly proclaimed the prohibition of women′s visits to cemeteries, such as in 679/1280, 708/1309, 793/1391, 824/1421, 825/1422, 835/1432, 841/1438, and 864/1460, usually prior to the feast celebrating the end of Ramaḍān. Yet, several records, including frequent criticism and bans on women′s *ziyārah,* clearly show that women were integral to visiting customs in Cairene cemeteries.[141]

Furthermore, it is worth noting that women of all classes visited cemeteries, and they could be interred therein, as well. Among them, there must have been women who helped with the fabrication of holy tombs, by carrying soil in their veils for instance, and even women of the ruling elite, who would visit, pray, and pledge ample donations to cemeteries, as in the case of the mothers of Sultan Ismāʻīl and Amir Anūk. In fact they acted as the very mediators between the royal elite and the common people by describing the conditions and merits of *ziyārah* to

their husbands or families.[142]

CONCLUSION

Cairene cemeteries were open to people of all social strata, regardless of ethnic origin, social status, language, gender, age, occupation, disparity in wealth, physical handicap, religion, place of origin, illness, or skin color.[143] Commoners could participate there through frequent visits and the creation or reidentification of tombs, as is well reflected in the guidebooks of *al-ziyārah*. Through *ziyārah* texts, writings on the tombs, and hearsay, people were able to form their own discourses. The ulama also maintained an association with Cairene graveyards through their writings and preachings, while the ruling elite held banquets, communal prayers, or engaged in political struggles there. Everyone could find his own medium through which to relate to the cemeteries, and had the right to visit or be buried there. In this sense, Cairene cemetery areas formed a public locus in which people of any social status participated in their creation or improvement.[144] The public character of al-Qarāfah is well reflected in what al-Shaykh ʻAlī al-Turkī (d. 804/1401–2) was told by Shaykh ʻUmar, while they were walking through al-Qarāfah. ″ʻAlī, al-Qarāfah is the cemetery for Muslims, and no one individual can possess it, nor is one allowed to take [even] a portion of it for oneself.″ [145]

Relationships in the cemeteries did not always depend on hierarchy; rather, equality was emphasized. Personal relationships among visitors to Cairene cemetery

[143]This characteristic also held true within the cities of Cairo and Fusṭāṭ. According to *ziyārah* treatises, sick persons rushed into cemetery areas to pray for their healing, albeit the *ḥisbah* tract warns against the mingling of hermaphrodites with women in funerals. See Ibn al-Ukhūwah, *Maʻālim,* 51.

[144]In general, the definition of ″public″ can delineate anything official relating to a nation, such as public education or public enterprise; anything common to all people, such as public welfare or public order; or anything open to everyone, such as information or a space from which no one will be rejected. Additionally, ″publicness″ is usually placed opposite ″community,″ and the latter is defined as the relationship unconsciously established between persons, before the emergence of individual consciousness, such as family. If ″public″ is understood as a notion adoptable only for modern bourgeois society derived from the modern West, any efforts to utilize this conception within the context of Cairene cemeteries are rendered inaccurate from the beginning. Likewise, a simple application of Western concepts to Middle Eastern studies should be avoided in general. This article does not employ directly the recent definitions and arguments on the public sphere, but still reflects them to some extent. The employment of the word and conception of ″public″ as a framework for reference and comparison can be thought of as stimulating to argument, which helps us to discover new aspects of Cairene cemeteries. In this sense, this article is evocative rather than deductive. See J. Saito, *Publicness* (in Japanese) (Tokyo, 2000).

[145]Al-Maqrīzī, *Durar al-ʻUqūd al-Farīdah,* 2:510.

districts were generally not communal, but rather temporal. Institutions such as *waqf* or shari'ah, then, pervaded the whole of this composition. That is why the government ordered *muḥtasib*s to supervise these cemetery areas, and *wālī*s to control them. In addition, they sent their superintendents *(nāẓir)* to oversee mausolea′s finances through the *waqf* system, and the government even supported the burial expenditures of commoners through *waqf* income.

The way people related to Cairene cemeteries, however, would have varied according to their religious beliefs, social status or personal situations, gender, and so forth. Particularly, internalized religious attitudes and values might have affected these relationships greatly; hence Sufis, who were devoted to ascetic practices there, differed from rigid scholars, who tried to prohibit people from visiting holy tombs. Thus the involvement of all classes does not mean that their interests and activities there were always in harmony. On the contrary, they were often in conflict with one another; for instance, the ruling elite undertook to supervise the activities of commoners and women. Ulama, too, harshly condemned them. Hence, Cairene cemetery areas were loci where power relationships were acted out.

Was there, then, any category of society who were excluded from visiting Cairene cemetery areas? As I mentioned above, they were open and accessible to all people, from sultans to commoners. It is worth underlining here that women went there to visit famous mausolea and fulfill their prayers through the mediation of the entombed Muslim saints. This habit was often criticized by scholars and sometimes prohibited by the government, yet women were never actually expelled from the cemeteries, and the Qarāfahs retained their fame as a spot for women to assemble. Nor were people from outside Egypt or Cairo excluded, so that it was a tourist spot not only for Muslims, from Andalusian Spain to Central Asia, but seemingly also for European travelers.

As for religious differences, the issue is rather subtle. Generally speaking, visits by non-Muslims to the Qarāfahs and al-Ṣaḥrā' may possibly be presumed to have been avoided by non-Muslims themselves, and not welcomed readily by Muslims. Nonetheless, we should never forget the fact that the communal prayers in Cairene cemetery areas in the Mamluk period always mobilized a band of Copts and Jews. Additionally, as the cemetery of Coptic Christians was situated on the southern border of al-Qarāfah al-Kubrá, and the Jews′ cemetery was also located close to the Ḥabash Lake, strictly speaking, their cemeteries were on the edge of the Cairene cemetery zones. And it is possible that they made visits to their own cemeteries by passing through Muslim cemetery areas. Moreover, European non-Muslim travelers possibly traversed them and left accounts of their own visits. Since the Cairene cemeteries were popular pleasure spots for Egyptians, there is a possibility that non-Muslims mingled with Muslims, as is frequently

observed during feasts in Mamluk Egypt. Thus we see a contrast between *ziyārah* to Cairene cemeteries and the Meccan pilgrimage, which prohibits non-Muslims in the holy zone.

Yet people who violated public morals, as expressed in the *ḥisbah* tracts, were the first to be excluded from the cemetery areas, at least in theory. Also, thieves, people of shameless behavior, those who insulted Islamic values, and destroyers of tombs were to be excluded. In reality, however, as mentioned earlier, the Cairene graveyards were famed for their thieves and moral laxity.

Finally, it can be seen that there was a difference in function and character between the two Qarāfahs and al-Ṣaḥrā'. If I may generalize by contrasting them, the Qarāfahs were a burial district for venerated people and commoners, and a visitation site for people of all classes. Meanwhile al-Ṣaḥrā' projected a more official character, where members of the ruling elite preferred to be interred, and for the common people it was usually not a place to visit for fulfillment of their prayers, except in instances when they were mobilized. *Ziyārah* treatises, therefore, seldom depicted tombs of sultans and *khānqāh*s there.

The Establishment and Development of al-Dīwān al-Mufrad: Its Background and Implications

The amount of tax revenues from farm villages was estimated throughout Egypt and Syria on the basis of the cadastral survey referred to as *al-rawk al-Nāṣirī,* conducted during the third reign of Sultan al-Nāṣir Muḥammad ibn Qalāwūn (709–41/1310–41). Based on the results of the survey, *iqṭā'*s were reallocated to soldiers, giving priority to the Mamluks. Simultaneously, a new ratio for the division of agricultural land into *iqṭā'*s and *khāṣṣ* land (land in the government's domain) was fixed. The government's control over the allotment of *iqṭā'* was greatly strengthened through this *rawk,* and the political, military, and financial systems of the Mamluk state were finally established on the basis of the highly centralized *iqṭā'* system. It is commonly understood that this resulted in the formation of the basic structure of the Mamluk state.[1]

However, the state structure thus established began to crumble after the middle of the eighth/fourteenth century, when the Mamluk state was thrown into political and social confusion. It was thus obliged to transform itself in various respects. Although this is considered as superficial evidence of the decline of the Mamluk dynasty thereafter, in recent years, several important articles have been published, attempting to document the transformations in state and society, especially the changing domestic and international situations during the rule of the Circassian Mamluks (784–922/1382–1517). These articles throw new light on Mamluk history.[2] Presently, Mamluk studies has reached a stage where the historical development

of the Mamluk regime throughout the whole of the Mamluk era is being reassessed through further research on the structure of the state and society during the period of "decline."

From this perspective, this article is concerned with a special financial bureau called al-Dīwān al-Mufrad, which was founded by al-Ẓāhir Barqūq, the first sultan of the Circassian Mamluks (r. 784–91, 792–801/1382–89,1390–99). The existence of this *dīwān,* which was charged with providing monthly wages and other essentials to the sultan's mamluks, was the most obvious difference between the state machinery of the Bahri Mamluks (648–784/1250–1382) and the Circassian Mamluks. However, thus far, the study of this *dīwān* has been superficial and little is known about it despite its having played a crucial role as the most important bureau during this period. I believe that elucidating the implications of its establishment and evolution will also contribute to understanding the problems that confronted the Circassian Mamluk state, compelling it to undertake such an institutional change.

In this article, we trace the historical development of al-Dīwān al-Mufrad from its establishment until its fiscal bankruptcy on the eve of the enthronement of Sultan al-Ashraf Qāytbāy in 872/1468, who had initiated financial and administrative reforms in order to revitalize the weakened Mamluk state.[3] We also investigate the political and social factors underlying this transformation in order to show that it was not a superficial alteration of the financial machinery; rather, it was closely linked to the process of the collapse of the *iqṭā'* system, established through *al-rawk al-Nāṣirī,* and the resulting transformation of the state structure.

THE POLITICAL AND FINANCIAL SITUATION IN THE SECOND HALF OF THE EIGHTH/FOURTEENTH CENTURY PRIOR TO THE ESTABLISHMENT OF AL-DĪWĀN AL-MUFRAD

It is necessary to examine the political and financial situation after the death of Sultan al-Nāṣir in 741/1341 and to understand the problems that confronted Barqūq when he seized power. Regarding the political situation, the Mamluk state was undergoing "political chaos," primarily caused by a fundamental problem concerning the character of the sultan's power and the path of succession. Power struggles in those days were basically caused by three factors: first, contesting for power between the Qalāwūnid sultans, who ascended on a lineage basis, and the Supreme Council *(majlis al-mashūrah),* comprising several senior Mamluk amirs; second, factional rivalries among the amirs; third, the direct intervention of the Royal Mamluks *(al-mamālīk al-sulṭānīyah)* in the political process. The Royal Mamluks were a powerful political group because they possessed the armed strength required to win such struggles. After a series of struggles, Sultan al-Ashraf Sha'bān was killed during the *coup d'état* in 778/1377. In the following year (779/1378), Amir

[3]Cf. Petry, *Protectors or Praetorians?,* 190–219.

Barqūq finally seized power and began to rule through the agency of the position of *atābak al-ʿasākir* (commander-in-chief) with the title of *al-amīr al-kabīr* (the Grand Amir). Subsequently, the principle that the paramount individual among the Mamluk amirs would assume the supreme seat with the support of a Mamluk factional power base and through an agreement among the Mamluks, which was the political system prior to the establishment of the Qalāwūnid "royal authority," was re-established. This principle was maintained for the remainder of the Circassian Mamluk period, determining the fundamental character of the sultan's power.[4]

It now became essential for Barqūq, who had emerged as the final winner in the series of power struggles, to rebuild the state structure that had been weakened during the previous volatile situation. The matter that required immediate attention was that of finance, which was responsible for affecting the stability of successive governments. The period of political and social upheaval following the death of al-Nāṣir was marked by a financial crisis. It had become difficult for the state treasury to meet expenses; therefore, dismissals and resignations of successive viziers were frequent. Although an increase in allowances and provisions for the army, the eunuchs, the harem, etc., was observed to be the principal cause of the financial difficulties,[5] it was not their only cause. The generous special bonus *(nafaqah)* paid to the Royal Mamluks for the purpose of gaining their support during political struggles had strained the treasury.[6] In addition to this, the great plague, which first broke out in 749/1348–49, played an additional, crucial role in the economic deterioration, resulting in rural depopulation and a subsequent decline in agricultural production in the Middle East.[7] Moreover, the "political confusion" in those days also impoverished rural areas in Egypt and Syria because it resulted in the government and the *iqṭāʿ* holders neglecting *ʿimārah* (cultivation of land) and exacting oppressive taxes from peasants, in addition to the subsequent plundering

of these areas resulting from the incursion of bedouin tribes with their herds and flocks.[8] There is no doubt that these varied factors contributed to economic decline and ensuing financial difficulties. However, the immediate cause of the decrease in state revenues was a problem arising from the system of landholding, which was characterized by the alienation and privatization of state lands that produced *kharāj* (land tax) revenues for the state treasury.

With regard to agricultural land in Egypt, which was the principal financial resource of the Mamluk state, 14 *qīrāṭ*s (14/24) were allotted to amirs and the *ḥalqah* troopers as *iqṭā'* and the remaining 10 *qīrāṭ*s (10/24) became *khāṣṣ* land. *Iqṭā'*s for the Royal Mamluks were allocated from the *khāṣṣ* land, with the remainder allocated for other governmental needs.[9] According to the traditional financial system of the Mamluk state, the vizier was in charge of the financial affairs of the government as the chief financial officer, and the bureau headed by him was called the Dīwān al-Wizārah/al-Dawlah (the vizier's bureau/the state bureau).[10] Although the state's economic and financial difficulties were predominantly due to the above-mentioned reasons, I believe that another direct cause was the decrease in taxable lands held by the government. Al-Maqrīzī's account reads as follows:

> On 11 Ṣafar 783 (7 May 1381), Shams al-Dīn Abū al-Faraj al-Maqsī resigned from the office of vizier owing to the impotence of the office, because a huge amount of land had been lost from [the resources for] its work. . . . The following day, the Grand Amir (Barqūq) sent a *khil'ah* (robe of honor) of a vizier to al-Maqsī in order to persuade him to continue [in office] as before. However, he declined the offer because the lands that had been lost from the state [bureau's resources] could not be recovered.[11]

[10]On the financial organization of the Mamluk state during this time, see: al-Qalqashandī, *Ṣubḥ al-A'shá fī Ṣinā'at al-Inshā'* (Cairo, 1913–22), 4:28–30 (hereafter cited as *Ṣubh*); Rabie, *Financial System,* 138–61; al-Bayyūmī Ismā'īl, *Al-Nuẓum al-Mālīyah fī Miṣr wa-al-Shām Zaman Salāṭīn al-Mamālīk* (Cairo, 1998), Chap. 1.

[11]*Sulūk,* 3:410–11, cf. Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah* (Damascus, 1977–97), 1:57 (hereafter cited as *Ibn Qāḍī Shuhbah*).

At this point, it should be noted that at the beginning of Barqūq′s rule, the decrease in government land was regarded as a crucial problem in the state′s finances and it was described as the reason for the vizier′s resignation and his adamant refusal of Barqūq′s offer. We will now investigate the two causal factors that Barqūq attempted to address during his reign. The first was that amirs had rented large quantities of agricultural land from the state treasury. On 19 Ramaḍān 784 (26 November 1382), Barqūq deposed the Qalāwūnid nominal sultan al-Ṣāliḥ Ḥājjī and pronounced himself sultan. He then immediately appointed Shams al-Dīn Ibn Kātib Arlān, who was the chief manager *(nāẓir)* of Barqūq′s office *(dīwān)* when he was an amir, as the vizier and ordered him to restore the fiscal integrity of the state:

> Since al-Malik al-Ẓāhir (Barqūq) ascended to the sultanate, some time had passed. [But] the [financial] affairs were not in order. Therefore, he appointed him [Ibn Kātib Arlān] to the post of vizier in Muḥarram 785 (March 1383). . . . At the time of his appointment, there was neither one dirham [in cash] nor one *qadaḥ* of grain in the [state] coffers, [because] state lands had been rented by amirs at a lower rate than their value by means of making advance payments.[12]

This indicates that a large amount of government land that should have been producing tax revenues for the state treasury had been ″rented″ by the powerful amirs for negligible amounts; in other words, the lands had passed into their *de facto* possession.

The second problem was an increase in the sales of state land and subsequent ″waqfization″ of the lands thus sold. During this period, a substantial amount of agricultural land had been sold by the state treasury as *milk* (private real estate), and then turned into *waqf* (religious trust) for the support of religious institutions or the descendants of sultans and amirs. Accordingly, in 780/1379, which was the year following his ascension to power as *atābak,* Barqūq called a meeting to discuss this problem in order to make such acts illegal and to implement the return of the alienated lands to the state treasury:

---

[12] *Ibn Qāḍī Shuhbah,* 1:225; cf. *Sulūk,* 3:569; al-Maqrīzī, *Durar al-ʻUqūd al-Farīdah fī Tarājim al-Aʻyān al-Mufīdah* (Damascus, 1995), 1:122; al-Ṣayrafī, *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān* (Cairo, 1970–94), 1:161 (hereafter cited as *Nuzhah*); Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʻd al-Wāfī* (Cairo, 1985–2003), 1:75 (hereafter cited as *Manhal*).

> On 16 [Dhū al-Ḥijjah 780] (5 April 1379), the Grand Amir Barqūq summoned qadis and learned shaykhs and consulted with them regarding the cancellation *(ḥall)* of *waqf* lands allotted for mosques *(jawāmi' wa-masājid),* schools *(madāris),* and Sufi convents *(khawāniq wa-zawāyā wa-rubṭ),* for descendants of sultans *(mulūk),* amirs, and others, and for pious *rizqah*s,[13] and whether the sale of Egyptian and Syrian *kharājī* lands from the state treasury was [legally] permissible or not. Documents concerning Egyptian and Syrian lands that had been turned into *waqf* or privatized—the amount [of loss] was an enormous sum of money every year—were presented. When these were read to the amirs and learned men present [at that consultation], Amir Barqūq stated, "This is the matter that has weakened the army of the Muslims."[14]

Barqūq's questioning of this circumstance, the legality of which had remained largely unchallenged until this time, indicates that he considered the management of the government to be seriously impeded by the sale and "waqfization" of state lands, which had intensified following al-Nāṣir's reign.[15] That is to say, the increase in *waqf*s caused a decrease in government tax revenues because the *waqf* properties were tax-free owing to their religious nature.[16] Moreover, state lands had often been sold for a pittance by means of an immediate refund of the price paid to the

[13]*Rizqah* (pl. *rizaq*) is land allotted by the sultan from the state treasury. It is classified under two categories: the first one is the "military *rizqah*" *(al-rizaq al-jayshīyah),* which was allotted to retired amirs or widows and orphans of dead amirs. The second one is the "pious *rizqah*" *(al-rizaq al-aḥbāsīyah),* which was allotted to religious institutions or religious men. See: A. N. Poliak, *Feudalism in Egypt, Syria, Palestine, and the Lebanon, 1250–1900* (London, 1939; repr. Philadelphia, 1977), 32–34; Takao Ito, "Aufsicht und Verwaltung der Stiftungen im mamlukischen Ägypten," *Der Islam* 80 (2003): 55–61.

[14]*Sulūk,* 3:345.

[15]Al-'Aynī, "Tārīkh al-Badr fī Awṣāf Ahl al-'Aṣr," British Library MS Add. 22350, fol. 104v (hereafter cited as *Badr*); Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963–72), 11:166 (hereafter cited as *Nujūm*); *Ibn Qāḍī Shuhbah,* 3:580.

[16]Muḥammad Muḥammad Amīn, *Al-Awqāf wa-al-Ḥayāh al-Ijtimā'īyah fī Miṣr 648–923 A.H./1250–1517 A.D.* (Cairo, 1980), 279. *Taysīr* also says that the state land sale and the subsequent "waqfization" was one of the reasons for the decrease in revenues in Egypt that occurred during the period from *al-rawk al-Nāṣirī* till the enthronement of Barqūq. Moreover, it was also regarded as a reason for the agricultural decline because the *'imārah* of *waqf* lands was often neglected (*Taysīr,* 79–83). While Abū Ghāzī, basing his findings on archival sources, describes the phenomenon as widespread under the Circassian Mamluks (Abū Ghāzī, *Taṭawwur,* 10, 16–17), we also find this situation described for earlier times in the literary sources.

state treasury for the land.[17]

Thus, these two factors that had led to the alienation of state lands were the fundamental causes of the financial difficulties at the time of Barqūq′s ascent to power. Moreover, their effects on the *iqṭā‘* system, which was based on the principle of state landholding and its full control over land allocation, cannot be ignored; this topic will be addressed later. Although the reasons for the problems that arose after the death of Sultan al-Nāṣir require careful examination, it is plausible that the damage to rural districts that resulted from the great plague had inflicted losses on the amirs who depended on the *iqṭā‘* income; therefore, they tried to obtain lands through suspect methods during the political instability wherein the sultan′s control over the government had weakened, by taking advantage of the frequent transfer of *iqṭā‘*s whose holders were lost to the plague.[18]

Nevertheless, when Barqūq took power, he made efforts to resolve these two problems during his reign. However, although all his attempts succeeded initially, they proved to be inconclusive. With regard to the former problem, Vizier Ibn Kātib Arlān succeeded in recovering lost lands from the possession of the amirs and rebuilding state finances during his tenure.[19] However, his death in 789/1387 and Barqūq′s temporary dethronement due to Amir Minṭāsh′s rebellion in 791/1389 nullified the efforts put into the reconstruction of the landholding system. When Barqūq recovered his position in the following year, 792/1389, he appointed several civilians, who had worked as viziers, to various financial posts at the Dīwān al-Wizārah for the purpose of ″restor[ing] the condition of the state land to that in Ibn Kātib Arlān′s years.″[20] Nonetheless, the fact that a majority of them were relieved of their positions as early as the following year is an indication of the failure of this attempt. With regard to the latter, it is important to understand the manner in which the *majlis* ended; however, two different endings are reported in the sources. While some sources such as *Sulūk* claim that Barqūq succeeded in confiscating *waqf* lands and allotting them to the army as *iqṭā‘* regardless of strong opposition from the ulama,[21] others, such as *Inbā’ al-Ghumr,* report that his

---

[17]*Sulūk,* 3:346. The same method is often observed in the archival sources, and Abū Ghāzī estimates that 10 percent of the state land sales he counted on the basis of the archives had applied this method. See: Abū Ghāzī, *Taṭawwur,* 80–83.

[18]Cf. *Sulūk,* 2:785.

attempt resulted in failure owing to the opposition.[22] It is difficult to judge the veracity of these reports. Although similar *majālis* were called in 783/1381 and 789/1387 during Barqūq′s reign[23] and also under later sultans, not all of them succeeded in abrogating *waqf*s. Moreover, owing to the opposition of the ulama, they went no further than imposing temporary levies on the *waqf*s under emergency situations such as military expeditions.[24] Therefore, this is an exceptional case even if the abrogation of *waqf*s was carried out at the time. In reality, throughout the Mamluk era, state land sales had never been forbidden, nor had the confiscation of lands converted into *waqf*s been legalized.[25]

When Barqūq seized power under these difficult circumstances, he not only made efforts to bring state finances under control, but also founded a new bureau, al-Dīwān al-Mufrad, for the purpose of anchoring the financial administration and achieving the political stability of his regime.

THE ESTABLISHMENT OF AL-DĪWĀN AL-MUFRAD AND THE TRANSFORMATION OF THE STATE MACHINERY

Chancery manual sources such as *Ṣubḥ* explain al-Dīwān al-Mufrad as follows: it was an independent financial bureau in charge of providing the monthly wages *(jāmakīyah),* clothing allowances *(kiswah),* fodder *(ʻalīq),* and other provisions to the Royal Mamluks, having specific lands separate from those of the state treasury as its own resources. *Ustādār al-sulṭān/al-ʻāliyah* (the sultan′s/supreme majordomo), one of the military officers, managed this *dīwān* as chief, assuming the responsibilities of other officials such as *nāẓir al-dīwān al-mufrad* (the deputy chief of the *dīwān*), scribes *(kuttāb),* notaries *(shuhūd),* and so on.[26]

While it is clear that this *dīwān* had been established by Barqūq, there are two

opinions regarding the actual year of its establishment; that is, 784/1382 or 797/1395.[27] The former is based on an account in the *Khiṭaṭ* stating that it was established by the conversion of an *iqṭā‘,* held by Barqūq when he was an amir, into a revenue source "when he ascended to the sultanate."[28] Accordingly, it regards 784/1382, the year of Barqūq's enthronement, as the year of establishment. On the other hand, the latter opinion depends on an account in *Nujūm* stating that it was established by the conversion of the *iqṭā‘* belonging to Barqūq's son Muḥammad, who died in 797/1395.[29] In other words, the difference of opinion with respect to the year of establishment of the *dīwān* arises from a question regarding its source of revenue, i.e., whether it was originally Barqūq's *iqṭā‘* or his son's. We shall now examine the actual establishment process of this *dīwān* on the basis of the chronicle sources.

In the early years of Barqūq's reign as *atābak al-‘asākir* from 779/1387, the government had been jointly headed by Barqūq and his colleague, Amir Barakah. Subsequently, owing to the political differences between them, Barqūq succeeded in incarcerating Barakah and then killing him in Rabī‘ I 782 (June 1380);[30] consequently, Barqūq's regime attained stability. At this time, he gave Barakah's *iqṭā‘,* which was allotted to an amir of one hundred, and the amirate to his own son Muḥammad, who was born on the first day of that month. He then appointed Amir Sharaf al-Dīn Mūsá ibn Dandār ibn Qaramān as Muḥammad's *ustādār* to be the manager of his *iqṭā‘,* contrary to the prevailing custom that when the position of an amir became vacant, it was given to another along with his *iqṭā‘*.[31] It appears reasonable to suppose that Barqūq intended to profit from the *iqṭā‘* held in the name of his infant son as well as to prevent the emergence of a political rival by not giving the vacant *iqṭā‘* of the number two position to another amir. In the meantime, Barqūq retained his own *iqṭā‘* as an amir of one hundred in addition to

[31]*Sulūk,* 3:387, 389; Ibn Duqmāq, *Al-Jawhar al-Thamīn fī Siyar al-Mulūk wa-al-Salāṭīn* (Beirut, 1985), 2:255; *Nujūm,* 11:180. Each amir used to have his own *ustādār* to manage the financial affairs of his *iqṭā‘* and other resources. See: al-Subkī, *Mu‘īd al-Ni‘am wa-Mubīd al-Niqam* (Cairo, 1948), 26–27; *Ṣubḥ,* 5:457.

being in charge of the financial affairs of the state as the *atābak*. During this time, Amir Bahādur al-Manjakī (d. 790/1388) had served as Barqūq's *ustādār*[32] and managed his *iqṭā'*. Thereafter, Barqūq formally ascended to the sultanate in Ramaḍān 784 (November 1382) and immediately appointed his personal *ustādār,* Bahādur, to the post of *ustādār al-sulṭān* with a rank of amir of forty, as well as to the post of Muḥammad's *ustādār*.[33] Although the duties of the *ustādār al-sulṭān* had hitherto included taking charge of all the affairs relating to the sultan's court and servitors as "majordomo,"[34] Bahādur's duties mainly comprised financial management, much as the *ustādār*s of the amirs. Nevertheless, this does not immediately imply that al-Dīwān al-Mufrad was established during this time. The first reference to this *dīwān* was made in Dhū al-Qa'dah 788 (November 1386), in which Sa'd al-Dīn Naṣr Allāh ibn al-Baqarī, who had managed Barqūq's private financial affairs prior to his enthronement, was appointed as the *nāẓir* of al-Dīwān al-Mufrad "newly established *(istajadda)* by the sultan."[35] Therefore, it appears reasonable to suppose that this *dīwān* was officially established at this time. However, I believe that Muḥammad's *iqṭā',* which had been under the control of the *ustādār al-sulṭān,* was probably added to the *dīwān*'s resources after his death in 797/1395 because his *iqṭā'* remained separate from the land of al-Dīwān al-Mufrad after its establishment as it was previously;[36] however, it might have been a *de facto* source of revenue for this *dīwān.*

Thus, we can summarize the establishment process of al-Dīwān al-Mufrad as follows: Barqūq had kept for himself two *iqṭā'*s allotted to amirs of one hundred, which once belonged to Barqūq and Barakah, as his own revenue source, and independent of the government purse, without allotting them to others even after his enthronement. Subsequently, he appointed the *nāẓir* and formally established this *dīwān* through the conversion of his former *iqṭā'* into its revenue source in 788/1386, then added the other *iqṭā'* to it later, possibly in 797/1395. If this is true, a question arises regarding the inducement for him to establish the *dīwān.* One reason could be that it was due to one of the policies aiming to augment the mamluks trained and organized by the sultan himself, called *mushtarawāt,*[37] and

36 *Badr,* fols. 139r, 145r.

37 The Royal Mamluks comprised the *mushtarawāt*, the Mamluks who were trained by the present reigning sultan, and the *mustakhdamūn,* those who were transferred from the service of the preceding sultans or amirs to the service of the reigning sultan. See: David Ayalon, "Studies on the Structure

also to ensure the regular distribution of monthly wages to them. During the chaotic period preceding Barqūq's ascent to the sultanate, the control of the Royal Mamluks was beyond the sultan's power and even the *mushtarawāt* had often participated in revolts by the amirs against the sultan demanding money.[38] Because of this, following his enthronement, Barqūq exiled the previous sultans' mamluks and replaced them with his own in order to secure control over the Royal Mamluks.[39] Therefore, the establishment of al-Dīwān al-Mufrad could be regarded as a corollary policy; that is, while the Royal Mamluks were sustained by *iqṭā*'s allotted from the *khāṣṣ* land or the monthly wages paid from the state treasury, this system had been directly affected by the decrease in state lands. To counter this problem, Barqūq ensured there would be an exclusive revenue source for the Royal Mamluks through the establishment of this *dīwān*. Accordingly, he succeeded in maintaining the *mushtarawāt,* comprising a large number of mamluks, estimated at 5,000 men.[40] The establishment of al-Dīwān al-Mufrad undoubtedly enabled Barqūq to retain his power, unlike his predecessors during the late Bahri Mamluk period. However, it should be noted that this *dīwān* was organizationally and financially independent of the traditional financial system of the Mamluk state as it was originally established, because the *dīwān* itself was funded by *iqṭā'* lands. This made it possible for the *dīwān* to avoid the direct effects of the government's financial difficulties which would affect the sultan's power base directly; however, it also indicated that Barqūq could not solve the fundamental problem causing these financial difficulties, and that it was difficult for the sultan to depend on the traditional financial system.

Consequently, the newly-established al-Dīwān al-Mufrad rapidly expanded its role, and the Mamluk state structure also came to be reorganized owing to its development. Initially, the financial affairs of the state were managed by three independent bureaus, namely, Dīwān al-Wizārah, Dīwān al-Khāṣṣ, and al-Dīwān al-Mufrad. Although each of these had its own revenue sources and was responsible for providing certain allowances, all of them were sometimes placed under the sole supervision of the *mushīr al-dawlah* (counselor of the government).[41] Although the role and revenue sources of each of these bureaus changed with time, they may be summarized as follows: Dīwān al-Wizārah obtained its income through

---

of the Mamluk Army 1," *Bulletin of the School of Oriental and African Studies* 15, no. 2 (1953): 204–22; William Popper, *Egypt and Syria under the Circassian Sultans, 1382–1468 A.D.: Systematic Notes to Ibn Taghrî Birdî's Chronicles of Egypt* (Berkeley and Los Angeles, 1955), 1:87.

[38]Sultan Sha'bān distributed money to his mamluks for the purpose of "securing himself by giving his money" [*Sulūk,* 3:139, 154], but he lost his position due to their participation in the amirs' revolt (see note 6). For a case pertaining to Barqūq's mamluks in 784/1382, see: *Sulūk,* 3:473; *Ibn Qāḍī Shuhbah,* 1:84–85.

[39]In 784/1382: *Sulūk,* 3:479; *Nuzhah,* 1:49–50. In 785/1383: *Sulūk,* 3:500; *Nuzhah,* 1:78.

the collection of *kharāj* tax from particular districts such as Giza and Manfalūṭ and miscellaneous taxes *(mukūs),* and undertook the responsibility of supplying meat and other food for the Royal Mamluks and others. Dīwān al-Khāṣṣ obtained its resources from taxes levied at Alexandria and other coastal ports on the Mediterranean, which covered expenses for the two feasts *(ʿĪdayn), khilʿah*s, etc. Finally, as mentioned before, al-Dīwān al-Mufrad was responsible for the monthly stipends and other essentials for the Royal Mamluks.[42]

It is difficult to specify the exact year in which the division of state finances into these three bureaus was completed. However, it is fairly certain that the two prominent *ustādār*s, Yalbughā al-Sālimī (d. 811/1409) and Jamāl al-Dīn Yūsuf (d. 812/1409), who seized political and financial power during the civil war during the reign of Sultan al-Nāṣir Faraj (801–8, 808–15/1399–1405, 1405–12), were associated with the transformation of the financial organization. Each of them was also an amir of one hundred exercising the general management and supervision of state finances as *mushīr al-dawlah,* and occasionally held concurrently the post of vizier.[43] During their tenure, the office of the *ustādār* underwent a remarkable growth in importance, accompanied by a dramatic increase in the numerical strength of the staff of al-Dīwān al-Mufrad.[44] In contrast, the office of vizier, which had hitherto played a crucial role in state finances, lost its importance.[45] Based on this knowledge, we can judge that the transformation of the financial bureaucracy was achieved at approximately this time; however, this leaves still unanswered the question of whether this was an intentional policy clearly designed to transform the organization of state finances.

Parallel to the division of the state finances, the *khāṣṣ* land in Egypt was also allocated to the resources of each bureau.[46] However, lands allotted to the Dīwān al-Wizārah and Dīwān al-Khāṣṣ accounted for only a small portion of the entire amount of land, and al-Dīwān al-Mufrad acquired the greater portion of it for itself[47] along with some farm land in Syria.[48] Consequently, al-Dīwān al-Mufrad

became the most important office for Egyptian local administration, and the appointee to the post of *ustādār al-sulṭān* began to assume the additional post of Viceroy of Lower Egypt *(nā'ib al-wajh al-baḥrī)* from the reign of Sultan Faraj, and also of Upper Egypt *(nā'ib al-wajh al-qiblī)* from the reign of Sultan al-Ashraf Barsbāy (825–41/1422–38). The appointee was also invested with the authority to appoint and dismiss local governors *(wālī, kāshif)*.[49] Furthermore, the *ustādār* would often travel throughout the rural districts of Egypt in order to collect taxes himself.[50]

With regard to the proportion of land assigned to al-Dīwān al-Mufrad, valuable information can be obtained from *Intiṣār* and *Tuḥfah,* which recorded the name, size of the cultivated land, and the tax revenues of each tax district *(nāḥiyah)* in Egypt (see Table).[51] This indicates that during the reign of Sultan Barqūq, the agricultural land of al-Dīwān al-Mufrad in Egypt comprised only 14 districts with annual revenues (*'ibrah*) estimated at approximately 200,000 *dīnār*s *jayshī* (dj).[52] However, by the reign of Sultan Qāytbāy, approximately eighty years later, these numbers had increased tremendously; the number of districts had increased by approximately ten times (159 districts), and the amount of revenue collected had increased approximately seven times (1,413,858.3 dj). These districts were spread across most of the provinces of Egypt (17 of 21) and the average revenue from them was 8,892.2 dj, which was more than twice that of the revenues obtained

---

[47]Ibid., 3:724; *Zubdah,* 107.

[48]*Sulūk,* 3:898; *Ibn Qāḍī Shuhbah,* 1:657, 4:107; *Nuzhah,* 2:398.

[49]*Dīwān al-Inshā',* fol. 126r–v; *Ḥadā'iq,* 121; *Khiṭaṭ,* 3:724. However, according to the chronicles, the first case of an *ustādār* holding the post of Viceroy of Lower Egypt came about in 800/1397 (i.e., toward the end of Barqūq's reign), and the first case of an *ustādār* holding the post of Viceroy of Upper and Lower Egypt came about in 824/1421 (i.e., the year in which Sultan al-Muẓaffar Aḥmad was enthroned). See: *Sulūk,* 3:891, 4:568; *Nuzhah,* 2:498.

[50]For example, the case occurring in 816/1414: *Sulūk,* 4:274–75; *Inbā' al-Ghumr,* 3:15. In 820/1417: *Sulūk,* 4:385, 392–94; *Inbā' al-Ghumr,* 3:138; *Nuzhah,* 2:401. Moreover, several *ustādār*s had careers as Egyptian local governors. For example, Fakhr al-Dīn 'Abd al-Ghanī ibn Abī al-Faraj (d. 821/1418): *Sulūk,* 4:180, 267, 356; *Inbā' al-Ghumr,* 3:182–84; *Manhal,* 7:314–18; *Ḍaw',* 4:248–51.

[51]Ibn Duqmāq, *Kitāb al-Intiṣār li-Wāsiṭat 'Iqd al-Amṣār* (Cairo, 1893); Ibn al-Jī'ān, *Kitāb al-Tuḥfah al-Sanīyah bi-Asmā' al-Bilād al-Miṣrīyah* (Cairo, 1898). Notes on the Table: (1) All figures were rounded off to one decimal place. (2) If al-Dīwān al-Mufrad shared a tax district with other uses (such as private land, *waqf,* etc.), the *'ibrah* of the *dīwān* was calculated by dividing the *'ibrah* of the district under consideration equally, except in a case wherein the *'ibrah* of each was specified. (3) The *'ibrah,* the average *'ibrah,* and the percentage were calculated excluding those districts whose *'ibrahs* were not known. Therefore, the total amount of *'ibrah* for the whole of Egypt given in this Table differs from that written in the opening paragraph of *Tuḥfah.* However, when calculating the percentage of *'ibrah* of al-Dīwān al-Mufrad, this showing of a general tendency is not a problem because there is a small difference of only one decimal place.

from all the Egyptian districts, which was 4,107.8 dj. Moreover, 187 districts in Egypt provided revenues exceeding 10,000 dj, of which 47 belonged to al-Dīwān al-Mufrad, accounting for almost one-fourth of the total number. However, this *dīwān* also accounted for 20 of the 50 districts (40 percent) that provided revenues of 20,000 dj and more, and 10 of the 17 districts (almost 60 percent) that provided revenues of 30,000 dj and more, with the ratio rising in proportion to the revenue. These details immediately clarify that this *dīwān,* as a matter of priority, acquired a greater number of productive districts among the resources under its control. As a result, al-Dīwān al-Mufrad held the largest number of tax districts among the financial bureaus of the government, the income from which comprised 17.3 percent (i.e., more than 4 *qīrāṭ*s) of the revenues from all the rural districts of Egypt.

This increase in al-Dīwān al-Mufrad's landholdings had been achieved by means of acquisition of not only *khāṣṣ* lands previously under the control of the Dīwān al-Wizārah but also *iqṭā'*s. The chronicles report several cases in which *iqṭā'*s of deceased or dismissed amirs were added to the resource pool of al-Dīwān al-Mufrad by sultans: those of three amirs of one hundred, one amir of forty, one amir of ten, and one amir of unknown rank.[53] However, not all the *iqṭā'*s added to this *dīwān* were such high-yielding ones belonging to high-ranking amirs. According to *Nujūm,* regarding Zayn al-Dīn Yaḥyá al-Ashqar (d. 874/1469), the *ustādār* during the reign of Sultan al-Ẓāhir Jaqmaq (842–57/1439–53), "he seized numerous *iqṭā'*s of the Royal Mamluks and amirs, acquiring them by force, and added them to al-Dīwān al-Mufrad." *Ustādār*s tried to seize *iqṭā'*s of lower-ranking amirs, mamluks, and probably also the *ḥalqah* troopers for the purpose of discharging their duties and advancing their own interests at every opportunity.[54] In addition, this *dīwān* benefited from other sources of revenue, notably, the government-managed waterwheels *(dawālib)* in 803/1401 and the income from the sultan's monopoly on sugar in 832/1429. Moreover, a deficit in this *dīwān* was covered by

Amir Jakam al-Ashrafī, uncle of the ex-sultan al-'Azīz Yūsuf (in 867/1463) [Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. William Popper (Berkeley, 1930–42), 759 (hereafter cited as *Ḥawādith*[1])].

[54]*Nujūm,* 16:28. Haarmann also connects the decline in *iqṭā'* holdings of the sons of the sultans (*sīdī;* pl. *asyād*) during the Circassian Mamluk period to the establishment of al-Dīwān al-Mufrad

sales of positions in local government in 824/1421.[55]

These details show that the establishment of al-Dīwān al-Mufrad brought about and played a pivotal role in the reorganization of the administrative and financial bureaucracy. It clearly indicates that providing monthly stipends to the Royal Mamluks became the most important task of the government. As mentioned earlier, the Mamluk state had undergone a radical change in its political and power structure, resulting in the Royal Mamluks expanding their role in politics.[56] Furthermore, they rioted when there were delays in the distribution of wages, which often escalated into open revolt against the sultan vociferously demanding his dethronement;[57] therefore, the reliable distribution of wages became the primary concern of successive sultans. Viewed in this light, the establishment of al-Dīwān al-Mufrad can be regarded as an organizational adjustment to the new political structure.

On the other hand, it is important to note that al-Dīwān al-Mufrad developed through the acquisition of not only *khāṣṣ* lands but several *iqṭā*ʿs as well. While the number of amirs of one hundred in Egypt had been fixed at 24 men owing to *al-rawk al-Nāṣirī*, all of these posts were rarely filled during the Circassian Mamluk period. According to *Ṣubḥ,* the decrease in the number of amirs of one hundred resulted from the establishment of this *dīwān,* and their number was reduced to 20 or less, and even 18 during the reign of Barqūq due to this reason. Thereafter, this decrease in the number persisted till the reign of Sultan Barsbāy in 840/1436, when it dipped to 13, and then 11 in 857/1453 during the reign of Sultan Jaqmaq.[58] This indicates that on one hand al-Dīwān al-Mufrad accumulated a vast amount of agricultural land but on the other that *iqṭā*ʿ lands for amirs decreased inversely, so that the ratio between the *khāṣṣ* land and the *iqṭā*ʿs based on *al-rawk al-Nāṣirī* was being diminished.

Nevertheless, such a large-scale expansion of al-Dīwān al-Mufrad's landholdings should not simply be regarded as part of an "innovation" to strengthen

the sultan′s autocratic power by an increase in the number of Royal Mamluks through the building up of this *dīwān.* On the contrary, it resulted from the necessary addition of resources to this *dīwān,* moving parallel to the gradually deteriorating financial situation, as we shall see in what follows.

THE BANKRUPTCY OF AL-DĪWĀN AL-MUFRAD AND ITS IMPLICATIONS

The economic decline caused by various factors such as plague was further aggravated during the Circassian Mamluk period.[59] Accordingly, al-Dīwān al-Mufrad also experienced financial difficulties as early as the reign of Sultan Barsbāy, usually regarded as a relatively stable period.[60] In Rajab 828 (May 1425), a large deficit was detected through an audit of the *dīwān;* it amounted to 120,000 dinars per year. Similarly, another deficit, detected in Rabīʻ II 832 (January 1429), had reached 60,000 dinars per year.[61] The financial condition markedly deteriorated subsequent to the reign of Sultan Jaqmaq, during which many *ustādār*s resigned, fled, or were dismissed and suffered confiscation, and the Royal Mamluks frequently demonstrated against the arrears of their monthly wages.[62] While the difficulty in managing this *dīwān* was undoubtedly further aggravated by the economic decline, I would like to emphasize that its expenditures showed a consistent increase throughout the period under consideration. During the reign of Sultan Shaykh, the total amount spent on monthly wages accounted for 11,000 dinars per month; it subsequently increased to 18,000 dinars during Barsbāy′s reign, 28,000 dinars

Ḥawādith[2], 1:333. Cf. Poliak, *Feudalism,* 8; Popper, *Systematic Notes,* 1:86.

[59]On the economic decline under the Circassian Mamluks, see: E. Ashtor, *A Social and Economic History of the Near East in the Middle Ages* (Berkeley and Los Angeles, 1976), 301–31. Regarding the financial difficulties of the Mamluk state during the period under consideration, see: Miura Toru, ″Administrative Networks in the Mamluk Period: Taxation, Legal Execution, and Bribery″ in *Islamic Urbanism in Human History: Political Power and Social Networks,* ed. Sato Tsugitaka (London and New York, 1997), 59–66.

[60]According to my analysis of the chronicles, there are 21 accounts on the financial failures of al-Dīwān al-Mufrad during 16 years and 8 months of his reign. It is remarkably larger than 5, the number of accounts of financial failures during the 14 years and 3 months of the reign of Sultan Faraj, and 2, during the 8 years and 5 months of the reign of Sultan al-Mu'ayyad Shaykh (815–24/1412–21).

[61]In 828/1425: *Sulūk,* 4:688. In 832/1429: *Sulūk,* 4:796; *Nuzhah,* 3:150.

[62]During the reign of Barsbāy, 9 men assumed the post of *ustādār* a total of 13 times, and the average term of office at one time was 15.4 months. However, during the reign of Sultan al-Ashraf Īnāl (857–65/1543–60), 7 men assumed the post a total of 12 times and the average term was 8.2 months, while during the reign of Sultan al-Ẓāhir Khushqadam (865–72/1461–17), 5 men assumed it a total of 12 times, and the average term was 6.5 months. These figures indicate that the frequency of the substitution was increasing steadily. According to Miura, the average term of office of an *ustādār* during the period from the beginning of Barsbāy′s reign to Qāytbāy′s

during Jaqmaq′s reign, and it finally reached 46,000 dinars in 873/1468, immediately after Qāytbāy′s enthronement.[63] Since these amounts excluded the expenditures on other necessities such as clothing allowances and fodder, the total expenditure of the *dīwān* undoubtedly exceeded the given amount.

This increase in expenditures was not caused by an increase in the number of the sultan′s mamluks or radical pay raises;[64] rather, it was caused by the inclusion of recipient groups other than mamluks. Several accounts are found in the sources wherein we can find that various groups such as the sons of the mamluks, referred to as *awlād al-nās,* Islamic jurisprudents *(fuqahā'),* women, children, orphans, merchants, and other common people were also enrolled as recipients, receiving money and supplies from al-Dīwān al-Mufrad similar to the mamluks after the reign of Jaqmaq, particularly after 860/1455:[65]

> If only a sultan′s mamluk was [a recipient], what do you think about the present [circumstances]? Countless people comprising ″men of the turban″ (*muta'ammimūn*: religious men), the *awlād al-nās,* merchants *(tujjār),* common people *('āmmah),* and even Christians had been enrolled with the sultan′s treasury *(bayt al-sulṭān)* [as recipients]. The situation departed from the rule and transcended its boundaries. Viziers were unable to provide meat supplies, and *ustādār*s also were unable to [provide] the monthly wages and fodder. . . . These incidents were unheard of before, except following the reign of Sultan Jaqmaq (may God have mercy upon him).[66]

It may be reasonable to believe that in its development, al-Dīwān al-Mufrad assumed the additional responsibility of providing for some of the needs of ″men of the turban″ and the poor, which prior to its establishment would have been

---

enthronement in 872/1468 was 1.09 years (Miura, ″Administrative Networks,″ 63).

[63] *Ḥawādith*^{2}*,* 689; al-Ṣayrafī, *Inbā' al-Haṣr bi-Abnā' al-'Aṣr* (Cairo, 1970), 33–34 (hereafter cited as *Inbā' al-Haṣr*).

[64] The monthly wage of a mamluk rose from 100 dirhams to 400–500 dirhams in 809/1406 [*Sulūk,* 4:28], thereafter undergoing several raises till it reached 2,000 dirhams per month during Barsbāy′s reign [*Sulūk,* 4:804, 817–18; *Nuzhah,* 3:160, 178; *Nujūm,* 14:330]. However, this increase was superficial and primarily resulted from the state of disorder of the monetary system; that is, the widespread circulation of copper coins and the consequent decline in the value of the dirham. On the conversion rates and the prices in this period, see: E. Ashtor, *Histoire des prix et des salaires dans l′orient medieval* (Paris, 1969), Chaps. 6, 7; Popper, *Systematic Notes,* 2:41–106.

[66] *Ḥawādith*^{1}*,* 691.

carried out by the government as charity.[67] However, more noteworthy reasons for the increase in the numbers and types of recipients were: first, the new, formal recognition of the *awlād al-nās* as recipients and second: the increase in the informal recipients registered fraudulently.

(1) The Awlād al-Nās

The sons of the mamluks, referred to as *awlād al-nās,* began to be enrolled in al-Dīwān al-Mufrad and like the mamluks, received monthly wages and provisions. The *awlād al-nās* were originally military men belonging to the *ḥalqah* troops, receiving *iqṭā*ʻs from the sultan.[68] A question arises as to the circumstances that required their enrollment, which started on a regular basis during the reign of Sultan Jaqmaq. I believe it was the ultimate consequence of the long-term decline of the *ḥalqah* that began during the late Bahri Mamluk period. It is widely known that the *ḥalqah* troops became impoverished and began to sell their *iqṭā*ʻs for money in the last decades of the Bahri Mamluk period;[69] however, their condition continued to deteriorate under the Circassian Mamluks. In Ramaḍān 821 (October 1418), Sultan Shaykh initiated the reconstitution of the *ḥalqah* and improved the chances of a *ḥalqah* trooper holding an *iqṭā*ʻ based on his status. That is to say, amirs often purchased the *ḥalqah* troopers′ *iqṭā*ʻs or acquired them in the names of their own mamluks and eunuchs. The sultan′s mamluks also acquired *ḥalqah* troopers′ *iqṭā*ʻs in addition to their own monthly wages. Accordingly, several *ḥalqah* troopers who lost their revenue source entered into the service of the amirs as ″mamluks of the amirs.″[70] This indicates that the *iqṭā*ʻs of the *ḥalqah* gradually came into the possession of the mamluks and amirs, the higher-ranking military class, contrasting with the decline of the *ḥalqah.* In addition, the situation wherein ″*iqṭā*ʻs were lost by being turned into *rizqah*s, *milk*s, etc.,″ was also regarded as a

---

[67] *Taysīr,* 73; *Dīwān al-Inshā',* fol. 133v.

[68] David Ayalon, ″Studies on the Structure of the Mamluk Army 2,″ *BSOAS* 15, no. 3 (1953): 456–58.

[69] On the decline of the *ḥalqah* troops and the sale of *iqṭā*ʻs of the *ḥalqah* troopers, see: ibid., 451–56; *Khiṭaṭ,* 3:710–11. While the origin of this phenomenon lay in *al-rawk al-Nāṣirī,* which sharply reduced the revenues from *iqṭā*ʻs for the *ḥalqah* troopers, the plagues that had been frequent since 749/1348–49 also aggravated this problem. In addition to causing extensive damage to the rural areas and decreasing income from the *iqṭā*ʻs, several *iqṭā*ʻs that lost their holders to the plagues fell into the hands of non-military men. See: Dols, *Black Death*, 273–75; Sato, *State and Rural Society,* 159–60.

[70] *Nujūm,* 14:69–71; *Sulūk,* 4:461–64; *Inbā' al-Ghumr,* 3:169. There are several examples wherein a sultan′s mamluk held an *iqṭā*ʻ of a *ḥalqah* trooper. For example, when the monthly wages were distributed to the Royal Mamluks in Rabīʻ II 827 (March 1424), wages of mamluks who also held *iqṭā*ʻs of the *ḥalqah* troopers were deducted. See: *Sulūk,* 4:661.

reason for the decline of the *ḥalqah,*[71] and the alienation of the state lands mentioned above continued uninterrupted, directly influencing the decrease in the land for *iqṭā*ʿs. In any case, this effort of Sultan Shaykh's was largely futile and the decline of the *ḥalqah* proceeded.

The continued decline of the *ḥalqah* troops and their disappearance as a military unit naturally and directly affected the sons of the mamluks, who joined the military unit as *"awlād al-nās"* troopers. One possibility is to assume that the enrollment of *awlād al-nās* in al-Dīwān al-Mufrad was in keeping with a policy to maintain them as a military unit by directly providing wages in cash from the state treasury instead of *iqṭā*ʿs, which had been gradually reduced during the period under consideration. The fact that Sultan Qāytbāy tested the *awlād al-nās* on their military ability by making them draw their bows and deducted the monthly wages of those who were unsuccessful in the examination proves that the wage for the *awlād al-nās* paid from al-Dīwān al-Mufrad was officially regarded as compensation for military service. But in fact a majority of them had never possessed any abilities suited to military service, nor had they received an amount necessary to support them. This is proved by the following account (885/1481) regarding the inspection of *ḥalqah* members in which they are ordered to maintain their military equipment and acquire military training:

> However, as for the *awlād al-nās,* no previous sultan had ever reviewed them, or ignored them even if they had reviewed them [with the army]. . . . One [of them] receiving a monthly wage of as much as 500 or 300 dirhams [as opposed to the regular sum for a mamluk of 2,000 dirhams] and having dependents is poor. Where can he raise additional [money] in order [to pay] for a sword, a lance, or a quiver? These are the people who preceding sultans allowed to have presents of alms *(ṣadaqah)* from the sultan's treasury.[72]

As this account indicates, the monthly wages paid to the *awlād al-nās* were not well-earned rewards for military service; rather, they were a kind of "public-assistance payment" for the sons of the mamluks. We can say that the novel enrollment of the *awlād al-nās* in al-Dīwān al-Mufrad as formal recipients of stipends indicated that the traditional military *iqṭā*ʿ system had reached a dead end as a consequence of the continuous decrease in state lands.

(2) INFORMAL RECIPIENTS

---

[71]*Nujūm,* 14:71.

[72]*Inbāʾ al-Haṣr*, 501–2.

There were several categories of informal recipients who were enrolled in al-Dīwān al-Mufrad. If we examine the people who acquired the right to receive wages from this *dīwān* and the channels through which they achieved it, they may be divided into two groups. The first group includes ″the people connected with influential men in the state *(muḍāfī kibār al-dawlah)*.″[73] It can be stated with a fair amount of certainty that they had connections and became recipients with the aid of their patrons. The majority of these are assumed to be mamluks and private staff of the amirs although there were various kinds of people among them. In the aforementioned account pertaining to Sultan Shaykh′s policy that aimed for the reconstruction of the *ḥalqah,* it is stated that the amirs enrolled their mamluks and eunuchs in this *dīwān* so that they could acquire monthly wages in addition to acquiring *ḥalqah* troopers′ *iqṭā*ʻs for their own uses (see note 70). For example, there was a case wherein an *ustādār* enrolled his own mamluks in this *dīwān* as ″sultan′s mamluks″ and paid them wages from it.[74] Another example is that of Amir Burdbak al-Bajmaqdār (d. 875/1470), an eminent amir who successively held various high offices such as Viceroy of Aleppo, Viceroy of Damascus, etc., and who compelled viziers and *ustādār*s to provide him and the men in his service with monthly wages and various supplies.[75] It is obvious that these types of people had included themselves among the regular recipients in view of the fact that amirs often balked at the attempts of sultans to reduce their stipends.[76]

The second group includes the people who purchased their status as recipients. Al-Ashqar, who had occupied the position of *ustādār* for more than ten years during the reign of Sultan Jaqmaq, was given free rein in the management of al-Dīwān al-Mufrad, which was mired in financial difficulties. Due to a lack of operating funds, he began to sell the rights of receiving wages from this *dīwān* in order to obtain funds to disburse the monthly wages. Consequently, various people fraudulently acquired wages as ″sultan′s mamluks.″ Furthermore, it was inevitable that these wages fell into the hands of wealthy people; there were amirs who also received monthly wages, or mamluks who gained more than one stipend at a time.[77] In 873/1468, Qāytbāy attempted to reestablish the principle that each mamluk would receive only 2,000 dirhams (i.e., the regular stipend) and compelled mamluks who purchased stipend-receiving status or received more than this amount to

---

[75] Ibid., 300.

[76] *Sulūk,* 3:1103; *Nuzhah,* 2:165; *Ḥawādith[2],* 1:426; *Badāʼiʻ*, 2:320. Sultan Qāytbāy did not approve the intervention of the amirs in his attempts at reforming al-Dīwān al-Mufrad in 873/1468 [*Ḥawādith[1],* 693].

[77] On the sale of the monthly wages and its repercussions, see: *Inbāʼ al-Haṣr*, 34.

return them to the sellers (probably including rank and file mamluks and *awlād al-nās*).[78] This explains the manner in which the sale of wages became widespread.

Under these circumstances, al-Ashqar managed al-Dīwān al-Mufrad as well as possible using all the means within his power, such as seizing *iqṭā*ʿs and *rizqah*s for the *dīwān*'s resources.[79] Nevertheless, this was nothing more than ad hoc management depending on his own discretion; thus, it ceased to function following the death of his supporter, Jaqmaq. Furthermore, a part of the agricultural land from the *dīwān*'s resources frequently fell into the hands of amirs and mamluks aiming to acquire the lands as *iqṭāʿ* during times of political unrest, such as the interval between a sultan's death and a new sultan's enthronement.[80] In addition, powerful amirs' *ḥimāyah* (private protection) over farm villages, which became widespread during this period and prevented local officials from collecting taxes from them undoubtedly exerted a negative influence on this *dīwān,* which depended heavily on tax returns from rural districts.[81] Therefore, sultans regularly had to meet this *dīwān*'s deficit from their own purses because it could not otherwise be operated.[82] During the reign of Khushqadam, the fact that the *ustādār* was awarded a *khilʿah* and was lauded each time he was able to provide stipends to the mamluks proves the difficulty of performing this job at this time.[83] These circumstances compelled Qāytbāy, who ascended to the sultanate in 872/1468, to immediately embark on a thorough financial reform. However, this will not be discussed in this article for lack of space.

CONCLUSION

On the basis of our analysis of the historical development of al-Dīwān al-Mufrad from its establishment till the time of its fiscal bankruptcy, two important facts relating not only to this *dīwān* but also to the structure of the Mamluk regime itself were clarified. Firstly, the growing weakness of the system of land management under the sole authority of the state had a persistent influence on the establishment, development, and, finally, bankruptcy of al-Dīwān al-Mufrad. This *dīwān* was established against the background of a problem, namely, the alienation of

---

[78] *Ḥawādith[1]*, 690; *Inbāʾ al-Haṣr*, 36. Similarly, the rights to receive meat supplies from Dīwān al-Wizārah were also dealt with [*Badāʾiʿ*, 3:23, 331] and pensions *(maʿāsh)* for the poor/Sufis *(fuqarāʾ)* and others were sold at a high price [*Nujūm,* 16:28].

[83] *Ḥawādith[1]*, 486, 491–92, 493, 495.

agricultural lands from the state treasury. However, this continued to be perceived as a problem without an effective solution throughout the Circassian Mamluk period. As Abū Ghāzī describes it, the state land sales rapidly increased in the 850s/1446–56 and a majority of those lands sold fell into the hands of the upper class of Mamluks, such as the sultans and amirs.[84] This problem was directly related to the malfunctioning of the *iqṭāʿ* system; the privatization and inheritance of *iqṭāʿ* lands were widespread during the period under consideration, and the *iqṭāʿ* system was shaken to its foundations.[85] It can be said that the large increase in al-Dīwān al-Mufrad's landholdings resulted from the ceaseless efforts to raise money for the monthly stipends of the relatively lower-class Mamluks (and their sons) who had been directly affected to a greater extent by these problems of the *iqṭāʿ* system, by means of concentrating the gradually decreasing state lands, either *khāṣṣ* lands or *iqṭāʿ*s, into this *dīwān*. Simultaneously, it meant that redistributing agricultural lands based on government initiatives such as *al-rawk al-Nāṣirī* were impossible, because titles to lands such as private holdings, *waqf,* lease, *ḥimāyah*, etc., were complicated.

Secondly, in relation to the above, the government's ability to control the distribution or withholding of remuneration, not only *iqṭāʿ*s but also the monthly stipends or other provisions, through the machinery of the state had weakened. In contrast, powerful amirs were striving to acquire interests from the state for themselves, and even their followers acquired interests with their support. It appears reasonable to suppose that this situation suggesting "the privatization of the state" that Sabra refers to[86] was closely linked to the emergence of the personal factions/households referred to as *jamāʿah* or *bāb,* which formed around powerful figures (including amirs, civilians, and qadis), and expanded their roles in politics and society during the late Mamluk period.[87] However, this is irrelevant to the main subject. In a political structure where one of the powerful amirs would ascend to the sultanate with the support of a Mamluk factional power base and through an agreement among the Mamluks, it essentially enabled other powerful

---

[84]Abū Ghāzī, *Taṭawwur,* 26–28, 110–11. However, I agree with Adam Sabra that the alienation of state lands was a part of the privatization of state resources by the Mamluk elite (and their descendants) linked to a change in the character of the Mamluk elite opposing Abū Ghāzī's view that it induced the rise of a new class of private landowners with the opening of a land market. Adam Sabra, "The Rise of a New Class? Land Tenure in Fifteenth-Century Egypt: A Review Article," *Mamlūk Studies Review* 8, no. 2 (2004): 207–10.

[85]*Taysīr,* 81–83; al-Balaṭunusī, *Taḥrīr al-Maqāl fīmā Yaḥill wa-Yaḥrum min Bayt al-Māl* (al-Manṣūrah, 1989), 107–8, 164–65; Poliak, *Feudalism,* 36–37.

[87]On the *jamaʿah*/*bab,* see: Miura Toru, "Urban Society at the Mamluk Era," 8–11, 17–19; cf. Miura, "Administrative Networks," 57–58, 65–66.

amirs to interfere in the workings of the administration. Thus, the sultan's control through the state machinery naturally had its limits although it was in varying degrees according to the sultan's ability and his power base. Inferentially, the sultan, as the "principal Mamluk," had first of all to protect the interests of all the Mamluks, ensuring an equitable distribution of wealth and its allotment among them.[88] On the basis of an understanding of the nature of the sultan's power and the political structure, we can explain the role of al-Dīwān al-Mufrad from a different perspective; that is, securing resources through the establishment of the *dīwān* and its continuous development achieved institutional stability in training and maintaining a certain number of Mamluks despite the adverse financial situation. In other words, it functioned as an effective mechanism in sustaining the Mamluk military system that produced the ruling military elites through the purchase, training, and emancipation of slaves, which was a fundamental basis of the Mamluk regime. It also enabled the continuance of their rule during the period of economic decline and the collapse of the state structure. Furthermore, the observation that the Royal Mamluks comprised the *mushtarawāt* of the ruling sultan and the *mustakhdamūn* trained by preceding sultans (see note 37) as well as the fact that powerful amirs had let their followers receive wages from al-Dīwān al-Mufrad indicates that not only the sultan but also several Mamluk factions and their leaders, namely, powerful amirs, had their own vested interests in this *dīwān*. In other words, the development of al-Dīwān al-Mufrad and various other efforts to ensure the regular payment of monthly stipends were linked to the common interest of the Mamluk community, beyond the original plan supporting the preferential treatment of only the sultan's mamluks.

---

[88]Under the Circassian Mamluks in particular, the members of those Mamluk factions who were trained and emancipated by the same sultan functioned as political interest groups. It was essential for sultans to manage the government through balancing the interests of such factions. On the Mamluk factionalism in politics and the power structure of the sultan, see: Robert Irwin, "Factions in Medieval Egypt," *Journal of the Royal Asiatic Society* (1986): 228–46; Levanoni, "The Mamluk Conception."

Slave Traders and Kārimī Merchants during the Mamluk Period: A Comparative Study

Both slave traders *(nakhkhās, jallāb)* and Kārimī merchants played important economic and social roles in Mamluk Egypt, Syria, and the Hijaz. As Ira M. Lapidus has stated, slave traders were regarded on religious grounds as disreputable, like brokers, town criers, and money changers, but nevertheless were employed in the slave trade for the army of the Mamluk sultanate and became important figures in Mamluk circles.[1] David Ayalon was the first historian to provide a brief overview of the characteristics of slave traders.[2] In an investigation of mamluk names, titles and *nisbah*s, he also discovered the personal ties that existed between slave traders and ex-mamluks, that is, the sultans and amirs sold by them.[3] On the other hand, Subhi Y. Labib′s voluminous book on commercial activities in Ayyubid and Mamluk Egypt presents only a brief description of the slave trade during the Mamluk period.[4] Eliyahu Ashtor and Andrew Ehrenkreutz have also touched upon military slaves supplied by the Genoese from the end of the thirteenth century on; however, both failed to refer to Muslim slave traders during that period.[5] Al-Sayyid al-Bāz al-ʻArīnī, in his book entitled *Al-Mamālīk,* explained the title *khwājā,* which was held mostly by slave traders, and their transactions in military slaves, through case studies of several merchants during the Mamluk period.[6]

As for the Kārimī merchants, more research has been accomplished than in the case of slave traders. S. D. Goitein, in a study on the origins of the Kārimī merchants based on the Geniza documents, refers to their close relationship with

the merchants active on the west coast of India.[7] Walter J. Fischel, following up on the pioneering study by Gaston Wiet,[8] states that the Kārimī merchants formed a strong association and played an important role in Mamluk fiscal administration through their participation in the profitable spice trade between Egypt and Yemen.[9] By adding new Arabic sources, Ashtor criticized Fischel′s views, stating that (1) the Kārimīs were a loosely-organized group of merchants dealing not only in spices but also slaves and agricultural products between Egypt and Yemen, including Syria, and (2) contrary to Fischel′s belief that the Kārimīs were an exclusively Muslim group of merchants, there is no reason why the Kārimīs should not have admitted Christians and Jews into their ranks.[10] Based on plentiful Arabic and non-Arabic sources, Labib systematically describes their activities from the Fatimid to the Mamluk period.[11] Muḥammad ʿAbd al-Ghanī al-Ashqar has furthered the historical study of the spice trade during the Mamluk period with a book entitled *Tujjār al-Tawābil fī Miṣr fī al-ʿAṣr al-Mamlūkī,*[12] which provides a very useful list of 201 Kārimī merchants containing their full names, personal information, and related historical sources.

As mentioned above, slave traders and Kārimī merchants have been studied mainly in the context of the social and economic history of Mamluk Egypt and Syria. Given that my interest lies in the similarities and differences between these two groups of merchants, this article will attempt to compare them during the Mamluk period, in terms of their fields of commercial activity, commodities, relationships with Mamluk sultans, and religious and cultural activities, based on the cases of two famous slave traders and one leading family from among the Kārimī merchants as depicted in the contemporary Arabic sources.

Two Slave Traders

The activities of Khawājā Majd al-Dīn Ismā'īl ibn Muḥammad ibn Yāqūt al-Sallāmī (671–743/1272–1342) and Khawājā Fakhr al-Dīn 'Uthmān ibn Muḥammad ibn Ayyūb ibn Musāfir al-As'ardī (d. 783/1381) are described in the Arabic chronicles and biographical dictionaries, allowing one to obtain a general grasp of their origins, spheres of activity, commodities, types of activity, relationships with the Mamluk sultans, and religious and cultural activities.

Origins

Majd al-Dīn al-Sallāmī was born in the village of al-Sallāmīyah near Mosul in al-Jazīrah in the year 671/1272.[13] According to Yāqūt (574 or 575–626/1179–1229), al-Sallāmīyah was a large village located on the east bank of the upper Tigris.[14] Al-Maqrīzī (d. 845/1442) says that he came to Egypt as a merchant and was granted the much-coveted title of *khawājā* during the reigns of Sultan al-Nāṣir Muḥammad (r. 693–94/1293–94, 698–708/1299–1309, 709–741/1310–41).[15] *Khawājā* (Arabic corruption of *hoja*) was a title *(laqab)* bestowed upon wealthy merchants operating in official service from outside the Mamluk domain in places like al-Jazīrah, Fars, etc.[16] Al-Ṣafadī (696–764/1297–1363) states that he was a significant figure, intelligent, friendly, and an excellent mediator between local rulers.[17]

Fakhr al-Dīn 'Uthmān al-As'ardī was from As'ard, a town to the south of Āmid in al-Jazīrah.[18] He was granted the title of *khawājā* for his distinguished service in transporting Barqūq (future sultan 784–91/1382–89, 792–801/1390–99), then his father and his brothers to Cairo in 782/1381.[19] According to *Al-Nujūm al-Zāhirah,* Fakhr al-Dīn was thought of as brave, intelligent, and dignified.[20]

As to language ability, both Majd al-Dīn and Fakhr al-Dīn should have spoken

[20] Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963), 11:220.

Arabic fluently since they were from al-Jazīrah. However, Ibn Taghrībirdī (d. 874/1470) states that Fakhr al-Dīn could speak Turkish, but not Arabic.[21] Ibn Qāḍī Shuhbah (779–851/1377–1448) gives his name as Fakhr al-Dīn al-ʻAjamī (al-aṣl) al-Miṣrī,[22] which indicates that he was originally not an Arab, but later lived in Cairo. As al-ʻArīnī concludes, judging from their names, most of the slave traders during the Mamluk period were non-Arabs.[23]

Spheres of Activity

Al-Maqrīzī (766–845/1364–1442) states in *Kitāb al-Sulūk* that Majd al-Dīn traveled often between Cairo and Tabriz using post *(barīd)* horses,[24] which were formally for official business. Tabriz at the beginning of the fourteenth century was not only the capital city of the Ilkhans but also an emporium of international trade.[25] Al-Maqrīzī states in *Al-Khiṭaṭ,* "Majd al-Dīn used to go in the countries of Ṭaṭar, trade there and return with slaves (sing. *raqīq*) and other goods."[26] It is related that when he visited the court *(urudū)* of the Ilkhanids, he would stay there for two or three years.[27]

As in the case of Barqūq, who was from Charkas,[28] Fakhr al-Dīn was involved in the trade between Cairo and the province of Charkas to the north of Tabriz. Fakhr al-Dīn also constructed a splendid trading center *(qaysārīyah)* in Damascus, which indicates that his activities encompassed both Egypt and Syria.[29] According to al-Maqrīzī,

> Sultan al-Nāṣir increased the number of male slaves (sing. *mamlūk*) and female slaves (sing. *jāriyah*) to be purchased. He summoned the slave traders and gave them money to purchase male and female slaves. When the traders returned from Uzbek, Tabriz, Rūm and

> Baghdad [to Cairo] with mamluks, the sultan would bestow precious goods upon them.[30]

The spheres of activity of Majd al-Dīn and Fakhr al-Dīn—Tabriz and the province of Charkas—were included in the districts for purchasing slaves as mentioned by al-Maqrīzī.

COMMODITIES

Majd al-Dīn was known as a mamluk trader for the sultan *(tājir al-khāṣṣ)* during the reign of al-Malik al-Nāṣir. He often traveled to the Tatar provinces and returned with mamluk and *jāriyah* slaves (sing. *raqīq*) and other goods.[31] The Arabic sources do not describe the "other goods"; however, Majd al-Dīn might have purchased such products in the Tatar provinces as furs, silk goods, and silver.

Fakhr al-Dīn was a "mamluk merchant" *(tājir fī al-mamālīk),*[32] widely known as the trader *(jālib)* who brought al-Atābak Barqūq from the Charkas provinces to Cairo around 764/1363.[33] According to Ibn Qāḍī Shuhbah, Fakhr al-Dīn was a "merchant of the sultan" *(tājir al-sulṭān)* bringing mamluks and *jāriyah*s from the Turkish provinces *(Bilād al-Turk)*.[34] However, it is not related whether or not he traded other goods besides slaves.

TYPES OF ACTIVITY

According to the Arabic sources, the slave traders of the Mamluk period were engaged in commerce on an individual basis, not forming any trade organizations. According to al-Maqrīzī, Majd al-Dīn al-Sallāmī was a person of high intelligence, a skillful manager, who had gathered information on the character and manners of local rulers, and a man of gentle character, moderate speech, and handsome appearance.[35] These talents and knowledge enabled him to form a personal bond of trust with Sultan al-Nāṣir. Al-Ṣafadī relates that Majd al-Dīn earned the trust *(wajāhah zā'idah)* of both Sultan al-Malik al-Nāṣir and the Mughuls (the Ilkhanid court) due to his outstanding conduct.[36]

---

[30]Al-Maqrīzī, *Al-Sulūk,* 2:524. We find another account that in 737/1336–37 Sultan al-Nāṣir ordered khawājā 'Umar to go to Uzbek to purchase mamluks and *jāriyah*s (al-Yūsufī, *Nuzhat al-Nāẓir fī Sīrat al-Malik al-Nāṣir* [Beirut, 1986], 379).

[32]Ibn Ḥajar, *Inbā',* 1:247.

[33]Ibn Taghrībirdī, *Al-Nujūm,* 11:223.

[34]Ibn Qāḍī Shuhbah, *Tārīkh,* 1:3:73.

[35]Al-Maqrīzī, *Al-Muqaffá,* 2:182; idem, *Al-Khiṭaṭ,* 2:43.

[36]Al-Ṣafadī, *Al-Wāfī,* 9:220. See also Ibn Ḥajar, *Al-Durar,* 1:407.

On the other hand, Ibn Taghrībirdī remarks in the obituary notice for Fakhr al-Dīn ʻUthmān that he achieved salvation *(saʻādah)* for his personal contribution in bringing Barqūq to Egypt.[37] Because Barqūq was also grateful to Fakhr al-Dīn for services that had opened his opportunity for advancement in Egypt, the sultan would stand up from afar whenever he saw Fakhr al-Dīn and pay his respects.[38] Thus Fakhr al-Dīn, like Majd al-Dīn, developed his trading business based on a personal relationship with the sultan. However, we do not find any account that their descendants inherited their slave-trading businesses following their deaths.

Relationships with the Mamluk Sultans

From the time of the establishment of the Ilkhanid dynasty in 654/1256, hostile relations continued between the Mamluks and the Ilkhanids until the end of Ghazan Khan′s reign (694–713/1295–1304). Since Majd al-Dīn had the confidence of both Sultan al-Nāṣir and Ghazan′s nephew, Abū Saʻīd (716–36/1316–35), he attempted to mediate between them. Majd al-Dīn traveled to Tabriz several times for the sultan carrying letters and gifts (sing. *hadīyah*) he himself chose for the notables at the Ilkhanid court.[39] In 722/1322 Amir Aytamish al-Muḥammadī was eventually sent to Abū Saʻīd to conclude a peace treaty *(ṣulḥ)*. The treaty, which was effective for ten years and ten days,[40] guaranteed that roads between the two countries would be open, enabling all merchants to travel freely and a caravan to travel from Iraq to al-Ḥijāz every year with a decorated palanquin *(maḥmil)* and the flags *(sanjaq)* of both countries.[41]

Due to his contribution to the peace treaty, Majd al-Dīn confirmed his position with Sultan al-Nāṣir and gained even greater esteem and favor than before.[42] Consequently, Majd al-Dīn obtained various privileges from the Mamluk government: the sultan assigned *iqṭāʻ*s of the *ḥalqah* to his mamluks, and granted him meat, bread, white unleavened bread (*kumāj*), barley, sugar, sugar candy, etc., worth one hundred and fifty dirhams a day. Furthermore, the sultan allotted him the village of Arrāq in Baʻlabakk,which yielded ten thousand dirhams annually.[43]

[41]Al-Maqrīzī, *Al-Sulūk,* 2:209–10.

[42]Al-Maqrīzī, *Al-Muqaffá,* 2:181; idem, *Al-Khiṭaṭ,* 2:43.

[43]Al-Ṣafadī, *Al-Wāfī,* 9:220–21. See also al-Maqrīzī, *Al-Muqaffá,* 2:181–82; idem, *Al-Khiṭaṭ,* 2:43.

In addition, according to al-Maqrīzī, Majd al-Dīn was granted another fifty thousand dirhams and received a 50% tax exemption on his goods.[44]

It is widely known that Barqūq named himself Barqūq al-ʻUthmānī because he greatly respected Fakhr al-Dīn ʻUthmān. When Fakhr al-Dīn died in 783/1381, just before Barqūq ascended the throne, he prayed to God and wailed much for him.[45] Furthermore, Ibn Ḥajar al-ʻAsqalānī (773–852/1372–1449) relates that Fakhr al-Dīn personally requested the abolition of the pomegranate tax *(maks al-rummān)* in Damascus and his request was eventually granted by the sultan.[46] It is interesting to find that both Majd al-Dīn and Fakhr al-Dīn were exempted from taxation due to their personal relationships with the sultans.

Religious and Cultural Activities

As to the public works sponsored by slave traders, we do not find any information on such activities except Fakhr al-Dīn′s trading center *(qaysārīyah)* in Damascus. Research to date documents only a few religious and cultural activities conducted by slave traders during the Mamluk period.[47]

The Kārimī Merchants

From the end of the Fatimid period on, the Kārimī merchants cultivated commercial relations with Yemen, India, Southeast Asia, and China. During the Mamluk period there were such influential families among the Kārimīs as al-Maḥallī, al-Kharrūbī, Ibn Kuwayk, and Ibn Musallam. Here I will take up al-Kharrūbī as an example of an upstart wealthy Kārimī merchant to be compared with the slave traders discussed above.

Since ″kharrūb″ in Arabic means carob, the family ancestor, Ṣalāḥ al-Dīn al-Miṣrī al-Kharrūbī, might have been a carob retailer. According to Ibn Ḥajar, the Kharrūbīs originated from Kharrūb square in Fusṭāṭ[48] where carob was usually sold.[49] In any case, the family′s activities as Kārimī merchants lasted for seven generations from Ṣalāḥ al-Dīn al-Kharrūbī (mid-thirteenth century) to Fakhr al-Dīn

---

[44]Al-Maqrīzī, *Al-Sulūk,* 2:246.

[45]Ibn Ḥajar, *Inbāʼ,* 1:247.

[46]Ibid.

[47]Ibn Ḥajar, *Al-Durar,* 2:141. Al-Ḥusayn ibn Dāwūd al-Khawājā ʻIzz al-Dīn al-Sallāmī was a merchant who constructed a madrasah known as ″al-Sallāmīyah.″

[48]Ibid., 1:481.

[49]Ibn Duqmāq, *Kitāb al-Intiṣār li-Wāsiṭat ʻIqd al-Amṣār* (Cairo, 1893), 1:35. According to this account, the square was originally called ″Raḥbat Dār al-Malik,″ then it came to be named ″Raḥbat Kharrūb″ because carob was usually sold there.

Sulaymān (d. 864/1460), who was imprisoned due to his large debt.[50]

ORIGINS

It was after the time of the two brothers, Ṣalāḥ al-Dīn Aḥmad ibn Muḥammad (d. 769/1368) and Badr al-Dīn Muḥammad ibn Muḥammad (d. 762/1361), that concrete descriptions of the Kharrūbīs appear in the Arabic chronicles and biographical dictionaries. Their activities were centered around Fusṭāṭ, where they were probably born as Arab Muslims. Among the Kharrūbī merchants, only Sirāj al-Dīn or Badr al-Dīn ibn Abī ʻUmar ibn Ṣalāḥ al-Dīn[51] and Nūr al-Dīn ʻAlī ibn ʻAbd al-ʻAzīz ibn Aḥmad (d. 802/1400)[52] were granted the title of *khawājā*.

SPHERE OF ACTIVITY

Badr al-Dīn Muḥammad constructed al-Madrasah al-Kharrūbīyah on the outskirts of Fusṭāṭ and his brother Ṣalāḥ al-Dīn Aḥmad built a large tomb *(turbah)* in al-Qarāfah.[53] Khawājā Nūr al-Dīn ʻAlī, who was a manly *(murūwah)* and benevolent *(khayr)* person, came to be one of the most notable merchants in Egypt and went to Mecca several times, probably both for pilgrimages and trade.[54] He was also the owner of a school *(ṣāḥib al-madrasah)* near the bank of the Nile in Fusṭāṭ.[55]

Zakī al-Dīn Abū Bakr ibn ʻAlī al-Kharrūbī (d. 787/1385) was brought up as a Sufi *(faqīr),* because his father, who yearned for the ascetic life, built a monastery *(zāwiyah)* for his son at al-Jīzah. After he returned from Yemen via ʻAydhāb with a small amount of goods, Zakī al-Dīn inherited a large fortune from his brother Badr al-Dīn, which provided him with the opportunity for success.[56] Ibn Ḥajar relates in *Al-Durar al-Kāminah,*

> [In Mecca] I was under the patronage of Zakī al-Dīn like his slave *(raqīq)* because my father had requested him to take care of me due to my young age. In 786/1384 I returned [to Cairo] with him and Zakī al-Dīn still retained the title of leadership *(riʼāsah).*[57]

---

[50]Al-Sakhāwī, *Al-Ḍaw' al-Lāmiʻ li-Ahl al-Qarn al-Tāsiʻ* (Beirut, 1934–36), 3:267.

[51]Ibid., 3:267, 8:246.

[52]Ibn Ḥajar, *Inbāʼ,* 2:123; Ibn Iyās relates that Nūr al-Dīn ʻAlī died in 803/1401 (*Badāʼiʻ al-Zuhūr fī Waqāʼiʻ al-Duhūr* [Wiesbaden, 1961–75], 1:2:636).

[53]Al-Maqrīzī, Al-Maqrīzī, *Al-Khiṭaṭ,* 2:369.

[54]Ibn Ḥajar, *Inbāʼ,* 1:123.

[55]Ibn Iyās, *Badāʼiʻ,* 1:2:636.

[56]Ibn Ḥajar, *Al-Durar,* 1:481–82.

[57]Ibid., 482. See also al-Maqrīzī, *Al-Sulūk,* 3:539; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:3:167–68. Since Ibn Ḥajar was born in 773/1372, he was thirteen years old when he returned to Cairo with Zakī

When Zakī al-Dīn died in 787/1385, Burhān al-Dīn Ibrāhīm al-Maḥallī took the title of leadership *(ri'āsat al-tujjār)* exclusively until he died in 806/1403.[58] Al-Maqrīzī relates that Burhān al-Dīn al-Maḥallī was a large-scale Kārimī merchant who traveled to Syria and Yemen many times.[59]

According to the above accounts, the sphere of activity of the Kārimī merchants, particularly those of the Kharrūbī family, were Fusṭāṭ, Cairo, Mecca, Yemen, and Syria. We know that there was a not-insignificant number of Kārimīs who unlike the Kharrūbīs traveled to India and as far as China.[60]

COMMODITIES

The research to date informs us that the Kārimīs traded spices *(bahār),* lumber, textiles, precious stones *(jawāhir),* wheat *(qamḥ),* sugar *(sukkar),* pottery *(fakhkhār),* slaves (sing. *raqīq*), etc.[61] Al-Qalqashandī (756–821/1355–1418) states that "the office of spice and al-Kārimī" (*naẓar al-bahār wa-al-Kārimī*) supervised the various spices *(bahār)* and other goods the Kārimī merchants brought from Yemen,[62] so there is no doubt that the Kārimīs specifically brought spices from Aden to Cairo, Alexandria, and Damascus.

However, as I have already mentioned in another article,[63] we find an interesting account in Ibn Duqmāq's (d. 809/1406) *Kitāb al-Intiṣār,* which relates that among the 65 sugar refineries *(maṭbakh al-sukkar)* located at Fusṭāṭ, 7 were owned by the sultan, 21 by amirs, and 13 by merchants (sing. *tājir*). Among the 13 refineries owned by merchants, 4 were managed by *sukkarī*s (probably Muslim and Jewish sugar merchants) and another 4 by the Kārimī merchants. Among the 4 refineries owned by the Kārimīs, 2 were managed by Kharrūbī family members: Maṭbakh Sirāj al-Dīn ibn [Abī 'Umar] al-Kharrūbī and Maṭbakh Nūr al-Dīn ['Alī ibn 'Abd al-'Azīz] al-Kharrūbī.[64] Sirāj al-Dīn ibn Abī 'Umar was the family's fourth-

[58]Ibn Ḥajar, *Al-Durar,* 1:482.

[59]Al-Maqrīzī, *Al-Muqaffá,* 1:246. Concerning Burhān al-Dīn al-Maḥallī, see also Ashtor, "The Kārimī Merchants," 48.

[60]Al-Ashqar, *Tujjār al-Tawābil,* 467–539.

[61]Ashtor, "The Kārimī Merchants," 55–56; Lapidus, *Muslim Cities,* 125; Sato Tsugitaka, *State and Rural Society in Medieval Islam: Sultans, Muqta's and Fallahun* (Leiden, 1997), 215; al-Ashqar, *Tujjār al-Tawābil,* 76.

[62]Al-Qalqashandī, *Ṣubḥ*, 4:32. Labib inscribes "der nāẓir al-buhār und al-Kārimī" (*Handelsgeschichte*, 165). However, not "al-buhār" but "al-bahār" is correct.

[63]Sato Tsugitaka, "Sugar in the Economic Life of Mamluk Egypt," *Mamlūk Studies Review* 8, no. 2 (2004): 99.

[64]Ibn Duqmāq, *Kitāb al-Intiṣār,* 1:41–46.

generation merchant prior to Nūr al-Dīn ʻAlī, who died in 802/1400.[65] This indicates that the Kharrūbīs had already begun managing sugar refineries during the latter half of the thirteenth century. Accordingly, we need to correct Ashtor's view that the first generation was represented by Ṣalāḥ al-Dīn Aḥmad ibn Muḥammad (d. 769/1368).[66]

Among the Kharrūbīs, Badr al-Dīn Muḥammad ibn Muḥammad (d. 762/1361) was particularly well known as a "sugar refinery merchant" *(tājir fī maṭābikh al-sukkar)* at Fusṭāṭ.[67] In 751/1350 Sultan Ḥasan (748–52/1347–51) ordered the Kharrūbīs to provide sugar for his grant of the commodity during the month of Muḥarram.[68] The above accounts show that the Kharrūbīs profited not only from the spice trade but also from sugar refining and sale. Al-Maqrīzī says, "When the water of the Nile flows into the Alexandria Canal during Misrā (25 July–23 August), ships (sing. *markab*) loaded with various kinds of goods, like crops *(ghallah),* spices *(bahār),* and sugar *(sukkar),* would set sail."[69] Sugar during the Mamluk period was thought to have been one of the most important exports to Europe as well as a luxury good consumed by sultans and amirs at their private residences or during public festivals.[70]

TYPES OF ACTIVITY

It is widely known that the Kārimīs formed a loose confederation of merchants bound together by professional interest and that they constructed hostelries (sing. *funduq*) on various occasions for common purposes.[71] According to Lapidus, Kārimī merchants themselves were headed by *ra'īs*es, who acted as liaisons between them and the state for the purpose of discipline, diplomacy, banking, and other services.[72] However, Ashtor emphasizes the fact that such titles as "chief of the Kārimīs" found in Arabic chronicles and biographical dictionaries should not be taken too literally.[73]

In the case of Zakī al-Dīn Abū Bakr al-Kharrūbī, who held the title of *ra'īs al-tujjār,* Ibn Ḥajar relates that after he obtained the title, the influential merchants

---

[73]Ashtor, "The Kārimī Merchants," 51.

came to be subject to him.[74] Arabic sources do not state distinctly what sort of authority he held over the Kārimī merchants, but it is clear that the title was closely related to the Mamluk government. This will be discussed in the following section.

Though the Kārimīs formed a loose confederation, there was, at the same time, a strong business rivalry among several of them. For example, when a dispute arose between Badr al-Dīn Muḥammad al-Kharrūbī and Nāṣir al-Dīn Muḥammad Ibn Musallam (d. 776/1374), Ibn Musallam said to Badr al-Dīn, "Buy sacks for all your money and bring them to me. Then I will fill them for you with my coins."[75] However, interestingly enough, Ibn Musallam gave his daughter in marriage to Sirāj al-Dīn ʻUmar ibn ʻAbd al-ʻAzīz (d. 825/1422), a Kharrūbī merchant, in order to strengthen ties between the two families.[76]

Another example of the rivalry that existed among the Kārimī merchants can be found in Ibn Ḥajar's *Inbā' al-Ghumr,* already noted by Labib.[77] In 786/1384, when trouble arose between Zakī al-Dīn al-Kharrūbī and Shihāb al-Dīn al-Fāriqī, an influential merchant from Yemen, they were both tried before Sultan Barqūq. In answer to al-Fāriqī's accusations, Zakī al-Dīn quoted a letter written by al-Fāriqī and addressed to the lord of Yemen, which read, "At present Egypt is in a state of corruption *(fasād)*. Since there is no credible lord *(ṣāḥib),* you need not send any gifts from here on. The present lord [sultan] is the lowest and the most despicable among the mamluks." After reading this, Barqūq ordered al-Fāriqī seized and his tongue cut out. Then the sultan bestowed on Zakī al-Dīn a fine robe *(khilʻah)* and granted him the title of "great merchant" *(kabīr al-tujjār).*[78]

Relationships to the Mamluk Sultans

The account of the Zakī al-Dīn/Shihāb al-Dīn dispute tells us that Zakī al-Dīn was granted the title of great merchant or chief merchant *(ra'īs al-tujjār)* in 786/1384. In *Al-Durar al-Kāminah,* Ibn Ḥajar states, "Zakī al-Dīn approached the state *(dawlah)* and gained the title of leadership *(ri'āsah),* thus surpassing his equals,"[79] showing distinctly that Zakī al-Dīn petitioned Sultan Barqūq to bestow

---

[74]Ibn Ḥajar, *Al-Durar,* 1:482; idem, *Inbā',* 1:306. Zakī al-Dīn was also called "*kabīr al-tujjār*" (a leading figure of merchants) (al-Maqrīzī, *Al-Sulūk,* 3:539).

[75]Ibn Ḥajar, *Inbā',* 1:99–100.

[76]Al-Sakhāwī, *Kitāb al-Tibr al-Masbūk fī Dhayl al-Sulūk* (Bulaq, 1896; repr. Cairo, 1974), 107; Ibn Ḥajar, *Inbā',* 3:289.

[77]Labib, *Handelsgeschichte*, 228. See also S. Labib, "Kārimī," *The Encyclopaedia of Islam,* 2nd ed., 4:640–43.

[78]Ibn Ḥajar, *Inbā',* 1:288.

[79]Ibn Ḥajar, *Al-Durar,* 1:482.

upon him the title of *ri'āsah.* Since he died in 787/1385 at Fusṭāṭ,[80] Zakī al-Dīn held that title for about two years. Ibn Ḥajar relates that after he gained the title, Zakī al-Dīn's status *(qadr)* in the government improved, and he became preeminent among the Kārimī merchants.[81]

Before that, in 781/1379, Kamāl al-Dīn, a grandson of Ṣalāḥ al-Dīn Aḥmad al-Kharrūbī, was arrested and whipped by amir Barqūq because he attempted to obtain the rank of vizier with a bribe of 100,000 dinars. Following that incident, Kamāl al-Dīn was exiled to Qūṣ in Upper Egypt, where he was ordered to reside until his death.[82] Consequently, Kamāl al-Dīn al-Kharrūbī was not summoned with three other influential Kārimī merchants—Burhān al-Dīn al-Maḥallī, Shihāb al-Dīn Ibn Musallam, and Nūr al-Dīn 'Alī ibn al-Kharrūbī—to supply Sultan Barqūq with 1,000,000 dirhams for the war against Timur when the latter attempted to invade Syria in 796/1394.[83] The above three Kārimī merchants' share thus amounted to ten percent of the 10,000,000 dirhams expended for Barqūq's royal mamluks just prior to the war.[84]

According to al-Ashqar, the Kārimīs during the Mamluk period were supported and administered by "the office of spices and the Kārimī," which issued passports (sing. *jawāz*) to them and imposed taxes (2.5 percent) on their trade goods.[85] Furthermore, Lapidus argues that the Kārimī merchants became officials because of their close association with the government.[86] However, Zakī al-Dīn al-Kharrūbī, for example, though he gained the title of *ra'īs al-tujjār* and had authority over his Kārimī colleagues,was never regarded as a state official.

Religious and Cultural Activities

Compared to the slave traders, we find many more instances of religious and cultural activities conducted by the Kārimīs. As mentioned above, Badr al-Dīn Muḥammad al-Kharrūbī (d. 762/1361), who was known as a "sugar refinery merchant," constructed a school (*madrasah*, later called "al-Madrasah al-Kharrūbīyah) to which he appointed Shaykh Bahā' al-Dīn 'Abd Allāh Ibn 'Uqayl

---

[80]Al-Maqrīzī, *Al-Sulūk,* 3:539; Ibn Taghrībirdī, *Al-Nujūm,* 11:305; Ibn Ḥajar, *Al-Durar,* 1:482. It is related that when he died, Zakī al-Dīn left a will stating that he provide Sultan Barqūq with 30,000 dinars (Ibn Qāḍī Shuhbah, *Tārīkh,* 1:3:168).

[81]Ibn Ḥajar, *Inbā',* 1:306.

[82]Ibid., 195–96.

[83]Al-Maqrīzī, *Al-Sulūk,* 3:811; Ibn al-Furāt, *Tārīkh al-Duwal wa-al-Mulūk* (Beirut, 1936–42), 9:378–79. Incidentally, Ibn al-Furāt describes each of these three merchants with the title of qadi. See also Fischel, "The Spice Trade," 171; Ashtor, "The Kārimī Merchants," 53.

[84]Al-Maqrīzī, *Al-Sulūk,* 3:803.

[85]Al-Ashqar, *Tujjār al-Tawābil,* 105–7, 112–13.

[86]Lapidus, *Muslim Cities,* 128.

″professor of law″ *(mudarris fiqh)* and Shaykh Sirāj al-Dīn ʿUmar al-Bulqīnī assistant *(muʿīd)*.[87] It is said that Badr al-Dīn set down the condition that non-Arabs not be appointed to its faculty.[88] His brother, Ṣalāḥ al-Dīn Aḥmad (d. 769/1368), built a large tomb *(turbah)* at Qarāfah, which his grandson, Nūr al-Dīn ʿAlī (d. 802/1400), repaired and to which he later added a fine washroom *(maṭharah)*.[89] According to Ibn Ḥajar, ʿIzz al-Dīn ʿAbd al-ʿAzīz (d. 776/1374) was the owner of a fine madrasah adjacent to his house.[90] Tāj al-Dīn Muḥammad ibn Aḥmad al-Kharrūbī (d. 785/1383) built a large house on the bank of the Nile and converted it into a madrasah, to which he donated a *waqf* and appointed a professor of tradition *(mudarris ḥadīth)*.[91] Ṣalāḥ al-Dīn′s son, ʿIzz al-Dīn Muḥammad (d. 776/1374), also built a madrasah in the suburbs of Fusṭāṭ, which was larger than that of his uncle Badr al-Dīn, but he died before its completion.[92] According to Ibn Iyās (852–ca. 930/1448–ca. 1524), Khawājā Nūr al-Dīn ʿAlī al-Kharrūbī (d. 802/1400) was also the owner of a madrasah in Fusṭāṭ near the Nile.[93]

After he returned from Mecca in 786/1384, Zakī al-Dīn *(raʾīs al-tujjār)* invited Najm al-Dīn Ibn Razīn to learn *Ṣaḥīḥ al-Bukhārī* from him. It is said that he was a person of decency *(hishmah),* esprit de corps *(ʿaṣabīyah),* and manliness *(murūwah),* donating generously to scholars and poets.[94] Al-Sakhāwī (d. 902/1497) relates that Badr al-Dīn ʿUmar ibn ʿAbd al-ʿAzīz al-Kharrūbī (d. 825/1422), who had yearned to hear the Quran, listened to his reading many times and died heavily in debt.[95] Nūr al-Dīn ʿAlī, who was a pious Sufi *(mutaṣawwif),* donated 100,000 dirhams for the reconstruction of al-Ḥaram al-Sharīf in Mecca.[96] Although Nūr al-Dīn was called ″the last of the Kharrūbī merchants *(ākhir tujjār Miṣr min al-Kharāribah),″*[97] actually he was not the last merchant to come out of the Kharrūbī family, for his nephews, ʿIzz al-Dīn Muḥammad ibn ʿUmar (d. 842/1438), Badr

---

[87]Al-Maqrīzī, *Al-Khiṭaṭ,* 2:369. Badr al-Dīn also built *rab*ʿs (living quarters) near the school (ibid.).

[88]Ibid., 369–70.

[89]Ibid., 369.

[90]Ibn Ḥajar, *Inbāʾ,* 1:86–87.

[92]Ibid., 370.

[93]Ibn Iyās, *Badāʾiʿ,* 1:2:636.

[94]Ibn Ḥajar, *Al-Durar,* 1:482. We also find al-Khānqāh al-Kharrūbīyah in al-Maqrīzī′s *Khiṭaṭ* (2:426–27). However, Zakī al-Dīn Abū Bakr al-Kharrūbī originally constructed this as a private house for his family. In 822/1419 the house was converted into a *khānqāh* in accordance with the wishes of Sultan al-Muʾayyad Shaykh.

[95]Al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 6:92.

[96]Ibid., 5:240.

[97]Ibid.

al-Dīn Muḥammad ibn ʻUmar (d. 833/1430), and Fakhr al-Dīn Sulaymān ibn ʻUmar (d. 864/1460), etc., still continued to be active in trade. Fakhr al-Dīn, who had spent a luxurious life reading the Quran, suffered misfortune, fell deeply into debt, and was consequently imprisoned,[98] no doubt as the result of the spice and sugar monopoly policies attempted by Sultan Barsbāy (825–41/1422–38).[99]

In conclusion, the above comparison between several slave traders and the Kharrūbī family of Kārimī merchants during the Mamluk period can be summarized in the following six points.

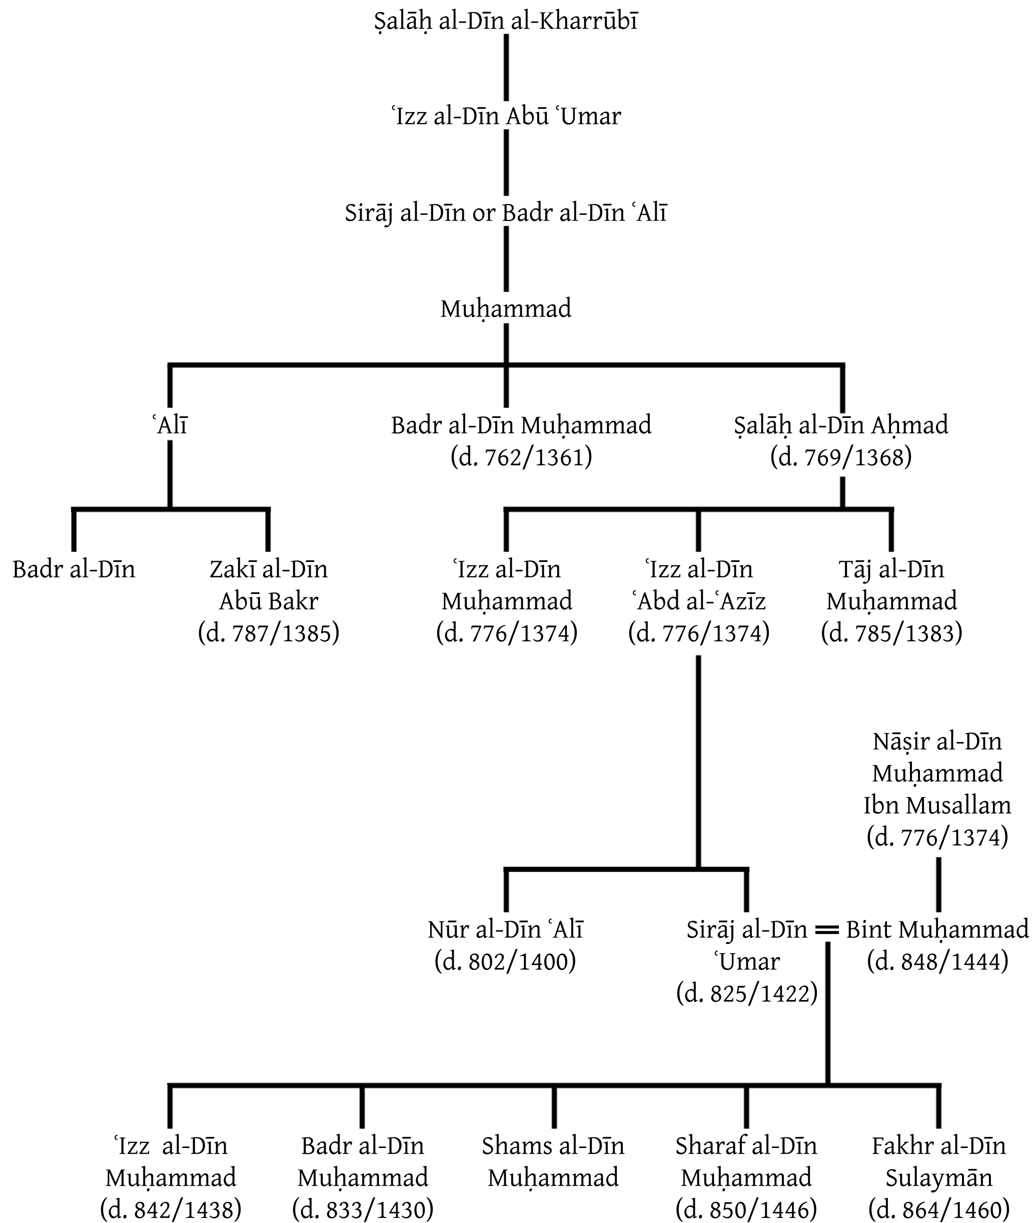
(1) Most of the leading slave traders who were from outside the Mamluk domain were given the title of *"khawājā,"* while only two merchants were granted the title of *"khawājā"* among the Kharrūbīs, who were based in Fusṭāṭ.

(2) Slave traders traveled from Cairo or Damascus to Tabriz and the province of Charkas along the northern routes, while the Kharrūbīs traded between Fusṭāṭ, Cairo, Mecca, and Yemen along the southern routes, but not as far as India, Southeast Asia, or China.

(3) Slave traders returned from Tabriz and the Tatar provinces with male and female slaves and other goods, while the Kārimīs traded goods such as spices, sugar, lumber, textiles, precious stones, wheat, pottery, and slaves. The Kharrūbīs, in particular, earned large profits not only from the spice trade but also from sugar refining and sale.

(4) While slave traders engaged in business on an individual basis, the Kārimīs formed a loose confederation headed by chief merchants *(ra'īs al-tujjār),* which title sultans bestowed upon several wealthy merchants.

(5) Since slave traders were favored and relied upon by both the Mamluk sultans and the Mongol khans, they played an active part as diplomats using their knowledge of the characters and manners of the local eastern rulers. They were often exempted from taxation due to their personal relationships with sultans. The Kārimī merchants also enjoyed the protection of sultans in return for their contribution to the spice trade and contribution to military expenditures. However, the Kharrūbīs were never regarded as state officials, despite their close association with the Mamluk sultans and influential amirs.



(6) As to the public works of slave traders, we find little positive information

[98]Ibid., 3:267.

[99]Concerning the monopoly policies of Sultan Barsbāy, see the following works: Aḥmad Darrāj, *L'Egypte sous le règne de Barsbay* (Damascus, 1961); Labib, *Handelsgeschichte,* 94 f.; idem, "Egyptian Commercial Policy," 63–77; E. Meloy, "Imperial Strategy and Political Exigency: The Red Sea Spice Trade and the Mamluk Sultanate in the Fifteenth Century," *Journal of the American Oriental Society* 123, no. 1 (2003): 1–19.

on their activities. In contrast to this, there are many accounts of the religious and cultural activities conducted by the Kharrūbīs, like the construction of schools in Fusṭāṭ, appointment of professors to those schools, and donations for the reconstruction of al-Ḥaram al-Sharīf in Mecca. Accordingly, it seems that the Kārimī merchants, most of whom were Arab Muslims from Egypt, Yemen, and Syria, made attempts to return part of their wealth to society through such public welfare *(maṣlaḥah)*-oriented religious and cultural works.

Urban Society in Damascus as the Mamluk Era Was Ending

Introduction

How were the Mamluks, formerly military slaves and of a different race and religion, able to govern cities occupied principally by Arab Muslims for more than 250 years? Nearly forty years have passed since Ira M. Lapidus presented a stimulating thesis, and abundant documentation, in an attempt to answer this question. His thesis is still influential: The Mamluks did not simply have military and political superiority; they also linked peasants and nomads to the cities by means of active social and economic actions, forming a variety of networks between these rural outsiders and the two main classes in urban society, the notables and the common people. Thus, the ruling Mamluks' linkage of the ulama and the common people into one political and social unity was characteristic of the structure of urban society during the Mamluk dynasty. Lapidus called such a system of political and social relations the "Mamluk regime"[1] and argued that it had its origin in the Seljukid era of the eleventh to twelfth centuries and worked well even after the rise of the Ottoman dynasty.[2]

In this article the author examines urban society at the end of the Mamluk period. According to Lapidus, the Mamluk regime suffered a serious crisis in this period, but later recovered under Ottoman rule. Earlier studies have thus far described this period as one of decline or disorder, but have given no analyses of the socio-political structure except those of Carl F. Petry, who regards it as a period of innovation because of the leadership of the sultans.[3] The article discusses

This article is a revised and enlarged English version of my Japanese paper published in *Shigaku-Zassi* 98, no. 1 (1989).

[1]Ira M. Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, MA, 1967). On the Mamluk regime, see 43, 191.

[2]Ira M. Lapidus, "The Evolution of Muslim Urban Society," *Comparative Studies in Society and History* 15 (1973): 41; idem, *Muslim Cities,* student edition (Cambridge, MA, 1984), xiii–xiv; idem, *A History of Islamic Societies* (Cambridge, 1988), 353–64. I have discussed methodological problems of Lapidus' urban study in *Islamic Urban Studies: Historical Review and Perspectives,* ed. Haneda Masashi and Miura Toru (London, 1994), 89–91, 116–18, 340.

[3]Carl F. Petry has published two illuminating works on the socio-political structure of Egypt at the end of the Mamluk period. See *Twilight of Majesty: The Reigns of the Mamlūk Sultans al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī in Egypt* (Seattle, 1993); *Protectors or Praetorians?: The Last Mamlūk Sultans and Egypt's Waning as a Great Power* (New York, 1994).

a period of about fifty years, from the reign of Sultan al-Ashraf Qāytbāy (872–901/1468–96) to the occupation of Cairo by the Ottomans, paying primary attention to the political changes outlined below.

First came the financial problem. At the end of the Mamluk period the state constantly faced serious financial crises, due to the decrease of income from *iqṭā‘* land as agricultural production fell and the salaries paid to mamluks and officials increased. Meanwhile, however, the Mamluk state needed to dispatch the army against repeated Ottoman incursions from the northern frontier into Syria, which required an extraordinary budget. The financial problem was therefore closely linked to state security. Sultan Qāytbāy inaugurated a new financial policy of imposing taxes on properties owned by civilians and donated as *waqf,* as well as reducing the salaries of military and state officials, thus changing the balance of state income and expenditures. The sultans who succeeded him followed this policy. Although such a policy was criticized by the ulama and the citizens as oppressive conduct *(ẓulm)* against the shari‘ah and *‘ādah* (customary law), its purpose was to replace income lost from the *iqṭā‘* system, by increasing taxes on the cities and their inhabitants.[4]

Second came the decline of the mamluk army, a phenomenon so precipitous that the sultans and provincial governors began to use non-mamluk military forces. The sultans′ mamluks, called *julbān,* often revolted against the sultans, demanding the customary extra payments *(nafaqah)* during mobilization and at the succession of a new sultan, or complaining about delays in payment of their monthly stipend. These revolts were caused not only by a lack of military discipline but also by the weakening of the state economically. Having lost their *iqṭā‘* income, the mamluks had become salaried workers who depended on the stipend paid to them by the sultans. They could not sustain themselves without an extra payment, in the face of the financial crisis and sudden rise in commodity prices, which reduced the real value of their incomes. The sultans, recognizing the weakness of the military, organized a new army (called the Fifth Army) consisting of non-mamluks, conscripted black slaves *(‘abīd),* and the urban outlaws called *zu‘r,* in order to reform a military system that at that time depended solely on the mamluks. This new army consisted of infantry equipped with firearms and hired at lower salaries

[4]Soon after his succession, Sultan Qāytbāy at the council meeting *(majlis)* twice proposed a new taxation plan on the citizens and the *waqf* properties. He had no choice but to withdraw it, however, because of strong opposition from the ulama. Then he adopted a policy of salary cuts instead. See Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. William Popper (Berkeley, 1930–42), 635–37, 689–93; Ibn al-Ṣayrafī, *Inbā’ al-Haṣr bi-Abnā’ al-‘Aṣr,* ed. Ḥasan Ḥabashī (Cairo, 1970), 33–37; Ibn Iyās, *Badā’i‘ al-Zuhūr fī Waqā’i‘ al-Duhūr,* ed. Muḥammad Muṣṭafá (Cairo and Wiesbaden, 1960–75), 3:13–15, 20–23.

than the mamluks, thus challenging the privileged status of the mamluks.[5]

The financial and military crisis became crucial at the end of the Mamluk period, after Qāytbāy, and this necessitated reform of the state itself, which up until that time was based on the *iqṭāʿ* and the mamluk system. The above-mentioned new financial and military policies were introduced to achieve such reform. The new targets were cities and citizens, and this inevitably caused changes in urban administration. In this article we will examine the changes in urban society, focusing on Damascus. The main sources are journals by Ibn Iyās (d. ca. 930/1524), Ibn Ṭūlūn (d. 953/1546), and Ibn Ṭawq (d. 908/1502).[6] These are detailed diary-like chronicles and give us clues as to how the inhabitants behaved toward external political and economic pressures and developed new networks as the era ended, even though this behavior was often implicit and concealed behind the apparent disturbances.

Change of Legal Administration

Bribery and Confiscation *(Muṣādarah)*

We find a remarkable number of descriptions of bribery in relation to appointment to office, as well as of confiscation of property by forcible means *(muṣādarah):* for bribery, 49 cases are found in *Badāʾiʿ,* 34 in *Mufākahat,* and 22 in *Inbāʾ;* for confiscation, 78 cases are found in *Badāʾiʿ,* 21 in *Mufākahat,* and 12 in *Inbāʾ*. Instances of both bribery and confiscation are found throughout the Mamluk period, but in the following discussion we will focus on particular features at the end of the period.[7] Bribes were customarily offered at the time of appointment to

[5]The sultans′ mamluks revolted about thirty times during the fifty years at the end of the Mamluk period, and most of the revolts were caused by their economic difficulties such as the termination of salary payments and food distribution. They had to maintain their households, pay wages to their subordinates, pay house rents, buy clothes, etc. (Ibn Iyās, *Badāʾiʿ,* 4:369, 483–86).

[6]Muḥammad Ibn Iyās was the son of a mamluk living in Cairo. See Ibn Iyās, *Badāʾiʿ,* 4:47, 136. Muḥammad Ibn Ṭūlūn was a Hanafi jurist living in the Ṣāliḥīyah Quarter in Damascus, who wrote a detailed chronicle of Damascus as well as a review of the provincial governors: *Mufākahat al-Khillān fī Ḥawādith al-Zamān,* ed. Muḥammad Muṣṭafá (Cairo, 1962–64), and *Iʿlām al-Wará bi-Man Wulliya Nāʾiban min al-Atrāk bi-Dimashq al-Shām al-Kubrá,* ed. ʿAbd al-ʿAẓīm Ḥāmid Khaṭṭāb (Cairo, 1973). See Ibn Ṭūlūn, *Al-Fulk al-Mashhūn fī Aḥwāl Muḥammad Ibn Ṭūlūn* (Damascus, 1348); Ibn al-Ḥanbalī, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Beirut, n.d.), 8:298–29; Stephan Conermann, ″Ibn Ṭūlūn: Life and Works,″ *Mamlūk Studies Review* 8, no. 1 (2004). Aḥmad Ibn Ṭawq lived in Damascus and provides a record of daily life there. See Ibn Ṭawq, *Al-Taʿlīq: Yawmīyāt Shihāb al-Dīn Aḥmad ibn Ṭawq,* ed. Jaʿfar al-Muhājir (Damascus, 2000–5), 1:8–11.

[7]I have discussed bribery and property confiscation in Miura Toru, ″Administrative Networks in the Mamlūk Period: Taxation, Legal Execution, and Bribery,″ in *Islamic Urbanism in Human History,* ed. Sato Tsugitaka (London, 1997). Bernadette Martel-Thoumian's recent article, "The

office, and there seems to have been standard amounts (such as 3,000 dinars for the chief judgeship of Cairo). The sultans could amass a huge amount of income from bribes by making frequent appointments of high officials.[8] As for confiscation, the amounts extracted were often more than 10,000 dinars, higher than the amount of bribes, and these were exacted to cover the extra payments *(nafaqah)* mentioned above.[9] Both bribery and confiscation were used as financial measures to cover the state income deficit. The main targets were civil officials living in the cities, thus transferring the wealth of the citizens to the state.

The constant bribery and confiscation caused changes in the administrative process and the quality of the officials. First, high officials needed to have considerable wealth to pay bribes and endure confiscations.[10] Second, the bribery was pervasive, from high officials to minor ones and common people, as shown in the following report. In Rajab 922/August 1516 when the Ottoman sultan Selim entered Aleppo in peace, he reproached three chief judges of Cairo (who were arrested there) for their unjust conduct, saying that ″you have received bribes *(rishwah)* at the trial under the shari‘ah and assumed the office of chief judge, seeking for it by money, and did not prevent the oppressive conduct *(ẓulm)* of the Mamluk sultans towards the citizens.″ The new Mamluk sultan al-Ashraf Ṭūmānbāy (r. 922/1516–17) stated at the appointment of four new chief judges of Cairo in Dhū al-Ḥijjah 922 that ″I have not received any bribe from them, and therefore you must not take bribes from any citizen.″[11] This report tells us that bribery had pervaded the whole administration, so widespread as to reach the judges and nullify any chance for justice at trials over which they presided. Furthermore, the bribery relating to judges was more frequent than other types.[12] We cannot simply

---

Sale of Office and Its Economic Consequences during the Rule of the Last Circassians (872–922/1468–1516)," *Mamlūk Studies Review* 9, no. 2 (2005), is a detailed research contribution but does not make use of my earlier work.

[8]Ibid., 46–49.

[9]Of the forty-seven cases reported in *Badā’i‘,* confiscation of more than 10,000 dinars occurs in about two-thirds (thirty-four cases). Intentional confiscations for the extra payments are found: *Badā’i‘,* 3:394, 407, 409, 442–43. For the average amount of confiscation, see ibid., 52.

[10]The average bribe for the chief judge (3,000 dinars) was equivalent to five years′ salary, assuming his salary was fifty dinars (Miura, ″Administrative Networks,″ 48–49). Since such a huge bribe was required, even wealthy men lacking the knowledge and skill needed for state civil officials were appointed simply by offering it (Ibn Taghrībirdī, *Ḥawādith,* 771, 780–81; Ibn Iyās, *Badā’i‘,* 4:257, 264).

[11]Ibn Iyās, *Badā’i‘,* 5:117.

[12]Bribery to get the position of chief judge appears in 56% (18 cases) of the total in *Badā’i‘* and 30% (6 cases) of the total in *Mufākahat,* while it rises to 65% (13 cases) in *Mufākahat* in the case of the appointment of deputy judges. A judge who did not receive a bribe at his trial was praised, which ironically shows the generality of taking bribes at trials (Ibn al-Ṣayrafī, *Inbā’,* 346–47, 451;

ascribe the prevalence of bribery to the depraved morals of the ulama. We must analyze the changes in the administrative system itself, which we will do in the next section, using as an example the Furfūr family, who monopolized the office of Shafiʻi chief judge in Damascus for 35 years.

THE FURFŪR FAMILY OF DAMASCUS

Two Shafiʻi chief judges, Shihāb al-Dīn Aḥmad ibn Maḥmūd (d. 911/1505)[13] and his son Walī al-Dīn Muḥammad (937/1531),[14] were both known as Ibn al-Furfūr, a name which was ascribed to their ancestor. As for the origin of this Furfūr family, all that is known is that Shihāb al-Dīn′s father Maḥmūd served Ibn Muzhir (d. 893/1488), confidential secretary *(kātib al-sirr)* of the Sultanate, and Shihāb al-Dīn himself was a head of Ibn Muzhir′s bureau at Damascus.[15]

Shihāb al-Dīn was appointed the Shafiʻi chief judge of Damascus, in addition to his existing posts as *nāẓir al-jaysh* (superintendent of the army), *wakīl al-sulṭān* (go-between for the sultan), and *nāẓir al-qalʻah* (superintendent of the Citadel), when he was thirty-three years old, in Ṣafar 886/April 1481. This was only five days after the former chief judge Ṣalāḥ al-Dīn′s appointment. The chronicle *(Inbā')* explains this sudden change as owing to three reasons: Shihāb al-Dīn, who with a fine countenance and voice and chivalrous mind *(futūwah)* was a right hand *(akhṣā')* to Ibn Muzhir, offered a bribe of 30,000 dinars and got a recommendation from the Shaykh al-Islām.[16] Ibn Muzhir, as a confidant of the sultan, had influence when it came to office appointments, and the judges were usually appointed from among the staff who served his bureau.[17] His close relationship to Ibn Muzhir dating from his father′s time, and a large bribe, secured the appointment of Shihāb al-Dīn.

Shihāb al-Dīn continued to be the Shafiʻi chief judge for twenty-five years until his death in Jumādá II 911/November 1505. Furthermore, in Rabīʻ I 910/August

[15]Al-Sakhāwī, *Al-Ḍaw',* 2:222; 10:137.

[16]Ibn Ṭūlūn, *Mufākahat,* 1:33–34, 36, 39; Ibn al-Ṣayrafī, *Inbā',* 513–14. Ibn Ṭawq, *Taʻlīq,* 1:49, 51. The amount of his bribe was reported at 32,000 dinars in *Mufākahat.*

[17]Al-Sakhāwī, *Al-Ḍaw',* 9:88–89; Ibn al-Ṣayrafī, *Inbā',* 288, 297; Ibn Iyās, *Badā'iʻ,* 3:255.

1504 he was appointed the Shafiʿi chief judge of Cairo, in addition to Damascus, and was allowed to pass the office to his deputy in his will.[18] At the same time his son Walī al-Dīn became deputy judge at the tender age of fifteen years; at his father′s death the following year, he succeeded to the post of chief judge and held this office for about ten years, until Rabīʿ I 921/May–June 1515.[19] The office of the Shafiʿi chief judge was the highest among the four chief judges, as he supervised *waqf* foundations and could appoint his own deputies *(nāʾib)*.[20]

Shihāb al-Dīn appointed twenty-four deputy judges during his tenure, with up to fourteen at one time. He controlled the ulama of the Shafiʿi law school by the appointment of deputies, so that he appointed a man of knowledge like al-Nuʿaymī (d. 927/1521) and dismissed a deputy who opposed him.[21] He also took a bribe when assigning a deputy office.[22] His influence extended to the other law schools so much as to make his nephew Badr al-Dīn Muḥammad Ibn al-Furfūr (d. 936/1529) a superintendent and professor of the Qāṣṣāʿīyah Madrasah, and to discharge Ibn al-Qaṣīf, the Hanafi chief judge. Badr al-Dīn finally assumed this office succeeding Ibn al-Qaṣīf in Muḥarram 902/October 1496.[23] As he held this office until Dhū al-Ḥijjah 913/March 1508, the Furfūr family monopolized the highest offices of two influential law schools for ten years after 902.

Shihāb al-Dīn seems to have been a powerful mediator among the ulama in matters of appointments to office, liberation from imprisonment, and the like.[24] He cultivated close connections with military officers such as the provincial governor *(nāʾib)* by means of gifts and banquets.[25] Such connections increased his influence, so that he was able to play an influential role in the conflict between the provincial governor and the common people, who resisted his attempt to tax them, preventing

the governor from attacking them in 905/1500.[26] He had gained considerable influence in Damascene politics and society and was known to be a man of wealth, having *iqṭāʿ* land in the provinces and a residence in Damascus, owning shops and public baths, and holding *waqf* properties.[27]

Strong opposition developed against the rising influence of the Furfūr family. In Rajab 893/June–July 1488 a lampoon on the deputies of Shihāb al-Dīn was thrown into the Umayyad Mosque. It ridiculed his deputy judges one by one in the form of a poem.[28] Once again, in Rabīʿ II/March–April 1489, another lampoon was thrown into the court of the governor's palace *(dār al-saʿādah),* in which a deputy was accused of oppressive behavior *(ẓulm)* at a trial and the forcible imposition of taxes *(balṣ).*[29] These lampoons asserted that the deputies acted tyrannically at their most important job, conducting trials. An order was sent to summon to Cairo two deputies, two notaries *(shāhid),* a *dawādār* (executive secretary), and a bailiff *(naqīb)* working under Shihāb al-Dīn in Shawwāl 895/September 1490. Here we note that those to be summoned were called "*jamāʿah* (faction, household) of the Shafiʿi chief judge, Shihāb al-Dīn,"[30] which shows that the subordinate staff (deputies, notaries, etc.) was regarded as within the faction of Shihāb al-Dīn, and the organization itself was criticized.

Based on two incidents that occurred after the death of Shihāb al-Dīn, it seems that the Furfūr family organized a faction/household composed of both familial and non-familial members. First, when Shihāb al-Dīn died on 2 Jumādá II 911, his son Walī al-Dīn sent an urgent message from Cairo to announce that he had been appointed chief judge to succeed his father on 9 Jumādá II and all deputy judges should remain in office. One of the deputies, al-Nuʿaymī, hesitated to conduct a trial, however, because the sultan had not authorized the assignment of

---

[26]Shihāb al-Dīn was described as being strong in his struggles with the governors (al-Buṣrawī, *Tārīkh al-Buṣrawī,* 229). Conflict in 905/1500: Ibn Ṭūlūn, *Mufākahat,* 1:227. He also prevented the clash in 891/1486 thus leading to the peace announcement (Ibn Ṭawq, *Taʿlīq,* 2:627–28).

[27]*Iqṭāʿ:* Ibn Ṭūlūn, *Mufākahat,* 1:103, 105, 110, 258. Residence: ibid., 253, 351; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 114. Shops: Ibn Ṭūlūn, *Mufākahat*, 1:117. Bath: ibid., 243; Ibn Ṭawq, *Taʿlīq,* 2:1061. *Waqf*s and *milk:* Ibn Ṭūlūn, *Mufākahat,* 2:115 and recorded *waqf* and *milk* properties of the Furfūr family in the Land Survey Registers at the beginning of Ottoman rule (Tapu Tahrir Defteri, no. 393:12, 112, 185, and no. 602:11, 22, 99, 140, 347). Wealth: Ibn Iyās, *Badāʾiʿ,* 4:84.

[28]Ibn Ṭūlūn, *Mufākahat*, 1:96.

[29]Ibid., 112. Al-Buṣrawī, *Tārīkh al-Buṣrawī,* 133. Ibn Ṭawq reported about this lampoon that Shihāb al-Dīn rejected it as a slander before the governor, and there is no criticism of him in Ibn Ṭawq's report, unlike Ibn Ṭūlūn's. See Ibn Ṭawq, *Taʿlīq,* 2:839.

[30]Ibn Ṭūlūn, *Mufākahat,* 1:133, 143. Al-Buṣrawī reported that his deputy judge al-Sibt was also summoned (al-Buṣrawī, *Tārīkh al-Buṣrawī,* 143–44). Ibn Ṭawq, *Taʿlīq,* 2:981.

deputies. Nevertheless, the other deputies continued their work.[31] We know from this report that appointment to the office of deputy judge lapsed when the official who had made the appointment left office, and permission of the sultan was needed to re-assign the deputy. To keep his own faction together, Walī al-Dīn declared the deputies would continue in office before getting the sultan′s permission. Walī al-Dīn benefited the deputies by assuming his late father′s office and assigning the office of deputy to each of them, so they did not follow al-Nuʿaymī. The second incident was that members of the faction *(jamāʿah)* of Walī al-Dīn were arrested and subjected to confiscation in Dhū al-Ḥijjah 911/April–May 1506, only a half-year after the first incident. Six persons, including Muḥammad, the *dawādār* of Walī al-Dīn and his late father, and the *ustādār* (majordomo) of his father, were arrested and sent to prison to be mulcted.[32] The reason for this arrest and confiscation was not made public, but its purpose must have been to reprimand the Furfūr family as a group because the target of the punishment was obviously the subordinate staff responsible for its management, such as the *dawādār* and the *ustādār*.[33] These reports show that the Furfūr family had organized a faction/household including non-familial members, who were united by their common interests.

*JAMĀʿAH*S IN LEGAL ADMINISTRATION

The term *jamāʿah* means a group in general, and was often used at the end of the Mamluk period to designate a specific faction led by a boss, attaching to it his own name or his post. The most frequent ones were those of provincial governors and chief judges.[34] The word *bāb*—originally meaning gate—was also used to designate a household or faction performing administrative tasks under the boss.[35]

The organization of *jamāʿah*s under judges was demonstrated during the two incidents in which Ibn Furfūr′s group was summoned and later mulcted. The members can be classified into two groups: legal administrative staff such as the *nāʾib, shāhid,* and *naqīb* on one hand, and the management staff such as the *dawādār* and *ustādār* on the other hand.

---

[31] Ibn Ṭūlūn, *Mufākahat,* 1:294. At the appointment of Shihāb al-Dīn to be chief judge, he sent a letter to declare the continuance of the predecessors of deputy judges (Ibn Ṭawq, *Taʿlīq,* 1:53).

[32] Ibn Ṭūlūn, *Mufākahat,* 1:300.

[33] Dawādār Muḥammad served two heads of the Furfūr family and took an important role as envoy on behalf of one (Ibn Ṭūlūn, *Mufākahat,* 1:215, 297). He was blamed at the time of confiscation in 894/1489 as well as of the summons in 895 (Ibn Ṭūlūn, *Mufākahat,* 1:108, 133), which suggests to us his responsibility for household management.

[34] We find twenty-one examples of governor′s *jamāʿah*s and thirteen of chief judge′s in *Mufākahat*.

[35] Ibn al-Ṣayrafī, *Inbāʾ,* 409, 450; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 106, 215.

First I will examine the legal administrative staff.[36] A *nā'ib* was a deputy judge appointed by the chief judge of each of the four Sunni law schools to conduct trials under his auspices. The number of deputy judges exceeded one hundred in Cairo and might have been about twenty in Damascus.[37] They conducted trials at the notary's office and even in the street,[38] and they seem to have been taking bribes, as is shown in an order stating that a *nā'ib* should be dismissed when he received anything at trial.[39] Walī al-Dīn Ibn Furfūr issued an order to his *nā'ib*s that they must not hear a complaint, authorize a document, or hold a trial other than at the house of the chief judge, in order for him to oversee the legal process, but nevertheless the *nā'ib*s were soon permitted to conduct trials freely. The *nā'ib*s resisted this new order and conducted trials and certified documents at their own houses in order to profit personally.[40]

*Shāhid*s acted as witnesses at trials, as well as for marriage contracts and commercial transactions.[41] They were also called *'adl*.[42] They received a fee for notarizing contracts or for being a trial witness,[43] had shops *(ḥānūt, dukkān)* and

---

[36]Regulations on legal administrators can be found in these sources: al-Mawārdī, *Al-Aḥkām al-Sulṭānīyah wa-al-Wilāyāt al-Dīnīyah* (Cairo, 1960), 71, 76; Ibn Abī al-Dam, *Kitāb Adab al-Qaḍā',* ed. Muḥammad Muṣṭafá al-Zuhaylī (Damascus, 1982), 98–100, 105–9. Émile Tyan studies those officials using legal and administrative texts in his *Histoire de l'organisation judiciaire en pays d'Islam,* 2nd ed. (Leiden, 1960), 200–61.

[37]Sultan al-Ghawrī, in Dhū al-Ḥijjah 919/January 1514, restricted the number of deputy judges for each Sunni law school in Cairo to 40 for the Shafi'is, 30 for the Hanafis, 20 for the Malikis, and 10 for the Hanbalis, a total of 100 (Ibn Iyās, *Badā'i',* 4:352). In Damascus in 902/1496 there were as many deputy judges as 10 for the Shafi'is, 5 for the Hanafis, and one for each of the other two schools, making a total of 17 (al-Buṣrawī, *Tārīkh al-Buṣrawī,* 190). The number of Walī al-Dīn's deputy judges reached 16 at one time (Ibn Ṭūlūn, *Mufākahat,* 1:309).

[38]Ibn al-Furāt, *Tārīkh al-Duwal wa-al-Mulūk* (Beirut, 1936–42), 9:298–99; Ibn al-Ṣayrafī, *Inbā',* 341, 375, 439.

[39]Bribe: al-Buṣrawī, *Tārīkh al-Buṣrawī,* 190. Order: Ibn al-Ṣayrafī, *Inbā',* 493.

[40]Ibn Ṭūlūn, *Mufākahat,* 1:311. At the time of Shihāb al-Dīn in Muḥarram 897/November 1491, a royal order came out to prohibit the *nā'ib*s of the Furfūr family from judging at their houses and keeping a *shāhid, wakīl,* and *rasūl,* but it was the order written by Shihāb al-Dīn (Ibn Ṭawq, *Ta'līq,* 3:1082).

[41]Joseph Schacht, *An Introduction to Islamic Law* (Oxford, 1964), 192–94; R. Peters, "Sh̲āhid," *Encyclopaedia of Islam,* 2nd ed., 9:207–8. Ibn Ṭawq worked as a *shāhid,* and then recorded in his journal different kinds of contracts in which he was engaged (Ibn Ṭawq, *Ta'līq,* 1:40, 59, 96, 101, 2:842, etc.).

[42]Al-Ghazzī, *Kawākib,* 1:285, 304; 2:31.

[43]It was reported that the fee was three dirhams for a certificate written at the office of the *muḥtasib* (market inspector) in Damascus, and the total number of certificates came to 3,000 in a day and the *rasūl*s executing this work gained one dinar each per day (Ibn al-Ṣayrafī, *Inbā',* 389). The Ottoman sultan Selim I, before his entry into Damascus, sent a new judge there to proclaim

bureaus *(markaz, maktab)* in the city, and performed their work at mosques and madrasahs and city gates in Damascus and Aleppo.[44] Descriptions of *shāhid*s are often found in the biographies of the ulama: for example, that they acquired their incomes by working as a *shāhid*[45] or began their career as a *shāhid*.[46] The position of *shāhid* was usually the first job for legal administrators. As an example, a *nā'ib* of Shihāb al-Dīn Ibn Furfūr, 'Uthmān, was originally a weaver, then became a madrasah gatekeeper, and worked as a notary under the Hanafi chief judge. He was promoted to *nā'ib* by paying a bribe and remained at this post for more than twenty years.[47] We find many cases of promotion from *shāhid* to *nā'ib,* or of holding both positions at the same time.[48] The offices of *nā'ib*s and *shāhid*s might be centers of legal administration where people were trained not so much in legal theory as in legal practice, and where a personal network (*jamā'ah*/faction) would be created.[49]

*Naqīb*s were bailiffs, also called *rasūl,* who executed legal judgements. They received a fee from a plaintiff and made a profit by exacting more from a defendant. In Cairo in Jumādá I 919/July 1513, the sultan ordered *naqīb*s and *rasūl*s under the amirs (military chiefs) not to extort payments from the parties to a trial.[50] At that time the amirs used to profit by holding a trial at the bench *(dikkah)* in front of their house gates.[51] This order aimed to prevent the subordinates from oppressing the parties. The Damascus governor also prohibited *naqīb*s from exacting a penalty without a plaintiff in Dhū al-Ḥijjah 918/February–March 1513.[52]

*Wakīl*s (go-betweens) arbitrated a matter between the party and the judge. We found a notable example of a *wakīl* in Sharaf al-Dīn, who served the chief judge

---

that the fee for a marriage contract was to be 25 dirhams, of which 20 dirhams were for the judge and 4 for the *shāhid* (Ibn Ṭūlūn, *Mufākahat,* 2:29–30, 41).

[49]Ibn Iyās, *Badā'i',* 4:131.

[50]Ibid., 320.

[51]Ibid., 302, 312. This is a kind of *maẓālim* court (administrative court) supervised by administrative executives, such as the sultan and provincial governors.

[52]Ibn Ṭūlūn, *Mufākahat,* 1:374. Ibn Furfūr's *naqīb*s also exacted money (Ibn Ṭawq, *Ta'līq,* 2:1199).

in spite of his ignorance and illiteracy. He bribed his boss to hear the cases and then extorted bribes from the parties. After a while he found favor with the judge and was consulted about important matters, lived in a mansion, and bought slaves, until he became so powerful that chief judges went to call on him instead of the reverse. Finally, however, in 876/1472 he was prohibited from performing the duties of a *wakīl*.[53]

The increase of lawsuits in larger cities accelerated this tendency of seeking more profit in legal administration. A curious order was issued in Rabīʻ II 914/July–August 1508, forbidding the bringing of a suit against anybody without just cause *(ḥaqq),* and demanding that the accused not be deprived of anything by such an unjust lawsuit. A similar order in Dhū al-Ḥijjah 914/March 1509 provided that a lawsuit would not be accepted unless the defendant agreed to the claim.[54] These orders show that lawsuits and trials had turned into a means for the strong to exploit the weak. Trials were no longer to maintain justice and fairness *(ʻadl)* in society or to prevent oppressive conduct *(ẓulm),* but were instead a means to pursue the private interests of both citizens and legal administrators.

We can surmise the features of legal factions and their staffs at the end of the Mamluk period. First, they gained their income by receiving fees, bribes, and exactions pursuant to the performance of legal functions. It is noteworthy that such income was not necessarily regarded as irregular or illegal, but instead as proper in lieu of salary, as the following episode demonstrates. ʻIzz al-Dīn, the Hanbali chief judge, did not solicit bribes at trials, because he received sufficient income from his madrasah salary and income from rented properties.[55] Legal staff could become wealthy by increasing their income from bribes and fees like the above-mentioned *wakīl.* Second, it was not necessary to have had a madrasah education in order to carry out the work of a notary and go-between. To give an example, a *shāhid* from a peasant background *(fallāḥ)* came to Damascus to be a *rasūl*, then became a *ballāṣī* (tax collector) and later worked as a *shāhid*. He was eventually banished because of his crime of forging a royal order.[56] His example shows that the easiest way for newcomers to the city to earn a living was to be employed as subordinate staff such as a *rasūl* or *ballāṣī* under the patronage of an influential man. After gaining experience in legal practice, they could advance to

---

[53]Ibn al-Ṣayrafī, *Inbāʼ*, 408–11. Other *wakīl*s: ibid., 224, 518–19; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 104.

[54]Ibn Iyās, *Badāʼiʻ,* 4:134; Ibn Ṭūlūn, *Iʻlām,* 214. At the *maẓālim* court of the sultan, bribes were offered (Ibn al-Ṣayrafī, *Inbāʼ,* 367). Therefore the sultan was forced to control the increase of lawsuits brought to him in Shaʻbān 876/January 1472 (ibid., 400–1).

[55]Ibn al-Ṣayrafī, *Inbāʼ*, 345–47, 450–51. He was famous for his austerity and did not employ *nāʼib*s, *naqīb*s, and *rasūl*s as the other chief judges did.

[56]Ibn Ṭūlūn, *Mufākahat,* 1:334.

become a *shāhid* or *nā'ib* and make more money.

Legal factions absorbed a large number of subordinate staff in the cities, based on the common interests for each member in making money from legal execution, plus their own training and promotion system inside the *jamā'ah,* until they strengthened and extended their organizations. To control such an extended faction *(jamā'ah)* required a managing staff of *dawādār*s and *ustādār*s such as that of the *jamā'ah* of Ibn Furfūr. We know about the prevalence of such *jamā'ah* organizations at the end of the Mamluk period because of the legal reform ordered by the Ottoman sultan Selim I and carried out from Sha'bān 922/August 1516 to Rabī' I 924/February–March 1518. In both Cairo and Damascus, the judges' courts were concentrated in one place, the number of *nā'ib*s and *shāhid*s was reduced, and the judges' *rasūl*s and *wakīl*s were dismissed. Strong resistance to this reform existed, however. No one in Cairo or Damascus obeyed the order. After Selim's departure to Istanbul, the provincial governor of Damascus, Jānbirdī al-Ghazzālī (r. 924–27/1518–21), allowed *shāhid*s to go back to their offices and restored the "*jamā'ah* of the judges, that is, *shāhid*s and *rasūl*s."[57] Legal factions *(jamā'ah)* could survive despite the Ottoman attempt at reform because they had already taken root in urban society.

The chief judges organized their factions, composed of subordinate staff, and executed legal affairs to gain huge profits by means of these *jamā'ah*s. This was why they sought the post of chief judge in spite of paying a large bribe and enduring property confiscation. We find similar organizations led by *kātib*s *al-sirr* and *muḥtasib*s as well.[58]

CHANGE OF CITY ADMINISTRATION

TAXATION AND MILITARY CONSCRIPTION

Mamluk sultans, facing the two serious problems of the need to mount military expeditions abroad and financial crisis, introduced a new tax policy, to be imposed on citizens and *waqf* properties. Such policies were imposed in Syrian cities as well,[59] and provincial governors of Damascus instituted the new taxation. Syrian cities were threatened by the invasion of the Ottoman army. How to pay the costs of war and raise the necessary military personnel and supplies were crucial problems of urban politics. In this section we will examine how these problems were solved, as well as investigate the changes in city administration, focusing on Damascus.

---

[57]Ibid., 2:29–30, 41, 88–89; Ibn Iyās, *Badā'i',* 5:165–66, 243; al-Ghazzī, *Kawākib,* 1:169.

[58]Kātib al-Sirr Ibn Muzhir: Ibn Ṭūlūn, *Mufākahat,* 1:381; Ibn al-Ṣayrafī, *Inbā',* 222, 314, 409; al-Sakhāwī, *Ḍaw',* 9:89. *Muḥtasib:* Ibn al-Ṣayrafī, *Inbā',* 389, 430. See also Miura, "Administrative Networks," 59–66.

[59]Ibn Iyās, *Badā'i',* 3:280, 4:23.

The provincial governor, called the *nā'ib al-salṭanah,* oversaw the administration of Damascus, with its population estimated at 50,000 to 60,000 persons.[60] The chronicles report a new type of taxation imposed on the citizens and city quarters *(ḥārah, maḥallah)*;[61] the first example was in Muḥarram 890/January 1485 and there eventually were sixty-eight examples prior to the end of the Mamluk period. Most of these were by order of provincial governors. After 904/1499, the tax was imposed every year.[62] In contrast, Cairo had only eight examples of such taxation according to Ibn Iyās' *Badā'i'*. What was the reason for its frequency in Damascus?

PURPOSE AND OBJECT

The imposition of occasional taxes in Damascus had two purposes: one, to fund the conscription of infantry soldiers for foreign expeditions (twenty-one cases) and the other, to impose an extra tax, allegedly as punishment, on a quarter where a murder was committed (fourteen cases). In contrast, in Cairo, seven of eight cases of taxation are for expeditionary costs, primarily to pay extra allowances to the mamluks rather than for infantry. As for the object of taxation, in Damascus taxes were imposed on all the city quarters or collected from an individual quarter,[63] whereas in Cairo they were levied on immovable properties of *waqf* and *milk* (private ownership), and a portion of rental income was collected.[64] The amounts

---

[60]My estimate of the population of Damascus and its quarters at the end of the Mamluk period is based on a household survey at the beginning of Ottoman rule in Damascus. Cf. Jean-Paul Pascual, *Damas à la fin du 16e siècle d'après trois actes de waqf ottomans* (Damascus, 1983), 1:23–27. The approximate number of quarters was estimated as 70 inside the city wall *(madīnah)* and 30 in the Ṣāliḥīyah Quarter, on the basis of the descriptions of Ibn Ṭūlūn (Ibn Ṭūlūn, "Ḥārāt Dimashq al-Qadīmah," *Al-Mashriq* 35(1937) and Ibn Kinnān, *Al-Murūj al-Sundusīyah al-Fasīḥah fī Talkhīṣ Tārīkh al-Ṣāliḥīyah,* ed. Muḥammad Aḥmad Dahmān (Damascus, 1947).

[61]There is no comprehensive study of the city taxation system during the Mamluk period, except that we know *zakāt* and *maks* were imposed on goods and trade, and *mushāharah* was imposed on daily commodities, at the end of the Mamluk era. Cf. Hassanein Rabie, *The Financial System of Egypt A.H. 564–741/A.D. 1169–1341* (London, 1972), 80–107.

[62]The descriptions were collected from the sources of *Mufākahat, I'lām,* and *Tārīkh al-Buṣrawī.* Those who imposed the tax were provincial governors, 21 cases; governor's *jamā'ah,* 6 cases; *khāṣṣakī* (sultan's guardsmen), 4 cases; and Mamluk sultans, 2 cases. In addition, 12 cases seemed to be by governors, judging from their taxation procedures.

[63]Taxation on all the quarters of Damascus was 23 cases, and on individual quarters, 25 cases.

[64]Taxation in Cairo: in Rabī' I 894 (Ibn Iyās, *Badā'i',* 3:260–61), in Rabī' I–II 896 (ibid., 278–280), in Muḥarram 907 (ibid., 4:14–17, 20) and in Rajab 917 (ibid., 242). Here the owners of *milk* properties such as houses *(bayt, rab'),* shops *(ḥānūt),* public baths *(ḥammām),* vegetable gardens *(ghayṭ),* mills *(ṭāḥūn),* and vessels *(markab)* collected the rent in advance from their lessees to pay the provisional tax to the sultans (ibid., 4:16). Such taxation can be found previously for dispatching the troops against the Mongols (700/1300) and Timur (803/1401); see Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah* (Beirut, 1966), 14:14; al-Maqrīzī, *Kitāb al-Sulūk li-Ma'rifat Duwal*

of taxation are known in the case of Damascus; the least one being 50 dinars from each quarter and larger amounts, including 1000 dinars imposed on the Shāghūr Quarter and 20,000 dinars on the whole city of Damascus.[65]

Expedition and Infantry

A new tax to fund an expedition was inaugurated in Jumādá II 891/June 1486. At that time the provincial governor of Damascus, Qijmās al-Isḥāqī (r. 892–902/1487–97), was asked to dispatch an expeditionary force by the commander of the Egyptian army in Aleppo. The governor read the letter from the commander in the presence of ulama and other officials, and apologized for the need to collect money from them to dispatch infantry troops against the Ottoman army.[66] In this case the purpose of taxation is clearly to send infantry troops; eight other cases were described as simply for an expedition. Can we assume these orders were also specifically for infantry?

The primary reason to use infantry is obvious. Due to the weakening of the Mamluk army, the need for infantry increased, for these troops could be hired by wage *(jāmakīyah, ma'lūm)*. Provincial governors ordered the conscription of men to serve as infantry in support of the mamluks, and the number of troops reached 4,000.[67] Another reason is technical: the use of gun power was becoming more necessary at the end of the Mamluk period. The Ottomans were able to use gun power, and therefore the Mamluk sultans were forced to organize infantry troops other than their mamluks. They organized the Fifth Army from non-mamluks and trained non-mamluk slaves *('abīd)* to use guns.[68] In Damascus, we find many examples of infantry troops (forty-five cases).[69] It is natural to assume that infantry

---

al-Mulūk, ed. Sa'īd 'Abd al-Fattāḥ 'Āshūr (Cairo, 1939–73), 1:906–7, 3:1052–53.

[65]Taxation of 50 dinars: Ibn Ṭūlūn, *Mufākahat,* 1:245. Taxation of 1000 dinars: ibid., 247, 249; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 179. Taxation of 20,000 dinars: *Mufākahat,* 1:254.

[66]Ibn Ṭūlūn, *I'lām,* 72; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 112. Ibn Ṭawq reported that the heads *(kubrá)* of quarters were asked to collect the money for infantry at an amount of 15 dinars for each infantryman (Ibn Ṭawq, *Ta'līq,* 2:625–29).

[67]In 903/1498 the provincial governor ordered the military dispatch. Most of the mamluks, however, were unwilling to go on the expedition, and eventually only 70 mamluks as well as many infantrymen went (Ibn Ṭūlūn, *Mufākahat,* 1:196-97). The number of infantry troops: ibid., 342 and idem, *I'lām,* 232.

[68]David Ayalon, *Gunpowder and Firearms in the Mamluk Kingdom,* 2nd ed. (London and Worcester, 1972), 59-83. Ayalon stressed the unwillingness of the mamluks to wear guns and the Mamluk Sultanate's delay in using firearms. Robert Irwin refutes these assertions by Ayalon in his recent article, "Gunpowder and Firearms in the Mamluk Sultanate Reconsidered," in *The Mamluks in Egyptian and Syrian Politics and Society,* ed. Amalia Levanoni and Michael Winter (Leiden, 2004). The Fifth Army: Ibn Iyās, *Badā'i',* 4:324, 369. *'Abīd:* ibid., 3:383, 4:84, 5:81, 107, 134.

[69]The descriptions are collected from *Mufākahat* and *I'lām*.

troops must have been equipped with firearms, although their specific use is mentioned in only two cases.[70] While the sultans in Cairo, using non-mamluks, organized a new army to employ firearms, infantry was conscripted from the city quarters in Damascus.[71]

The next problem was how to conscript infantry and cover their wages. We can find answers from the descriptions that follow. In Muḥarram 907/August 1501 the deputy governor ordered conscription of troops from each quarter and announced that the conscripts′ allowances should be collected from their respective quarters.[72] In Jumādá I 912/October 1506 the provincial governor asked each quarter for twenty infantrymen to accompany him on an expedition, and the *ʿarīf*s (administrative heads) of the quarters began to collect money to support these soldiers.[73] As these two descriptions show, the quarters were levied heavily, contributing both infantrymen and their wages. However, a clever means of dealing with this problem was devised: The outlaws *(zuʿr)* of the quarter were conscripted and the inhabitants paid their wages. This mechanism is mentioned in the report of Jumādá I 908/November–December 1502, which says that the provincial governor collected the money to be paid to infantrymen, but could not collect it from the *zuʿr* whom he would conscript.[74] As the following section explains, the *zuʿr* were outlaw groups who usually brought arms with them. This solution worked well for all parties concerned. For the governor, the *zuʿr* provided a strong military force. For the *zuʿr,* conscription was a way to acquire weapons as well as wages. For the inhabitants of the quarter, it enabled them to avoid conscription. The provincial governors could acquire the infantry troops at the expense of the inhabitants. This is why they repeated this policy, and by pursuing this policy they could solve their financial and military problems simultaneously.

Penalty Tax for Murder

The provincial governor imposed a penalty tax on the inhabitants of any quarter where a murder had occurred. For example, at the Mazzāz quarter in Ramaḍān 906/1501 a man was killed and robbed of his horse. Several days later the *ustādār*

[70]Ibn Ṭūlūn, *Mufākahat,* 1:211, 289.

[71]Ibn Ṭūlūn, *Mufākahat,* 1:118. Ibn Ṭawq states that unjust exaction spread in the city due to the infantry conscription (*Taʿlīq,* 2:937–38).

[72]Ibn Ṭūlūn, *Mufākahat,* 1:245.

[73]Ibid., 309.

[74]Ibn Ṭūlūn, *Iʿlām,* 164. In Jumādá II–Rajab 898/February–March 1493 the provincial governor ordered the collection of 20 dinars per infantryman, totalling 10,000 dinars for the whole city, equivalent to 500 infantrymen (Ibn Ṭawq, *Taʿlīq,* 3:1174–75, 1178, 1189). Other cases of conscripting the *zuʿr* for infantry in Damascus: Ibn Ṭūlūn, *Mufākahat,* 92, 190, 195, 330, and those in Cairo: Ibn Iyās, *Badāʾiʿ,* 3:230, 5:119, 140.

of the governor imposed a penalty tax on the inhabitants there.[75] Judging from this report, the provincial governor imposed a penalty on the quarter whether the killer lived there or not. The governor had good reason for this penalty taxation, as he stated when he imposed a penalty of 1000 dinars on the Ṣāliḥīyah Quarter in Dhū al-Qaʿdah 901/August 1496: ″I did not impose [a penalty] without a basis in shariʿah. One of the Hanafi ulama told me that the *diyah* (blood money) should be collected from the inhabitants of the quarter when a murdered person was found there and the killer was unknown.″[76] This legal ground originated from the theory of the Hanafi law school, called *qasāmah* (compurgation). Joseph Schacht explains it thus: ″If the body of a person is found who has obviously been killed, the inhabitants of the quarter, the owner of the house and his *ʿaqīla* (relatives) must swear fifty oaths that they have not killed him and do not know who has killed him. They thereby become free from liability to *qiṣāṣ* but must as *ʿaqīla* pay the blood money.″[77] The legal texts of the twelfth century developed this theory to specify that all inhabitants of the quarter were responsible as a group for the murder or compurgation,[78] responding to the development of city quarters.

The provincial governors used this legalism to repeatedly impose penalty taxation. The chronicle states, ″at the end of this month incidents of murder occurred many times because of the absence of the governor, and his deputy again imposed the penalty for the reason of murder, which was oppressive to the people.″[79] This shows that the governors willingly imposed the penalty on the quarter, rather than pursing the killer. It is obvious they took the penalty to cover their lack of income, in place of normal taxation,

The amount of the penalty imposed was much larger than that collected to support the conscripted infantry, reaching 1000 dinars in the great quarters like the Ṣāliḥīyah. This could be a financial boon for the governor, but on the other hand was oppressive to the inhabitants, causing dissension between the rulers and citizens. The inhabitants of the Masjid al-Qaṣab Quarter gathered to ask for God′s relief *(takbīr)* from a huge imposition due to a murder in Jumādá II 905/January 1501.[80] On the side of the rulers, al-ʿĀdil Ṭūmānbāy, after assuming the position of sultan in Damascus in Jumādá I 906/November 1500, issued a decree that the inhabitants of the quarter where a murder occurred should not be liable for the

penalty; rather they should strive to pursue the killer. The decree of Sultan al-ʿĀdil was engraved on the stone wall of each quarter.[81] But this decree was issued so the sultan could win the favor of the citizens, and it was rescinded after four months.[82] The opposition led to bloodshed in Rabīʿ I 910/August 1504, when Muḥammad Bardadār, the bailiff of the governor, went to the Maydān al-Ḥaṣā Quarter to exact the penalty because its inhabitants killed his colleague, and his fellows were attacked and killed on their way. The next day, the inhabitants stoned those who tried to bury those killed, and antagonism deepened between the two groups. The governor launched an effort to arrest the killers, but the *zuʿr* began to support the inhabitants. The governor was then forced to issue a decree of *amān* (peace), attributing the murder of Muḥammad Bardadār to a dog.[83] In this incident, the governor was on the side of the victim and could demand blood money from the inhabitants. Nevertheless they showed strong resistance to the imposition of this financial penalty. Why did the governors cling to the blood penalty, which caused heavy oppression? The governors of Damascus had no other means but the blood penalty to increase their incomes, whereas the sultans in Cairo could gain an immense amount by bribes and property confiscation to overcome a financial crisis.[84]

TAX COLLECTION AND THE *JAMĀʿAH*S OF THE GOVERNORS

The governors used differing tax collection procedures to fund expeditions and for the murder penalty. We know that when Governor Qijmās attempted to raise money to dispatch an expedition of infantry in 891/1486 the response from the citizens was to protest and assert that his actions were motivated by self-interest and were illegal. As the people prepared to stone him, Qijmās went to the house of Shaykh al-Islām Taqī al-Dīn Abū Bakr Ibn Qāḍī ʿAjlūn (d. 928/1522),[85] to talk him into asking the influential people of each quarter to cooperate in tax collection. As the Shaykh al-Islām consented to this request and justified the taxation, *ʿarīf*s

---

[81]Ibn Ṭūlūn, *Mufākahat,* 1:234; idem, *Iʿlām,* 129. It remained until the twentieth century and was recorded in Jean Sauvaget, ″Decrets mamelouks de Syrie,″ *Bulletin d′études orientales* 2 (1932): 44. Sultan Qāytbāy issued a similar decree (*Iʿlām,* 129).

[82]Ibn Ṭūlūn, *Mufākahat,* 1:234.

[83]Ibid., 279–80.

[84]Property confiscation in Damascus was conducted on a smaller scale than that of Cairo in terms of the number and amount. The number of confiscations in Damascus noted in *Mufākahat* and *Iʿlām* for the period 885–922 was 17 (in contrast to 73 cases in Cairo in the same period), and in only 4 cases were more than 10,000 dinars confiscated.

[85]He was a Shafiʿi jurist and played a role in negotiations on matters of civil life such as the rise of commodity prices and the alcohol trade (Ibn Ṭūlūn, *Mufākahat,* 1:29–30, 32, 41). Cf. al-Ghazzī, *Kawākib,* 1:114–18; Ibn al-Ḥanbalī, *Shadharāt,* 8:157.

(administrative heads of the quarters) and other influential persons began to collect the money.[86] At first, the governors strove to get the consent and cooperation of the ulama to defend this taxation. Later, however, only two examples of their seeking such support can be found,[87] indicating it probably was unnecessary.

In practical terms, *'arīf*s of each quarter were charged with the task of collection, as in the example of Qijmās. The following report is suggestive: In Jumādá I 912/September 1506 when the governor ordered the conscription of twenty infantrymen from each quarter, *'arīf*s of the quarters began to collect money following the example of Qijmās.[88] A noteworthy incident occurred during the twenty years between these two reports. When the order of infantry conscription was given in Muḥarram 907/July 1501, outlaws *(ghawghā')* began to plunder the quarter. They justified their actions by insisting that the order stipulated that their wages should come at the expense of each quarter. This caused severe harm to the inhabitants, who appealed to the deputy governor. He suddenly decided to collect 50 dinars from each quarter, 40 dinars of which was allotted to the infantry.[89] The example of Qijmās in 891/1486 was mentioned as precedent for the collection in 912/1506 to avoid such confusion.

Who were the *'arīf*s of the quarter? In spite of only meager information about the duties of the *'arīf*s, we can say that they were the administrators responsible for security as well as tax collection in each quarter, and were appointed by the governor.[90] *'Arīf*s pocketed the money collected from the quarter and seemed to have taken tips in exchange for allowing some to avoid paying, for the governor ordered *'arīf*s to collect taxes in Jumādá I 893/April 1488, warning that no one should seek the protection of *'arīf*s.[91] When *zu'r* of the quarters were ordered to take part in an expedition in Ṣafar 914/June 1508, *'arīf*s were asked to cover their expense, so as not to burden the citizens.[92] The governor must have recognized the abuse committed by *'arīf*s while collecting taxes. The people's strong opposition to the exploitation of the *'arīf*s often led to their murder.[93]

---

[86]In other sources, three chief judges as well as Taqī al-Dīn were reported as cooperating in the taxation: Ibn Ṭūlūn, *I'lām,* 73–74; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 112. See also note 66.

[93]Ibid., 2:21, 22.

Subordinate officials of the provincial governor such as the *ustādār,* the *dawādār,* and the *bardadār* collected the murder penalty, and they were often collectively called the *jamāʻah* of the governor.[94] The governor′s *jamāʻah* was composed of two different groups, one being subordinate officials such as *ustādār, dawādār, khāzindār* (grand treasurer), *bardadār,* and *mihmandār* (host manager), the same posts that can be found in the central government of Egypt. These were administrators whose function was to perform political and administrative tasks for the provincial governor.[95] The *dawādār* was mainly responsible for tax collection, for the arrest and execution of criminals, and for supervising the *jamāʻah* itself.[96] They were primarily from the mamluks of the governor, and later the governors would value them above higher officials of the provincial government like *ḥājib al-ḥujjāb* (grand chamberlain).[97]

The second group executed public policy: for example, the *ballāṣī* and *naqīb* carried out commands of the governor and the *dawādār*.[98] The *ballāṣī* was a tax collector, but only part time because the first group of *bardadār* and *ra's al-nawbah* (guard) held these positions concurrently.[99] They might also be recruited from the common people, as announced in the decree of Rabīʻ I 912/August 1506 that recently appointed *ballāṣī*s were dismissed and should return to their own professions.[100] The third group was mercenaries, such as the *ʻabīd* (black slaves) and the *zuʻr. ʻAbīd* were hired by wage and worked as private soldiers of the governors, equipped with firearms, especially in the civil war against the sultan. They were also employed to make collections from citizens and for security.[101] Lastly, the governors hired drifters (*gharīb*) entering the city and robber chieftains,[102]

in their attempt to maintain control by incorporating marginal men in urban society into their *jamāʿah*.

The new taxation to support conscripted infantry and the imposition of the murder penalty benefited the governors financially and militarily. To perform these new procedures efficiently, they organized the *ʿarīf*s in each quarter while also maintaining their *jamāʿah*s as a distinct group separate from the formal administrative organization. Thus, they could control the inhabitants of the quarters directly. Next we will examine the actual conditions of people under this system of rule.

The City Quarters and the Common People

Political Development of the Quarters

There were two conflicts in Damascus that reflect political developments of the quarters at the end of the Mamluk period. One was the civil war from Ṣafar to Rabīʿ II 903/October to December 1497, and the other was the popular revolt in Jumādá I 907/October 1501.

In 903/1497 Āqbirdī (d. 904/1499), after being defeated by the sultan in Cairo, marched to Damascus. Īnāl al-Faqīh, the recently-appointed governor of Damascus, joined him. When their alliance against the sultan became known on 26 Ṣafar, citizens hastened to bring their property inside the city walls for fear of an attack by the rebellious troops. The next day the mamluks who supported the sultan gathered at the citadel. However, a split occurred among them and they were left leaderless. Ultimately they all fled from the citadel in fear of an attack by the rebels. On 29 Ṣafar the rebels first clashed with the inhabitants of the Ṣāliḥīyah Quarter in the northern suburbs, which had remained on the sultan′s side, and established their base at the Maydān al-Ḥaṣā Quarter in the southern suburbs of Damascus, from which they planned to attack the inner city. On the sultan′s side, the *nāʾib al-qalʿah* (governor of the citadel) was made commander and continued to wage battle for a month and a half. On 16 Rabīʿ II, the rebels launched a final attack with all their force, but could not enter the city. Hearing that the army, led by the new governor Kurtbāy al-Aḥmar (r. 903–4/1497–98), was approaching Damascus to subdue them, the rebels then abandoned Damascus for Aleppo.[103]

It is noteworthy that the common people and *zuʿr* fought on both sides. One report was that nobody supported the sultan other than the common people *(al-ʿawāmm),* especially those of the Shāghūr Quarter, and that Āqbirdī was amazed at the strength of the common people who fought equally with his army.[104] Several

[103]Ibid., 185–96.

[104]Ibid., 200.

reports also document the participation of the *zuʿr* in the battle. Responding to the sultan′s dismissal of Governor Īnāl and his demand for their submission, the rebels claimed it was a false report in order to keep the *zuʿr* on their side.[105] This report suggests the *zuʿr* were an indispensable force for the rebels. We know that they were employed as infantry because the people complained that the *zuʿr* behaved as they pleased in each quarter because the Turks (mamluks) valued them as infantry.[106] Both groups often used firearms that were normally employed only by infantrymen. Therefore the *zuʿr* might participate in the battles as infantry with guns. As the Shāghūr Quarter was a base of the *zuʿr,* it is possible that they comprised the militia of the Shāghūr who fought against the rebels so bravely.

Also notable are the political activities of the people organized in each quarter, especially at major quarters located in the suburbs. At the time of Āqbirdī′s rebellion, the Shāghūr and Ṣāliḥīyah Quarters were allied with the sultan and defended the inner city, while the Maydān al-Ḥaṣā and the Qubaybāt Quarters sided with the rebels. They were not forced to take sides, but allied themselves with one side or the other depending on their personal politics. The Ṣāliḥīyah Quarter fought against the rebels on the side of the sultan and refused the rebels′ proposal of alliance, which demanded that they supply one hundred soldiers and safeguard the women and belongings of the rebels.[107] The inhabitants of the Maydān al-Ḥaṣā and Qubaybāt Quarters demanded their protection when moving to the Qabr ʿĀtikah Quarter to take refuge from the combat.[108] In contrast, the quarters located between the Maydān al-Ḥaṣā and the inner city, such as al-Suwayqah, Qaṣr al-Ḥajjāj, and Masjid al-Dhabān, were often battlefields and suffered devastation.[109] Suburban quarters were exposed to the dangers of attack and plunder by invaders, and the inhabitants there moved to shelter in the inner city, with its protection of a strong city wall, as shown in the war of 903/1497. The four suburban quarters participating in the civil war with their own armies and of their own volition seem to have learned from bitter experience, however, that this was the best and indeed the only way to defend their quarters.

The popular revolt in 907/1501 illustrates political developments in the major suburban quarters of Damascus. First, the inhabitants of the Shāghūr and the

---

[106]Ibid., 195.

[107]Ibid., 199. See also Miura, ″The Ṣāliḥiyya Quarter in the Suburbs of Damascus: Its Formation, Structure, and Transformation in the Ayyūbid and Mamlūk Periods,″ *Bulletin d′études orientales* 47 (1995): 164.

[108]Ibn Ṭūlūn, *Mufākahat,* 1:189, 191, 195.

[109]Al-Suwayqah: Ibn Ṭūlūn, *Mufākahat,* 1:192. Qaṣr al-Ḥajjāj: ibid., 192–95. Masjid al-Dhabān: ibid., 189, 192–93, 195.

Maydān al-Ḥaṣā Quarters gathered at the congregational mosque of Muṣallá al-ʿĪdayn on 14 Jumādá I and allied to fight against the injustice *(ẓulm)* of the governor and his faction.[110] Governor Qānṣūh al-Burj (r. 906–10/1501–4) had levied taxes on quarters like the Maydān al-Ḥaṣā and the Shāghūr and others so frequently that there was no quarter which had not been taxed during the one and one-half months since his arrival.[111] Here the word *ẓulm* is used in reference to this taxation by his *jamāʿah*. On that day the inhabitants of the Shāghūr Quarter clashed with the *jamāʿah* of the sultan, and the sultan dispatched the army, against which the people fought, allied with the *zuʿr*. Meanwhile "the strength of the people and the *zuʿr* overwhelmed the army," defeating it, until the people of the quarter demanded that the governor of the citadel, sent as a messenger of the sultan, should transfer three officials (*ustādār*, *ballāṣī,* and the *naqīb* of the *muḥtasib*),[112] all of whom were responsible for collecting taxes. On the 15th and 16th, the people constructed barricades in their quarters, fought the army, and forced it to retreat. At night the governor, fearing their attack, sent a mission of the governor of the citadel and judges, to talk to their representatives *(akābir)* and promised to accept their demands to abolish taxation on markets and houses and execute the tax-collectors *(ballāṣī)*. The people of the quarter accepted his answer as satisfactory.[113] This, however, was only a temporary concession. Three months later the governor began to levy taxes on the inhabitants again and attacked the *zuʿr* of the Shāghūr Quarter and others. This time, his army defeated the *zuʿr,* put their leaders to death, and pillaged the Shāghūr Quarter.[114] The *zuʿr* could not cope with the governor's army by themselves. It was the collaboration of the *zuʿr* and the common people that had brought them victory over the governor in the revolt of 907/1503.

The political change is clear from the stories of the civil war in 903 and the revolt in 907: First, while the declining power of the mamluk army was apparent, the armed people had gained sufficient strength to fight in place of the mamluks, or to cope with them. The governors employed the *zuʿr* as infantry, which increased their own power. Second, the suburban quarters stopped depending on the power of the governor and instead initiated their own independent political actions. Third, the *zuʿr* played an important role in the popular movement of the quarter.

[114]Taxation: Ibn Ṭūlūn, *Mufākahat,* 1:254, 258; idem, *Iʿlām,* 157, 159. Arrest and attack: Ibn Ṭūlūn, *Mufākahat,* 1:258–60; idem, *Iʿlām,* 160–61.

THE ACTIVITY OF THE *ZU'R* AND THEIR CHARACTER

The original meaning of the word *zu'r* is "thin-haired," and it also has the meanings of "lacking in wealth" and "lacking in virtue."[115] At the end of the Mamluk period it designates a specific group of outlaws, using three variations of the root *(zu'r, ahl al-za'ārah, az'ar)*.[116] The words *ghawghā'*, *awbāsh* (both mean mobs), and *manāḥīs* (scoundrel) were also used to designate specific groups like the *zu'r*.[117] Here we examine their activities and their character, lumping them all together under the term *zu'r*.[118] (See Appendix Table, Activities of the *Zu'r* in Damascus.)

ACTIVITIES OF THE ZU'R

We classified the activities of the *zu'r* into four categories in Table 1:

TABLE 1. TYPES OF ACTIVITIES OF THE *ZU'R*

Categories	Actions and their Frequencies	
Violence	Murder 30 (5 of these were victims)	Plunder and attack 24
Public	Procession 13	Militia 11
Mass Struggle	Fighting 15	Revolt 6
Others	Arrest and Execution 26	

[115] Ibn Manẓūr, *Lisān al-'Arab* (Cairo, 1300–7), 5:411–12.

[116] Activities of the *zu'r* in Damascus were recorded for the first time in 889/1484, and thereafter reports of their activity suddenly increased, so that the number of reports concerning the *zu'r* totaled 111 by the decline of the Mamluk Dynasty, according to the sources of *Mufākahat, I'lām, Tārīkh al-Buṣrawī,* and *Ta'līq*. The term *az'ar* is used to designate individuals of the *zu'r,* especially the head (Ibn Ṭūlūn, *Mufākahat,* 1:283, 259, 315; idem, *I'lām,* 181). The term *zu'r* is a plural form of *az'ar,* designating the group of the *zu'r*.

[117] The words *ghawghā'* and *awbāsh* are sometimes connected to the word *zu'r,* such as *ghawghā' al-zu'r* and *awbāsh al-zu'r* (see Appendix Table). The same group is described by both words, *zu'r* and *ghawghā'*. Other words are also used to designate similar groups of the *zu'r; shabāb* (originally youth): Ibn Ṭūlūn, *Mufākahat,* 2:105; idem, *I'lām,* 260, 266; *manāḥīs* (originally bandit): Ibn Ṭūlūn, *Mufākahat,* 1:66.

[118] The leading studies on the *zu'r* are: Lapidus, *Muslim Cities*, 153–63, 173–77; Akram Ḥasan al-'Ulabī, *Dimashq bayna 'Aṣr al-Mamālīk wa-al-'Uthmānīyīn* (Damascus, 1982), 95–110; 'Abd al-Waddād Barghūt, "Jawānib Ijtimā'īyah min Tārīkh Dimashq fī al-Qarn al-Khāmis 'Asharah min Makhṭūṭ Ibn Ṭawq," in *Kitāb al-Mu'tamar al-Duwalī li-Tārīkh Bilād al-Shām* (Damascus, 1974). In a paper published in 1989, I described relations between the quarters of Damascus and the *zu'r:* Miura, "The Structure of the Quarter and the Role of the Outlaws: The Ṣāliḥīya Quarter and the Zu'r in the Mamluk Period," in *The Proceedings of the International Conference on Urbanism in Islam,* vol. 3 (Tokyo, 1989). In a recent paper by James Grehan, the author's analysis of motivation for the revolts in the quarters neglects a key topic: the socio-political relationships of the *zu'r* to the quarters and the common people there. "Street Violence and Social Imagination in Late-Mamluke and Ottoman Damascus (ca. 1500–1800)," *International Journal of Middle East Studies* 35, no. 2 (2003).

The activities in the first category are the most frequent, which shows that the *zu'r* most commonly committed illegal acts of violence. In regard to murder, they intentionally killed *'arīf*s, *ballāṣī*s, and *naqīb*s who collected taxes,[119] which means that these murders had a political basis. They could be hired to kill anyone—for example, to kill the aide of an arbitrary ruler *(a'wān al-ẓalamah)* or, just the opposite, to assassinate at the request of a ruler a shaykh who helped those who were unjustly oppressed.[120] The targets of their plundering and attacks were indiscriminate. They were strong enough to attack with impunity even in the light of day, and to celebrate their success by holding a banquet at which they displayed their loot.[121] Afterwards they sold the loot and pocketed the money.[122] The *zu'r* plundered as they pleased, especially when a state of anarchy prevailed owing to the death of a governor or to civil war, and the citizens feared them.[123] They are differentiated from simple robbers *(surrāq, ḥarāmīyah)*[124] stealing at night. We can say, based first of all on their behavior, that the *zu'r* were an outlaw group that maintained its livelihood by violent acts such as plunder and murder.

If they had only committed illegal acts, they would soon have disappeared or lived at the edge of society. Their second role reveals their public function. They were conscripted as infantry by the governors and asked to participate in public processions such as receiving delegations. In Muḥarram 909/July 1503 the governor included the armed *zu'r* in a procession, though he had previously prohibited the arming of the *zu'r*.[125] The third category is mass struggle, that is, combat among the *zu'r* of different quarters (four cases) and revolts against the rulers (six cases). It is noteworthy here that the *zu'r* organized the whole quarter for combat. In Dhū al-Ḥijjah 907/June 1502 the *zu'r* of the Maydān al-Ḥaṣā Quarter rose as one against the governor in response to the execution of their leader. People fled their houses and the heads of the Muṣallá Quarter and others constructed barricades to defend their quarters.[126] The fourth category, arrest and execution, represents the

results produced by the activities in the other three categories.

The above-mentioned three categories describe the ambiguous character of the *zuʿr*. The first category shows an outlaw character, those who did not hesitate to employ violence in the violation of the law. Their violence, however, was not only for their own interests, but had an additional effect on the city and its quarters. The second category tells us that their organized power was indispensable to citizens as well as rulers, to defend the city and its properties. Furthermore, from the third category, we see that they took over leadership of the battles to defend the quarter whether the inhabitants wanted them to or not. In all these categories, the activities of the *zuʿr* were closely related to the socio-political changes of the city and the quarters.

Relation to the Rulers

The governors could not ignore the habitual plundering and murders of the *zuʿr*, since they not only destabilized the civil order, but also at times attacked the governors and their subordinates. Therefore the governors began to take action against the *zuʿr*, for example by issuing a decree prohibiting the *zuʿr* from arming themselves.[127] Especially after the civil war in 903/1497 when the need for armed infantry increased, Governor Kurtbāy organized new troops by, on the one hand, conscripting *ʿabīd* (black slaves) from among the citizens and training them in the use of firearms, and on the other hand, clamping down on the *zuʿr* until most of them fled the city during his reign.[128] Soon after the revolt of 907/1503, the governor ordered the arms merchants to submit a document swearing not to sell arms to anyone but the mamluks.[129] He began to take measures against the *zuʿr* after the end of 907, arresting the *zuʿr* leaders of the Maydān al-Ḥaṣā Quarter and others and executing them on Dhū al-Ḥijjah 907/July 1502, attacking the Shāghūr Quarter with the *ʿabīd* and mamluk army, killing the *zuʿr* leaders of the Shāghūr and the Qarāwinah in the battle, plundering the markets there, and burning the quarters.[130] Both governors, having experienced the danger of employing the *zuʿr* as auxiliary forces, intended to train the *ʿabīd* instead of the *zuʿr* and to check the latter by the former.

Nevertheless these measures proved unsuccessful in the end. In reaction, the *zuʿr* attacked the quarter of the *ʿabīd* and plundered it in Rabīʿ I 910/August 1504.[131] At the same time, the amirs began to hire the *zuʿr* for their private armies

[130]Ibid., 258–59, 260–61; idem, *Iʿlām,* 160–61.

[131]Ibn Ṭūlūn, *Mufākahat,* 1:280.

even though the hiring of the *zu'r* had been prohibited by decree in Shawwāl 905/May 1500.[132] This decree was ignored by the amirs even after the great chamberlain *(ḥājib al-ḥujjāb)* remonstrated with Governor Arikmās for giving arms to their leaders in Sha'bān 911/January 1506.[133] Thereafter, the *zu'r* were always conscripted from each quarter and the role of the *'abīd* was completely eroded.[134]

Why did these measures against the *zu'r* lack consistency and effectiveness? Our answer: because the *zu'r* were necessary and indispensable for the governors and amirs facing the declining power of the mamluks. Put another way, although mamluks were the sole military force for a long time, other military forces eventually appeared to compete with the mamluks around the turn of the sixteenth century. Therefore the governors needed to keep the *zu'r* on their own side, by bestowing robes of honor *(khil'ah)* and asking for an oath of homage,[135] just as they did with the mamluks.

Relations to the Quarters

The activities of the *zu'r* were usually related to the quarters in terms of organization. Table 2 shows their relations to the individual quarters:

Table 2. Relations between the *Zu'r* and the Quarter

Shāghūr	24	Maydān al-Ḥaṣā	11
Ṣāliḥīyah	11	Muṣallá	5
Qubaybāt, Shuwaykah	4 for each	Qarāwinah, Mazābil, Qabr 'Ātikah	2 for each
Bāb al-Jābiyah	2	Qaṣr al-Ḥajjāj	1

Table 2 lists 68 cases and 11 quarters; of these 11 quarters, all except Bāb al-Jābiyah were located in the suburbs of Damascus outside the city wall. The activities of the *zu'r* were most conspicuous in the suburbs. They seemed, however,

[132]Ibn Ṭūlūn, *I'lām,* 108. A similar decree is found in Ramaḍān 906 (Ibn Ṭūlūn, *Mufākahat,* 1:233).

[133]Ibn Ṭūlūn, *Mufākahat,* 1:283, 295, 298; idem, *I'lām,* 181, 197, 198–99. In addition, the two persons who struggled for the office of governor's *dawādār* both hired the *zu'r* (Ibn Ṭūlūn, *Mufākahat,* 1:269).

[134]Conscription and imposition for expeditions was most frequent during the period 912–22/1506–16: in all, 13 cases, representing 62% of the total number.

[135]*Khil'ah:* Ibn Ṭūlūn, *Mufākahat,* 1:185; idem, *I'lām,* 78. Swearing homage: idem, *Mufākahat,* 1:282–83; idem, *I'lām,* 180.

to be present in all quarters, as the phrase "the *zuʿr* of each quarter" appears.[136] Furthermore they were also in the villages surrounding Damascus, as the head of the *zuʿr* in the Shāghūr Quarter called on the *zuʿr* of Damascus and the Ghūṭah (surrounding villages of Damascus) to plunder and held a great banquet.[137] The *zuʿr* were most active in the five quarters of Shāghūr, Maydān al-Ḥaṣā, Ṣāliḥīyah, Muṣallá, and Qubaybāt, where they fought with each other, while also allying themselves to fight against the governor, especially if he oppressed them.[138]

The quarter became a unit by which to organize the *zuʿr* under their head (called by them *shaykh* or *kabīr*), especially in the above-mentioned major suburban quarters. The *zuʿr* head of the Shāghūr Quarter was famous for being titled *sharīf* and *sayyid* (meaning descendant of the Prophet Muḥammad)[139] and had wide influence over other quarters, as mentioned before. The heads of the *zuʿr* in Maydān al-Ḥaṣā and Bāb al-Jābiyah were also heads *(shaykh)* of the quarters at the same time,[140] which means the head of the *zuʿr* not only led the *zuʿr* in his quarter but also represented the quarter itself.

Relationship to the People

The *zuʿr* were a menace to the population and their attacks and plundering were aimed at ordinary people as well as the wealthy and upper classes. Rivalry between the governors and the *zuʿr* might have been a cause for the *zuʿr* to seek revenge. The murders increased the blood penalty on the quarters. The following describes the *zuʿr* in the quarters:

> Taxation and property confiscation increased recently in each quarter, and the *zuʿr* became angry, wanting to pay nothing at all. Some of them pressured the shops under their control, to make them sell at a higher price than other shops and to get kickbacks from them. When being taxed for the quarter, they tried to evade the imposed levy by transferring the money to other shops. They enjoyed their fill of food and drink, and were depraved in their exploitation of women and Muslim property. When you find a man brandishing a horrible dagger in the middle of his body, it is indeed

[136]Ibn Ṭūlūn, *Mufākahat,* 1:316; 330; idem, *Iʿlām,* 208.

[137]Ibn Ṭūlūn, *Mufākahat,* 1:283.

[138]Struggle between the Maydān al-Ḥaṣā and the Shāghūr Quarters: Ibn Ṭūlūn, *Mufākahat,* 1:179, 232. Between the Qubaybāt and the Maydān al-Ḥaṣā: ibid., 182. Alliance: ibid., 260; idem, *Iʿlām,* 160–1.

[139]*Sayyid:* Ibn Ṭūlūn, *Mufākahat,* 1:219; *sharīf:* ibid., 225.

[140]Ibid., 289, 332; idem, *Iʿlām,* 191.

> a criminal who is short and ugly to support confiscation by the ruler.[141]

As shown by this description, the *zu'r* in each quarter controlled the markets and shops from which they pocketed kickbacks to the extent that no one could do business without paying a kickback *(fā'idah)* to them.[142] In exchange, they protected *(yaḥmī)* the shops from taxation by the governor.[143] Considering this relationship between the *zu'r* and the quarter, the governor's attempt to exact taxes from shops under their control was a threat to their control of the shops and the quarter itself. This is why they often killed *ballāṣī*s and *'arīf*s who collected tax from the quarter.

We now come to a re-examination of the popular revolt in 907/1503, especially the relationship between the *zu'r* and the quarter. The revolt began, it is clear, with the alliance of the Shāghūr and Maydān al-Ḥaṣā Quarters. A victory of the people against the governor was achieved through an alliance between the *zu'r* and the common people. Three questions arise, however, about participation by the *zu'r*.

The first is whether the *zu'r* participated in the revolt from its beginning or later rallied the people in their support. The report of *I'lām* on the first clash says "the inhabitants *(ahl)* of the Shāghūr Quarter clashed with the *jamā'ah* of the governor. Other *zu'r* appeared there after hearing of the clash, and united against the mamluk army." The *zu'r* of the Shāghūr must have participated in the first clash and asked for help from other *zu'r*.

The second question is who the chiefs *(akābir)*[144] of the people were who met with the delegation of the governor on 16 Jumādá I to talk about a peace agreement. Lapidus supposed them to be shaykhs of the quarters. He insisted that the shaykhs and the *zu'r* dealt separately with the governor in these negotiations and that the *zu'r* continued to murder officials, only afterwards making peace with the governor. In his study, he equates the shaykhs of the quarters with leading notables such as influential ulama who represented the interests of the inhabitants and negotiated on their behalf, and he assumes that they used the power of the *zu'r* as a counter-

---

[141]Ibn Ṭūlūn, *I'lām,* 195. A similar description is found in Ibn Ṭūlūn, *Mufākahat,* 1:292–93, relating that the *zu'r* commanded the markets *(sūq)* under them not to cooperate in the imposition. We find a description of Ibn Ṭawq in 901/1496 of the *zu'r* going around the markets in the inner city with their swords drawn and demanding money from the merchants and others (Ibn Ṭawq, *Ta'līq,* 3:1437).

[142]Ibn Ṭūlūn, *I'lām,* 208.

[143]Ibn Ṭūlūn, *Mufākahat,* 1:316; idem, *I'lām,* 208.

[144]*Akābirhum:* Ibn Ṭūlūn, *Mufākahat,* 1:251; *akābir al-ḥārāt:* idem, *I'lām,* 154.

balancing power to that of the governor.[145] His lucid explanation contradicts the sources, however, concerning both this event and others. The sources do not use the term *shaykh* but rather *akābir* to designate the chiefs in the negotiations. As the word *akābir* was often used to designate the leaders of the *zu'r*,[146] it is possible to suppose that *akābir* here means the leaders of the *zu'r*. Lapidus′ explanation is based on his thesis that the shaykhs and the *'arīf*s represented the interests of the inhabitants and negotiated on their behalf.[147] As for the descriptions of the shaykhs and *'arīf*s of Damascus in the *Mufākahah, I'lām,* and *Tārīkh al-Buṣrawī,* we find no cases in which they actually acted in the interests of the people of the quarter.[148] Considering that a leader of the *zu'r* was also the shaykh of the quarter, and that the shaykhs of the quarters, along with the *ballāṣī*s and *naqīb*s,[149] were denounced in a decree by the sultan, the assumption that the shaykh of the quarter was an autonomous representative for the inhabitants is far too simplistic.[150]

Finally, the course of events after the treaty of 16 Jumādá I gives us a key to understanding the role of the *zu'r* in the revolt. On 4 Jumādá II, the next month, the governor sent a messenger to the head of the *zu'r* in the Shāghūr Quarter. The governor promised not to demand blood money for those killed in the fight, not even from those responsible for it, and concluded a peace *(ṣulḥ)* with the *zu'r,* much to the relief of both the citizens and the governor. Then the *zu'r* of the Shāghūr, Maydān al-Ḥaṣā, and Qubaybāt quarters held a peace-making banquet for the governor.[151] Observing these complicated procedures, we see that the *zu'r* fought against the governor, and therefore the *zu'r* anticipated the imposition of

---

[145]Lapidus, *Muslim Cities*, 156–57.

[146]*Akābir:* Ibn Ṭūlūn, *Mufākahat,* 1:283; idem, *I'lām,* 180; *kabīr:* idem, *Mufākahat,* 1:247, 259.

[147]Lapidus, *Muslim Cities*, 92–93.

[148]Lapidus regards the shaykhs as mediators between the rulers and the common people, citing examples of the latter′s opposition to the former′s imposition in 890 (correctly 891) and in 907 (ibid., 93). These sources, however, simply describe the opposing ones as *al-nās* (citizens), and do not mention shaykhs (Ibn Ṭūlūn, *Mufākahat,* 1:254; idem, *I'lām,* 72–74).

[149]In Dhū al-Ḥijjah 918/February–March 1513 a decree was issued to prohibit the activities of shaykhs of the quarters *(mashā'ikh al-ḥārāt),* body guards *(ru'ūs al-nuwab),* and *naqīb*s (Ibn Ṭūlūn, *Mufākahat,* 1:374). *Ru'ūs al-nuwab* in general designates the office responsible for guarding the sultan, but the three cases in Damascus were all tax collectors (*ballāṣī:* Ibn Ṭūlūn, *Mufākahat,* 1:70, 221; Ibn Ṭawq, *Ta'līq,* 3:1509). The purpose of this decree was clearly to prohibit exploitation by these three offices. It is plausible to assume that the shaykhs of the quarters were actual rulers of the quarters, like the *zu'r*, rather than communal representatives of the inhabitants.

[150]Al-'Ulabī in his study defines the shaykhs of the quarters as dominating the inhabitants of quarters and speaking in the name of the inhabitants before the provincial rulers, whereas the *'arīf*s dominated the inhabitants, taking root in the quarters and cooperating with the rulers in taxation. No reference is given, however, to the original sources (al-'Ulabī, *Dimashq,* 95–96).

[151]Ibn Ṭūlūn, *Mufākahat,* 1:251–52; idem, *I'lām,* 154–55.

blood money. True peace could not come without a solution to the problem of blood money. It is noteworthy that before making peace the governor was most worried that his *ballāṣī*s would not perform their task and the collection of taxes might stop.[152] As mentioned above, the people demanded transfer of the *ustādār* and *ballāṣī* who were responsible for tax-collection. The crucial issue was the governor′s taxation of the quarters by his *jamāʻah,* and the *zuʻr*′s resistance by force.

This evidence leads us to conclude that the *zuʻr* fought against the governor throughout the revolt in 907/1503 simply to prevent taxation in their quarters. They fought to defend their interests in the quarters, and not to aid the people. This explanation is consistent with the character of the *zuʻr*, who defended their own interests at all times; the alliance between the common people and the *zuʻr* was possible because abolition of the tax was a common interest and goal for both. The governors were eager to control the *zuʻr,* and conversely the *zuʻr* resisted the arrest of their leaders with all possible force.[153] Thus, they competed and struggled with each other to gain control over the quarters. Whoever succeeded there would get the money, whether as a tax or as a protection fee *(ḥimāyah).*

Social Background

The *zuʻr* ruled the quarters of Damascus and their inhabitants during the final years of the Mamluk period. At the same time, they confronted the authority of the governors and thereby protected the inhabitants from the exactions of the governors. For the quarter inhabitants, to take shelter under the *zuʻr* meant protection from the governor′s exploitation, and if one became a *zuʻr* himself, he could escape from the rule of both the governor and the *zuʻr* and gain wealth and power. The influence of the *zuʻr* emerged suddenly and became widespread in a very short time.[154] This sudden development might be caused by such socio-political change around the quarters.

It is difficult to know the organizational development of the *zuʻr* and its inner structure, because sources on the members and the organization of the *zuʻr* are scarce. In spite of this, we find among its members common people such as brokers *(dallāl),* weavers *(ḥā'ik),* carpenters *(najjār),* and tin makers (*samkarī*).[155] The report of Ibn al-Mibrad (d. 909/1503), a Hanbali jurist, on a strange event of mass assassinations in 902/1496–97 shows changes in the esteem for *zuʻr* among the ulama.

---

[152]Ibn Ṭūlūn, *Mufākahat,* 1:252; idem, *Iʻlām,* 154.

[153]See Appendix Table, nos. 60, 79, 81, and 92.

[154]See note 116.

[155]Ibn Ṭūlūn, *Mufākahat,* 1:204, 238, 2:105; idem, *Iʻlām,* 191.

> This year, after the death of governor Qānṣūh, a legal scholar published his opinion that the murder of the subordinates of unjust tyrants *(ẓalamah)* should be permissible, and encouraged the *zu'r* to assassinate them. A simple-minded man killed a subordinate or gave silver coins to the *zu'r* to assassinate a subordinate. After the killing, the murderer declared that the person killed was a subordinate [of the unjust tyrant]. Due to this, so many fatalities occurred that about thirty persons were killed in the Ṣāliḥīyah Quarter and about one hundred in the inner city. . . . I was asked about this issue two times. . . . [My answer is] both lack legality. The *zu'r* must not be encouraged.[156]

This opinion of Ibn al-Mibrad represented the traditional idea of the ulama to oppose both the *zu'r* and unjust rulers and not to justify the violence of the *zu'r* as a weapon against injustice. This idea had no power, however, due to the fact that rulers, chief judges, and the *zu'r* all competed with each other for profit and power. Therefore the new opinion that condoned the violence of the *zu'r* as a means of removing injustice is worth noting. Such an opinion must have encouraged the weak and suffering to seek the protection of the *zu'r*.

In this year of 902 murders by the *zu'r* and clashes among the quarters indeed continued, even up to the time of the great pilgrimage festival.[157] On 14 Dhū al-Ḥijjah 902/8 August 1497, the *zu'r* of the Maydān al-Ḥaṣā Quarter invited those of the Shāghūr, Qubaybāt, and Ṣāliḥīyah quarters and others to a banquet to make peace. Amirs, the *nā'ib al-qal'ah,* and other mamluks participated as well as three persons who were rumored to be leaders of the *zu'r;* one was Taqī al-Dīn, deputy judge of Ibn al-Furfūr, and another was al-Sayyid Ibrāhīm, the *naqīb al-ashrāf*.[158] The third, Ibn al-Muḥawjib (d. 912/1506), is described as generous, with real power, someone to be asked for aid by those who suffered injustice, and visited by influential ulama and amirs.[159] We cannot ascertain that these three were

On al-Sayyid Ibrāhīm ibn Muḥammad: Ibn Ṭūlūn, *Mufākahat,* 1:189, 315; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 33, 57; al-Ghazzī, *Kawākib,* 1:100–1; Ibn al-Ḥanbalī, *Shadharāt,* 8:60.

[159]Al-Ghazzī, *Kawākib,* 1:136–37. His influence on the governors and other ulama: Ibn Ṭūlūn, *Mufākahat,* 1:189, 202, 249, 307; al-Buṣrawī, *Tārīkh al-Buṣrawī,* 74, 178, 191, 223, 229; Ibn Ṭawq, *Ta'līq,* 1:194, 2:813, 3:1367, 1514. Another example is that the *nāẓir*s of the Umarīyah

in fact the leaders of the *zuʿr*, but they must have had actual connections to the *zuʿr* to mediate in their conflicts even though they did not hold high official positions.

The *zuʿr* were illegal outlaws who acted in their own self interest, whether on the side of the rulers or on the side of the common people. Due to this ambiguous character, the governor could not subdue them, until they turned into the representatives of justice who opposed injustice often through violence.[160]

CONCLUDING REMARKS: THE CHANGING STRUCTURE AND DYNAMISM OF URBAN SOCIETY

The purpose of this article has been to examine the theory of Muslim urban society and the Mamluk regime presented by Ira M. Lapidus, by re-constructing the structure of urban society at the end of the Mamluk period. Lapidus argued that the mamluks were able to rule Muslim urban society by combining the ulama and the common people into one social group. His theory is based on the assumption that three major groups—the mamluks, the ulama, and the common people—comprised that urban society. These three, however, were changing at the end of the Mamluk period.

First, the mamluks′ military power had weakened and they had become ″salaried workers″ in the city after losing their principle source of income *(iqṭāʿ)*. Meanwhile, influential amirs and provincial governors formed their *jamāʿah*s, organizing *ʿabīd* and the *zuʿr* as private troops and using subordinates like *ballāṣī* to perform tasks of city administration and maintain their rule. The mamluks thus lost their unity as a political force, and social differentiation appeared among them. Second, a similar differentiation or polarization can been seen among the ulama. High officials such as the chief judges also organized their *jamāʿah*s by using subordinate staff in their faction to shoulder city administration and politics together with the influential members of the military, and to exploit the citizenry. Ulama other than the high officials seemed to be hired for these *jamāʿah* as subordinates or to depend on allowances from *waqf* properties as before. Frequent struggles over *waqf* institutions and *waqf* properties[161] suggest that *waqf*s had been a major economic resource for the ulama. Ultimately they lost their dignity and role as religious and legal intellectuals and forfeited their influence on urban society, except for a few high officials like Ibn Furfūr. Finally, the common people of the third stratum were

---

Madrasah in the Ṣāliḥīyah Quarter hired robbers *(ḥarāmīyah)* and the *zuʿr* in opposition to the governor (see Miura, ″The Ṣāliḥiyya Quarter,″ 159–60).

[160]It is noteworthy that the outlaws called *shuṭṭār* and *zuʿr* fought against the injustice of judges, *muḥtasib*s, and other officials, supporting the just rulers, sultans and caliphs, in the oral folk literatures of the Mamluk period such as *Sīrat al-Ẓāhir Baybars* and *Sīrat ʿAlī Zaybaq*. It might reflect the popular image of the *zuʿr,* which shall be discussed in my future work.

[161]Ibn Ṭūlūn, *Mufākahat,* 1:113, 202, 319, 321, 346, 385. Ibn Ṭawq, *Taʿlīq,* 1:109.

ruled directly by the *jamāʿah*s of the governors, influential amirs, and high officials, and they were also squeezed by force. In such severe conditions, the common people had only three possible choices: suffering the exactions unwillingly, being a subordinate of the person who ruled, or taking shelter under the protection of the *zuʿr*. The *zuʿr*, with their violence and organization, created in the quarters a domain that even the ruling power could not invade, ignoring authority and the law. The *zuʿr* can be regarded as *jamāʿah*s inside the quarter for people who had no other way to participate.

In the cities, at the end of the Mamluk era, the provincial governors, amirs, high officials, and the *zuʿr* all formed their own factions (*jamāʿah*s) to strengthen their domains and to achieve their own interests. They struggled with each other by force. Here, in fact, the three strata of mamluks, ulama, and the common people had already dissolved and lost their bases as social strata as well as political actors. They all began to move into the factions. Scholars have regarded such social mobilization so far as being, on the one hand, decline and depravity or corruption and, on the other hand, regarded social mobilization as disorder. Recent studies, however, have shed light on both mobilization and factionalization of society under Ottoman rule in Egypt and Syria.[162] Although we might discuss at greater length whether the socio-political change discussed in my article was only a temporary phenomenon, appearing solely at the end of the Mamluk period, we should also consider the dynamism and potential inherent in any urban society that enables illegitimate organizations like *jamāʿah*s and *zuʿr* to become cores of administration and rule, and to represent two contradictory notions of justice *(ʿadl)* and injustice *(ẓulm).*

---

[162]The growth of influential families, both military and civil, in Ottoman Egypt and Syria can be regarded as re-organization of the societies by the household factions. See Abdul-Karim Rafeq, *The Province of Damascus 1723–1883* (Beirut, 1966); Linda Schatikowski Schilcher, *Families in Politics: Damascene Factions and Estates of the 18th and 19th Centuries* (Stuttgart, 1985); and James Reilly, *A Small Town in Syria: Ottoman Hama in the Eighteenth and Nineteenth Centuries* (Oxford, 2002).

Book Reviews

Response to Th. Emil Homerin, review of *Sanctity and Mysticism in Medieval Egypt: The Wafā' Sufi Order and the Legacy of Ibn 'Arabī,* by Richard J. A. McGregor, *Mamlūk Studies Review* 9, no. 2 (2005): 238–41.

Richard J. A. McGregor

I would like to respond to Emil Homerin′s review of my book *Sanctity and Mysticism in Medieval Egypt: The Wafā' Sufi Order and the Legacy of Ibn 'Arabī* in *MSR* vol. 9, no. 2. Homerin is right to point out the difficulty in identifying clear lines of influence between mystical thinkers. The issue at hand is how to characterize the relationship between Ibn 'Arabī and Muḥammad and 'Alī Wafā'. Since the Wafā's were not students within the well-known ″Akbarian″ school—that is, they did not identify themselves as systematizers or commentators on Ibn 'Arabī′s work—we are obliged to comb through the Wafā' writings in search of similarities with Ibn 'Arabī′s work. In this context Homerin writes ″McGregor must undertake a more extensive and exacting comparison if he wants to assess the scope and strength of Ibn 'Arabī′s influence on Muḥammad and 'Alī″ (p. 241). I would agree with this only in part. Yes, more comparisons (especially of material not relating to *walāyah*) would be welcome, but I am confident that such subsequent work would support my characterization that Muḥammad and 'Alī Wafā' have read Ibn 'Arabī closely. However the picture becomes less clear once we realize that the Wafā's have gone a step further, and put the Akbarian system to work in their own mystical speculations (see p. 8). Thus the question arises as to what exactly we mean by ″influence″? Certainly Ibn 'Arabī′s technical vocabulary has been imported into the Wafā' writings, and so have many key concepts; but the Wafā's were not slavish, and the details of their doctrine of *walāyah,* for example, differ significantly from Ibn 'Arabī′s. They are deeply ″influenced″ by his wider hermeneutic, ontology, epistemology, and technical vocabulary, but at the same time they strive to assert their own insights and identities. How they manage to do both is fascinating, and should force us to examine what exactly we mean by ″influence.″ Homerin would argue that what I am calling the Akbarian influence may well be found elsewhere, with Ibn al-Fāriḍ for example. I would not dispute that the wider strokes of this mystical philosophy went beyond the writings of Ibn 'Arabī, but my view is that so much of the Wafā' writing can be explained in light of Ibn 'Arabī that he is certainly a primary ″influence.″ I am not sure how we could quantify the ″scope and strength″ of this influence. This said,

at the same time I am sure a full comparison of the Wafā' poetry with that of Ibn al-Fāriḍ would also yield interesting parallels (or influences), and certainly a closer reading of the Akbarian school figures (Qūnawī et al.) would be worthwhile. One final point: I would like to remind readers that the Arabic texts provided in the notes are unedited copies of the manuscript texts, and not typos (although neither the English nor the Arabic texts are completely free of those). See my "Note on Transliteration" for more on this.

Aḥmad Fawzī al-Hayb, *Al-Taṣannu' wa-Rūḥ al-'Aṣr al-Mamlūkī* (Damascus: Manshūrāt Ittiḥād al-Kuttāb al-'Arab, 2004). Pp. 121.

Reviewed by Roger Allen, University of Pennsylvania

As the specific discipline of literature studies has come to define itself and to develop its own theoretical modes over the course of the last century or so, the need to write and, more often than not, to rewrite literary histories has come to be regarded as being part of a continuing process. In the case of the Arabic heritage, the literary historian enters a sphere in which the basic chronological parameters and esthetic criteria are often regarded as having been set long since, and within the contexts of both indigenous and external research. Scholars here confront a set of historical attitudes that can be viewed as a perfect model of the rise, decline, and renaissance model of generic developments (or lack thereof). *Mamlūk Studies Review* (and especially Volume VII and articles in Volume IX) has played a major part in attempts to challenge some of the critical postures and attitudes engendered by approaches to this topic that have set specific chronological boundaries to periods of efflorescence and decline. The Mongol sack of Baghdad in 1258, for example, has been adopted as a convenient dividing-line between a "high" period before it and a "period of decadence" after it; all that in spite of clear signs of change in the anterior period and of continued creativity in the so-called "Mamluk" period that followed it (the latter being a period that Professor Thomas Bauer has recently declared to be "one of the apogees of Arabic literature" (*MSR* 9, no. 2 [2005]: 129).

The work under review here thus enters a subfield of Arabic literature studies in which traditional attitudes are already being challenged, although, it has to be admitted, mostly from outside the Arabic-speaking region itself. There is a certain irony here too, one that involves the as-yet-unexplored history of the origins and motivations at work in this usage of the term "decadence" to describe a six-century

period in Arabic literary history. As Bauer also points out as a contribution to that much-needed project, the process of tarring several centuries of literary creativity with the brush of ″decadence″ can be seen as part of the nineteenth-century agenda of European powers in order to justify their colonial intentions by underlining the ″backwardness″ of the peoples in the target regions (see esp. ibid., 105–7). Such lessons in the applications of history were, it would appear, well learned by Arab scholars such as Ṭāhā Ḥusayn and Aḥmad Amīn during their studies in France in the early decades of the twentieth century.

Within the context of the ″*taṣannu‘*″ of the title of this volume, it goes without saying, of course, that the juxtaposition of the ″natural″ *(maṭbū‘)* and the ″artificial″ *(maṣnū‘)* in discussions of Arabic poetry and debate over their relative virtues (particularly in the context of an increased emphasis on *badī‘*) had been part of the critical milieu at least since the time of Ibn Qutaybah (d. 889); indeed that very topic is the focus of a complete study by Mansour Ajami, *The Neckveins of Winter* (Leiden: E. J. Brill, 1984), not mentioned by the author of the current study (but then all the sources in this work are in Arabic). One can perhaps get a glimpse of the attitudes involved by posing the question as to whether the ″*taṣannu‘*″ of the title is best translated in English as ″artifice,″ with its mostly positive connotations—the process of acquiring a craft, or rather as ″artificiality,″ with its implications of contrivance and even lack of sincerity.

The author announces in both his prefatory and concluding material that he wishes to assess the phenomenon during the Mamluk era through two lenses: that of the period in question, and that of the contemporary era. He is to apply the principles he outlines to the poetry of two poets from the period: Ibn al-Wardī (d. 1349) and Ṣafī al-Dīn al-Ḥillī (d. ca. 1349). However, whatever the parameters that are cited and the intentions that are made, what emerges is a prolonged lament over the course of Arabic poetry and its modes of analysis, beginning with the publication of *Kitāb al-Badī‘* by Ibn al-Mu‘tazz (d. 908). As has been noted many times, that particular work was actually a rather conservative gesture, in that it intended to show that the trend towards increased elaboration in the use of poetic devices was a matter of emphasis; Arabic poetry (and indeed the text of the Quran itself) contained many examples of the devices to which Ibn al-Mu‘tazz had drawn attention. In his rapid survey of the development of artifice (or is it artificiality?—pp. 16–33), the author suggests that in the pre-Islamic era and the early period of the Islamic caliphate, the two elements of ″naturalness″ and ″artifice″ were in some kind of balance (p. 19), raising, of course, the question as to: in whose eyes and according to what criteria. This typically idealized scenario in analyzing the earliest periods in the Arabic poetic tradition is seen as undergoing a gradual change ″which distanced it bit by bit from the element of content which is the basis of the tradition″ (ibid.). The ″problem″ is, at least in the view of those

who would cast generic developments of this kind in negative terms, that subsequent poets and critics adopted Ibn al-Mu'tazz's categories (and especially his "*muḥassināt*" [embellishments]) and proceeded to produce larger and larger lists of their examples. In this context Abū al-'Alā' al-Ma'arrī (d. 1058) comes in for his due share of opprobrium for the elaboration of devices in his *Luzūmīyāt* (p. 20), as do al-Ḥarīrī (d. 1122) and al-Qāḍī al-Fāḍil (d. 1200) for their similarly elaborate prose works (pp. 13, and 20–22). But the major culprits in this gradual and prolonged process are said to be the critics (p. 22): Abū Hilāl al-'Askarī (d. 1005) and Ibn Rashīq (d. 1063?) are cited as merely two of those who assembled long lists of devices, until a time when one of the two poets whose works are analyzed in detail in this volume, Ṣafī al-Dīn al-Ḥillī, managed to assemble 104 of them. This led, we are told, to a change in the nature of the poetic art and the function of the poet; the concentration on form over content meant that "the poet no longer believed that poetry was an expression of his emotions and a portrait of his feelings" (p. 31). Poets resorted to imitations of each other and to attempts at besting their forebears; the study of plagiarism became a growth industry.

The author then proceeds to analyze the two above-mentioned poets in separate chapters. With Ibn al-Wardī, he concentrates on the individual aspects in the enhanced use of *badī'* devices (evident from the subdivision of the chapter into a number of specific *muḥassināt* categories); with al-Ḥillī (and specifically his *Durar al-Nuḥūr fī Imtidāḥ al-Malik al-Manṣūr* [Pearly necklets concerning the eulogy of al-Malik al-Manṣūr]) the author's analytical method demands a more unified and comprehensive approach to the poems, particularly since they are mostly (and naturally, considering the title) panegyrics.

Not surprisingly, the result of such surveys of these two poets and their poems (indeed their individual lines) succeeds in providing confirmation of the generally negative image of the direction of the poetic tradition provided in the prefatory chapters.

This work then contextualizes a detailed study of two poets of the Mamluk era in a very particular way. In returning to my opening thoughts about the larger issues involved in contemporary studies of Arabic literary history in general and of this era in particular, I am left to wonder in what way(s) is the "deck stacked" in a study of this type. The author's use of sources is excellent and extremely well referenced, but one is drawn inevitably to the conclusion that, by relying on sources, both pre-modern and modern, that clearly operate within a matrix of historical periodization and a view of generic development that prefers breaks (ruptures perhaps) to continuities, the verdicts to which this volume inexorably leads the reader are almost a foregone conclusion. Indeed the very introduction to the volume, by 'Abd al-Karīm al-Ashtar, uses the term "*khumūd*" (decline) on its very first page. What I find missing in this study is any desire to call into question

the very parameters on which these assessments of broad cultural trends are based. For example, we can certainly read the poetry and the criticism of it (and, in this case, the critical analysis of both the poetry and its criticism), but what about the views of the audiences (including critics) that were contemporary with the poetry and poets? Are we really to believe that, for several centuries in Arabic literary creativity, the variety of audiences that listened to and read the poetry that was created within a certain time period and its cultural norms and expectations did not appreciate and even enjoy what they were hearing and reading? Are we supposed to blame them for ″getting it wrong″ on esthetic criteria? Or is it rather that an entirely different set of critical yardsticks were at work? I would suggest that, before we can really attempt to assess poetic creativity during this prolonged period, a more profoundly researched answer to that last question is a prerequisite.

This volume then provides a useful survey of the work of two poets of the Mamluk era, set against a study of the place of artifice in the poetic tradition that is firmly based in long-accepted opinions that may well need to be substantially revised.

SUHAYR MUḤAMMAD IBRĀHĪM NU‘AYNI‘, *Al-Ḥurūb al-Ṣalībīyah al-Muta'akhkhirah: Ḥamlat Buṭrus al-Awwal Lūsinyān ‘alá al-Iskandarīyah, 1365 M/747 H* (Giza: ‘Ayn, 2002). Pp. 260, maps.

REVIEWED BY NIALL CHRISTIE, University of British Columbia

In this book Suhayr Nu‘ayni‘ presents an account of the attack made on Alexandria in 767/1365 by the Lusignan King of Cyprus, Peter I (d. 770/1369). This is widely regarded as one of the last major actions undertaken by the Crusaders in the eastern Mediterranean, and despite the fact that the Latins only occupied Alexandria for a few days, it had a significant impact, exacerbating tensions between Muslims and Christians for years after the event and contributing to the slow decline and eventual downfall of Lusignan Cyprus in the ninth/fifteenth century. Until now Peter of Lusignan′s expedition has received relatively little attention from scholars in comparison to the other major Crusading expeditions, something that, while understandable in the face of its limited size and scope, nevertheless makes this book a welcome contribution to the field.

Nu‘ayni‘ begins her account of the events by surveying both previous scholarship on the attack on Alexandria and the sources that provide information about the events. She makes use of both primary and secondary sources from both Europe

and the Middle East; she pays particular attention to the *Kitāb al-Ilmām bi-al-I'lām* of the Muslim eyewitness, al-Nuwayrī al-Sikandarī (d. after 775/1372), the *Prise d'Alexandrie* of the French poet Guillaume de Machaut (d. 778–79/1377), and the *Recital Concerning the Sweet Land of Cyprus* of the Cypriot Greek chronicler Leontios Makhairas (d. c. 835/1432), but also makes use of a wide range of other sources from both the contemporary and later European and Middle Eastern literature.

The bulk of Nu'ayni''s work is divided into five parts. In the first of these she provides a description of Europe and the Levant before the attack on Alexandria. Her account of the Levant focuses on the political, social, and economic situation of Egypt under the Mamluk sultan al-Ashraf Sha'bān (d. 778/1377), and also details relations between the Mamluk sultanate and its neighbors in Iraq, Armenia, the Byzantine Empire, and Africa, while her account of Europe describes the various states of the region, again in political, social, and economic terms, before describing Cyprus in detail. In the second part of her work Nu'ayni' focuses more closely on the history of Cyprus preceding Peter of Lusignan's expedition, examining the circumstances that led him to conceive the idea of attacking Alexandria, the motives ascribed to him by the sources, and his efforts to garner support for the venture in Europe. The following two parts of Nu'ayni''s text describe the expedition itself, from Peter I's departure from Venice on 7 Shawwāl 766/27 June 1365 through his capture of Alexandria on 24 Muḥarram 767/10 October 1365 to his eventual withdrawal from the city a few days later. Her account is detailed, and she both compares and analyzes the primary sources. The fifth part describes the aftermath of the attack and its impact on both the internal relations of the Levantine region and the wider interactions of the Levant and Europe, with particular attention paid to its effect on military and commercial interaction between Christians and Muslims and Europeans and Levantines.

Nu'ayni' concludes her work with an account of the subsequent "death" of the crusading movement and the Muslim response in the ninth/fifteenth century before providing an analysis of the events. She is highly critical of the attack, regarding it as a result of the papacy's inability to change with the times and accept that it no longer directed the military might of Europe, something that was further exacerbated by a more widely-held, outdated European perception of political, economic, and military realities in the Levant. Meanwhile, Peter I is blamed for pursuing policies that merely consumed the resources of Cyprus and left it destitute, making it ripe for subjugation and conquest by external enemies, while he is accused of pursuing his venture for commercial and political rather than pietistic motives. Such a negative portrayal of the situation is, naturally, open to question, particularly when it comes to the issue of Peter I's motives. While the attack has been regarded by some scholars as an attempt to dominate Mediterranean commerce, others have

regarded Peter I as being genuinely stimulated by a crusading zeal that he also displayed in earlier life.[1] Thus the matter is somewhat more complex than Nu'ayni' believes.

Shortcomings aside, Nu'ayni''s work is of great value as a detailed account of the attack on Alexandria that takes account of both European and Levantine sources. As such, it is recommended for scholars interested in this dramatic and controversial event.

REVIEWED BY WALID SALEH, University of Toronto

These two books cover different aspects of the intellectual life of the Mamluk era, and in so doing point to a regrettable absence of any substantial general study in English of the cultural and intellectual life under the Mamluks such as one is accustomed to read about medieval Europe. The first book is a study of the poetry of one of the leading intellectual figures of the Mamluk era, while the second is a survey of the educational system under the Mamluks. Before discussing them individually, a generalization about the milieu in which they were produced is in order. Both works share in obvious ways both the virtues and the faults typical of most secondary literature coming from the Arab Middle East. Invariably there is much to learn from such works, and this reviewer, for one, is a devoted reader of them. Despite their shortcomings, they offer the interested reader many insights and directions for study. Some are indeed indispensable in so far as they have carried out the first stage of assessing information available in the literature on a certain topic. Ultimately there is no telling when such works can be useful and there is no substitute for assessing each on its own merits.

The first work under review here, *Al-Ḥāfiẓ Ibn Ḥajar,* makes clear two things: that the collected poems of Ibn Ḥajar are now available in print, and that a study

[1]For a variety of opinions, see for example Norman Housley, ″The Crusading Movement,″ in *The Oxford Illustrated History of the Crusades,* ed. Jonathan Riley-Smith (Oxford, 1995), 272–74; Peter Edbury, ″The Latin East, 1291–1669,″ in ibid., 298–300; and Sir Harry Luke, ″The Kingdom of Cyprus, 1291–1369,″ in *A History of the Crusades,* ed. Kenneth M. Setton (Madison, 1969–89), 3:352–60.

on this most important author is sorely needed. Like many of his peers Ibn Ḥajar wrote many important works in many different fields—altogether 216 works, according to the author of this study. This huge number of books makes it even harder for those planning to study his intellectual career. One only needs to point to his epoch-making commentary on al-Bukhārī′s *Ṣaḥīḥ, Fatḥ al-Bārī fī Sharḥ Ṣaḥīḥ al-Bukhārī,* to realize that he is one of the most important of medieval hadith scholars. The current edition of *Fatḥ al-Bārī* is in 14 volumes, totalling about 8000 pages of finely-printed text. Recently his *mu'jam* has been published—under the title *Al-Mu'jam al-Mufahras,* edited by M. al-Mayādīnī (Beirut, 1998)—allowing us a rare opportunity to study what Ibn Ḥajar studied of previous Islamic scholarship.

Ayyūb′s work is dedicated to a study of the poetry of Ibn Ḥajar and he makes clear that this study was part of his M.A. work, which also included the edition of Ibn Ḥajar′s unpublished second collection of poetry, *Al-Sab'* (p. 5). This newly-published collection is different from his *Dīwān,* which has been available for a while. We are not told this, however, and only by going through the footnotes and the bibliography does this fact become clear. The first one hundred pages of Ayyūb′s work offer a biography of Ibn Ḥajar, which includes a full list of his works (pp. 77–87). The rest of the book is a study of the poetics of Ibn Ḥajar, and the approach here is squarely traditional. His poetry is analyzed through the lens of genres, eulogy, panegyric, etc. Ayyūb′s critical vocabulary is anything but scholarly; we are still here in the realm of the school of ″truth and beauty.″ But in the course of this analysis we do learn that Ibn Ḥajar used to travel to Yemen to recite his poetry to their kings for money. This is a very interesting snippet of information, and unfortunately Ayyūb does not inform us about his sources for it. The most interesting aspect of Ibn Ḥajar′s poetry, however, is his non-traditional poetry, the non-*qaṣīdah* poetry, such as *al-muwashshaḥāt*. The *kharjah*s of these poems were written in colloquial Egyptian dialect. This is rather important information to know and dialectologists should take note. The bibliography at the end of the book is important, as it includes a large number of secondary Arabic studies on the intellectual life in the Mamluk era, the only such studies available so far.

The second book under review, *Al-Madāris* by Jīdah, is a better work on the whole, in so far as it is a more systematic study of the educational system of the Mamluk era. Most of the work is a listing of all the information available in the sources on madrasahs, their names, dates of establishment, and the names of professors who taught there. There is also an analysis of the curriculum, the students′ life, professors′ duties, etc. The merit of this work is that it offers a detailed survey of all the information available in primary sources, a task that is usually beyond most of us. Scholars wishing to write on the educational system

will benefit immensely from this work. As for the cultural life of the Mamluk era, we still await a study that will do justice to its monumental achievements in the cultural sphere.

Kitāb Waqf al-Sulṭān al-Nāṣir Ḥasan bin Muḥammad bin Qalāwūn ʻalá Madrasatihi bi-al-Rumaylah. Edited by Huwaydā al-Ḥārithī. Bibliotheca Islamica, vol. 45 (Beirut: in commission at United Distributing Co., 2001). Pp. 295 + 11.

REVIEWED BY JOHANNES PAHLITZSCH, Freie Universität Berlin

The foundation of Sultan al-Nāṣir Ḥasan ibn Muḥammad ibn Qalāwūn (735/1334-762/1360) on Maydān al-Rumaylah (today Maydān Ṣalāḥ al-Dīn) opposite the Citadel could very well be termed the most magnificent building of the Mamluk period in Cairo. Thus, the edition of the long endowment deed *(waqfīyah)* of Ḥasan's foundation by Huwaydā al-Ḥārithī, who is Associate Professor for Architecture and Design at the American University of Beirut and already well known for her work on Islamic art and architecture with a special emphasis on the Mamluk period, is most welcome.[1]

The *waqfīyah* of Sultan Ḥasan has been transmitted in two copies, both in the possession of the Dār al-Wathā'iq al-Qawmīyah in Cairo. The original parchment document (no. 40/6) of which a small portion has been published by Muḥammad Muḥammad Amīn in 1986[2] is damaged and has not been used by al-Ḥārithī. Instead, she relied on an obviously contemporary bound manuscript copy (no. 365/85). According to al-Ḥārithī a comparison of this copy with the fragments of the *waqfīyah* demonstrate that it is an exact copy of the original. Also included in the bound copy and published by al-Ḥārithī are the texts that have been written on the back of the original *waqfīyah,* namely a confirmation of the *waqfīyah,* an

Doris Behrens-Abouseif (Cairo, 2000), 113–31; "The Patronage of al-Nāṣir Muḥammad ibn Qalāwūn, 1310–1341," *Mamlūk Studies Review* 4 (2000): 219–44.

[2]In: Ibn Ḥabīb, *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh,* vol. 3 (Cairo, 1986), 341–449.

incomplete second *waqfīyah* with additional endowments and new personnel appointments, and a similarly incomplete list of further *waqf* lands in Egypt and Syria.

The first *waqfīyah* of Sultan Ḥasan follows the usual form of Islamic endowment deeds. After an introduction describing the religious merits of the *waqf* there follows the very casual statement that the endowed property belonged to the private property of the founder (pp. 1–5). This short remark stands in sharp contrast to the explicit formulas used in the *waqfīyah* of Ḥasan's grandfather Qalāwūn.[3] The description of the newly-erected buildings of Ḥasan's complex (pp. 5–10) is followed by the long list of endowed properties in Egypt and Syria (pp. 10–148). It is remarkable to find foundations like the "*waqf 'alá al-Madrasah al-Nūrīyah al-Ḥanafīyah*" and many other foundations included in the endowed properties without giving any reference to how they could be transferred to Ḥasan's foundation—if by means of *istibdāl* or because the plague has ruined many foundations.[4] As is well known, these descriptions of property could be of great value for topographical research. However, the *waqfīyah* of Ḥasan could be used as well for the study of the history of older foundations not only in Egypt but also in Syria, especially in Damascus. Then the purpose of the foundation and its different parts, namely the *qubbah,* the *jāmi',* the *madrasah,* and the *maktab al-sabīl* are given together with a list of its staff, their salaries, and instructions to distribute donations on specific occasions (pp. 148–73). The next section deals with the duties of the administrator *(nāẓir)* of the foundation, the appointment of the founder's family as administrators, and the general stipulations of the founder *(shurūṭ)* followed by the final legal formulas, the date, and subscriptions of witnesses (pp. 173–79). The fact that Ḥasan appointed himself as the first *nāẓir* with all rights to change his foundation including the right of *istibdāl* might hint at the legal means that were used in the transfer of the above-mentioned *waqf* lands into Ḥasan's foundation.

In editing the documents contained in MS 365/85 al-Ḥārithī follows the method of reproducing the text as it is "with no corrections, additions, or alterations except for some characters added for the purpose of clarity" (p. 10, English introduction). Furthermore she provides her edition with a double apparatus, giving in the first one some helpful information about the meaning of certain terms or the location of certain places while the second one is the critical apparatus. In view of the fact that a considerable part of the original *waqfīyah* still exists (according to

---

[3]In: Ibid., vol. 1 (Cairo, 1976), 337.

[4]For a similar case cf. the discussion of Sultan Īnāl's foundations by Lucian Reinfandt, *Mamlukische Sultansstiftungen des 9./15. Jahrhunderts: Nach den Urkunden der Stifter al-Ašraf Īnāl und al-Mu'ayyad Aḥmad Ibn Īnāl,* Islamkundliche Untersuchungen, vol. 257 (Berlin, 2003), 74–84.

Amīn, a text of 1258 lines) it would have been very desirable to use both versions of the document for the establishment of the published text whenever possible. A comparison with Amīn′s edition of parts of the original *waqfīyah* shows that there are not only differences between the two versions as indicated in the apparatus of Amīn′s edition but that MS 365/85 even has a considerable lacuna which is filled by Amīn′s edition. It is true that al-Ḥārithī does mention this fact in a note. However, she does not give the missing the text (cf. p. 150, l. 4; Amīn, pp. 389–95, ll. 1209–58). Thus, al-Ḥārithī′s text cannot be called a critical edition of Ḥasan′s endowment deed based on all available copies of the document. Instead al-Ḥārithī′s edition should be described best as a reproduction of one specific version.

Unfortunately one′s faith in the reliability of this reproduction is shaken if one compares the few pictures of the manuscript published in the book with the printed text. So al-Ḥārithī′s text reads on p. 176, l. 15, *yajrá* with *alif maqsūrah* instead of *yajrī* as is indicated quite clearly in the manuscript (cf. the picture on p. 290). On the same page, l. 19, one has to read *thubūtihi* as in the manuscript instead of *thubūthihi*. On p. 209, l. 18, the manuscript has *wa-min dhālika* instead of *min dhālika,* which makes a difference in terms of syntax, and on p. 210, l. 2, something got mixed up between the footnote and the text (cf. p. 293). While the published text reads *qīrāṭ faddān* the manuscript has *qīrāṭ min faddān.* Confusingly, al-Ḥārithī states in note 2 that *qīrāṭ faddān* corresponds to the manuscript, which should be corrected to read *qīrāṭ min faddān*.

Al-Ḥārithī′s method to reproduce the manuscript unchanged might have the advantage of giving an unadulterated impression of the Mamluk court′s use of the Arabic language. However, one gets the impression of a certain methodological inconsistency when she follows the model of the manuscript in writing *hā'* instead of *tā' marbūtah* or *alif mamdūdah* instead of *alif maqsūrah* at the end of the word while adding the missing diacritics in the middle of the word as in the case of *mubīd al-ṭughātin* (p. 180, l. 5, cf. p. 291), to give just one example. On the one hand she substitutes *hā'* at the end of *al-ṭughātin* instead of *tā' marbūtah*. On the other hand she changes the *'ayn* of the manuscript to *ghā'*. All in all it would have improved the legibility of the text to standardize the use of, e.g., *tā' marbūtah*, *alif maqsūrah,* or *hamzah* at the end of the words as well.

With regard to headings, paragraphs and punctuation al-Ḥārithī follows the same method. Only the headings found in the manuscript, be it in the text proper or in margins, are inserted into the text. A few editorial measures like the addition of periods might have helped the reader to find his or her way through the very long descriptions of endowed properties. Furthermore al-Ḥārithī′s unsystematic insertion of headings and subheadings does not help to clarify the structure of the *waqfīyah*. So no heading, paragraph, or even a period separates the section on the

foundation′s expenditures from the section on the duties of the *nāẓir* (pp. 171–73). Especially in the case of the localization of the endowed property it is not helpful to find, e.g., the Madrasah al-Nūrīyah in Damascus, which is mentioned without any reference to its location, under the general heading of property in the *diyār al-miṣrīyah* (pp. 10 and 32).

Despite its editorial shortcomings—and maybe it should be taken into account that al-Ḥārithī is an art historian, not a philologist—the edition of Sultan Ḥasan′s endowment deed is a very valuable contribution to the study not only of Cairo and its history, but also of the history of other cities such as Damascus and Antioch. In particular, the indices of people and place names are very important tools for future research.

YAḤYÁ IBN ʻABD AL-ʻAẒĪM AL-JAZZĀR, *Dīwān al-Jazzār*, edited by Muḥammad Zaghlūl Sallām (Alexandria: Munshaʻat al-Maʻārif, 2001). Pp. 109.

REVIEWED BY THOMAS BAUER, Westfälische Wilhelms-Universität

The editions under review are dedicated to two poets from the earlier period of the Mamluk era. Neither of them has got an entry in the *Encyclopaedia of Islam,* nor in the *Encyclopedia of Arabic Literature*. But they were famous enough in their time, and the editions under review prove that both are interesting, provide important material for a better understanding of early Mamluk cultural life, and doubtlessly deserve further study. The editors, however, seem to have had difficulties to find a publisher for their products, and therefore instead of a calligraphic layout and gold imprinted cloth (now standard with religious texts) one finds homemade, awkwardly printed books sometimes hard to read (and to obtain), as is the case with al-Maḥḥār′s *Dīwān,* or full of printing errors and other shortcomings, as is the case with the *Dīwān* of al-Jazzār.

Yaḥyá al-Jazzār (601–79/1204–81) is one of the first of the many craftsmen-poets of the period. He grew up in the butcher shop of his parents in al-Fusṭāṭ. When his father discovered that his boy could make verses, he presented him proudly to Ibn Abī al-Iṣbaʻ. ″Well done,″ Ibn Abī al-Iṣbaʻ remarked on hearing the boy′s lines, ″you are a good diver.″ The father took this as a compliment for his son′s talent and brought a present of food to Ibn Abī al-Iṣbaʻ, but he had only meant that the son had not yet mastered the meters of poetry and was thus ″diving″ from one

baḥr ″sea = meter″ into the next.[1] This anecdote is important because it shows that poetry met with great interest even among craftsmen and that poetry was seen as a means to social advancement.

Al-Jazzār surmounted his problems with meters and, according to al-Ṣafadī, became the best poet of his time next to al-Sirāj al-Warrāq.[2] His success as a poet allowed him to give up his job as a butcher and to try to earn a living by composing panegyric poetry. For a while this attempt proved successful, but in his later years he had to resume his craft as a butcher. To people who mocked him for that, he replied that as a butcher the dogs would run after him, whereas as a poet he had to run after the dogs. The life of al-Jazzār is therefore characteristic for the role of poetry in the Mamluk period as a whole in a twofold way. First, al-Jazzār is a good example of the spread of literary knowledge and practice in the whole of society right down into the class of merchants and craftsmen. Second, this increase in poetic production led to a lowering of its monetary value, so that it became increasingly difficult to earn one′s living only by composing poetry.

In his history of Mamluk literature, M. Zaghlūl Sallām had dedicated a comparatively long chapter to al-Jazzār and pointed to the poet′s importance.[3] An edition of the *Dīwān* of al-Jazzār by the same scholar may meet therefore with great expectations. But it turns out to be a great disappointment. It is not easy even to figure out what exactly M. Zaghlūl Sallām edited. There is no description of a manuscript and not even a hint about what the basis of the present edition is. As a matter of fact, the whole introduction is nothing else but the very chapter on al-Jazzār from Zaghlūl Sallām′s history of Mamluk literature dating from 1971. No modifications or additions have been made. Though it is true that progress in the study of Mamluk literature is rather slow, it is not so slow that absolutely nothing has happened during the last three decades!

To find out what we have before us, we have to turn to another text on al-Jazzār that has been edited more recently. It is al-Ṣafadī′s notice on al-Jazzār in the twenty-eighth volume of *Al-Wāfī bi-al-Wafayāt,*[4] which is, with its thirty pages, the longest entry in the whole volume. This volume is now available in an excellent edition by Ibrāhīm Shabbūḥ, who spent more effort and care on these thirty pages than Zaghlūl Sallām did for his entire edition. For in addition to the manuscript of the *Wāfī,* Shabbūḥ also used two manuscripts relevant for the poetry of al-Jazzār. The first is a selection of al-Jazzār′s poetry, compiled by the poet himself and dedicated to his close friend, the famous historiographer of

---

[2]Ibid.
[3]Muḥammad Zaghlūl Sallām, *Al-Adab fī al-Aṣr al-Mamlūkī* (Cairo, 1971), 2:135–51.
[4]Al-Ṣafadī, 183–212.

Aleppo, Kamāl al-Dīn Ibn al-ʻAdīm (588–660/1192–1262), entitled *Taqāṭīf* (variant reading: *Taqṭīf*) *al-Jazzār*. It is preserved in a manuscript in Tunis. The second is a manuscript preserved in Istanbul and entitled *Al-Muntakhab min Shiʻr al-Shaykhayn*. It contains poems by al-Jazzār and his ″sparring partner″ al-Sirāj al-Warrāq.[5] As becomes clear from a comparison between al-Ṣafadī′s article and M. Zaghlūl Sallām′s edition, the latter used a film of the Tunis manuscript (without even mentioning this fact), and the edition is therefore not an edition of the *Dīwān al-Jazzār,* but of the *Taqāṭīf al-Jazzār*. Sallām did not use the *Muntakhab,* though it is mentioned in a footnote on p. 7, and consequently a great portion of the poetry of al-Jazzār that has come down to us is missing in the edition.

As an anthology, the text edited by Zaghlūl Sallām gives only a rather small selection of al-Jazzār′s poems, and for most of the longer poems only excerpts are given. The bulk of the poetry is *madīḥ* and *ghazal*. The last part of the book is entitled ″Al-Ḍirāʻah al-Nājiḥah wa-al-Biḍāʻah al-Rājiḥah″ and consists of twenty-eight poems in praise of the prophet, each comprising ten lines. Each poem rhymes on a different consonant of the alphabet, and the rhyme consonant is always also the first letter of every line. A further development of this scheme was used by al-Ṣafī al-Ḥillī in his *Durar al-Nuḥūr fī Madāʻiḥ al-Malik al-Manṣūr*.[6] Ibn Saʻīd al-Maghribī, who was a friend of al-Jazzār, and the editor consider these poems as literarily inferior to al-Jazzār′s achievements in other genres, and I do not dare to contradict.

In the high proportion of *madīḥ,* the low proportion of satiric, frivolous, and sarcastic epigrams, and the lack of a discernible influence of the spoken language, al-Jazzār′s poetry differs from that of other craftsmen poets like Ibrāhīm al-Miʻmār. It is not easy to decide, therefore, to what degree al-Jazzār can be considered a ″popular poet,″ as the editor calls him (p. 5), notwithstanding al-Jazzār′s social origin and position. But this impression is, at least partially, due to the fact that in his *Taqāṭīf* al-Jazzār presents a selection of his poetry meant to meet the taste of an educated *kātib* who may not have been interested in the ups and downs of Cairene everyday life. So, e.g., al-Jazzār composed several pieces on his donkey. An elegy on this animal is quoted in al-Ghuzūlī′s *Maṭāliʻ al-Budūr* and mentioned in the editor′s introduction (p. 16), but only half of the twelve lines are given in the text (p. 40). We can read an even more complete version of seventeen lines now in al-Ṣafadī′s notice.[7] Even more interesting is a poem that al-Jazzār puts into

[5]A copious selection of the poetry of Sirāj al-Dīn al-Warrāq is now easily accessible in Shihāb al-Dīn Aḥmad ibn Faḍl Allāh al-ʻUmarī, *Masālik al-Abṣār fī Mamālik al-Amṣār,* vol. 19, ed. Yūnus Aḥmad al-Sāmarrā'ī (Abu Dhabi, 1424/2002), 15–306.

[7]Al-Ṣafadī, *Wāfī,* 211–12.

the mouth of his little infant. In this poem, which is preserved in several sources, but not in Zaghlūl Sallām's edition,[8] al-Jazzār uses baby talk. So far, Ibn Sūdūn was the only poet known to have used baby talk in his poems.[9] Such findings show that it may indeed be reasonable to draw a line of popular poets from al-Jazzār to al-Mi'mār and further to Ibn Sūdūn.

Further examples may demonstrate that the text edited by M. Zaghlūl Sallām is far from being exhaustive. In the recently published anthology *Al-Muḥāḍarāt wa-al-Muḥāwarāt* by al-Suyūṭī, al-Jazzār is quoted five times with altogether sixty-two lines.[10] This shows that al-Jazzār was not yet forgotten after 250 years, but it also shows that the *Dīwān* that is now in our hands contains only a segment of al-Jazzār's production, since only three of the sixty-two verses in the *Muḥāḍarāt* reappear in the *Dīwān*. Among the missing pieces we find two elegies on the scholar 'Izz al-Dīn ibn 'Abd al-Salām, a short piece of three lines, and a long one of thirty lines, and a poem of twenty-three lines in praise of al-Ẓāhir Baybars on the occasion of the pilgrimage in the year 664. Not only are these poems missing from Sallām's edition, we do not find in it even a hint of a relationship between the poet and 'Izz al-Dīn or Sultan Baybars. Especially important, both from a literary as from a biographical point of view, is the entry on al-Jazzār in Muḥsin al-Amīn's *A'yān al-Shī'ah*.[11] Interesting enough is the fact that al-Jazzār has got an entry in it. Further, al-Amīn provides the most detailed account of al-Jazzār's life, and finally, the entry presents a remarkable poem rhyming on *ūzū*/*īzū* on al-Ḥusayn not given in any other source. The editor has not used these and other sources, which are crucial for the understanding of al-Jazzār and his poetry. And even those that were known to him were used in a superficial and negligent way. To mention only one example: The *Dīwān* contains a short *'Āshūrā'* poem that corroborates al-Jazzār's veneration for the *Ahl al-Bayt*. Its first line is given in the edition as follows:

ويعودُ عاشوراءُ يُذكِرُني وُزْءَ الحَسين، فليت لَم يُعدِ

The poem is quoted—as the editor notes—in al-Ṣafadī's *Tamām al-Mutūn,*[12] but

[12]Al-Ṣafadī, *Tamām al-Mutūn fī Sharḥ Risālat Ibn Zaydūn,* ed. Muḥammad Abū al-Faḍl Ibrāhīm (Cairo, 1969), 207. On this text see Everett K. Rowson, "An Alexandrian Age in Fourteenth-Century

this did not help to avoid the three mistakes, and the vocalization given in al-Ṣafadī´s text, where we read *ʻĀshūrā' yudhakkirunī* instead of *ʻĀshūrā'u yudhkirunī,* should at least have been given as an alternative reading in the apparatus. According to this source, the above line should be read as follows:

ويعودُ عاشورا يُذكِّرُني   رُزْءَ الحُسينِ، فليت لَم يَعُدِ

ʻĀshūrā' comes back and reminds me of al-Ḥusayn´s affliction—
would that it never came back!

Unfortunately, this example is representative of the whole edition. Relevant sources are either not used at all or only selectively. Even in al-Ṣafadī´s *Tamām al-Mutūn* we can find several lines by al-Jazzār which are not mentioned by the editor of the *Dīwān* (pp. 49, 64, 285). The text itself is marred by countless mistakes, which cannot always be corrected as easily as in the example given. Sometimes *shaddah* and vowel signs seem to be haphazardly distributed among the consonant text. It is hard to believe that an experienced scholar and editor such as M. Zaghlūl Sallām can be held responsible for the mess. In any case, this combination of a defective edition and an out-dated study can hardly be considered the last word on al-Jazzār.

The fame of al-Jazzār was overshadowed to a certain degree by the great poets of the next two generations, but during his lifetime his renown even spread to Syria and inspired a young man in Aleppo who was just beginning to write his first poems to compose a *muwashshaḥ* in praise of al-Jazzār and to send it to Egypt. This young man was Sirāj al-Dīn ʻUmar ibn Masʻūd al-Maḥḥār (d. 711/1311), also known as al-Kattān. The *muwashshaḥ* is found in al-Maḥḥār´s *Dīwān* (p. 304-5). The headline that says that the poem is ″in praise of Abū al-Ḥasan al-Jazzār al-Miṣrī″ has to be corrected to ″Abū al-Ḥusayn,″ since the poet, who is addressed by al-Maḥḥār as ″Yaḥyá,″ is without doubt none other than Abū al-Ḥusayn al-Jazzār. Therefore, it must have been composed in the year 679/1281 or earlier and thus is one of the earliest preserved poems by al-Maḥḥār, most of which date between 683 and 711 (see the editor´s remark, p. 12).

Though al-Jazzār and al-Maḥḥār were of similar social origin, the latter´s fate differed much from that of his older Cairene colleague, for, in contrast to al-Jazzār, al-Maḥḥār managed to find patrons who allowed him to make a living from his poetry. From the year 683 onwards, al-Maḥḥār stayed in Ḥamāh as a court poet to the Ayyubid princes who still were allowed to govern this town under Mamluk

Damascus: Twin Commentaries on Two Celebrated Arabic Epistles,″ *MSR* 7, [no. 1] (2003): 97–110.

sovereignty. The same constellation was to repeat itself half a century later, albeit with a more famous poet—Ibn Nubātah—and probably a more famous prince—Abū al-Fidā'—too. Al-Maḥḥār's sultans were al-Malik al-Manṣūr II (r. 642–83) and al-Malik al-Muẓaffar III (r. 683–98), to whom he offered most of his panegyric odes and some of his *muwashshaḥāt*. Several poems are also dedicated to al-Manṣūr's brother al-Malik al-Afḍāl, and a panegyric *muwashshaḥ* is addressed to the latter's son 'Imād al-Dīn (no. 42, pp. 301–4), who is none other than Abū al-Fidā', the future al-Malik al-Mu'ayyad and patron of Ibn Nubātah. The comparatively simple style of al-Maḥḥār's *qaṣā'id,* however, seems to be closer to Bahā' al-Dīn Zuhayr than to Ibn Nubātah.

For this or for some other reason, later authors displayed only minor interest in the *madīḥ* poems of al-Maḥḥār. Al-Ṣafadī, to mention one example, dedicates quite a long article to al-Maḥḥār in his *A'yān al-Aṣr* (3:662–77), in which he does not quote from al-Maḥḥār's panegyric odes at all, but only from his epigrams and his *muwashshaḥāt.* As a matter of fact, the *muwashshaḥ* seems to be the proper domain of al-Maḥḥār's poetic genius, in contrast to Ibn Nubātah, who perhaps only composed panegyric *muwashshaḥāt* on al-Malik al-Mu'ayyad because al-Maḥḥār's songs still resounded in the palace of Ḥamāh. On the contrary, half of al-Maḥḥār's *Dīwān* is made up of *muwashshaḥ* and *zajal*—a quite unusual proportion for a court poet. In fact, with his more than sixty *muwashshaḥāt,* al-Maḥḥār provides the largest corpus of this poetic form in the Bahri Mamluk period. Despite its metric and rhythmic complexity, the *muwashshaḥ* was considered a simpler and more popular form of poetry than the *qaṣīdah*. The audience expected from the *washshāḥ* not a sophisticated presentation of striking and original *ma'ānī,* but a melodious arrangement of the well-known topoi of love poetry. After all, one must never forget that *muwashshaḥāt* were meant to be song texts. The editor has already drawn our attention to al-Maḥḥār and his crucial role for the Mamluk *muwashshaḥ* in a recent publication, which inevitably overlaps with the present edition.[13] It corroborates that al-Maḥḥār was a preeminent *washshāḥ* of the Bahri Mamluk period.

The same holds true regarding the vernacular brother of the *muwashshaḥ,* the *zajal.* Al-Maḥḥār's *Dīwān* contains the remarkable number of thirty-seven *azjāl,* which represent a major corpus of the Eastern *zajal* in its earlier period. Al-Maḥḥār was certainly not the first Eastern *zajjāl.* A *zajal* by Mujīr al-Dīn Ibn Tamīm (d. 684/1285) is quoted by al-Nawājī.[14] But the genre was probably still in its formative

[13]*Dīwān al-Muwashshaḥāt al-Mamlūkīyah fī Miṣr wa-al-Shām: al-Dawlah al-Ūlá (648–784/1250–1382),* ed. Aḥmad Muḥammad 'Aṭā (Cairo, 1990); see the review by Mustapha Kamal, *MSR* 6 (2002): 198–202.

[14]Shams al-Dīn al-Nawājī, *'Uqūd al-La'āl fī al-Muwashshaḥāt wa-al-Azjāl,* ed. 'Abd al-Laṭīf

period in the East when al-Maḥḥār wrote his contributions. As far as I can judge, the Andalusian model is more visible with him than with any other *zajjāl* of the Mamluk realm. He considers Ibn Quzmān as his model and boasts that whoever hears his *zajal* will imagine that Ibn Quzmān is still alive (p. 360). Therefore it naturally follows that al-Maḥḥār does not hesitate to use words typical of the Arabo-Andalusian dialect (such as the negative particle *las*). In the end of the first *zajal* in the *Dīwān*, al-Maḥḥār declares that ″Western are my words, though I am from Syria″ (*Maghribī lafẓī lākinnī min ahl il-Shām,* p. 344). In this respect, his *zajal* differs remarkably from that of later authors such as al-Mi'mār or Ibn Sūdūn who only use their own (Cairene) dialect in the *zajal*. Cairo, however, plays a role even in the *zajal* of the Syrian al-Maḥḥār. In *zajal* no. 13 al-Maḥḥār depicts an elementary school *(maktab)* in a Cairene setting *(qarīb Darb il-Wazīr)*. The teacher *(faqīh)* sits at the door of his class like an amir, correcting, threatening, or even beating every pupil who is committing a speech error *(alḥan)*—quite a nice idea in a vernacular *zajal* (p. 361):

ثمَّ مكْتَب قَريب دَرْبِ الوَزيرْ
وفيهِ الصَبْيَانُ صِغَار وكبارْ
وَفَقيه جالِس على باب مَكْتَبُهْ
أيّ مَنْ ألْحَنْ في الكَلامِ يُعْرِبُهْ
وَيْهَدِّدْ ذا وذا يَضْرُبُهْ
وهُوَ جالس بينهم كالأَميرْ
الصَرَّامهْ والأدب والوقارْ

It seems that for this genre depiction the reality of Cairo and its dialect was more influential than that of Cordoba.

The editor had only a single (albeit old and reliable) manuscript at his disposal, or rather, a microfilm of it, since the original (formerly in Alexandria) seems to be lost now (p. 18). Considering this and the fact that only comparatively few quotations of al-Maḥḥār′s poems in other sources could help him, one can only admire the formidable task that the editor has accomplished. As minor shortcomings one could mention the lack of a bibliography and the fact that the page numbers given in the index are not correct (one can find the poems though according to the number given to them). One should also mention the entry on al-Maḥḥār in Ibn Taghrībirdī′s *Manhal,*[15] which, however, does not provide verses absent from

al-Shihābī (Baghdad, 1982), 201–2.

[15]Yūsuf Ibn Taghrībirdī, *Al-Manhal al-Ṣafī wa-al-Mustawfá ba'd al-Wāfī,* vol. 8, ed. Muḥammad

'Aṭā's edition. In sum, 'Aṭā has done an excellent job and we can only be grateful for having al-Maḥḥār's poetry now in a reliable edition, which is deserving of a more lavish presentation. A careful edition like 'Aṭā's shows that one can only promote the cause of Mamluk literature by dedicating to it as much diligence and effort as is the custom with pre- and early Islamic poetry.

RĀ'ID MUṢṬAFÁ ḤASAN 'ABD AL-RAḤĪM, *Fann al-Rithā' fī al-Shi'r al-'Arabī fī al-'Aṣr al-Mamlūkī al-Awwal* (Amman: Dār al-Rāzī, 2003). Pp. 430.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

Rithā', or "elegy," is one of the oldest genres of Arabic poetry. The Arabic elegy probably arose out of pre-Islamic Arab lamentations for dead relatives, usually senior adult males. After the coming of Islam, poets gradually extended the genre to include other relatives, including women and children. Poets also composed elegies on important public figures, such as amirs, viziers, caliphs, and their family members, for whom the elegy served as a type of eulogy and obituary. Similarly, classical Arab poets composed verse lamenting the deaths of the Shi'i imams, the destruction of Muslim cities by infidels, and the reversal of Muslim fortunes. The classical Arabic elegy, then, had a long and respected tradition. Poets of the Mamluk period added to this legacy, and this is the focus of *Fann al-Rithā' fī al-Shi'r al-'Arabī fī al-'Aṣr al-Mamlūkī al-Awwal* by Rā'id Muṣṭafá Ḥasan 'Abd al-Raḥīm.

At the outset, 'Abd al-Raḥīm never states why he confined himself to the first half of the Mamluk period. There is some justification for dividing Mamluk rule into two periods based on dynastic change, but 'Abd al-Raḥīm does not state how this division is applicable to the study of elegy. Perhaps he simply wanted to limit his study in terms of sources and research time, or maybe he hopes to write a sequel, though I doubt that he will reach further conclusions to warrant this. Still, 'Abd al-Raḥīm's study is a very useful survey of the type of elegies composed during the Mamluk period.

'Abd al-Raḥīm cites al-Mubarrad's (d. 285/899) observation that an effective elegy may give consolation to the bereaved and contribute to proper public mourning. Yet 'Abd al-Raḥīm has little else to say about the elegy's uses and purposes, in general. Further, he does not discuss the origins of *rithā'* or detail its developments

Muḥammad Amīn (Cairo, 1999), 324–29.

but, instead, moves directly into the Mamluk period, categorizing and describing elegies in terms of the deceased. He begins with a chapter on deceased family members and close relatives (pp. 1–37) introduced by a brief discussion of poets′ elegies for themselves and the recurrent themes of the brevity of life and the inevitability of death. He then moves on to elegies on male relatives. Among these, the most frequent subject is the death of a son. ʻAbd al-Raḥīm observes this as a change from the Umayyad and Abbasid periods when elegies to brothers were more frequent. He notes that this may be the effect of Arab, Muslim society moving away from tribal life, in which brothers were valued as allies, toward urban living and the increasing importance of the nuclear family, in which sons were thought to preserve the family′s line and fortune. Citing numerous verses by a number of poets, ʻAbd al-Raḥīm shows that sons who died young were generally praised for their sinless life and handsome appearance, while older and grown sons were eulogized for their skills, learning, and virtue. Often the blissful life of the deceased son in heaven is compared to the living hell of the grieving father.

In contrast to the many poems on sons, ʻAbd al-Raḥīm could find only three short elegies written by sons for their fathers, and he is at a loss to explain why. It may be that ʻAbd al-Raḥīm would have found more examples had he searched further, especially in the many collections of Mamluk poetry still only in manuscript, which he obviously did not consult. It may be too, however, that most sons did not feel a pressing need to compose an elegy for their fathers, who were often eulogized by their contemporaries. Further, most societies regard the death of parents as a sad but inevitable event, and the natural, ordered passing of a generation, while the death of a child is often viewed as a shocking and tragic event requiring an explanation and extraordinary consolation.[1]

ʻAbd al-Raḥīm dedicates his second chapter to elegies on men of state, especially the sultans (pp. 38–114). Often the elegists had once been in the employment of the deceased, and they are worried about their futures following their patron′s death. ʻAbd al-Raḥīm asserts that many of these elegies were written by poets interested more in their own prestige and financial security than in consoling the bereaved family. While this is undoubtedly the case for some poems, ʻAbd al-Raḥīm belabors the point and underestimates the possible friendship and respect that may have grown between poets and patrons. In addition, the sorrow and concern over an uncertain future voiced in many elegies may well have echoed feelings in the larger populace worried over possible chaos in the wake of a ruler′s death. Hence, the elegist′s praise of the deceased′s successor, usually his son, may reflect the

[1]C.f. Th. Emil Homerin, ″A Bird Ascends the Night: Elegy and Immortality in Islam,″ *Journal of the American Academy of Religion* 59, no. 4 (1991): 247–79, and Avner Gil′adi, *Children of Islam* (Oxford, 1992), 67–119.

hope for a peaceful transition in power and the need to maintain a world with order and sense.

ʿAbd al-Raḥīm passes over such issues and concentrates, instead, on an inventory of some of the themes and images found in these ″royal″ elegies. As in most elegies, the deceased is presented in an ideal fashion and, in this case, the deceased sultan may attain near mythical status as the manly, pious, Muslim ruler and defender of Islam. Here, ʿAbd al-Raḥīm fails to make a connection that others have made regarding elegy and eulogy in general, namely their ability to portray, to a significant degree, a society′s norms and values regarding relations between ruler and ruled, husband and wife, parents and children, etc. However, ʿAbd al-Raḥīm does draw attention to descriptions of royal funerals in many elegies and their usefulness for reconstructing some of the important funeral rites and rituals of the Mamluk period. Finally, ʿAbd al-Raḥīm notes that the elegies on sultans, generals, and other important men of state usually praise the deceased and seek consolation in his certain heavenly reward. In the case of such great sultans as Baybars and Qalāwūn, some of their battles and achievements may be dramatically and, to a degree factually, recounted and praised. Yet a few elegies have a sharper, negative tone. Often short and sometimes in more folk poetic forms, these invectives castigate the deceased for bad behavior and an immoral life, and offer a curse in lieu of praise. ʿAbd al-Raḥīm suggests that this may have provided some solace to those victimized by the deceased, while serving as a warning to living officials who cared for their own reputations and legacies.

In chapter three, ʿAbd al-Raḥīm reviews elegies on the men of the pen, the many religious scholars and litterateurs in Mamluk domains (pp. 116–66). These elegies were often composed by colleagues and students and, too, by poets formerly patronized by the deceased. Generally, the deceased is praised for his learning, piety, generosity, and forbearance, and occasionally for his courage in facing the infidels in battle, or for standing up for the community against unjust rule. Eminent scholars, including Ibn Taymīyah (d. 728/1328) and Tāj al-Dīn al-Subkī (d. 756/1355), were often the subject of many elegies, some of which mentioned the deceased′s fields of learning and specific writings by name. Secretaries, too, were praised in elegies for the power of their pens to do good and correct wrongs, and poets offered consolation to the bereaved by lauding such pious legacies. References to the Quran and hadith are frequent in these elegies, which often depict the deceased as alive and well in heaven, in his writings, and in his obedient children and learned students.

ʿAbd al-Raḥīm reviews elegies on women in his fourth chapter (pp. 167–96). He claims that there is a scarcity of these elegies. Certainly there are fewer elegies for women than men, and ʿAbd al-Raḥīm is probably correct to attribute this to women′s lower social status in the Mamluk period. Nevertheless, he cites many

examples and could have offered even more, especially had he known of Abū Ḥayyān's (d. 745/1344) many elegies for his grown and accomplished daughter Nuḍār (d. 730/1329).[2] Such elegies by fathers for daughters and husbands for wives are a valuable and largely untapped resource for the study of male-female relations in the Mamluk period. Why ʻAbd al-Raḥīm segregated women relatives from the men is not clear, particularly as they are treated with the same respect as their male counterparts. Deceased wives of the elegist or of his colleagues are depicted as pious and generous, of good character, and sometimes learned. Deceased women may be likened to a buried treasure or a secluded maiden, and physical attributes may be lauded in ideal terms (i.e., a face like the full moon), which one finds, but less frequently, in elegies on male relatives. ʻAbd al-Raḥīm may be right to assume that women are more often compared to elements of nature, and men to civilization and learning, though this is by no means a hard and fast rule in Mamluk elegies. Moreover, when a wife's death is likened to the setting of the sun, for instance, this may not denote the loss of physical beauty (especially if the wife was elderly), so much as to the poet losing the "light of his life."

This raises one of the major short-comings of this book, namely the author's apparent lack of analysis regarding nearly universal themes involving death, dying, and symbolic immortality. The eclipse of the sun or moon, the setting of the sun, moon, and stars, the broken branch, the wilting of the redolent flower, the departure of the traveler, and many other motifs occur time and again in world literature and art to symbolize, not just the loss of beauty and love, but above all death. Yet, they imply new life as the sun, moon, and stars will rise again, the leafless tree and dead flower will sprout anew in spring, while the traveler will safely arrive at a heavenly home. While ʻAbd al-Raḥīm is certainly aware of the symbolic associations of many such themes, he never fully acknowledges their essential function to place the sorrow of the bereaved in larger contexts (of nature, society, religion. etc), in order to assert that while the deceased is gone, they are not annihilated but live on in their legacies and, of course for Muslims, in heaven.[3]

In the fifth chapter, ʻAbd al-Raḥīm recounts many elegies composed on Muslim cities that were devastated by the Mongols or Crusaders, including Baghdad, Damascus, and Alexandria (pp. 197–253). Occasionally, a poet may attribute this catastrophe to God's retribution against the sinful life of the city's inhabitants though, more often than not, the tragedy is seen as a wake up call for Muslims to take up arms and defeat the infidel. While acknowledging dramatic and stylistic

---

[2]Homerin, "A Bird Ascends the Night."

[3]See Robert Jay Lifton, *The Broken Connection* (New York, 1983), 3–112, and George Lakoff and Mark Turner, *More Than Cool Reason: A Field Guide to Poetic Metaphor* (Chicago, 1989), 1–56.

dimensions of these elegies, ʿAbd al-Raḥīm also points to their possible historic value as some of the elegists were eye-witnesses to the destruction of the Muslim cities that they lament. Weapons and battles are sometimes described in detail, and while the infidels are often depicted as vicious dogs, filthy pigs, or other unsavory characters, the Mamluks are not always lauded as lions and heroes. This was especially the case in elegies on the sack of Alexandria in 767/1365, which resulted, in part, because the Mamluk forces fled the city without fighting.

ʿAbd al-Raḥīm gathers together a number of topics in his sixth chapter, including elegies on animals, broken drinking goblets, lost arrows, slave boys, singers, the banning of hashish and wine, and the loss of the good life of debauchery (pp. 254–301). These elegies are frequently works of humor and satire, and this chapter features many verses from the shadow plays of Ibn Dāniyāl (d. 710/1310). Elegies on the death of male slaves, however, are serious poems, and of some significance. Several recount the poet′s grief at the loss of a young slave boy, whom the poet was raising and educating as he had his own sons. Other elegies for youthful male slaves *(ghilmān)* resemble elegies for concubines in that love and the physical beauties of the young man are the focus of praise. Had ʿAbd al-Raḥīm compared such elegies with those on concubines, instead of segregating men and women, he might have found that it is not the sex of the deceased so much as his/her social status that determines whether the deceased′s physical or moral features will be the major subject of praise.

ʿAbd al-Raḥīm devotes his seventh and final chapter to elements of form and style (pp. 303–401). Once again, this is a largely descriptive chapter, in which he takes up routine notions of poetic harmony and unity, which are easily achieved in the *rithā'* since its subject is the deceased and reflections on life and death. He notes the frequent quotation of the Quran and hadith as sources of consolation, particularly in assuring the bereaved that there is a life after death. He mentions some of the classical poets, including Abū Tammām (d. ca. 232/845), al-Mutanabbī (d. 354/965), and al-Maʿarrī (d. 449/1058), frequently referred to in Mamluk elegies, and briefly discusses poetic influences. He also catalogs various stylistic elements, including the use of repetition, interrogatives, imperatives, etc., that elegists employed to heighten the tone and pitch of their poems. ʿAbd al-Raḥīm draws attention to the frequent appearance of scholarly terms and jargon in elegies as indicative of their authors′ academic and scribal background, and he ends with a discussion of the rhetorical devices *(badīʿ)* that were quite popular in the Mamluk period. Unlike many scholars of Mamluk literature, ʿAbd al-Raḥīm does not dismiss *badīʿ* with contempt. Rather, he notes that if used in excess, it will distract the reader from the poem′s theme, while its judicious use may enhance the poem′s form and content. ʿAbd al-Raḥīm argues forcefully that antithesis *(ṭibāq)* and paronomasia *(jinās)* are particularly suited to elegy. Antithesis accords especially

well with elegy given the natural contrasts between life and death, joy and sorrow, night and day, etc.; as for paronomasia *(jinās)* and similar devices, when carefully applied they add to the musical qualities of any verse.

Despite these insights, ʿAbd al-Raḥīm occasionally makes the common mistake of equating simplicity with sincerity, and rhetorical style with insincerity, a false dichotomy that has plagued the study of Arabic literature. For example, he cites the rhetorical verses composed by al-Ṣafadī on the death of Abū Ḥayyān′s daughter Nuḍār as being forced and artificial due to the use of rhetorical devices, yet had ʿAbd al-Raḥīm read Abū Ḥayyān′s own elegies to his daughter, he would have found many of the same devices, and this applies to many poets of the time, including Ibn Nubātah who composed a number of elegies on his dead children.[4] Further, ʿAbd al-Raḥīm questions the sincerity of emotions and grief underlying other elegies, particularly those composed on the children and women folk of colleagues, whom the poet may have seldom met due to social constraints of the period. It may well be true that most of these men did not know or interact with the female members of a colleagues′ family, though we do not know this for certain. However, this lack of personal contact does not render the elegists′ words insincere. Today, many of us send sympathy cards with verses that we never even composed, yet most of us are sincere in our expressions of condolences to others. I think that we must view the elegies from the Mamluk period in the same light. They were publicly recognized and, perhaps, expected forms of condolence exchanged among the learned and ruling classes of Mamluk society and, as such, an important means of social discourse about life and death, love and friendship. To question the sincerity of these elegies is to miss an important and quite intended function.[5] ʿAbd al-Raḥīm should have understood this as he cites (p. 196) several ″Thank You″ poems composed in response to elegies previously received in sympathy for a lost loved one. While ʿAbd al-Raḥīm focuses on stylistic similarities of the poems, he ignores their social dimension and relevance.

This is indicative of the major flaw in his study, which is the lack of critical analysis on many themes and issues. ʿAbd al-Raḥīm never analyzes a complete elegy in any detail, and he often abridges his quotations without telling his reader. Moreover, he fails to read elegies from the Mamluk period in the larger context of elegy, in general, and, as is the case with many Arab scholars, he cites almost nothing by Western scholars relevant to his topic. To his credit, he has cited in his bibliography most of the many Arabic works written on *rithā*ʾ. Despite its

shortcomings, *Fann al-Rithā' fī al-Shi'r al-'Arabī fī al-'Aṣr al-Mamlūkī al-Awwal* offers a detailed description of elegies composed in the Mamluk period, and a tantalizing glimpse into their importance for the study of Mamluk society.

Governing the Holy City: The Interaction of Social Groups in Jerusalem between the Fatimid and the Ottoman Period, edited by Johannes Pahlitzsch and Lorenz Korn (Wiesbaden: Reichert Verlag, 2004). Pp. 156, maps, illustrations, tables.

REVIEWED BY NIALL CHRISTIE, University of British Columbia and Corpus Christi College, Vancouver

This edited volume comprises eight articles dealing with a variety of issues related to the city of Jerusalem during the second/eighth to fifteenth/twentieth centuries. Of these, five are of direct relevance to the Mamluk period (648–922/1250–1517), while the others are likely to be more peripheral to the interests of the readership of this journal. All bar one of the articles derive from a round-table discussion of Jerusalem in the Middle Ages held at the 28th Deutscher Orientalistentag in Bamberg in March 2001.

In the introduction, the editors set out the scope of their volume; they seek to explore the social rather than political or religious history of the city, focusing in particular on the interaction of its inhabitants with the urban fabric. In doing so, they present articles that make particular use of sources that are consulted less frequently by modern scholars than the historical chronicles, including legal documents, inscriptions, and architectural remains.

Given this emphasis, it is fitting that the first two articles, "Primary Sources on Social Life in Jerusalem in the Middle Ages," by Khader Salameh, and "The Arabic Stone Inscriptions in the Islamic Museum, al-Ḥaram ash-Sharīf, Jerusalem," by Salameh and Robert Schick, introduce two such types of sources. In the first article, Salameh surveys the collections of documents held in three institutions in Jerusalem, the Aqṣá Mosque Library, the Islamic Museum, and the Shari'ah Court at the Ḥaram al-Sharīf, which collectively include documents dating from the first/seventh to fourteenth/twentieth centuries, many of which are relevant for the study of the Mamluk period. Salameh pays particular attention to what these documents reveal about the role of *awqāf* (charitable endowments) in Jerusalem. The second article complements the first by drawing attention to the Arabic stone inscriptions found in the Islamic Museum in Jerusalem, which include tombstones and dedicatory, Quranic, and building inscriptions. Eleven examples, ranging in

date from the second/eighth to the thirteenth/nineteenth centuries (including three from the Mamluk period), are given in Arabic, Arabic transliteration, and English, with illustrations of the actual artifacts also being included.

The next article, ″Manifestations of Private Piety: Muslims, Christians and Jews in Fatimid Jerusalem,″ by Andreas Kaplony, addresses the ways in which people of all three faiths reacted to the holiness of the city during the Fatimid period (358–492/969–1099). Drawing in particular on the *Safarnāmah* of Nāṣir-i Khusraw and the *Faḍā'il Bayt al-Maqdis* of Ibn al-Murajjá al-Maqdisī, Kaplony shows that personal piety could manifest in a number of ways, including the performance of pilgrimages, the establishment of residence at holy sites, seeking to die and/or be buried in the holy city, donations of lamps, oil, and carpets, and the patronage of architectural work and institutions. Thus Kaplony explores religious observance as conducted by members of all social classes during the period.

Moving from the Fatimid to the Ayyubid period, the next two articles consider the attention paid to Jerusalem by Saladin (d. 589/1193) and his descendents. In ″The Transformation of Latin Religious Institutions into Islamic Endowments by Saladin in Jerusalem,″ Johannes Pahlitzsch examines Saladin′s foundation of three religious institutions, a madrasah, a *khānqāh,* and a hospital, as part of his re-Islamization of the city after the Muslim conquest of 583/1187. Pahlitzsch shows that Saladin sought to ensure a smooth transition in the administration of both Muslim and non-Muslim religious institutions during the Muslim takeover, only changing their religious affiliations if such changes helped with this transition. An edition and translation of the *waqfīyah* (endowment document) of the *khānqāh* is included. Meanwhile Lorenz Korn, in ″The Structure of Architectural Patronage in Ayyubid Jerusalem,″ considers Ayyubid architectural patronage in the city, demonstrating that the fact that relatively few buildings were founded by Saladin′s descendents (with the exception of his nephew al-Mu'aẓẓam 'Īsá [d. 624/1227]) is indicative of the city′s decline, in the Ayyubids′ eyes, from a symbol of the jihad to an unimportant town that could be traded away for political ends.

The last three articles of the volume are concerned, either directly or indirectly, with the Mamluk period. Yehoshua Frenkel′s ″The Relationship Between Mamluk Officials and the Urban Civilian Population: A Study of Some Legal Documents from Jerusalem″ uses a variety of *waqfīyāt,* petitions, decrees, and death registers to show how these documents can shed light on the history of those individuals normally neglected by the historical narratives. Frenkel demonstrates that while the Mamluk rulers used *awqāf* as a means of establishing their legitimacy as rulers, the lower classes could also make use of the institution in a variety of ways to assert themselves in the public sphere. Frenkel includes texts and translations of two decrees in support of his argument.

Joseph Drory addresses the issue of natives of Jerusalem working in the heartland

of the Mamluk realm in ″Jerusalemites in Egyptian Society during the Mamluk Period.″ Drory notes that both medieval sources and modern scholars regard inhabitants of the holy city as having contributed little to the Mamluk state. Drory proposes to disprove this assertion, which he does by presenting case studies of three chief judges of Jerusalemite origin who became highly influential in Egyptian religious and political circles in the eighth/fourteenth to tenth/sixteenth centuries, showing that contrary to received wisdom, natives of the city did rise to positions of considerable prominence in Egyptian society.

The final article of the volume, ″The Walls and Gates of Jerusalem Before and After Sultan Süleyman′s Rebuilding Project of 1538–40,″ by Mohammad Ghosheh, surveys the development of the city′s wall and gate defenses from the Ayyubid to the early Ottoman periods. Much of Ghosheh′s article is devoted to the Mamluk period, and he shows that contrary to the general opinion, the Mamluk city did have some walls, built at least in part through the efforts of the city′s population, as is apparent from statements in several court records. Ottoman court records also prove to be useful, revealing information about the work conducted on the walls of Jerusalem during the early Ottoman period. Ghosheh concludes by noting that current scholarly opinions about the defenses of Jerusalem and the historical sources that refer to them must be re-evaluated in the light of the new evidence contained in the Mamluk and Ottoman court records, of which he provides illustrations and edited texts of several. The volume concludes with a bibliography.

As should by now be apparent, *Governing the Holy City* is an important volume for its contributions to modern understanding of the social history of Jerusalem. However, it is even more important for its use of hitherto largely neglected legal documents and inscriptions from archives and museums in Jerusalem. Scholars of the medieval Middle East, and the Mamluk period in particular, are beginning to make increasing use of such sources in their research; this volume, with its surveys of available resources and its presentation and use of numerous texts and translations of such sources, can only help to encourage this healthy trend.

ṢALĀḤ AL-DĪN KHALĪL IBN AYBAK AL-ṢAFADĪ (attributed), *Law'at al-Shākī wa-Dam'at al-Bākī*, edited by Muḥammad 'Āyish (Damascus: al-Awā'il, 2003). Pp. 104.

REVIEWED BY EVERETT K. ROWSON, New York University

In a 2004 review for this journal of an edition of one work by al-Ṣafadī (d. 764/1363) and a study of another, I noted the burgeoning interest in this author in both the Middle East and the West, and expressed the hope that the trend would continue.[1] I am gratified to say that it has not only continued but intensified. The Beirut-Wiesbaden edition of al-Ṣafadī's massive biographical dictionary, *Al-Wāfī bi-al-Wafayāt,* now lacks only three of its thirty volumes; his dictionary of contemporaries, the *A'yān al-'Aṣr,* has been available since 1998 in a serviceable if not optimal six-volume edition;[2] and his voluminous correspondence (almost a biographical dictionary in itself, as well as a literary anthology), the *Alḥān al-Sawāji',* appeared in two volumes in an excellent edition in 2004.[3]

Muḥammad 'Āyish is one of several recent enthusiastic converts to Ṣafadī studies. Besides the *Law'at al-Shākī,* under review here, he has also edited al-Ṣafadī's amusing parody of the genre of literary commentary, the *Ikhtirā' al-Khurā',*[4] and is promising an edition of the *Tashnīf al-Sam' bi-Insikāb al-Dam',* one of al-Ṣafadī's many "theme" anthologies, this one focusing on tears. But the field is getting crowded. A first critical edition of the *Tashnīf* appeared already in 2000[5] (it was published earlier, uncritically, in Cairo in 1903), as did one of the *Ikhtirā'* (never previously published).[6] In 2003 al-Ṣafadī's "beautiful boy" anthology, *Al-Ḥusn al-Ṣarīḥ fī Mi'at Malīḥ,* was edited for the first time.[7] But the prize for industry at this point must go to Muḥammad 'Abd al-Majīd Lāshīn, who in 2005 published

[7]Al-Ṣafadī, *Al-Ḥusn al-Ṣarīḥ fī Mi'at Malīḥ,* ed. Aḥmad Fawzī al-Hayb (Damascus: Dār Sa'd al-Dīn, 2003).

first editions of al-Ṣafadī′s *Al-Rawḍ al-Bāsim wa-al-ʿArf al-Nāsim* (a general anthology of his own poetry), his *Ṣarf al-ʿAyn* (a ″theme″ book on eyes), and his *Al-Hawl al-Muʿjib fī al-Qawl al-Mūjib* (one of a series of studies on particular rhetorical figures).[8] Most importantly, Lāshīn has also published the most comprehensive biography and study of al-Ṣafadī to date, an impressive work that will be basic for all future Ṣafadī studies.[9]

If it is his, the *Lawʿat al-Shākī wa-Damʿat al-Bākī* (The Sufferer′s pain and weeper′s tear) must count as al-Ṣafadī′s most enduringly popular work. At least twenty-five manuscripts of it are known, it was the first of his works to be printed (in a lithograph edition in Cairo in 1857), and it was republished at least a dozen times between 1864 and 1922, in Cairo, Istanbul, Hims, and Tunis. In form it is a *maqāmah* (also described in some manuscripts as a *risālah,* but the two terms were virtually synonymous in the Mamluk period), a relatively brief prose narrative, giving an account in the first person of the narrator′s love affair with a young Turkish soldier. The plot is minimal—the two meet by chance, fall in love on the spot, arrange to meet a week later, spend a happy night of love, and then part—but proceeds extremely slowly, since the point is not the story but the language, which is an elaborately rhetorical rhymed prose, punctuated at regular intervals by short passages in poetry. The verses, whose authors are never identified (this was conventional in the *maqāmah* genre), usually recast what has just been said in prose, a procedure that reflects the popularity of both *ḥall al-naẓm* (prosification) and *naẓm al-manthūr* (versification) among the littérateurs of the period.[10] The improbabilities of the plot—of which there are many, such as the reproaches the beloved directs at the lover when they first meet, accusing him of abandoning the good sense he knows he has always shown in the past by not falling in love—are to be explained by the fact that the entire exercise is driven by the conventions of love poetry, not in any sense by reality.[11]

In the introduction to his new edition of this text (the first since 1922, to the best of my knowledge), Muḥammad ʿĀyish briefly reviews al-Ṣafadī′s life and works (a very incomplete and rather perfunctory list); summarizes the *Lawʿah*′s plot (laudably avoiding any editorial comment on its homoerotic theme); lists

[9]Muḥammad ʿAbd al-Majīd Lāshīn, *Al-Ṣafadī wa-Āthāruhu fī al-Adab wa-al-Naqd* (Cairo: Dār al-Āfāq al-ʿArabīyah, 2005).

[10]Both devices have been analyzed by Amidu Sanni, *The Arabic Theory of Prosification and Versification* (Beirut-Stuttgart: Franz Steiner, 1998).

[11]For further discussion of the content of the text see Everett K. Rowson, ″Two Homoerotic Narratives from Mamluk Literature: al-Ṣafadī′s Lawʿat al-shākī and Ibn Dāniyāl′s al-Mutayyam,″ in *Homoeroticism in Classical Arabic Literature*, ed. J. W. Wright, Jr. and Everett K. Rowson (New York: Columbia University Press, 1997), 158–91.

some of the previous printed editions of the work and describes the manuscripts on which he has relied for his own; discusses the problem of its authorship; and explains how he has gone about editing it. All of this is presented clearly and succinctly, but there are some issues that merit comment.

The most important of these is the question of authorship. ʿĀyish is sufficiently cautious about this that the cover of his book reads ″attributed to *(al-mansūb li-)* al-Ṣafadī.″ In fact, as he explains in some detail, while the majority of manuscripts do in fact attribute the work to al-Ṣafadī, there are others that assign it to no fewer than four other authors: Ṣafī al-Dīn al-Ḥillī (d. 752/1351), Ibn Khaṭīb Dārayyā (d. 811/1408), Zayn al-Dīn al-Ḥarīrī (d. 967/1560), and ʿAlāʾ al-Dīn al-Māridīnī (ninth/fifteenth c.). The only one of these he takes seriously, however, is Zayn al-Dīn, since that attribution appears in both the *Shadharāt al-Dhahab* of Ibn al-ʿImād and the *Kashf al-Ẓunūn* of Ḥājjī Khalīfah (whereas an attribution to al-Ṣafadī appears nowhere in the bio-bibliographical tradition, nor does al-Ṣafadī seem ever to mention the title in his own works, despite his habit of frequent cross-referencing among them). ʿĀyish is nevertheless inclined to accept the attribution to al-Ṣafadī, although offering no real arguments for it beyond a vague claim of similarity of style between the *Lawʿah* and al-Ṣafadī′s correspondence as reproduced in his *Alḥān al-Sawājiʿ*.

Lāshīn has now gone into this question in somewhat greater detail.[12] He is also inclined to grant al-Ṣafadī′s authorship, but besides appealing, like ʿĀyish, to style and to the preponderance of the manuscript evidence, he also notes that most of the (unattributed) poetry in the *Lawʿah* also appears (attributed) in al-Ṣafadī′s other works, especially in the *Wāfī,* and lists quite a number of examples, including a two-line poem that is not only in fact by al-Ṣafadī himself but serves as the introduction to one of his unpublished works, a collection of literary exchanges from the past with the title *Al-Mujārāh wa-al-Mujāzāh fī Mujārayāt al-Shuʿarāʾ*. He also notes that at one point the beloved, addressing the narrator, refers to ″your imam al-Shāfiʿī,″ which is exactly how al-Ṣafadī, a fervent adherent of the Shafiʿi school of Islamic law, would have done it; and, less convincingly, argues that the narrator′s describing himself as a *ṣabb damʿuhu mithl ismihi* (″a besotted one whose tears are like his name″) is a reference to al-Ṣafadī′s personal name, Khalīl, which literally means ″close friend,″ the intended meaning being that the narrator′s tears (which *do* appear in great abundance throughout the text) are his inseparable companion. (It seems more likely, however, that the reference is to the word *ṣabb* itself, which can mean ″poured out″ as well as ″besotted.″)

This question cannot be settled in a review, but a few further considerations may be noted. ʿĀyish has done an admirable job of tracking down most of the

---

[12]Lāshīn, *Al-Ṣafadī,* 95-98.

authors of the *Law'ah*'s poems (87 out of 145), and they fit quite well with al-Ṣafadī's authorship. At least five are by al-Ṣafadī himself ('Āyish notes three, to which Lāshīn has added one, and I have identified another); seven are by his colleague and sometime friend Ibn Nubātah; a number of others are by other colleagues and friends, including one by Ibn al-Wardī and another by his early mentor Shihāb al-Dīn Maḥmūd; and none seem to postdate his own lifetime. Were the work later, one would expect the occasional appearance of a later poet.

On the other hand, there are serious questions about the relationship between this work and some other titles mentioned in contemporary sources. One of al-Ṣafadī's very first works was a *maqāmah* (or *risālah*) titled *'Ibrat al-Labīb bi-'Athrat al-Ka'īb* (A Lesson for the perspicacious from the stumbling of the disconsolate [lover]), which he himself tells us he composed in emulation of a *maqāmah* enjoying enormous popularity in Cairo when he arrived there in 727/1327, the *Marāti' al-Ghizlān* of 'Alā' al-Dīn Ibn 'Abd al-Ẓāhir.[13] The text of the latter has been tracked down by Jaakko Hämeen-Anttila in al-Nuwayrī's *Nihāyat al-Arab* (where the author but not the title is given), and is in fact an account of an affair with a young Turkish soldier.[14] Al-Ṣafadī's *'Ibrah* (which is also in some manuscripts called "Al-Maqāmah al-Aybakīyah," suggesting that it was his *only,* or at least his most famous, *maqāmah*) has never been published; but any temptation to identify it with the *Law'ah* would seem to founder on the fact that both the *'Ibrah* and the *Law'ah* are included, side by side, in a Bodleian manuscript (MS Sale 34). Further complicating matters is the fact that al-Ṣafadī informs us that at some point he studied with Ibn Faḍl Allāh al-'Umarī the latter's *Dam'at al-Bākī*,[15] about which nothing further appears to be known, while some manuscripts (and one early publication) of the *Law'ah,* while attributing it to al-Ṣafadī, call it *Dam'at al-Bākī wa-Law'at al-Shākī*. One can only hope that further investigation of manuscripts of the *Law'ah,* and the now long overdue publication of the *'Ibrah,* will help clear up this situation.

The resources 'Āyish had mustered to establish his text are very far from ideal. For his base *(aṣl),* he has relied on a 1331/1912 Cairo printing, apparently purely on the basis of availability, since he himself points out its poor quality. This he has collated with two relatively recent manuscripts from the library of Maḥmūd Sab' al-Mustashār (not further identified) in Cairo, the first ("Ṣ") dated

---

[13]Al-Ṣafadī, *A'yān al-'Aṣr,* 3:496.

[14]Al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab* (Cairo: al-Hay'ah al-Miṣrīyah al-'Āmmah lil-Kitāb, 1923-), 8:140–9. See Jaakko Hämeen-Anttila, *Maqama: A History of a Genre* (Wiesbaden: Harrassowitz, 2002), 340, 386. The *Marāti' al-Ghizlān* of Ibn 'Abd al-Ẓāhir is not to be confused with the work of the same title by al-Nawājī (d. 859/1455), which is a collection of epigrams about beautiful boys, in the tradition of al-Ṣafadī's *Al-Ḥusn al-Ṣarīḥ.*

[15]Al-Ṣafadī, *Wāfī,* 8:255; *A'yān,* 1:420.

1272 and attributing the work to Ṣafī al-Dīn al-Ḥillī and the second (″D″) undated (?) and attributing it to Ibn Khaṭīb Dārayyā. Besides frequent minor textual variations among these, manuscript ″Ṣ″ frequently supplies additional words and phrases, which the editor has mostly included in his text, in brackets. The apparatus lays out all significant variants in lucid fashion. I have in turn collated the text with the 1922 Cairo edition by Muḥammad Abū al-Faḍl Muḥammad Hārūn, which supplies yet more minor variations, lacks almost all the additions from ″Ṣ″, and turns out to have a major lacuna that becomes apparent only from the collation. (Hārūn also supplies some attributions for the poetry, which do not always agree with those of ʿĀyish.)

In textual terms, then, we are hardly better off than we were in 1922, and must continue to await a truly critical edition. ʿĀyish′s printed text is certainly easier to read than the older ones, however, and he has supplied quite a lot of vocalization, almost all correct, and is sensitive to both the meaning and the scansion of the poetry. His work in tracking down the verses in other sources is to be appreciated. A table of verses at the end (first rhyme word, meter, author if known, number of lines, page number) is helpful. The only other end matter is a bibliography of primary sources, but for a short work of this kind no further indices would be expected.

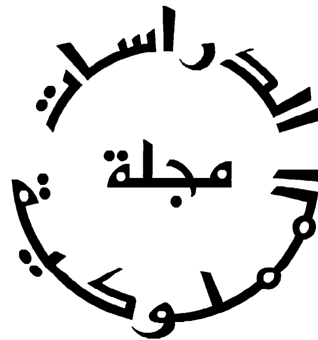
Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	’	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	‘				
		ة	h, t (in construct)			ال	al-		



ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
اَ	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before ″sun″ letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, mi’ah, ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shi‘i, Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

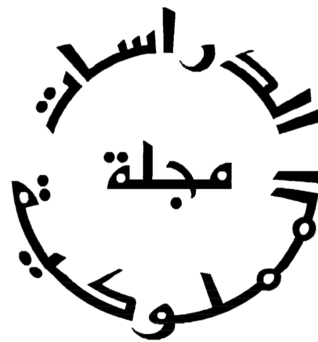
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk or online, together with a printed copy. The print copy should have full and proper diacritics, but the disk or online copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of primary and secondary sources, created and maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review.*

ISSN 1086-170X.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig
Prize for Mamluk Studies

The Prize Committee is pleased to announce that Zayde G. Antrim (Ph.D., Harvard University) has been named the recipient of the 2005 Bruce D. Craig Prize for Mamluk Studies for her dissertation:

"Place and Belonging in Medieval Syria, 6th/12th to 8th/14th Centuries"

The Committee was impressed by Antrim′s exhaustive use of various genres of sources to study the formation of a medieval Syrian ″sense of place.″ She broke new ground in developing a paradigm in Mamluk studies for an indigenous and contemporary understanding of ″place″ and, specifically, the creation of a Syrian identity. The Committee believes that her work will find a place not only in Mamluk studies but also world systems theory/globalization studies and a variety of other disciplines such as political/social/intellectual history, art and architectural history, geography, and archaeology.

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2006 Prize, dissertations must be defended by December 31, 2006, and submitted to the Prize Committee by January 31, 2007. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

The Prize Committee for 2005 consisted of Marlis J. Saleh (University of Chicago); Li Guo (University of Notre Dame); and Bethany J. Walker (Grand Valley State University).

Previous Prize Winner:
2004: Tamar el-Leithy, Princeton University, ″Coptic Culture and Conversion in Medieval Cairo: 1293–1524.″

Medieval Egyptian Society and the Concept of the Circle of Justice

One of the prominent ideologies of justice in medieval Egypt was the one called the Circle of Justice.[1] That term refers to an ancient concept of justice in which the king at the top of society was seen as dependent on the peasants at the bottom; they could only provide him revenue if he provided them justice. Justice, in this view, meant much more than equality before the law; it had to include peace, protection, good organization, and a functional infrastructure. In its summarized form the Circle consisted of eight sentences:

> The world is a garden for the state to master.
> The state is power supported by the law.
> The law is policy administered by the king.
> The king is a shepherd supported by the army.
> The army are assistants provided for by taxation.
> Taxation is sustenance gathered by subjects.
> Subjects are slaves provided for by justice.
> Justice is that by which the rectitude of the world subsists.[2]

Scholars who have referred to this idea have emphasized the absolutist and elitist elements of it and have often neglected its acknowledgment that the ruler′s power rested on the well-being and productivity of his subjects. I would argue, however, that this understanding of political interdependence was pervasive enough in Egyptian society to be known to peasants and artisans as well as rulers and scribes, that institutions were established and maintained to implement it, and that ordinary people used these institutions to demand justice from their rulers, whether

---

[1]A version of this article, part of a larger study I am preparing on the dissemination and implementation of the Circle of Justice *(Justice and Royal Power in the Middle East),* was presented at the American Research Center in Egypt Convention, Tucson, Arizona, April 2004; I thank the members of the audience for all their helpful comments.

[2]This version of the Circle is from *The Counsels of Alexander,* presented to the Timurid prince Baysunghur, reproduced and translated by Thomas W. Lentz and Glenn D. Lowry, *Timur and the Princely Vision*: *Persian Art and Culture in the Fifteenth Century* (Washington, 1989), 12; it is identical to one of those in the *Sirr al-Asrār,* our earliest source for the saying.

or not they received it.[3] First, although Muslims attributed this idea to the Persians, the Persians inherited it from the Assyrians and the Assyrians from the Sumerians. By the time of the rise of Islam, it had been promulgated for three millennia; any idea repeated that long is bound to seep into people′s consciousness to some degree. Second, this concept of justice formed the ideological underpinning for a number of social institutions that touched the lives of ordinary people throughout the Islamic period, notably the regulation of taxation by surveys and registers and the *maẓālim* court, the court for redress of wrongs.

As my colleagues who are Mamluk historians know, I am not a Mamluk historian but an Ottomanist. Anne Broadbridge, however, has drawn our attention to the fact that Ibn Khaldūn, famed as the transmitter of the Circle of Justice to the Ottomans, was not without influence in his own society.[4] In this article, therefore, I will examine medieval Egyptian society′s use of this concept. In so doing, I acknowledge my debt to the many scholars who have already researched aspects of this issue and propose that by knitting their work together we may gain a new view of the subject. First, let us look at the origin of the saying (the origin of the idea itself would take us back to the Sumerians and is outside the scope of this article).

The eight sentences quoted above came from a tenth-century book called *Sirr al-Asrār* or *Secretum Secretorum,* at least part of which was supposedly written by Aristotle for Alexander the Great.[5] That book contained several variations of the sentences, attributed to different people: Aristotle, the Persian king Anūshirvān, the fourth caliph ʻAlī ibn Abī Ṭālib, and the Muslim conqueror of Egypt ʻAmr ibn al-ʻĀṣ, suggesting that a variety of earlier sources existed at that time which are no longer known to us. The eight sentences initially became popular in Spain, where they were quoted around 980 by Ibn Juljul in a biography of Aristotle that appeared in his collection of medical biographies, *Ṭabaqāt al-Aṭibbā' wa-al-Ḥukamā'*.[6] A shorter four-line version, which had first appeared as a quotation

[6]Abū Dāwūd Sulaymān ibn Ḥassān ibn Juljul al-Andalūsī, *Les générations des médecins et des*

from anonymous sources in the *adab* work of Ibn Qutaybah (828–89), *'Uyūn al-Akhbār*, was disseminated by Ibn Juljul′s compatriot, Ibn 'Abd Rabbih (d. 940), through his *adab* work *Al-'Iqd al-Farīd,* where it was attributed to 'Amr ibn al-'Āṣ.[7] This version became very popular in Egypt. The eight sentences first appeared in Egypt around 1050 in an *adab* anthology by al-Mubashshir ibn Fātik, who used a version replacing the word ″king″ with ″imam.″[8]

The Fatimids (969–1171), who ruled Egypt in al-Mubashshir′s time, belonged to a movement with a powerful sense of social justice and an expectation of a charismatic ruler to enact it. The precise nature of the ruler′s charisma was a secret imparted only to initiates, but his reforming role was part of the movement′s official propaganda. The Fatimid caliphs, especially in their celebration of public festivals and processions, drew on the common people′s ideology of the ruler as a fountain of justice to whom petitions were addressed, a victorious warrior, sponsor of the infrastructure, and bestower of prosperity.[9] A legal compendium by the chief Fatimid qadi al-Nu'mān highlighted the interdependence of ruler and people and warned that God

> hearkens to the prayer of every oppressed one. . . . Cherish most that conduct which conforms to the highest degree of rightfulness, is the most perfect expression of obedience to the Lord, and ensures most the contentment of the common people, for the discontent of the common people outweighs the contentment of the retinue.[10]

He stressed the interdependence of all social groups and the contribution of that interdependence to the prosperity of the whole society, and therefore recommended that the ruler maintain the populace in good order:

> Take care of those who pay the *kharāj* and consider everything that will keep them in good estate, for upon their welfare rests that

> of others. . . . They and none other are the mainstay of the state, and the people are dependent on them. Therefore you should care for the cultivation of their land and the favorable state of their livelihood more than for the easy collection of their *kharāj*.[11]

In the first century of their rule, the Fatimids could take credit for a rise in Egyptian prosperity, perhaps by following this advice. The protection they provided enhanced their legitimacy, according to the Persian poet and pilgrim Nāṣir-i Khusraw, who was there in the 1040s.

> The people are so secure under the sultan′s reign that no one fears his agents, and they rely on him neither to inflict injustice nor to have designs on anyone′s property. . . . The security and welfare of the people of Egypt have reached a point that the drapers, moneychangers, and jewelers do not even lock their shops—they only lower a net across the front, and no one tampers with anything.[12]

The Fatimids put great stress on their ability to supply grain and bread and to control the grain merchants. They also paid for the repair of irrigation works, provided public safety, granted land to petitioners, and reportedly presided over the *maẓālim* court in person.[13] A Fatimid political testament called the judicial office ″the balance of God′s justice which He has established on earth to vindicate the offended against the offender, to defend the weak against the strong″; it urged rulers to hear the grievances of the people and lighten their tax burden in times of distress, and recommended that judges be appointed who were learned, forbearing, pious, who would not be impatient, ″get angry with the contenders, or be exasperated at the halting speech of stammerers.″[14] Ibn al-Sayrafī, author of a treatise on bureaucracy, saw the people′s petitions as improving the state′s reputation by bringing injustices to the attention of the ruler, initiating investigations, and

promoting the good behavior of officials.[15] All sorts of people used the *maẓālim* court: Muslims and non-Muslims, city dwellers and country folk, rich and poor sent petitions or brought their cases to the court in Cairo and obtained responses to their pleas.

During the Ayyubid period, the Circle of Justice became one of the elements in the legitimation of Ṣalāḥ al-Dīn ibn ʻAyyūb. His biographer, the religious scholar Ibn Shaddād, began the biography with chapters on religion and justice describing Ṣalāḥ al-Dīn as a just governor, quoting the Prophetic definition of a just governor as the Shadow of God upon earth, and alluding to the just governor′s favored position on the day of resurrection. In the role of a just ruler, Ṣalāḥ al-Dīn performed a revenue survey, remitted non-Quranic taxes (restored by later sultans),[16] and regularly held *maẓālim* court. As Ibn Shaddād described the court:

> Every Monday and Thursday he sat in public to administer justice, and on these occasions jurisconsults, kâdis, and men learned in the law were present. Every one who had a grievance was admitted—great and small, aged women and feeble men. He sat thus, not only when he was in the city, but even when he was travelling; and he always received with his own hand the petitions that were presented to him, and did his utmost to put an end to every form of oppression that was reported. Every day, either during the daytime or in the night, he spent an hour with his secretary, and wrote on each petition, in the terms which God suggested to him, an answer to its prayer.[17]

In this receptive atmosphere, literature on justice began to emerge. A work of advice written for Ṣalāḥ al-Dīn on the virtues of leadership quoted the eight-line Circle of Justice in a section on the virtue of justice, putting it in the mouth of

[15]Henri Masse, ″Ibn el-Çaïrafi, Code de la chancellerie d′état (Période fâtimide),″ *Bulletin de l′Institut français d′archéologie orientale* 11 (1914): 113–15.

[16]Claude Cahen, ″L′Évolution de l′iqta‘ du IXe au XIIIe siècle: Contribution à une histoire comparée des sociétés medievales,″ *Annales, économies, sociétés, civilisations* 8 (1953): 46; al-Maqrīzī, *A History of the Ayyubid Sultans of Egypt,* trans. R. J. C. Broadhurst (Boston, 1980), 75–76, 231. A twelfth-century history of eastern Anatolia equated justice with remission of non-Islamic taxes and injustice with ″murder, mulcting, and the imposition of illegal taxes″ (Carole Hillenbrand, *A Muslim Principality in Crusader Times: The Early Artuqid State* [Istanbul, 1990], 34, 42, 109).

[17]Bahā’ al-Dīn ibn Shaddād, *The Life of Saladin, by Behâ ed-Dîn,* trans. C. W. Wilson and Lieutenant-Colonel Conder (London, 1897; reprint as *Saladin, or, What Befell Sultan Yusuf* [Lahore, 1976]), 15.

Anūshirvān.[18] Ṣalāḥ al-Dīn′s vizier was also the recipient of a work of *adab* that quoted the four-line Circle and attributed it to ʻAmr ibn al-ʻĀṣ.[19]

Other Ayyubid rulers do not seem to have shared Ṣalāḥ al-Dīn′s concern for justice; only once did the historian al-Maqrīzī mention any later sultan remitting taxes, even temporarily.[20] Still, the institutional mechanisms for delivering justice that were so highly developed under the Fatimids continued to operate under the Ayyubids. People presented petitions in ″Houses of Justice″ in Aleppo and Cairo which were constructed in imitation of the one previously built by Nūr al-Dīn Zangī in Damascus. Rulers handled petitions privately as well as in public, sometimes appointing others to preside over the public sessions. They considered cases with the aid of a panel of qadis, and their decrees were transmitted not by mere secretaries but by high court officials and religious scholars.[21] Documents were registered in the government offices before being issued, and governors and deputies, headmen and holders of *iqṭā*ʻs were required to enforce the sultan′s orders. The few decrees still extant convey the stress placed by Ayyubid administrators on the need ″to protect the subjects whose affairs were entrusted to us by God.″[22]

The Circle of Justice was disseminated more widely in the Mamluk period. Authors quoted it in a variety of different literary genres and contexts, perhaps as part of a broader effort to Islamize and acculturate their foreign-born rulers. The eight-line version appeared in a work on politics written by the jurist and qadi Ibn Jamāʻah. Although he was a jurist, Ibn Jamāʻah apparently saw no conflict between the Quran and the Circle of Justice. He wrote that ″justice is the cause of the increase of blessings and of the growth of prosperity, but that injustice and tyranny are the reason for the destruction of empires,″ and he expected the sultan to

practice justice, since ″the justice of the king is the life of the subjects and the spirit of the realm.″[23] In exchange for obedience to the ruler, the people had the right to demand justice from him.[24] Ibn Jamāʻah even quoted the Circle, though in a garbled form:

> The kingdom is a building supported by the army. The army are soldiers assembled by money. Money is sustenance obtained from prosperity, and prosperity is an accomplishment brought about by justice. And the wise men say that the world is a garden whose wall is the state. The state is authority supported by the soldiers. The soldiers are an army assembled by money. Money is sustenance gathered by the subjects. The subjects are servants raised up by justice.[25]

Surprisingly, Ibn Jamāʻah′s opposite number, Ibn Taymīyah, who recommended a public policy based completely on the Quran and hadith, a *siyāsah sharʻīyah,* also held an understanding of the ruler′s tasks that incorporated aspects of this concept of justice. Like al-Māwardī, he awarded to the sultan the authority to administer justice, wage holy war, lead prayers, and relieve the oppressed, and on that account designated him as God′s Shadow on Earth. Without precisely defining justice, he quoted a hadith about the just ruler and likened him to a shepherd, responsible for the flock: ″he is the right ruler who gives to men what men need and never appropriates except what is lawful and decent.″ Government in his view had essentially two functions, fiscal and judicial, and its purpose was ″the improvement of the religious and material conditions of men.″[26]

Ibn Jamāʻah′s offhand quotation of the eight-line Circle suggests that the idea was familiar to many of his readers. This impression is strengthened by the fact that al-Waṭwaṭ introduced a section on justice in his book of ethics by paraphrasing

the Circle′s last line, doubtless expecting his readers to recognize the quotation:

> For justice is the support of the world and the faith,
> And the cause of the health of all creation.[27]

Readers could have encountered the Circle in a new biography of Aristotle by the thirteenth-century Egyptian author Ibn Abī Usaybī'ah, found in his collection of medical biographies called *'Uyūn al-Anbā' fī Ṭabaqāt al-Aṭibbā'*. Expanding upon Ibn Juljul′s earlier biographical collection, this book listed among the sayings of Aristotle the eight sentences, which he desired to be written at his death on the sides of his costly tomb. The eight sentences, carefully numbered, were marked on an abstract eight-sided diagram (of the tomb?).[28]

Other Mamluk authors and encyclopedists, whose books were accessible in private and public libraries throughout the city, wrote chapters on justice and injustice in which they liberally cited the Circle of Justice, most often in its four-line form. The administrator al-Nuwayrī, in his encyclopedic reference work of *adab* and history *Nihāyat al-Arab fī Funūn al-Adab,* quoted the standard version and attributed it to 'Amr ibn al-'Āṣ; Ibn Ya'qūb included it in a condensation of the Seljuk grammarian al-Zamakhsharī′s *adab* collection; and al-Ibshīhī, in his anthology of ″edifying discourses and wise maxims″ called *Al-Mustaṭraf fī Kull Fann Mustaẓraf,* gave it five terms, and traced it to Anūshirvān.[29] The eight-line version appeared in al-'Abbāsī′s *Āthār al-Uwal fī Tartīb al-Duwal,* introduced by the note that Alexander had had between his hands an eight-sided wheel or ball of gold which Aristotle had invented, on each side of which was a political sentence on which he was to act. It was also quoted in Ibn al-Azraq′s *Badā'i' al-Silk fī Ṭabā'i' al-Milk,* a work that drew on Ibn Khaldūn.[30]

[30]Ḥasan ibn 'Alī al-'Abbāsī, *Āthār al-Uwal fī Tartīb al-Duwal* (Beirut, 1989), 71. Sadan also mentions an unnamed sixteenth-century Egyptian author who described the eight sentences as being written on a wheel or ball which Aristotle turned to demonstrate their continuousness and

The history written by Ibn Khaldūn (1332–1406), with its well-known *Introduction (Muqaddimah)* containing the author′s principles of analysis, was probably the most outstanding cultural product of the period. Ibn Khaldūn served as a *maẓālim* judge, qadi, and royal advisor, describing his work in the *maẓālim* court in his autobiography: ″I made the utmost effort to enforce God′s law, as I had been charged to do. . . . I considered the plaintiff and the accused equally, without any concern for their status or power in society; I gave assistance to any weaker party, to level out power inequalities; I refused mediation or petitions on either party′s behalf.″[31] In the *Muqaddimah* he quoted the Circle of Justice in three versions: the tale of Bahrām and the owls first told by al-Mas‘ūdī (d. 956), the four-line saying of Anūshirvān, and the eight sentences of Aristotle.[32] Unlike others who cited the Circle, Ibn Khaldūn did not consider it a mere literary gem or even a piece of good advice; to him it summarized the real nature of human association and formed the key to the science of civilization which he had been led by God to understand and set forth. He credited the author of the *Sirr al-Asrār* with the circular arrangement of the eight sentences but expressed his disapproval of all previous writers for not supporting this crucial statement with arguments or pursuing its historical implications, as he intended to do in his *Introduction:*

> These are eight sentences of political wisdom. They are connected with each other, the end of each one leading into the beginning of the next. They are held together in a circle with no definite beginning or end. The author was proud of what he had hit upon and made much of the significance of the sentences. When our discussion in the section on royal authority and dynasties has been studied and due critical attention given to it, it will be found to constitute an exhaustive, very clear, fully substantiated interpretation and detailed exposition of these sentences.[33]

Ibn Khaldūn felt that all others who had copied and relayed the Circle of

---

interrelatedness; al-‘Abbāsī was perhaps this author′s source (Sadan, ″A ′Closed-Circuit′ Saying,″ 335 and n. 20). Abū ‘Abd Allāh ibn al-Azraq, *Badā’i‘ al-Silk fī Ṭabā’i‘ al-Milk,* ed. ‘Alī Sāmī al-Nashshār (Baghdad, 1977–78), 1:229.

Justice had at best touched upon the problems he sought to analyze in depth; Ibn al-Muqaffaʻ merely mentioned them in passing, and al-Turtūshī presented illustrative stories without any analysis. Specialists in religious law such as al-Māwardī discussed the legal conditions under which rulers might assume power, but Ibn Khaldūn was investigating the nature of civilization and the requirements of human existence and therefore found the ruler′s behavior more significant than his origin or intentions. He saw the duties of a good ruler as protecting the community, restraining mutual hostility and attacks on property, supervising the market and enforcing contracts, issuing trustworthy coinage, and keeping the people satisfied with their lot in life. Royal authority, according to him, was a relationship with the ruled: ″A ruler is he who has subjects *(raʻāyā)* and subjects are persons who have a ruler. . . . If such rulership is good and beneficial, it will serve the interests of the subjects.″ Since civilization was prior to religion, the shariʻah should be seen not as a constitution for the state but as a measuring stick for rulers, who should employ it in combination with ethical-rational principles in a combination best described in the letter of advice by Ṭāhir Dhū al-Yamīnayn, which he quoted in full.[34] That letter described the governor as

> a watchman, and a shepherd; the people in your realm are only called ″your flock″ because you are their shepherd and their overseer; you take from them that which they hand over to you from their surplus income and subsistence means, and you expend it on things which will ensure their continued material well-being and spiritual welfare and which will alleviate their burdens. . . . As a consequence, charitable works will abound in your land and prosperity will be general in your territories. The land under your rule will burgeon with fertility, the yield from the land tax will increase, and your income in kind will be proportionately expanded. By this means you will be able to strengthen the bonds linking your army to you, and you will bring contentment to your people through the personal largess which you will be able to lavish upon them.[35]

According to Ibn Khaldūn, struggle for power did not in itself delegitimate kingship, but a king′s power could be dissipated by tyranny.[36] The ruler and his army were supported by the wealth of the conquered cities, and they returned the

people′s taxes in the form of gifts and public works. In order to maintain their power, the powerful became personally involved in the production of wealth. They would be successful in this as long as they remained just, but as the level of luxury among the rulers increased so would the level of exploitation, and injustice soon produced division and ″the ruin of civilization.″[37] So insistent was Ibn Khaldūn on this point that in discussing the injurious effects of injustice on society he repeated in full the story of Bahrām and the owls, a cautionary tale in which Bahrām passed by a ruined village where two owls were hooting. On asking what they were saying, the king learned that the two owls were to be married, and that the female owl had demanded as a wedding present twenty ruined villages like that one so that she could hoot in them. The male owl responded that if the king continued in his unjust ways, he would easily be able to give her a thousand ruined villages.[38] Al-Mas‘ūdī′s retelling of the story ended by quoting the vizier′s advice from the Circle of Justice, from which Ibn Khaldūn drew the logical conclusion:

> ″O King, the might of royal authority materializes only through the religious law, obedience toward God, and compliance with His commands and prohibitions. The religious law persists only through royal authority. Mighty royal authority is achieved only through men. Men persist only with the help of property. The only way to property is through cultivation. The only way to cultivation is through justice. Justice is a balance set up among mankind. The Lord set it up and appointed an overseer of it, and that is the ruler. . . .″ The lesson this story teaches is that injustice ruins civilization. The ruin of civilization has as its consequence the complete destruction of the dynasty.[39]

In keeping with Ibn Khaldūn′s view of the Circle of Justice as an essential social mechanism, we will proceed to examine how this concept of justice appeared in actual Egyptian life and practice. Its long life and popularity cannot be attributed merely to the cleverness and pithiness of the forms in which it was stated. Rather,

it encapsulated elements of the political relationship that were valued by both the rulers and the ruled. First of all, it provided criteria for legitimating and praising the ruler. Many quotations could be cited; for example, in the fifteenth century a member of the ulama called attention to the rulers′ devotion of their lives to the defense of the believers, their protection of the helpless subjects against brigandage and robbery, and their maintenance of order in the cities.[40] The Mamluk rulers themselves adopted it as a standard of behavior; Sultan Qalāwūn′s instructions to his deputy stated that ″justice results in the cultivation of the land and financial profits which are the essential element, or basis, of the armies,″ and so he ordered his deputy to ″collect proper petitions from all the people to discuss them in order to preserve that golden age″ because ″the strong must not use their power to dominate the weak.″[41]

The Mamluk armies were supported by *iqṭā*ʿs, and it was in the allocation of *iqṭā*ʿs and the administration of taxes that the rural population felt the ruler′s justice or injustice most directly. Ordinarily government agents estimated taxation levels on the basis of the height of the Nile flood and made a more accurate assessment at the end of the growing season by surveying the actual area planted to crops. ″This,″ said al-Nuwayrī in his secretarial handbook, ″is justice and equity, and whoever departs from it has erred and done wrong.″ An earlier handbook by the late Ayyubid finance official al-Nābulusī had decreed ″failure to make a survey of all private and public property annually, by faithful and recognized assessors, together with honest and intelligent soldiers who are heedful, scribes who are expert in surveying, and two or three of the most faithful accountants, who fear for their honor″ to be ″amazing negligence.″[42] Under the Mamluks, however, the soldiers and administrators who received *iqṭā*ʿs were responsible for making the survey themselves, which left ample room for abuses.[43] Another type

Owen, ″Scandal in the Egyptian Treasury: A Portion of the *Lumaʿ al-Qawānīn* of ʿUthmān ibn Ibrāhīm al-Nābulusī,″ *Journal of Near Eastern Studies* 14 (1955): 80.

[43]Frantz-Murphy, *Agrarian Administration,* 69–70. The historian al-Maqrīzī stated that in the early period a survey was performed every thirty years, or once a generation, to readjust the assessed amounts; this period coincided with the solar/lunar year cycle which generated an extra

of survey, a *rawk*, was made to allocate the *iqṭā'*s among their holders; the Mamluks made two of these surveys, in 1298 and 1315. They had the effect of centralizing landholding in the hands of the elite: the first took *iqṭā'*s from ordinary soldiers and redistributed them to Mamluk officers, while the second increased the number of *iqṭā'*s under the direct control of the sultan.[44] Despite this centralization, however, later Mamluk sultans were unable to maintain the irrigation works or to force the *iqṭā'* holders to do so, and demands for heightened revenue were not met by any improvement in production. The people responded to increasingly oppressive tax collection not with open rebellion but with foot-dragging and evasion, and finally by petitioning the *maẓālim* court.[45]

The *maẓālim* court, the court for the redress of wrongs, was described by the finance official al-Qalqashandī (d. 1418) as "rendering justice to the victim of a wrong against the one who committed it, delivering the right from the wrong, succoring the weak against the strong, assuring the observation of the rules of justice throughout the realm."[46] This institution goes back to ancient Mesopotamia, and the Mamluk rulers also maintained it. During times of political upheaval, however, the *maẓālim* court was not convened. Reopened when the crisis was under control, it symbolized the stability and order provided by a powerful sultan. As elsewhere in the Muslim lands, the *maẓālim* court heard cases against qadis, the great men of the realm, and the sultan himself. Under the Mamluks, however, the *maẓālim* court changed over time from an imitation of Ayyubid judicial practice to a ceremonial occasion renewing the ruler's legitimacy, and royal judicial activity was transferred to other locations.[47]

The Mamluks first heard *maẓālim* cases in the old Ayyubid House of Justice

in a Cairo madrasah. In 1262, to reinforce the independence of the Mamluk regime, Sultan Baybars built a new House of Justice near the Citadel. In 1315 al-Nāṣir Muḥammad built a second one inside the Citadel, with open sides to suggest the sultan's accessibility. He presided over its sessions in person, surrounding them with ceremonies courting popular support.[48] Greater attention to justice was possible during his reign because the threat from the Mongols and Crusaders was receding and the sultan was becoming less a military commander and more a head of state.[49] In 1387 Sultan Barqūq started hearing *maẓālim* cases in the Royal Stables below the Citadel. This was not degrading; in Turkish practice stables were often places of political sanctuary. The *maẓālim* sessions in the Royal Stables were preceded by a magnificent military procession down from the palace and featured the chief qadis, government officials, and military officers arrayed around the sultan in advisory positions.[50] The House of Justice in the Citadel then became the place where the sultan "held court" in the ceremonial sense, received ambassadors, announced state decisions, set prices and coinage values, received taxes, and distributed robes of honor.[51] Special *maẓālim* courts held at the enthronement of new sultans were ceremonies of legitimation, including the reception of petitioners from all over the country. The hearing of petitions was made a symbolic ornament to the ruler's power and lost some of its effectiveness as a complaint against governmental oppression, becoming a vehicle for the advancement of officials and the achievement of the sultans' political aims.[52]

In this situation, real complaints began to employ less formal but more effective channels, such as the sultan's wife or the bureaucracy.[53] According to al-Qalqashandī, the majority of petitions were handled through administrative channels. Mamluk

administration was highly developed, to judge by the flourishing genre of secretarial manuals, at least eight of which were produced during the Mamluk period. These manuals described bureaucratic methods and document production, transmitting the governing heritage of previous regimes as well as current modifications to it. The greatest of them, al-Qalqashandī's magisterial fourteen-volume *Ṣubḥ al-Aʿshá,* continued to be read by succeeding regimes as a summation of the best in administrative practice. Extant petitions, and decrees issued in response to them, show that the form of the petition and the procedures used to handle it modified Fatimid precedents only slightly.[54] The topics of complaint in surviving documents include such problems as interference with a poor man's palm trees, Bedouin raids on St. Catherine's monastery, and an *iqṭāʿ* holder's taking revenue to which he was not entitled.[55]

If the petition process became ineffective, the populace could resort to mass demonstrations. Because the rulers disapproved of popular political activity, however, they tried to maintain a certain level of responsiveness to petitions as a safety valve. The records show that when the authorities became too oppressive, the people did take their demands for justice to the streets.[56] An upsurge of crime, urban rioting, or Bedouin incursions was interpreted as a lapse in the ruler's ability to govern and a strike against his legitimacy. "Every grain crisis thus became a . . . political struggle."[57] In 1412 the sultan punished grocers who closed their shops in the wake of coinage inflation, because the people's inability to buy bread could be interpreted as the ruler's inability to feed his flock.[58] Mamluk sultans, to maintain the public order on which their power rested, dispensed free

Mortel, "The Decline of Mamluk Civil Bureaucracy in the Fifteenth Century: The Career of Abū'l-Khayr al-Naḥḥās," *Journal of Islamic Studies* 6 (1995): 181.

[58]Shoshan, "Grain Riots and the 'Moral Economy'," 465.

grain to the poor, took steps to deal with plague or communal strife, and tried to control the violence of the mighty. There was no regular institutional mechanism for this kind of relief; it was thought to proceed directly from the personal justice of the ruler.[59] Sultan Qāytbāy used his judicial role in *maẓālim* to emphasize his solidarity with his subjects and to win their loyalty, intervening personally in cases of official dereliction and announcing his return to health after a riding accident by presiding over the *maẓālim* court. His successor Qānṣūh al-Ghawrī, in order to be seen as the fountain of justice, tore down the House of Justice and built a bigger and more magnificent one. He also restored the Nilometer, Egypt′s barometer of prosperity, and initiated popular festivities, acting as the bestower of the people′s well-being by praying for the annual flood. An advice book written for him, *Ṭaḥrīr al-Sulūk fī Tadbīr al-Mulūk,* was dedicated to the intricacies of judging *maẓālim* cases.[60]

According to the Egyptian historian Ibn Iyās, however, royal injustice was a key issue in the fall of the Mamluks. His narrative of their last days was couched in terms of the Circle of Justice and its absence. He told how Sultan al-Ghawrī′s preparations for war with the Ottomans included oppressive levies on peasant villages and extortion of money from women whose fathers had died and who sacrificed their dowries to pay. Those governing the city in his absence were all known tyrants, except for his regent Tūmānbāy, who heard petitions and was ″beloved by the people and the poor.″ In the first battle against the Ottomans, Sultan al-Ghawrī was killed and his body lost, never to be buried in the magnificent tomb for which he had squeezed so much money from the people. He was commemorated in a verse describing the disastrous effects of injustice:

> Look with wonder at al-Ashraf al-Ghuri,
> Who, after his tyranny had reached its height in Cairo,
> Lost his kingdom in an hour,
> Lost this world and the world to come.

[60]Carl F. Petry, *Twilight of Majesty: The Reigns of the Mamlūk Sultans al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī in Egypt* (Seattle, 1993), 79, 106; idem, *Protectors or Praetorians?* 155–58, 164, 161; idem, ″Royal Justice in Mamluk Cairo: Contrasting Motives of Two Sultans,″ in *Saber Religioso y Poder Politico en el Islam* (Madrid, 1994), 197–211. For an interpretation of al-Ghawrī′s actions as resulting from piety see Robert Irwin, ″The Privatization of ′Justice′ under the Circassian Mamluks,″ *Mamlūk Studies Review* 6 (2002): 69. Ibn al-Faḍl Muḥammad ibn ʻAbd al-Wahhāb al-Aʻraj, *Ṭaḥrīr al-Sulūk fī Tadbīr al-Mulūk,* ed. Fu'ād ʻAbd al-Munʻim (Alexandria, 1982).

Tūmānbāy was chosen as his successor to ″abolish the tyrannical innovations of al-Ghuri.″ In an act heavy with symbolism, he tore down al-Ghawrī′s stone seat or throne and replaced it with a simple wooden dais. A poem on the occasion explained its meaning:

> The Dais of Justice has come back,
> The ″Mastabah″ of Injustice has been pulled down;
> Tuman Bai has become amongst the people
> As one who causes the wolf to live with the sheep in peace.
> Oh! what a King he is! his justice has become notorious
> Amongst Arabs, and people of other countries.

Besides making symbolic gestures, Tūmānbāy punished advisors who recommended oppressive measures, even to raise money for an army bonus, and he tried to enforce Islamic law. It was too little too late, though; in the last battle his troops fled, leaving him to defeat.[61]

To Ibn Iyās, and perhaps to most Egyptians in the Mamluk period, the Circle of Justice was more than a literary curiosity or a propaganda ploy of rulers. It also played a central role in the moral economy of medieval Egyptian peasants, soldiers, and even historians, encapsulating the people′s expectations of their rulers and providing a measuring rod for how well or poorly they met them. Rulers were well aware of these expectations and tried to live up to them, or at least to appear as if they did. The people′s obedience was carefully graded to match their estimate of the ruler′s justice, and they took advantage of the institutions of petitioning and the *maẓālim* court to register their complaints. Other popular actions, such as bread riots and the withholding of taxes, also played on the same understanding of an interdependence between the people′s welfare and the sultans′ power. Thus, the idea behind the Circle of Justice must be taken seriously as a political idea in the Egyptian context. It is clear that our image of Mamluk government as pure force, which we tend to derive from the notorious custom of Egyptian peasants not to pay their taxes until they were beaten to within an inch of their lives, has to be modified to include a calculus of justice based on the time-honored Circle, according to which the peasants′ ability to provide revenue was understood to be dependent on the ruler′s ability to provide justice and good administration.

Ibn Qayyim al-Jawzīyah: His Life and Works*

There is hardly another Muslim Mamluk polymath of such standing who at the same time is best known as the student of someone else. Despite his own extraordinary scientific output, Ibn Qayyim al-Jawzīyah (1292–1350) was Taqī al-Dīn Aḥmad Ibn Taymīyah's (1263–1328) most famous and important student. Even centuries later, he is still primarily known and defined by his relation and service to his master, whose works he compiled and whose legal doctrines and hermeneutical and theological convictions he defended. While Ibn Taymīyah led a life characterized by conflict on several fronts, Ibn Qayyim al-Jawzīyah—with the exception of a few incidents—was a rather bookish man who preferred pious scientific endeavors to confrontations of any kind.

Biographical Sketch

The full name of this scholar in the shadow is Abū ʻAbd Allāh Shams al-Dīn Muḥammad ibn Abī Bakr ibn Ayyūb ibn Saʻd ibn Ḥarīz ibn Makkī Zayn al-Dīn al-Zurʻī al-Dimashqī al-Ḥanbalī, known as Shams al-Dīn Ibn Qayyim al-Jawzīyah, or simply Ibn al-Qayyim. It is, however, wrong to say Ibn al-Qayyim al-Jawzīyah, since the element "Qayyim" is the first part of a genitive clause. Being in the *status constructus,* "Qayyim" takes no article.[1] Nevertheless, this is a frequent mistake. The article, however, returns when one uses the short version Ibn al-Qayyim. Ibn al-Qayyim's father, Abū Bakr, took care of the Damascene Jawzīyah madrasah, so that the term means nothing more than "son of the superintendent *(qayyim)* of the Jawzīyah."[2] There is no need to dwell in this article on the numerous other elements of his name.[3] Suffice it to mention his *nisbah* al-Zurʻī

*This article is a by-product of my splendid isolation in the stacks of Harvard's marvelous Widener Library. My research there in 2000–3 was made possible by the German Research Community, the "Deutsche Forschungsgemeinschaft" or DFG. I am indebted to the DFG and its anonymous expert advisors for a Heisenberg Grant, including two years abroad. I would also like to thank the students of my block seminar at Tübingen University in the winter term 2004/05 for providing a testing ground for this overview and discussing its principal ideas.

[1]Aḥmad Māhir Maḥmūd al-Baqarī, *Ibn al-Qayyim min Āthārihi al-ʻIlmīyah* (Beirut, 1984), 4.

[2]Burhān al-Dīn Ibrāhīm Ibn Mufliḥ, *Al-Maqṣad al-Arshad fī Dhikr Aṣḥāb al-Imām Aḥmad,* ed. ʻAbd al-Raḥmān ibn Sulaymān al-Uthaymīn (Riyadh, 1990), 1:265.

[3]Minute details concerning his names are already given in Bakr ibn ʻAbd Allāh Abū Zayd, *Ibn*

(or al-Zarʻī), since we thereby ″know that his family originated from Zarʻa in the Ḥawrān″ (a coincidental parallel with Ibn Taymīyah, whose family was also ousted from Ḥarrān in that region). ″Most probably they fled the Mongolian invasions in the thirteenth century,″[4] so that his family headed to Damascus which was at that time ″the major academic center of the Ḥanbalite world.″[5] Al-Zarʻah itself is described as ″a small farming village fifty-five miles from Damascus,″[6] though by the time of Ibn al-Qayyim′s birth the family had already moved to Damascus.

This short introduction to what is basically an overview of Ibn al-Qayyim′s œuvre gives only rough biographical outlines.[7] The late medieval sources for biographical data on Ibn Qayyim al-Jawzīyah are already diligently displayed in a number of modern Arabic books on this author and are also presented in the foreword of many editions of his books. Nevertheless, a critical biography of Ibn al-Qayyim in a Western language remains to be written. Entries in the vast biographical dictionaries are quite summary; they display a lot of name-dropping, do not offer much analysis, and copy profusely from one another. Obviously Ibn al-Qayyim′s life was quite humdrum judged from the sensationalist viewpoint of biographers and historical chroniclers. Of real importance, however, are the contributions by another Hanbali legal scholar, Ibn Rajab (d. 1397), and the Shafiʻi traditionalist and historian Ibn Kathīr (d. 1373).[8] These two were the most important of Ibn al-Qayyim′s pupils.[9] Ibn Rajab is also ″the last great representative of medieval Hanbalism.″[10] While the reception of Ibn al-Qayyim′s life and works

in later centuries certainly deserves more exploration, his rediscovery and enthusiastic propagation by modern Salafi authors also calls for closer analysis. A comparable revival and hailing by such reformers was offered not only to Ibn Taymīyah, his co-Hanbali or *the* neo-Hanbali par excellence, but also, for instance, to the Maliki scholar Muḥammad al-Shāṭibī (d. 1388) and the Shafiʻi ʻIzz al-Dīn Ibn ʻAbd al-Salām (d. 1262). But before we can examine the ongoing interest in Ibn al-Qayyim's œuvre, we need to get a better idea of the scope and variety of this reservoir beyond merely rattling off book titles. Since about the second half of the twentieth century, a considerable number of monographs written in Arabic on Ibn Qayyim al-Jawzīyah have been published. These works are often the outcome of dissertations and other academic writing from faculties of religion, shariʻah law, or literature from the Near East. Many of them are not found in Western libraries or are not even officially published.[11] This study refers to at least some of them, but does not have the scope to fully present their major findings.

To give but a short biographical overview,[12] Ibn al-Qayyim was born on 7 Ṣafar 691/29 January 1292 in Damascus, the city where he also died. His father was a religious scholar who excelled notably in inheritance law *(al-farāʼiḍ)*. From him Ibn al-Qayyim received his initial scientific education[13] and took over the responsibility for the Jawzīyah madrasah. This madrasah also "served as a court of law for the Hanbali *ḳāḍī al-ḳuḍāt* of Damascus."[14] His education "was particularly wide and sound."[15] The subjects of his education, and especially the names of his teachers, are extensively listed in the biographical dictionaries.[16] Among them are Ṣafī al-Dīn al-Hindī,[17] an opponent of Ibn Taymīyah, Ibn Taymīyah himself, and Badr al-Dīn Ibn Jamāʻah. Al-Ṣafadī in particular not only mentions the names of his teachers but also lists the titles of certain books Ibn al-Qayyim read with them.[18] According to the Shafiʻi scholar al-Suyūṭī (d. 1505),

---

[11]Some such works are mentioned in Rāshid ibn ʻAbd al-ʻAzīz al-Ḥamd's introduction to his edition of Ibn al-Qayyim, *Al-Kalām ʻalá Masʼalat al-Samāʻ* (Riyadh, 1409/1988–89), 14.

[15]Ibid.

[16]Given in full detail in Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 49–50, 159–78; cf. Ḥijāzī, *Ibn al-Qayyim wa-Mawqifuhu min al-Tafkīr al-Islāmī,* 31–33; Ibn al-Qayyim, *Al-Kalām ʻalá Masʼalat al-Samāʻ,* ed. al-Ḥamd, 24–28, followed by a list of his students, 28–30.

[17]Sayyid Ahsan, *Life and Thoughts of Muhammad Ibn Abd al-Wahhab* (Aligarh, 1988), 32.

[18]Ṣalāḥ al-Dīn Khalīl ibn Aybak al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt* (Istanbul, n.d.), 2:271.

> he wrote *(ṣannafa),* debated *(nāẓara),* practiced legal development *(ijtahada),* and became one of the great authorities *(al-a'immah al-kibār)* in Quran commentary, hadith, practical jurisprudence, both roots [i.e., Quran and *sunnah*], and Arabic.

He then lists fourteen of Ibn al-Qayyim's important works.[19] Ibn Rajab mentions that he was likewise versed in "the science of proper conduct, and the terminology, allusions, and subtleties of the Sufis" *('ilm al-sulūk, wa-kalām ahl al-taṣawwuf, wa-ishārātihim wa-daqā'iqihim).*[20] He is described as outstanding not only for his erudition, but also for his level of piety. Ibn Kathīr says, "I do not know in this world in our time someone who is more dedicated to acts of devotion" *(akthar 'ibādah minhu),* and reports as an eyewitness that Ibn al-Qayyim had a manner of conducting the ritual prayer by which he very much prolonged it, stretching out its bowing and prostration, while turning a deaf ear to any critique thereof.[21] And Ibn Rajab adds that:

> he was extremely *(ilá al-ghāyah al-quṣwá)* dedicated to divine devotion *('ibādah),* spending the night in prayer *(tahajjud)* as well as prolonging ritual prayer, and he invoked the name of God *(ta'allaha),* was eager to recall him *(lahija bi-al-dhikr),* articulated affection, repentance, and petitions of forgiveness and longing directed to God *(shaffafa bi-al-maḥabbah, wa-al-inābah wa-al-istighfār, wa-al-iftiqār ilá Allāh),* and expressed that he could be broken by him *(wa-al-inkisār lahu)* and that he is cast into his hands *(wa-al-iṭrāḥ bayna yadayhi),* [all] while entering or leaving prayer *('alá 'atabat 'ubūdīyatihi)*—to which I never witnessed anything comparable therein [the prayer] *(lam ushāhid mithlahu fī dhālik).*[22]

The Hanbali scholar must have been so peculiar in his pious exaggerations, as some see it, that he caused bewilderment even among the inhabitants of Mecca. Ibn Rajab further relates:

[22]Ibn Rajab, *Kitāb al-Dhayl 'alá Ṭabaqāt al-Ḥanābilah,* 2:448; cf. the translation in *Ibn Qayyim al-Jawziyya on the Invocation of God,* xiii.

> He often *(marrāt kathīrah)* performed the pilgrimage and dwelled in the holy vicinity *(jāwara)* in Mecca. The people of Mecca, however, remember him because of his intense devotion *(shiddat al-ʻibādah)* and multiple circumambulations of the Kaaba *(kathrat al-ṭawāf),* which was regarded as astonishing.[23]

Although Ibn al-Qayyim made several pilgrimages to Mecca and spent some time there, he is not recorded for any other *ṭalab al-ʻilm* activities. His modern chronicler Abū Zayd takes some pains to dispel the impression of a travel-shy, stay-at-home scholar, pointing out that many eminent religious scholars were already on hand in Damascus so that he did not need to head for other places. The old patterns of *ṭalab al-ʻilm* cannot be applied, he says, arguing:

> this is not unusual for his epoch, because the cities at that time used to be jam-packed with expert scholars of Islam, outstanding Quran memorizers, and well-versed writers, especially in Damascus.[24]

When Ibn Taymīyah returned from Egypt to Damascus in 712/1313 after an absence of six years, Ibn al-Qayyim, at that time aged twenty-one, joined him immediately as a student and remained so until the former's death in 1328. The companionship with this extraordinary scholar and, from the viewpoint of influential circles, notorious troublemaker, was an experience that shaped Ibn al-Qayyim's life like no other.[25] In 1318, however, the sultan "forbade Ibn Taymīyah to issue fatwas regarding repudiation (*ṭalāq*) contrary to the prevailing Hanbali doctrine." Ibn Taymīyah landed in prison for five years but kept receiving visitors, as well as publishing and issuing fatwas. Only after his last arrest in 1326, prompted by a critical treatise on the visitation of graves, was he finally denied the possibility to write, a serious deprivation that lasted until his death in 1328.[26] During this period, Ibn al-Qayyim was likewise held captive in the citadel of Damascus, accused of prohibiting visits to the grave of Abraham *(ziyārat qabr al-Khalīl).* Ibn Ḥajar

[25]*Ibn Qayyim al-Jawziyya on the Invocation of God,* xi.

[26]Ahsan, *Life and Thoughts of Muhammad Ibn Abd al-Wahhab,* 18. On Ibn Taymīyah's various detentions, see Sherman A. Jackson, "Ibn Taymiyyah on Trial in Damascus," *Journal of Semitic Studies* 39, no. 1 (1994): 41–85; Donald Little, "Significance of the Detention of Ibn Taymiyya," 311–27; Hasan Qasim Murad, "Ibn Taymiyya on Trial: A Narrative Account of his Miḥan," *Islamic Studies* 18, no. 1 (1979): 1–32.

al-ʻAsqalānī recounts: ″He was arrested together with Ibn Taymīyah in the Citadel after he was humiliated *(uhīna)* and paraded around (*ṭīfa bi-hi*) on a camel.″[27] Delivering fatwas in line with the convictions of Ibn Taymīyah had brought about this treatment and the ensuing arrest, but since Ibn al-Qayyim was ″the most devoted disciple of his mentor, he was especially marked for humiliation.″[28] He would have been shown more leniency and been spared this sojourn in prison had he switched legal doctrines. In the eyes of many followers, however, this self-imposed fate had nothing to do with social stain and stigmatization; on the contrary, as Ibn Rajab reports:

> He underwent inquisition *(umtuḥina),* and was repeatedly harmed *(ūdhá)* and jailed *(ḥubisa)* together with Ibn Taymīyah in the Citadel, but separated from him, and was only released from there after the death of the shaykh.[29]

The verb *umtuḥina* already recalls the ″*miḥnah*″ of Aḥmad Ibn Ḥanbal[30] and—in this great tradition of sacrifice in the name of wholehearted dedication to the holy sources—the subsequent multiple *miḥan* of Ibn Taymīyah. By undergoing his own ″mini-*miḥnah*,″ Ibn al-Qayyim impressed certain people, while repulsing others. Even after the death of Ibn Taymīyah, Ibn al-Qayyim ″suffered distress *(umtuḥina)* once again because of the fatwas of Ibn Taymīyah.″[31] In 1345 he ″experienced *miḥan* with the judges″ *(jarat lahu miḥan maʻa al-quḍāh),* namely Taqī al-Dīn al-Subkī (d. 1378), the Shafiʻi chief judge of Damascus, ″because of his fatwa on the permissibility of a shooting contest *(musābaqah)* without a third competitor *(muḥallil).″*[32] In 1349, a second conflict arose with al-Subkī because of Ibn al-Qayyim′s stubborn adherence to Ibn Taymīyah′s fatwas, this time concerning the much-debated issue of repudiation (*ṭalāq*).[33] Before it escalated, however, a conciliation *(ṣulḥ)* was reached between the two with the help of the amir Sayf

al-Dīn ibn Faḍl in al-Subkī′s garden.[34] Compared with his scientific skills, Ibn al-Qayyim′s ″career was modest, and was hampered by the opposition that the neo-Ḥanbalism of Ibn Taymiyya encountered in the governmental circles of the Mamlūk state.″[35] But when Ibn al-Qayyim died in 1350 at the age of sixty,[36] his burial attracted huge crowds of people.[37] He was buried beside his mother in the Bāb al-Ṣaghīr cemetery. One of his three sons, ʻAbd Allāh (d. 1355), succeeded him at the Ṣadrīyah madrasah.[38] The main feature that ultimately distinguishes Ibn al-Qayyim from Ibn Taymīyah seems to be his general mood and attitude toward the world. According to a modern Damascus-based shariʻah commentator, Wahbah al-Zuḥaylī, their ″modes of thinking″ *(al-minhaj al-fikrī)* differ in that Ibn Taymīyah is ″hot-blooded″ *(ḥādd al-mizāj),* whereas Ibn al-Qayyim is ″mild-tempered″ *(raqīq al-uslūb).*[39] While his master is often described in situations revealing his choleric rage, notorious impatience, uncompromising stance, aggressiveness, and sarcastic rejoinders, Ibn al-Qayyim is perceived as a profoundly different, rather sanguine individual. Ibn Kathīr, who claims to have belonged to the inner circle of this scholar, reports that Ibn al-Qayyim′s behavior easily won sympathy, because he never envied others or caused harm to them, never blamed anybody, or harbored hatred or grudges.[40] Conflicts simply for the sake of dispute did not suit his personality. He preserved this attitude even in jail:

> During his imprisonment he was busy reciting the Quran, contemplating, and meditating. Thereupon many good things were disclosed to him *(fa-futiḥa ʻalayhi min dhālik khayr kathīr)* and he gained a large portion of the right senses and sentiments *(al-adhwāq wa-al-mawājīd al-ṣaḥīḥah).* As a consequence, he mastered the

> discourse of the sciences of the people of [mystical] experiences *(ahl al-maʿārif)* and gained access to their concealed issues *(wa-al-dukhūl fī ghawāmiḍihim),* and his writings are full of that.[41]

His modern admirers feel obliged to point out

> that he felt longings and affection that captivated his heart, not in the manner of the extreme Sufis, but of the venerable forefathers" *(lā ʿalá manhaj al-mutaṣawwifa al-ghulāh bal ʿalá ṭarīq al-salaf al-ṣāliḥ).*[42]

Ibn Rajab, who is very famous himself, confessed, "I never saw anybody with a broader knowledge than him."[43] A modern editor praises Ibn al-Qayyim as "the very learned and encyclopedic" *(al-ʿallāmah al-mawsūʿī).*[44] He was indeed outstanding *(bāriʿ)* in several sciences, such as Quran commentary *(tafsīr),* jurisprudence, Arabic, grammar, and hadith.[45] Ibn al-Qayyim also possessed an impressive library, since he purchased more manuscripts than anybody else,[46] and devoted much time to studying them. This is apparent after reading only a single example of his writings.[47] This is not to say that he diligently quoted from his sources; as a matter of fact, he seldom explicitly quoted anything but Quran and *sunnah*—a deplorable habit that makes an assessment of his original contributions all the more difficult.[48] He was such an enthusiastic collector of books "that he obtained an unquantifiable number of them, while his children for a long period after his death used to sell out of this what they did not finish."[49] His whole life was rooted in religious sciences. He served as imam at the Jawzīyah, and after 1342 he also taught at the Ṣadrīyah and other institutions. Further, he issued fatwas and wrote books and treatises. Al-Ṣafadī informs us that

> he worked a lot, disputed, carried out legal development, bent to

> the quest [for knowledge], composed, and became one of the great leading figures in the science of Quran commentary, hadith, legal and theological hermeneutics, jurisprudence, and Arabic.[50]

The sources convey the impression of a workaholic.[51] His fields of expertise can hardly be enumerated, because

> the sciences he learned and in which he distinguished himself encompass nearly all the sciences of the holy law and God″ *(takādu taʿummu ʿulūm al-sharīʿah wa-ʿulūm al-ālihah).*[52]

One would expect that a scholar of his standing would have had a brilliant career in the relevant institutions of higher learning. This, however, did not happen, although he did have some moderate success. Three reasons account for this. First, his œuvre provides no easy reading. The scope of his erudition and eloquence could not make up for his long-windedness and tedious focus on the whole range of minutia related to any problem.[53] Second, his loyalty to Ibn Taymīyah, even after his death, proved to be a persistent impediment to achieving higher aspirations: ″Ibn Qayyim had a decent career, but since he represented and propagated Ibn Taymīyah′s thoughts, he was at times hampered by the same circle which opposed his master.″[54] As a consequence, his writings quickly fell into oblivion: ″A majority of his works have become extinct since in the early periods no care was taken to preserve them.″[55] Already in Ibn Rajab′s time, Ibn al-Qayyim′s works were largely forgotten.[56] Abū Zayd discusses this ″concealed reason why many of the writings of Ibn al-Qayyim disappeared from the Islamic library″ *(al-sirr fī ikhtifāʾ al-kathīr min kutub Ibn al-Qayyim ʿan al-maktabah al-islāmīyah).*[57] He answers his own question by referring to the widespread indignation *(sakhṭ)* and quarreling *(khiṣām)* instigated by the activities of Ibn Taymīyah, which continued well beyond the latter′s death. Finally, ″the enemies of this Salafi call″ *(daʿwah)* embarked upon

the collection and burning of his books and those of his master Ibn Taymīyah.[58] Even today, the accusation against Ibn Taymīyah that he was the ″father of Islamic fundamentalism″[59] rarely includes Ibn al-Qayyim explicitly, but it does cast a certain suspicion on him. A third reason is the repression of Hanbalism with the advent of Ottoman supremacy, which basically favored Hanafism.[60] The development of Hanbalism has barely been studied for the period before the eighteenth century,[61] when the importance of neo-Hanbali authors reappears as a sort of *deus ex machina* in the time of Muḥammad Ibn ʻAbd al-Wahhāb (d. 1792) in what today constitutes the kingdom of Saudi Arabia.

While this introduction is intended to point out areas of needed research, rather than filling existing gaps, the main part of this article is dedicated to an attempt to outline and categorize Ibn al-Qayyim′s works. We first need to know what is available before addressing the other serious problems of insufficient research. The methodology chosen for the second and main part of this article therefore differs from that of the previous two projects in this long-term series on the ″great Mamluk polymaths.″[62]

WORKS OF IBN AL-QAYYIM

Introductions to editions of Ibn al-Qayyim′s works usually present only a number of various book titles to acquaint the reader with his literary output.[63] Such a mere enumeration of doubtlessly important titles is of little help in getting an idea of the character and composition of his œuvre.[64] Even those who do try to somehow

[64]The article ″Ḥanābila″ by Henri Laoust, in *EI*^{2}, 3:161, mentions only four titles; likewise his article ″Ibn Ḳayyim al-Djawziyya,″ 822. Much more detailed are the ones by Najīb Māyil Haravī,

categorize his writings still feel compelled to deliver some remarks on the general difficulty of analyzing his scientific output on the basis of clear-cut categories. One editor, for instance, in his long introduction quotes from Ṣubḥī al-Ṣāliḥ′s preliminary remarks to his edition of *Aḥkām Ahl al-Dhimmah* to make the observation:

> At times, it is difficult for the researcher to consider something from the writings of Ibn al-Qayyim under a specific category *(ism mawḍūʻī khāṣṣ)*, . . . because what he wrote on theology *(kalām)* is not devoid of legal aspects as well as of exhortations that refine the hearts (*al-mawāʻiẓ al-muraqqiqah lil-qulūb),* and what he wrote on practical jurisprudence and on the principles of legal reasoning is also not free from theological studies and exhortations.[65]

Given this multi-layered character and departure from familiar genres, it is no coincidence that many an editor or scholar has shied away from such a task or stopped short of any further inquiry by simply reverting to a list of titles, or by reducing the state of the art to broad generalizations. No wonder that Western secondary literature has also failed to come up with any remedy in this regard, providing only bits and pieces.[66] The relevant Western secondary literature on Ibn al-Qayyim is cited throughout this article.

Therefore, it has proven necessary to try a somewhat different approach here. To begin with, the present overview makes no attempt to recommend a definitive way to finally pinpoint Ibn al-Qayyim′s numerous writings under familiar genre labels. It calls for a heightened awareness that any classification can be used only loosely, since most of his writings defy easy categorization and—as a rule—transcend familiar boundaries. That is to say, the majority of Ibn al-Qayyim′s writings could also legitimately be categorized differently. Nevertheless, the present study does not seek recourse to overly broad, catch-all categories, such as cramming several titles under one simple term, for instance ″religious doctrine″ *(al-ʻaqīdah),* to cope with this inherent ambiguity. Instead, the aim is to convey a sense of

″Ibn-i Qayyim-i Jawzīyah, ″in *Dā'irat al-Maʻārif-i Buzurg-i Islāmī* (Tehran, n.d.), 4:498–504 (in Persian), and especially Yusuf Şevki Yavuz, ″İbn Kayyim el-Cevziyye,″ in *Türkiye Diyanet Vakfı İslâm Ansiklopedisi* (Istanbul, 1999), 20:109–27 (in Turkish).

[65]*Aḥkām Ahl al-Dhimmah,* ed. Ṣubḥī al-Ṣāliḥ (Damascus, 1961), editor′s introduction, 1:70; *Hidāyat al-Ḥayārá fī Ajwibat al-Yahūd wa-al-Naṣārá,* ed. Muḥammad Aḥmad al-Ḥājj (Damascus, 1996), 80. The categorization of al-Ḥājj is highly problematic anyway and does not really address the critical issues, 81–102.

[66]An exception is Schallenbergh, ″The Diseases of the Heart,″ 421–28, who analyzed a number of his writings.

certain common threads in the author's interest and output. With a bird's-eye view, but occasionally with a more focused look at specific writings or parts of them, Ibn al-Qayyim's publications available in print[67] are grouped under certain headings and their characteristics identified. His most important works will be discussed in the context of these subdivisions of his religious-scientific output. For the sake of lucidity, not every small tract attributed to him shall be recorded.[68] Nor is any chronology of his many writings an option here. The same applies to an analysis of Ibn al-Qayyim's sources and his indebtedness to certain authors, especially to Ibn Taymīyah, although the latter's influence is sporadically traced. The authenticity of a substantial percentage of Ibn al-Qayyim's work is contested, and much that appears in modern publications is of little help to the critical reader who seeks the precise original work. This is an issue that will be demonstrated for a variety of writings in this survey which proceeds along the following divisions:

(1) Inner-Islamic religious polemics
(2) Intercommunal polemics with Jews and Christians
(3) Eschatology
(4) Quranic studies
(5) Hadith
(6) Legal methodology
(7) Practical jurisprudence
(8) Moral psychology
(9) Pervasion of everyday life

On a second level, the intricate complex of modern perception, transformation, and distortion of Ibn al-Qayyim's œuvre by a plethora of compilations will be exposed to a certain degree. This includes a discussion of the considerable confusion about the original format of his writings.

(1) Inner-Islamic Religious Polemics

As an ardent follower of Ibn Taymīyah, it is not surprising to find Ibn al-Qayyim engaged in religious polemics. Committed to a literal understanding of the holy sources, he unwaveringly promotes religious truth as he sees it. Various intra-communal Muslim polemics aim to address familiar Hanbali hot spots. A voluminous

---

[67]For manuscripts of Ibn al-Qayyim's writings see 'Alī ibn 'Abd al-'Azīz ibn 'Alī al-Shibl, *Al-Thabat: Fīhi Qawā'im bi-Ba'ḍ Makhṭūṭāt Shaykh al-Islām Aḥmad Ibn Taymīyah wa-ma'ahu Mulḥaq bi-Ba'ḍ Makhṭūṭāt al-'Allāmah Ibn Qayyim al-Jawzīyah* (Riyadh, 1417/1996–97), 177–221.

[68]The most detailed account of titles attributed to Ibn al-Qayyim or referred to by himself is Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 201–309.

opus is *Al-Ṣawāʾiq al-Mursalah ʿalá al-Jahmīyah wa-al-Muʿaṭṭilah*.[69] This edition is the fruit of a dissertation from Saudi Arabia. Its editor writes in his introduction that "Ibn al-Qayyim lived in a century to a certain degree similar to the century we live in today," since an awakened Islamic community of believers returned to its Creator, "after it had suffered from defeats and losses of vigor."[70] People in the author's time were divided into several factions, while books on Sufism, philosophy, and speculative theology *(ʿilm al-kalām)* were widespread and "the people were tempted *(futina)* by them, like they are tempted today by Western patterns of thinking, so that truth and void get mixed" in the minds of many Muslims. Ibn al-Qayyim is given credit for laying down "the most important principal deviations *(uṣūl al-inḥirāfāt)* of the Jahmites, if not of many sects *(firaq)*." Things turned bad because reason *(ʿaql),* desire *(shahwah),* personal judgement *(raʾy),* caprice *(hawá),* politics *(siyāsah),* and personal taste *(dhawq)* had taken precedence over revelation (*waḥy*).[71]

A smaller but better known work is his *Ijtimāʿ al-Juyūsh al-Islāmīyah ʿalá Ghazw al-Muʿaṭṭilah wa-al-Jahmīyah*, which is also known under the title *Al-ʿUlūw wa-al-Istiwāʾ* (Highness and sitting), or simply *al-Istiwāʾ*. It is a tract that pinpoints the literalistic criticism of Jahmites. It speaks out against denying God all attributes *(taʿṭīl)* by dealing with the Quranic information that God, for instance, "sat" on a throne *(al-raḥmān ʿalá al-ʿarsh istawá)*.[72] The attributes of God *(ṣifāt Allāh)* are an old and fiercely debated issue with manifold hermeneutical implications.[73] The title of the epistle *(risālah)* in question could be translated as "Gathering the Islamic troops to fight the *muʿaṭṭilah* and the *jahmīyah*." The "troops" Ibn al-Qayyim claims to have assembled therein are utterings taken from the Quran, dicta of the Prophet's companions and their followers, renowned traditionalists, leading

[69]Ed. ʿAlī ibn Muḥammad al-Dakhīl Allāh, 4 vols. (Riyadh, 1412/1991–92). An early short version *(mukhtaṣar)* by Muḥammad Ibn al-Mawṣilī already dates from Cairo 1348/1929–30, repr. 1370/1950–51. Ahsan, "Ibn Qayyim al-Jawziyah," 247, renders the work incorrectly as "Al-Ṣawāʾiq al-Munazzalah ʿalá al-Jahmīyah wa-al-Muʾaṭṭalah."

[70]*Al-Ṣawāʾiq al-Mursalah ʿalá al-Jahmīyah wa-al-Muʿaṭṭilah,* ed. al-Dakhīl Allāh, 1:5.

[71]Ibid., 1:6.

[72]*Ijtimāʿ al-Juyūsh al-Islāmīyah ʿalá Ghazw al-Muʿaṭṭilah wa-al-Jahmīyah: Wa-huwa al-Risālah al-Musammá bi-"al-Istiwāʾ,"* ed. Riḍwān Jāmiʿ Riḍwān (Mecca and Riyadh, 1415/1995), 5–7. Early editions include one in Amritsar, India, in 1314/1896–97 and in Cairo in 1350/1931–32 (Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 201; Ahsan, "Ibn Qayyim al-Jawziyah," 246). On Ibn Ḥanbal and *istiwāʾ* see al-Baqarī, *Ibn al-Qayyim min Āthārihi al-ʿIlmīyah,* 74–78.

[73]Cf. Daniel Gimaret, *Les noms divins en islam: Exégèse lexicographique et théologique* (Paris, 1988); ʿAbd al-Raḥmān Ibn al-Jawzī, *A Medieval Critique of Anthropomorphism: Ibn al-Jawzī's* Kitāb Akhbār al-Ṣifāt, a critical edition of the Arabic text with translation, introduction, and notes by Merlin Swartz (Leiden, 2002).

interpreters of the Quran *(a'immat al-tafsīr),* Sufis and ascetics, theologians, poets, even one or the other philosopher, jinn and ants—as enshrined in the cherished reservoir of early Islamic texts.[74]

A third theological tract of importance is *Shifā' al-'Alīl fī Masā'il al-Qaḍā' wa-al-Qadar wa-al-Ḥikmah wa-al-Ta'līl* (Cure of the ill concerning questions of divine ordinance, predestination, underlying reason, and finding explanations).[75] The title is an example of Ibn al-Qayyim's penchant for medical metaphors when discussing—to his mind—necessary normative orientations. This time, his arguments are basically directed against the ideas of, on the one hand, the fatalistic Islamic school of the Jabarīyah, and on the other, the Qadarīyah, perceived as extreme proponents of man's free will.[76] The cluster of theological problems in question is not a mere academic exercise for Ibn al-Qayyim, but relates to his inner conviction of man's accountability for his deeds, of which freedom of choice is the essential precondition. He therefore stands up against all charges of blurring the boundaries between good and evil or—to be more precise—between certain and uncertain as well as between permitted and forbidden. According to him, an allegation of fatalism is averse to the logic of divine legislation, the sending of prophets, and reward or punishment in the hereafter.[77] The same applies, on the other hand, to self-important behavior of man when confronted with God's demands. Today, as well, self-appointed agents of the Islamic heritage *(turāth)* underline the necessity of "the authentic method for an understanding of religious doctrine" *(al-manhaj al-ṣaḥīḥ fī fahm al-'aqīdah)* which they claim to have found in Ibn al-Qayyim's theological works.[78]

Also to be mentioned under the rubric of religious polemics is the booklet *Al-Kāfiyah al-Shāfiyah fī al-Intiṣār lil-Firqah al-Nājiyah* (The Sufficient and salutary concerning the triumph of the rescued group).[79] It is better known as

[78]*Shifā' al-'Alīl,* ed. al-Sab' al-'Alamī, 5. A translation into Urdu, printed in Lahore as *Kitāb al-Taqdīr,* is mentioned by Ahsan, "Ibn Qayyim al-Jawziyah," 246.

[79]Hüseyin Avni Çelik,, "İbn Kayyim el-Cevziyye ve Ma'āni el-Edevāt ve'l-Hurūf adlı eseri," *Atatürk Üniversitesi İlāhiyat Fakültesi Dergisi* 8 (1988): 152. There is an Arabic edition published by the Suhail Academy in 1976 in Lahore (Pakistan). An early one appeared already in Cairo in 1319/1901–2. It is reminiscent of Ibn Taymīyah's *Al-Waṣīyah al-Kubrá fī 'Aqīdat Ahl al-Sunnah*

Al-Qaṣīdah al-Nūnīyah (Ode rhyming in the letter ″n″). It comprises important tenets of faith in the form of a didactic poem or mnemonic manual.[80] It further fueled fierce discussions of old disputes over the divine attributes, etc., that were launched by various commentaries and which prompted a famous refutation from Taqī al-Dīn al-Subkī (d. 1355), namely *Al-Sayf al-Saqīl fī al-Radd ʻalá Ibn Zafīl* (The Burnished sword in refuting Ibn Zafīl), i.e, Ibn al-Qayyim.[81] During the lifetime of its author the *Nūnīyah* could only be transmitted in secret.[82]

(2) INTERCOMMUNAL POLEMICS WITH JEWS AND CHRISTIANS

Hidāyat al-Ḥayārá fī Ajwibat al-Yahūd wa-al-Naṣārá (Guidance for the confused: answers to Jews and Christians) has been variously published. A first edition appeared already in 1323/1905–6 in Egypt.[83] Of special importance for any future analysis is a Saudi Arabian dissertation from the Islamic Muḥammad Ibn Saʻūd University which was published in 1416/1996. It provides not only an important critical edition,[84] but also has an introduction of more than 200 pages. Concerning the context of his engagement, this Saudi Arabian editor informs his readers:

> The Jews and Christians used to carry the banner of enmity against the Muslim community *(ummah)* in the course of the centuries. Their deceit *(kayd)* is endless, not restricted to one means, but they fight against Muslims with all the means available to them. At times, they oppose them with strength and combat *(qitāl),* if they find a way to do so; at others, they take recourse to deceit and conspiracies or they defame by suspicions *(qadhf al-shubuhāt),* trying to fill Muslims with scepticism toward their [own] doctrinal beliefs *(tashkīk al-muslimīn bi-ʻaqīdatihim)*.

The book at hand is therefore presented as a reaction to such endeavors and allegations from non-Muslim religious communities.[85] It basically deals with seven

---

wa-al-Firqah al-Nājiyah: al-Baqarī, *Ibn al-Qayyim min Āthārihi al-ʻIlmīyah,* 153.

80Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 288, counted nearly 6,000 verses. For Ibn al-Qayyim as a poet see al-Baqarī, *Ibn al-Qayyim min Āthārihi al-ʻIlmīyah,* 147–53.

81Cf. the *sharḥ* by Muḥammad Khalīl al-Harrās (Miṣr, n.d.). See also <http://www.sunnah.org/history/Innovators/ibn_al_qayyim_al-jawziyya.htm> (accessed Jan. 2, 2005), with a modern repetition of neo-Hanbali bashing of anthropomorphism by G. F. Haddad, 1. 84*Hidāyat al-Ḥayārá,* ed. al-Ḥājj, 7, 141–42.

85Ibid., 6.

key theoretical issues raised by distortions of Islam by Jews and Christians, such as their questioning of the prophethood of Muḥammad.[86] The editor not only discusses the monograph′s relation and independent value in comparison with Ibn Taymīyah′s *Al-Jawāb al-Ṣaḥīḥ li-Man Baddala Dīn al-Masīḥ,* but also of two similar earlier works—one by Abū al-Ma'ālī al-Juwaynī (d. 1085) and the other by Abū Ḥāmid al-Ghazzālī (d. 1111).[87] Finally, the editor not only claims a great portion of originality for Ibn al-Qayyim′s piece and sees his endeavors as complementary to Ibn Taymīyah, but also stresses that the tone of the former is very different from that of his teacher:

> I found that Ibn al-Qayyim did not believe in the manner of harshness *('unf)* and abuse *(shatm)* in responding to his adversary *(khaṣm).* Rather, he believed in the principle of dispelling doubt *(shubhah)* with arguments *(bi-al-ḥujjah)* and proof *(burhān)*.[88]

While his tone and strategies in making counter-arguments may differ from Ibn Taymīyah′s, Ibn al-Qayyim, like his master, nevertheless does not hesitate to directly address all the touchy issues. However, a proper comparison of their style and content, as well as a comparison with other writings, is still awaited.

(3) Eschatology

With two outstanding monographs of wide circulation, eschatology is one of Ibn al-Qayyim′s influential areas of activity. Of these two, the ″Book of the Soul,″ *Kitāb al-Rūḥ,*[89] is the more popular. It is a real best seller[90] and gained him a reputation even in circles opposed to him in other ways.[91] Less polemical, but definitely rooted in his literalist text interpretation, are his efforts concerning Islamic eschatology. Although the Quran declares the question of the human soul to be unexplorable, for instance in 17:85, no other author has presented such a diligent investigation of the holy sources and statements on the various aspects of

---

[86]The seven main topics are, for instance, listed ibid., 131–32.

[87]Ibid., 161–68. Cf. *A Muslim Theologian′s Response to Christianity: Ibn Taymiyya′s* al-Jawab al-Sahih, ed. and trans. Thomas F. Michel (Delmar, NY, 1984).

[88]*Hidāyat al-Ḥayārá,* ed. al-Ḥājj, 595.

[89]The subtitle is often rendered in the following form as *Al-Rūḥ: Fī al-Kalām 'alá Arwāḥ al-Amwāt wa-al-Aḥyā' bi-al-Dalā'il min al-Kitāb wa-al-Sunnah wa-al-Āthār wa-Aqwāl al-'Ulamā',* cf. for instance the 3rd ed. (Miṣr, 1966). All sorts of blends are available. For details of this work see Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 253–58.

[90]To mention here only one other edition of *Al-Rūḥ,* ed. 'Iṣām al-Ṣabābiṭī (Cairo, 1415/1994).

[91]<http://www.sunnah.org/history/Innovators/ibn_al_qayyim_al-jawziyya.htm> (accessed Jan. 2, 2005), 2.

the soul, especially of its whereabouts after death but before resurrection.[92] The work itself was written in response to requests for clarification, since the question of the createdness and essence of the soul, etc., had always stirred discussions.

A bit less famous, but also widely circulating in many editions is his *Ḥādī al-Arwāḥ ilá Bilād al-Afrāḥ* (Guide for the souls to the realm of ultimate joy), also known under the title *Kitāb Ṣifat al-Jannah* (Book on the quality of paradise).[93] What the *Kitāb al-Rūḥ* provides for the knowledge of the soul, the ″Guide for the Souls″ offers with regard to Paradise. Such aspects as its ″gardens, fruits, castles, black-eyed maidens, food, clothes, attire, adornment, jewelry, and the rivers therein″ are so vividly described by direct quotations from the hadith and Quran that the reader is motivated to strive for them.[94] Striking are the most blatant, down-to-earth accounts of what can be awaited. Such descriptions are a necessary outcome of Ibn al-Qayyim′s non-metaphorical understanding of the holy texts. Since it comprises some five hundred pages in Arabic and suffers from ″too much information on chains of authorities *(kathrat al-ʻanʻanah),* burden of some topics, and multitude of linguistic details,″ several short versions have been arranged.[95] Ibn al-Qayyim did not come up with a comparable compilation for the other option for the soul (and body), i.e., hell, although the latter is also an important topic in the sources. Because Muslims are not supposed to stay in hell eternally, Ibn al-Qayyim prefers not to frighten people about the hereafter *(tarhīb).* There is no famous independent *tarhīb* work in Ibn al-Qayyim′s literary output on the torments awaiting sinners in the world to come. Probably such an approach did not match his personal inclinations and preaching habits, as shall be demonstrated in the section on his moral theology.

(4) QURANIC STUDIES

Ibn al-Qayyim did not leave behind a complete commentary on the Quran *(tafsīr)* or undertake to write one, as might be expected from a scholar of his standing.

---

[92]Cf. Timothy J. Gianotti, *Al-Ghazālī′s Unspeakable Doctrine of the Soul: Unveiling the Esoteric Psychology and Eschatology of the* Iḥyāʼ (Leiden, 2001), which also contains a good selection of relevant secondary literature.

[95]*Tahdhīb Ḥādī al-Arwāḥ ilá Bilād al-Afrāḥ*, ed. Ṣāliḥ Aḥmad al-Būrīnī (Amman, 2000), 5. Another one bears the title *Rūḥ wa-Rayḥān min Naʻīm al-Jinān: al-Mukhtaṣar al-Ṣaḥīḥ min Ḥādī al-Arwāḥ li-Ibn al-Qayyim,* ed. ʻAbd al-Ḥamīd Aḥmad al-Dukhānjī (Alexandria, 1990). A similarly shortened French version is also available, namely *Le paradis:le rapprochement des âmes dans le monde des merveilles=Hadi el arwah ila biladi el Afrah,* ed. Fdal Haja, trans. Hébri Bousserouel (Paris, 1996), 1.

Although he drew heavily on the Quran, he usually combined Quranic interpretation with other aspects throughout his writing. He seems to have been more dedicated to the demonstration of certain ideas or perspectives than to an abstract goal of general commentary. Given his penchant for long-windedness even on the most minute topics, an official *tafsīr* work would have exceeded all reasonable measures anyhow. Instead, we find him concentrating on the interpretation of certain passages of the Quran. In this sense he produced a limited number of sporadic, but clear-cut *tafsīr* units. His extensive use of Quran interpretation in the course of general writing on the holy sources could be called commentary in a secondary sense, but is as such difficult to specify. Of special importance in the overall understanding of Ibn al-Qayyim's *tafsīr* are his remarks on the very beginning and some final parts of the Quran: the very first chapter, namely "The Opening" Surah *(al-Fātiḥah),* and the likewise short chapters at its end, namely Surah 109, "The Unbelievers" *(al-Kāfirūn),* as well as Surahs 113, "The Twilight" (*al-Falaq*), and 114, "The People" *(al-Nās).* The modern book market offers in monographic form a *Tafsīr Sūrat al-Fātiḥah,* a *Tafsīr al-Mu'awwidhatayn,*[96] i.e., a commentary on the last two surahs, numbers 113 and 114, and a *Tafsīr Suwar al-Kāfirūn wa-al-Mu'awwidhatayn*.[97] A closer look at the first of these three books, *Tafsīr Sūrat al-Fātiḥah,* reveals that it has simply been taken from the first part of the compendium *Madārij al-Sālikīn*.[98] In his opening words Ibn al-Qayyim nevertheless describes the *fātiḥah* as the bearer of the most central names of God.[99] The editor concedes this fact only by quoting the relevant part of the *Madārij* in his very last footnote.[100] The second separately published commentary booklet, *Tafsīr al-Mu'awwidhatayn,* is also taken from one of the huge compendia, namely *Badā'i' al-Fawā'id*.[101] It draws attention to Ibn al-Qayyim's attachment to spiritual healing and white magic,[102] i.e., to counter-measures against evil by reference to specifically strong passages of the Quran, notably the last two surahs. The author himself announces:

> The aim is to discuss these two surahs and to show that they are

> tremendously useful, that people strongly benefit from, if not need them, that no one is able to dispense with them, that they both have a specific effect on the repulsion of sorcery *(siḥr),* the evil eye *(al-ʿayn),* and other evils *(shurūr),* and that man′s need to seek God′s protection *(istiʿādhah)* through these two surahs is more pressing than his need for breath, food, drink, and clothes.[103]

To further illustrate this, Ibn al-Qayyim follows up on some incomplete and less impassioned comments of his teacher Ibn Taymīyah. The tracts of both authors were also patched together for publication in Bombay.[104] The special interest in this issue in the Indian subcontinent is further indicated by the fact that an Urdu translation of Ibn al-Qayyim′s commentary on the *muʿawwidhatān* had already been prepared in 1927 in Lahore.[105]

On top of that, it was an Indian follower who initiated the most ambitious project and compiled a sort of all-encompassing *tafsīr* of Ibn al-Qayyim that was—to the disappointment of his admirers—not authentic. A graduate of Nadwat al-ʿUlamāʾ in Lucknow, Muḥammad Uways al-Nadwī, browsed through the works of Ibn al-Qayyim, sorting out their *tafsīr* sections in order to cut-and-paste them into a single compendium of 631 pages. As its title he chose ″The Precious Commentary″ (*Al-Tafsīr al-Qayyim),*[106] insinuating that these were the authentic words of the late medieval Hanbali scholar. Its editor in 1949, Muḥammad Ḥāmid al-Fiqī, however, leaves no doubt in his concluding remark that he had to do much more than just straighten out some slips in Uways′ concoction.[107] Successive projects to set up a mega-*tafsīr* were carried out in the 1990s. They undertook to eliminate the many remaining deficiencies and also to broaden the scope of writings reviewed. One of these hails all the works of Ibn al-Qayyim as being ″gardens full of fruit and rivers with fresh water,″[108] while another characterizes its task as

---

Muḥammad Ḥāmid al-Fiqī (Cairo, 1368/1949), ″with the support of the distinguished traders and Mecca-based Salafis ʿAbd Allāh and ʿUbayd Allāh Dihlawī.″ Al-Baqarī, *Ibn al-Qayyim min Āthārihi al-ʿIlmīyah,* 219, assures his readers that Ibn al-Qayyim did wish to write a *tafsīr* and dedicates a large section to its description and reconstruction, 219–80, 288.

[107]*Al-Tafsīr al-Qayyim lil-Imām Ibn al-Qayyim,* 631. For more criticism see Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 232.

[108]*Badāʾiʿ al-Tafsīr: al-Jāmiʿ li-Tafsīr al-Imām Ibn Qayyim al-Jawzīyah,* ed. Yusrī al-Sayyid

uncovering a ″hidden treasure″ *(kanz madfūn)*.[109] However, both authors of these reviews deserve credit for not listing Ibn al-Qayyim as the official author, as is often done, and indicating on the title page that they had put together *(jamaʻa)* the amalgamation contained therein themselves. Such an announcement is welcome these days. Devices to attract the customer by creating fancy titles recalling familiar works of an author are, nevertheless, widespread. In this case, the title of the newly created *Badāʼiʻ al-Tafsīr* seems to suggest the authentic *Badāʼiʻ al-Fawāʼid.*

This *Badāʼiʻ al-Fawāʼid* (Amazing benefits) is a voluminous work not easily categorized.[110] Al-Suyūṭī (d. 1505) describes it as having ″many benefits, the majority of which concern questions of grammar″ *(huwa kathīr al-fawāʼid aktharuhu masāʼil naḥwīyah)*.[111] Various other lessons derived from Quran and *sunnah* are also assembled in this work, which transcends genre categories. Wahbah al-Zuḥaylī, in his introduction to one edition, characterizes it as a unique combination of

> general principles in law and legal methodology, explication of the underlying reasons for the Holy Law *(asrār al-sharīʻah),* detailed description of eloquence, purity of expression, ease of style, clarity of purpose and intention, and power of persuasion by bringing forward manifold and comprehensive proofs, by subtlety and precision, renewal *(tajdīd)* and creative development *(ijtihād),* so that it belongs to the core of general books on the shariʻah.[112]

For the sake of convenience, we consider the ″Amazing Benefits″ here within the section on Quranic studies, also in order to distinguish it from other writings in this field—be they real or synthetic. *Badāʼiʻ al-Fawāʼid* should not be confused with *Al-Fawāʼid,* another authentic work by Ibn al-Qayyim that is presented in our section eight on moral psychology. Neither does it have anything to do with *Kitāb al-Fawāʼid al-Mushawwiq ilá ʻUlūm al-Qurʼān wa-ʻIlm al-Bayān*[113] (The

[112] *Badāʼiʻ al-Fawāʼid,* ed. Maʻrūf Muṣṭafá Zurayq et al. (Beirut, 1994), 1, introduction of Wahbah al-Zuḥaylī.

[113] *Al-Fawāʼid,* ed. Salīm ibn ʻUbayd al-Hilālī (Riyadh, 1422/2001), see the foreword by al-Hilālī, 18–19. For criticism regarding its ascription to Ibn al-Qayyim see Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 291–92.

Benefits which arouse interest in the sciences of the Quran and of eloquence). The latter is often ascribed to Ibn al-Qayyim and has appeared as such on the book market.[114] An Arabic edition from Pakistan warmly recommends it for didactic purposes in a direct address to prospective readers.[115] This, however, proved to be a wrong ascription, because its real author is the scholar Ibn al-Naqīb.[116] To set the record straight, a recent edition printed a warning under the subtitle on the front page which reads ″printed wrongly under the title *Al-Fawā'id al-Mushawwiq ilá 'Ulūm al-Qur'ān wa-'Ilm al-Bayān* of Ibn Qayyim al-Jawzīyah.″[117] Certain parts of the huge *Badā'i' al-Fawā'id,* as happened with several of Ibn al-Qayyim′s compendia, have been published separately.[118] Some such partial publications tend to be blended with other writings by Ibn al-Qayyim. In short, whether spurred on by pious engagement or the rules of the market, there is a huge number of creative compilers, extractors, condensers, and synthesizers who have a share in the current confusion about the scholar′s œuvre.[119]

To conclude this section on his studies immediately related to the Quran we must include a separate,[120] authentic tract by Ibn al-Qayyim, the monograph *Al-Tibyān fī Aqsām al-Qur'ān* (The Exposition on oaths in the Quran). It is ″a commentary on Quranic verses such as ′By the sun and its radiance.′″[121] It is described in one of the introductions as an absolutely unequaled and unique source on the topic.[122] The medieval scholar diligently identifies instances of oaths in the holy book, revealing their background and offering erudite musings. Especially the passage that ″Muhammad was the only prophet of God, from among numerous

others by whose life Allāh has sworn, so dearly beloved was he to him,″ is taken as another indicator of his privileged status.[123] Besides dogmatic insight, obtaining everyday spiritual benefits seems to be the overarching focus of Ibn al-Qayyim′s musings on the Quran. He is not interested in making predominantly technical contributions.

(5) HADITH

Although Ibn al-Qayyim drew upon the vast corpus of hadith as hardly anyone else, his immediate engagement in traditional hadith sciences appears to be quite meagre. He wrote an emendation *(tahdhīb)* on al-Mundhirī′s (d. 1258) abridgement *(mukhtaṣar)* of Abū Dāwūd al-Sijistānī′s *Sunan*. The latter is widely known as one of the canonized ″six books″ that contain the core corpus of early Islamic tradition *(sunnah)*. This *Tahdhīb Mukhtaṣar Sunan Abī Dāwūd* was composed by Ibn al-Qayyim during a stay in Mecca; it apparently took him about four months to complete it.[124] The work is also published alongside other *Sunan* revisions, which is the reason for some different titles on the book market.[125] His further contributions to the field of hadith sciences address from a different angle the range and limits of hadith as a source of knowledge. Ibn al-Qayyim studied reported traditions in their strongest and weakest forms, from the so-called ″holy hadith″ *(ḥadīth al-qudsī)* in which God himself is said to speak, to the weak *(ḍaʻīf)* hadith at the other end of the spectrum. In the slim tract *Al-Farq bayna al-Qur'ān al-Karīm wa-al-Ḥadīth al-Qudsī*[126] (The Difference between the noble Quran and the holy hadith), he analyzes their functional, hierarchical, and ritual differences. In *Al-Manār al-Munīf fī al-Ṣaḥīḥ wa-al-Ḍaʻīf* (The Tall lighthouse for correct and weak reports),[127] however, the focus is on spurious reports. There are variants of its title; it is, for instance, also called simply *Al-Manār* or *Naqd al-Manqūl wa-al-Miḥakk al-Mumayyiz bayna al-Mardūd wa-al-Maqbūl* (Criticism

[123]Haji Abdul Karim Germanus, ″Some Unknown Masterpieces of Arabic Literature,″ *Islamic Culture* 26 (1952): 98.

[124]Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 235.

[125]For instance, *Mukhtaṣar Sunan Abī Dāwūd lil-Ḥāfiẓ al-Mundhirī wa-Maʻālim al-Sunan li-Abī Sulaymān al-Khaṭṭābī wa-Tahdhīb al-Imām Ibn Qayyim al-Jawzīyah,* ed. Aḥmad Muḥammad Shākir and Muḥammad Ḥāmid al-Fiqī (Cairo, 1369/1950, repr. Beirut 1400/1980), or *ʻAwn al-Maʻbūd: Sharḥ Sunan Abī Dāwūd lil-ʻAllāmah al-ʻAẓīm Ābādī maʻa Sharḥ al-Ḥāfiẓ Ibn Qayyim al-Jawzīyah,* ed. ʻAbd al-Raḥmān Muḥammad ʻUthmān, 2nd ed. (Medina, 1377/1968).

[126]Ed. Nāyif ibn Qublān al-ʻUtaybī (Mecca, 1418/1997–98).

[127]*Al-Manār al-Munīf fī al-Ṣaḥīḥ wa-al-Ḍaʻīf*, ed. ʻAbd al-Fattāḥ Abū Ghuddah (Aleppo, 1970), or ed. ʻAbd al-Raḥmān ibn Yaḥyá al-Muʻallimī and Manṣūr ibn ʻAbd al-ʻAzīz al-Samārī (Riyadh, 1996).

of the transmitted and touchstone distinguishing the rejected and the acceptable).[128] According to the latter's editor, Ibn al-Qayyim "did not intend a thorough examination of the false hadith, but laid down the regulations and principles by which false hadith can be identified."[129] Such an analysis makes a great difference, since weak traditions, in contrast to spurious ones, are cherished inasmuch as Hanbali doctrine —based on its hierarchy of the law sources—accords them preference over rational arguments.

(6) LEGAL METHODOLOGY

I'lām al-Muwaqqi'īn 'an Rabb al-'Ālamīn (Instructing those in charge about the master of the two worlds) is a heavy-weight compendium on the principles of Islamic jurisprudence. It ranks among a distinguished group of about half a dozen *uṣūl al-fiqh* monographs that represent the best and most important pre-modern Islamic contributions to the field.[130] Within Hanbali writing, it surpasses works like Muwaffaq al-Dīn Ibn Qudāmah's[131] (d. 1233) *Rawḍat al-Nāẓir wa-Jannat al-Munāẓir* and Ibn 'Aqīl's (d. 1199) *Al-Wāḍiḥ fī Uṣūl al-Fiqh*. Modern manuals on Islamic legal methodology regularly refer their students to Ibn al-Qayyim's towering work—discussing its positions on a broad range of issues, such as the genesis of Islamic law, analogical reasoning, the reprehensibility of *taqlīd* and *ḥiyal,* or the fatwas of the Prophet and his companions.[132] An early expression of this esteem in modern times is the fact that the very first edition of *I'lām al-Muwaqqi'īn* was published in India.[133] The extent and depth of Ibn al-Qayyim's treatment of the means of legal development *(ijtihād)* is not surprising, since by his time "virtually all Muslims became semi-rationalists in jurisprudence."[134] This

[128]Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 302–4. However, the edition *Naqd al-Manqūl wa-al-Miḥakk al-Mumayyiz bayna al-Mardūd wa-al-Maqbūl: Wa-huwa al-Kitāb alladhī Ṭubi'a bi-Ism "Al-Manār al-Munīf fī al-Ṣaḥīḥ wa-al-Ḍa'īf,"* ed. Ḥasan al-Samāḥī Suwaydān (Beirut, 1990), is quite explicit in its subtitle.

[129]*Naqd al-Manqūl wa-al-Miḥakk al-Mumayyiz bayna al-Mardūd wa-al-Maqbūl,* 9.

[130]In this sense it could be compared to, for example, Sāṭibī's *Muwāfaqāt.*

[131]On Muwaffaq al-Dīn ibn Qudāmah see Henri Laoust, *La profession de foi d'Ibn Baṭṭa (Traditionniste et jurisconsulte musulman d'école hanbalite mort en Irak à 'Ukbarâ en 387/997)* (Damascus, 1958), cxxxiii–cxxxv.

[132]Birgit Krawietz, *Hierarchie der Rechtsquellen im tradierten sunnitischen Islam* (Berlin, 2002), 456.

[133]Published in three volumes by al-Maṭba'ah al-Niẓāmīyah, India, 1298 [1880/81]: Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 209, n. 3 and 4. According to Ahsan, "Ibn Qayyim al-Jawziyah," 246, it was brought out in two volumes in Delhi in 1313–14/1885–86 and there is an "Urdu translation entitled *Dīn-i-Muḥammadī.*"

[134]Christopher Melchert, "The Adversaries of Aḥmad Ibn Ḥanbal," *Arabica* 47 (1997): 253.

was particularly true for neo-Hanbali authors who propagated the dire need for *ijtihād*. His indebtedness to the trail-blazing thoughts of Ibn Taymīyah in particular is uncontested, although the latter himself never wrote a comprehensive work on *uṣūl al-fiqh*,[135] a format that did not suit his personality and approach. The core section of *I'lām al-Muwaqqi'īn* is to be found towards its very end. It consists of a broad collection of the Prophetic fatwas, i.e., Muḥammad's transmitted legal or doctrinal decisions, as requested by his followers, which were not directly fueled by divine inspiration *(waḥy)*.[136] Such a minute presentation of the Prophet's normative decisions referred to in *sunnah* and the Quran, although not surprising for Ibn al-Qayyim, is quite unusual in the framework of a book on the principles of legal methodology. This ambiguity can be clarified by a deeper look at the exact structure and apparent genesis of this work. The decisive clue is offered in its title, "Instructing Those in Charge about the Master of the Two Worlds."[137] While the second part, without any doubt, refers to God, the first part refers directly to the authorities, that is to say those who are entitled to sign (in Arabic: *waqqa'a*). Here Ibn al-Qayyim addresses legal scholars in their function as *muftī*s and *mujtahid*s, i.e., those who write down their answers to questions and who seek to develop a solution consistent with the holy sources and the legitimate methodological means derived from them. To outline this task, the Hanbali scholar takes early Islamic proto-*iftā'* as the starting point and eternal model. In his exploration of the various aspects of the correct behavior for the *muftī* and questioner *(mustaftī),* this work, initially devoted to the relationship between *muftī* and *mustaftī,*[138] grew into an encompassing compendium covering, in the end, a whole range of issues relating to *uṣūl al-fiqh*.[139] Specifically *adab al-muftī* problems are dealt with in the section preceding the Prophetic fatwas.[140] The comprehensive character of *I'lām al-Muwaqqi'īn* turned it into a convenient reservoir for all sorts of separate, often paperback publications that offer its subtopics piecemeal. Out of this "quarry" which, in its complete form, is published in several volumes, parts hitherto selected

for separate publication include those about *taqlīd,*[141] *qiyās,*[142] the authority of fatwas of the companions of the Prophet,[143] and, of course, Muḥammad′s fatwas themselves.[144] The latter became especially popular in the modern era when the qadi was gradually supplanted by the *muftī* as the most central figure of Islamic legal thinking.[145] In general, the decades-delayed exploration in Western languages of the Hanbali school of law has also gained impetus lately with regard to Ibn al-Qayyim′s conception of the principles of Islamic jurisprudence.[146]

(7) PRACTICAL JURISPRUDENCE

In spite of the fact that he is frequently referred to as ″the legal scholar″ *(al-faqīh)* and in spite of his above-mentioned leading role in the field of *uṣūl al-fiqh,* Ibn al-Qayyim did not write a comprehensive *furūʿ al-fiqh* manual, nor did he comment upon one. Instead, a number of legal writings on more specific topics are attributed to him. To start with, it would be excessive to claim that, in these monographs on practical jurisprudence, he was primarily concerned with penal law.[147] Nevertheless, he is the author of some larger tracts on Islamic jurisprudence that are, though not exclusively, also important from the standpoint of criminal law, namely *Aḥkām Ahl al-Dhimmah, Al-Ṣalāh wa-Ḥukm Tārikihā, Al-Ṭuruq al-Ḥukmīyah fī al-Siyāsah al-Sharʿīyah,* and *Kashf al-Ghiṭāʾ ʿan Ḥukm al-Samāʿ wa-al-Ghināʾ*. All four of these works were written in response to fatwa requests. Since they are *responsa*

[144]*Fatāwá Rasūl Allāh*, ed. Sulaymān Salīm al-Bawwāb (Damascus, 1404/1984).

[145]Krawietz, ″Der Prophet Muḥammad als Muftī und Muǧtahid,″ 55.

[146]Cf., for instance, Satoe Horii, *Die gesetzlichen Umgehungen im islamischen Recht (ḥiyal): Unter besonderer Berücksichtigung der Ǧannat al-aḥkām wa-ǧunnat al-ḫuṣṣām des Ḥanafīten Saʿīd b. ʿAlī as-Samarqandī (gest. 12. Jhdt.)* (Berlin, 2001), 53–66 and passim.

[147]A study such as Bakr Ibn ʿAbd Allāh Abū Zayd, *Aḥkām al-Jināyah ʿalá al-Nafs wa-mā Dūnahā ʿinda Ibn Qayyim al-Jawzīyah* (Beirut, 1416/1996), might convey the wrong impression that penal law is one of Ibn al-Qayyim′s central areas of interest. In fact, his relevant utterances had to be assembled from a variety of his writings, 12, but had attracted Abū Zayd′s attention because of their insistence on the inherent wisdom of Islamic legislation *(tashrīʿ)* as against claims of ″the orientalists″ directed against the allegedly savage character of Islamic penal law, 13. Abū Zayd offers a comparative perspective on the various law schools using them as a frame for selected remarks taken from Ibn al-Qayyim.

and, as such, originally often did not bear an official title, the usual confusion about Ibn al-Qayyim's book titles here allows for an even greater range of different versions. The monographs mentioned here are widely read and discussed—well beyond the more limited realm of specifically Hanbali jurisprudence.

Outstanding are his *Aḥkām Ahl al-Dhimmah* (Regulations for the people of the covenant), i.e., Jews and Christians, with whom he was concerned not only in the sphere of theology. This *furūʿ al-fiqh* work is usually published in two volumes.[148] It is one of the most prominent works of Ibn al-Qayyim in general and the most important of his writings in practical jurisprudence in particular. In fact, it has to be regarded as the main late medieval reference concerning the status of minorities in Islamic law. No wonder that—once again—the well-known Salafi scholar Ṣubḥī al-Ṣāliḥ prepared the pioneering edition.[149] Of special importance is the long introduction by al-Ṣāliḥ himself[150] and an introduction to Muslim international law *(muqaddimah fī ʿilm al-siyar)* by Muḥammad Ḥamīd Allāh.[151] The editor praises this book as

> surpassing all earlier works in regard to diligence, depth, and comprehensiveness, and it was the first complete compilation on its topic *(imtāza ʿan kull mā sabaqahu bi-al-diqqah wa-al-ʿumq wa-al-shumūl, fa-kāna awwal kitāb jāmiʿ fī bābihi).*[152]

The point of departure was a fatwa request on the poll-tax *(jizyah)* and its imposition on more or less wealthy *dhimmī*s.[153] The very last part of the *Aḥkām* on the "conditions of ʿUmar," i.e., of the (fictitious) pact between ʿUmar and the Christians of Syria, has attracted specific attention. The editor of the famous 1961 version of the *Aḥkām* also edited and commented upon them separately that same year. He even recommends this detached part as an instructive and concise account of regulations for *dhimmī*s.[154] He characterizes it as an appendix on the one hand, but also as a separable and independent entity on the other. In due course, al-Ṣāliḥ

148Cf. ed. Ṭāhā ʿAbd al-Raʾūf Saʿd (Beirut:, 1995), or ed. Yūsuf ibn Aḥmad al-Bakrī and Shākir ibn Tawfīq al-ʿĀrūrī (al-Dammām, Saudi Arabia, 1997).

149*Aḥkām Ahl al-Dhimmah,* ed. Ṣubḥī al-Ṣāliḥ (Damascus, 1961).

150Ibid., 1:1–46, and a description of the originally sole copy of the manuscript in Madras, India, on 47–66, followed by a presentation of Ibn al-Qayyim on 67–73.

151Ibid., 74–95. On *siyar* regulations see Hilmar Krüger, *Fetwa und Siyar* (Wiesbaden, 1968), 31–37.

152*Aḥkām Ahl al-Dhimmah,* ed. al-Ṣāliḥ, 1:6.

153Ibid., 7.

154*Sharḥ al-Shurūṭ al-ʿUmarīyah: Mujarrad min Kitāb Aḥkām Ahl al-Dhimmah,* ed. Ṣubḥī al-Ṣāliḥ (Damascus, 1961), introduction, 5–6; likewise *Aḥkām Ahl al-Dhimmah,* ed. al-Ṣāliḥ, 1:14–15.

qualifies this last quarter of the text as its real ″center of gravity″ *(markaz al-thaqal),*[155] which is a frequent feature in Ibn al-Qayyim′s writings.[156]

The much smaller *Kitāb al-Ṣalāh wa-Ḥukm Tārikihā* (Book on the ritual prayer and those who neglect it) was edited in 1376/1956 by the important Salafi scholar Quṣayy Muḥibb al-Dīn al-Khaṭīb.[157] Since this legal tract is not very long and is well established as a topic of specific Hanbali (and later also Wahhabi) concern, some editions patch it together with other statements from this school, especially those of its alleged founding father Aḥmad ibn Ḥanbal.[158] This work of Ibn al-Qayyim is a compound fatwa answering ten questions, all related to the problem of neglecting the duty of prayer. The basic question is whether such a disregard for one′s religious duties has to be treated as unbelief *(kufr)* or not. The scholar′s harsh reaction to skipping this duty is relevant because it offers an opportunity for sanctions in public space. It is worth mentioning that this time Ibn Taymīyah does not take the lead. Instead, it is Ibn al-Qayyim and it seems a relevant tract of Ibn Taymīyah has been unearthed and published separately only against the background of Ibn al-Qayyim′s writing.[159] It has been drawn *(istikhrāj)* from his *Majmūʿ al-Fatāwá*[160] and was obviously only recently printed separately for the first time as an ″independent epistle″ *(risālah mustaqillah)*.[161] The latter was put together with a lengthy introduction, various indices, and extensive footnotes in the epistle itself, that is to say, it had to be substantially edited to publish it along the lines of Ibn al-Qayyim′s monograph.[162]

Al-Ṭuruq al-Ḥukmīyah fī al-Siyāsah al-Sharʿīyah (Legal ways of shariʿah-conforming governance) not only addresses legal issues, such as the judiciary, but also aspects of economics, politics, and administration.[163] It is presented as ″a

treatise of public law built around a theory of proof."[164] It relies heavily on Ibn Taymīyah's *Al-Ḥisbah fī al-Islām* as well as on *Kitāb al-Siyāsah al-Shar'īyah fī Iṣlāh al-Rā'ī wa-al-Ra'īyah,*[165] but has received less attention in Western secondary literature. Also in its economic aspects, Ibn al-Qayyim very much followed the ideas of his master.[166] On the level of political jurisprudence, however, the monograph has to be viewed in comparison with a series of other works, such as Abū al-Ḥasan al-Māwardī's (d. 1058) famous *Al-Aḥkām al-Sulṭānīyah*. Masud pointed out that in its political fine-tuning, Ibn al-Qayyim's understanding of *siyāsah shar'īyah* possesses a flavor distinct from Ibn Taymīyah's harsh stance.[167]

With *Kashf al-Ghiṭā' 'an Ḥukm Samā' al-Ghinā'*[168] (Lifting the veil: judgement on listening to singing) a chord is struck that is again strongly reminiscent of Ibn Taymīyah and his criticism that Sufi practices lack respect for the demands of the shari'ah.[169] Although the topic of music is dealt with in other writings of Ibn al-Qayyim as well, such as *Madārij al-Sālikīn* and *Ighāthat al-Lahfān,* this monograph is the special product of a fatwa request that was answered by eight late medieval legal scholars; Ibn al-Qayyim was the one who provided the longest and most detailed answer by far.[170]

In his surviving legal responses, Ibn al-Qayyim often confronted problems of public space. While his famous longer fatwas acquired the format of full-fledged monographs, as has been demonstrated, it has to be assumed that many of his shorter ones did not survive the test of time. Some of these, however, are in wider circulation because they caused a great stir and prompted refutations, such as his counseling on repudiation *(ṭalāq)* or the visitation of graves *(ziyārat al-qubūr),* along the lines of his stubborn master Ibn Taymīyah.[171] Taylor even speaks of the

[171] Ibn Qayyim al-Jawzīyah, *Mashrū'īyat Ziyārat al-Qubūr,* ed. 'Izzat al-'Aṭṭār al-Ḥusaynī (Cairo, 1375/1955). The editor remarks that Ibn al-Qayyim "was so overwhelmed with love for his master

″inflammatory, revisionist, and radically anti-ziyāra rhetoric of Ibn Taymiyya and Ibn Qayyim al-Jawziyya.″[172] The publication of later refutations may also unearth some of this material. It is further likely that Ibn al-Qayyim incorporated several smaller *responsa* into his other writings, especially the ethical compendia, with their broad range of topics. Those shall be presented in the next section. At present, however, it is not possible to give a more comprehensive list of his legal publications—a problem that is closely related to the much-needed chronology of his works.

(8) MORAL THEOLOGY

Ibn al-Qayyim is depicted as belonging to ″the scholars of the hearts″ *(ʿulamāʾ al-qulūb)*[173] and his pathology in the Sufi tradition has already been described by Schallenbergh.[174] His concern for a ″treatment of the heart″ *(ṭibb al-qulūb)* stems from profoundly mystical influences on moral theology and a deeper understanding of the shariʿah. As opposed to mere lip–service and letter-of-the-law-obedience, this powerful trend directly addresses the conscience of the believer, calls for his internalization of norms, and encourages an enhanced awareness of their necessary application by the responsible individual. The latter, in his daily life—and not merely as a matter of pious seclusion—has to equip himself with sufficient knowledge and insight to monitor his spiritual development and outward behavior within the legal framework of the shariʿah. In this sense, Ibn al-Qayyim can indeed be called a ″Sufi-Hanbalite.″[175] It is primarily for this type of deep pious concern that Ibn al-Qayyim is nowadays mostly appreciated far beyond the Hanbali inner circles of the Near East. In this field he produced the greatest bulk of his writings, namely *Madārij al-Sālikīn, Ṭarīq al-Hijratayn, Al-Dāʾ wa-al-Dawāʾ,* and *Ighāthat al-Lahfān.*[176] Under his writings on Sufism are further listed *Rawḍat*

Ibn Taymīyah that he did not transgress any of his dicta,″ 5, an allegation that should, however, be more critically tested.

[172]Christopher S. Taylor, *In the Vicinity of the Righteous:* Ziyāra *and the Veneration of Muslim Saints in Late Medieval Egypt* (Leiden, 1999), 211. For Ibn al-Qayyim′s attitude towards *ziyārah,* see Josef W. Meri, *The Cult of Saints among Muslims and Jews in Medieval Syria* (Oxford and New York, 2002), 34–135 and passim.

al-Muḥibbīn, ʻUddat al-Ṣābirīn, and *Al-Fawāʼid.*[177] The contents of these works shall be roughly presented and characterized here to allow for some closer analysis of Ibn al-Qayyim as an author of religious ethics.

Madārij al-Sālikīn bayna Manāzil "Iyyāka Naʻbudu wa-Iyyāka Nastaʻīn" (Stages of the travelers between "Thee alone we worship and in thee alone do we seek help)[178] is a voluminous commentary on the Sufi manual *Manāzil as-Sāʼirīn* (Way stations of the wayfarers)[179] of the Herati mystic and Hanbali preacher Abū Ismāʻīl ʻAbd Allāh al-Anṣārī al-Harawī (d. 1089).[180] The latter has often been commented upon,[181] but Ibn al-Qayyim, with his diligent approach and special concentration on the issue of repentance *(tawbah)* at the beginning of the work, has probably produced the most popular and widespread Anṣārī commentary in circulation today. It is no wonder that various short versions are also available.[182] In addition to that, the section on *tawbah* has been singled out and printed separately.[183] *Madārij al-Sālikīn* is widely regarded as Ibn al-Qayyim's finest piece on theological psychology and an eminent example of Hanbali Sufism.

Ibn al-Qayyim's book titles could be a topic in their own right. *Al-Dāʼ wa-al-Dawāʼ* (The Malady and the remedy), for instance, is likewise known and published under *Al-Jawāb al-Kāfī li-Man Saʼala ʻan al-Dawāʼ al-Shāfī* (Sufficient answers on medication).[184] The medicinal metaphor is reminiscent of his already-mentioned theological treatise *Shifāʼ al-ʻAlīl*. It starts out with remarks on the blessings of invocation *(duʻāʼ)* and remembrance of God *(dhikr),* provides information on sins

---

177 Çelik, "İbn Kayyim el-Cevziyye ve Maʻāni el-Edevāt ve'l-Hurūf adlı eseri," 152.

178 Notice should be taken of an important early edition, namely *Madārij al-Sālikīn bayna Manāzil "Iyyāka Naʻbudu wa-Iyyāka Nastaʻīn,"* since it was "printed with the support of a group of excellent Arabs in Kuwait, India, and Egypt," ed. Muḥammad Rashīd Riḍá (Cairo, 1333/1915). Ahsan, "Ibn Qayyim al-Jawziyah," 246, informs us that vol. 1 was already printed in 1331/1912.

179 For information on this work and its commentators see Anṣārī al-Harawī, *Chemin de Dieu: Trois traités spirituels,* trans. and ed. Serge de Laugier de Beaurecueil, 45–77.

180 For his place within Hanbalism see A. G. Ravan Farhadi, *Abdullah Ansari of Herat: An Early Sufi Master* (Richmond, UK, 1996), 14.

181 For example, *Manāzil al-Sāʼirīn ilá al-Ḥaqq al-Mubīn li-Abī Ismāʻīl al-Harawī: Sharḥ ʻAfīf al-Dīn Sulaymān Ibn ʻAlī al-Tilimsānī (d. 1291),* ed. ʻAbd al-Ḥāfiẓ Manṣūr (Tunis, 1989).

183 Ibn Qayyim al-Jawzīyah, *Kitāb al-Tawbah,* ed. Ṣābir al-Baṭāwī (Cairo, 1990).

184 Schallenbergh, "The Diseases of the Heart," 422. Another translation is given by Germanus, "Some Unknown Masterpieces of Arabic Literature," 97: "The answer given to him who asked for a curing medicine." There are several editions under each of the two titles. Some editions alternatively offer both titles, such as *Al-Dāʼ wa-al-Dawāʼ aw al-Jawāb al-Kāfī li-man Saʼala ʻan al-Dawāʼ al-Shāfī,* ed. Muḥammad Jumayyil Ghāzī (Cairo, 1978). Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 233–45, found no reference to it by the author himself.

(al-ma'āṣī), distinguishing for instance healthy love *(ḥubb)* from excessive passion *('ishq).* The compendium is also quite specific on certain aberrations such as polytheism and homosexuality.

Ighāthat al-Lahfān min Maṣāyid al-Shayṭān is composed—as the title reveals—for "Rescuing the Distressed from Satan's Snares." Perlmann[185] has already narrated a sort of rough outline based on the critical edition of al-Fiqī.[186] Schallenbergh renders it as "Assistance for Those Who Seek Refuge From Satan's Entrapments."[187] The voluminous work provides interesting reading material insofar as it not only deals with regulations for mastering the straight path to God, but also focuses on sins in all their richness and variety. Two issues in particular dealt with in this monograph were singled out for publication as a separate booklet. The first one is "devilish delusion" *(al-waswās al-khannās* or *waswasah).*[188] In this context, the literary impact of both Ibn al-Jawzī's (d. 1200) famous *Talbīs Iblīs,*[189] and of Muwaffaq al-Dīn Ibn Qudāmah (d. 1223)[190] still needs to be investigated.[191] The second topic of special interest as expressed in various editions is the contested question of triple divorce (*ṭalāq al-ghaḍbān,* "divorce of the angry"), i.e., to effect a divorce by pronouncing *ṭalaq* three times in immediate succession. This procedure was contested by neo-Hanbali legal scholars—notably in a famous fatwa of Ibn Taymīyah.[192] Ibn al-Qayyim backed his position with the consequence of

[185]Perlmann, "Ibn Qayyim and the Devil," 330–37.

[186]Ed. Muḥammad Ḥāmid al-Fiqī (Cairo, 1939). Among the various editions available there is again the name Muḥammad Jamāl al-Dīn al-Qāsimī (Cairo, ca. 1969).

[187]Schallenbergh, "The Diseases of the Heart," 422.

[188]Printed separately as *Al-Waswās al-Khannās* (Cairo, 1984), or as *Subul al-Khalāṣ min al-Waswās al-Khannās,* ed. Nūr Sa'īd (Beirut, 1992).

[189]For instance 'Abd al-Raḥmān Ibn al-Jawzī, *Talbīs Iblīs,* ed. Ayman Ṣāliḥ (Cairo, 1422/2001). Cf. the translation by D. S. Margoliouth, "*The Devil's Delusion* by Ibn al-Jauzī," *Islamic Culture* 9–12, 19–22 (1935–38, 1945–48).

[190]Muwaffaq al-Dīn Ibn Qudāmah, *Risālat Dhamm al-Waswasah,* ed. Aḥmad 'Adnān Ṣāliḥ (Baghdad, n.d.).

[191]This is all the more necessary since there is a booklet claiming to be Ibn al-Qayyim's adaptation of the Ibn Qudāmah version, namely Ibn Qayyim al-Jawzīyah, *Makā'id al-Shayāṭīn fī al-Waswasah wa-Dhamm al-Muwaswisīn: Sharḥ Kitāb Dhamm al-Muwaswisīn wa-al-Taḥzīr min al-Waswasah lil-Imām al-Faqīh Muwaffaq al-Dīn Ibn Qudāmah al-Maqdisī al-Ḥanbalī* (Cairo, 1401/1981), or the Beirut, 1402/1986, edition.

[192]Yossef Rapoport, "Ibn Taymiyya on Divorce Oaths," in *The Mamluks in Egyptian and Syrian Politics and Society,* ed. Michael Winter and Amalia Levanoni (Leiden and Boston, 2004), 191–217; Henri Laoust, "Une *risāla* d'Ibn Taimīya sur le serment de répudation," *Bulletin d'Etudes Orientales* 7–8 (1937–38): 215–36.

imprisonment, as previously mentioned.[193] *Ighāthat al-Lahfān* is not only a very popular treatise on theological psychology concerning all sorts of pitfalls in life (including lengthy remarks on doctrinal errors of Christians and Jews) with a presentation of remedies, such as formally seeking God's protection *(isti'ādhah),* but is also relevant for legal doctrine. It deals with challenges for the believer in the context of ritual purity, prayer, visitation of graves,[194] dance, music, singing, polytheism, adultery, and homosexuality. In addition, it contains various reflections on the character of legal tricks *(ḥiyal)* and unorthodox innovations *(bida').*

In *'Uddat al-Ṣābirīn wa-Dhakhīrat al-Shākirīn* (Implements for the patient and provisions for the grateful) Ibn al-Qayyim pursues the Sufi topics of patience and gratitude, which are seen as the two halves of faith. He thereby presents "a complete pedagogic encyclopedia,"[195] i.e., he "combines *ṣabr* with all aspects of life."[196] This book is tremendously popular. Its essence also reappears in other writings attributed to Ibn al-Qayyim.[197] There is a shortened version in English that assures its readers in the translator's afterword that, despite "a constant struggle to reassert our Islam in the face of overwhelming pressure from Western media and technology," the Islamic heritage still has "a great deal to say about the human condition."[198] Nowadays, even economists claim Ibn al-Qayyim's assistance, since in the course of this book he also explores the concepts of poverty *(faqr)* and wealth *(ghiná),* but without proposing strict asceticism:

> Against the background of widespread influence of Sufism which promotes self-denial and pauperism, Ibn al Qayyim has tried to

[193]Ibn al-Qayyim, *Ighāthat al-Lahfān fī Ḥukm Ṭalāq al-Ghaḍbān* was printed separately in 1327/1909–10 and edited by the Salafi scholar Jamāl al-Dīn al-Qāsimī in the Egyptian Maṭba'at al-Manār. *Ighāthat al-Lahfān min Maṣā'id al-Shayṭān,* ed. Muḥammad Sayyid Kīlānī, 7, refers to an even earlier edition (Cairo, 1320/1902–3)—just to mention such early efforts. Some authors refer to it as *Al-Ighāthah al-Ṣughrá,* Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 220.

[194]Cf. the extract version *Ziyārat al-Qubūr al-Shar'īyah wa-al-Shirkīyah* by Muḥyī al-Dīn al-Birkawī, Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 219.

[195]*'Uddat al-Ṣābirīn,* ed. Abū Usāmah Salīm Ibn 'Īd al-Hilālī (Jeddah and Riyadh, 1420/1999), with criticism of previous editions, 5–8.

[196]*'Uddat al-Ṣābirīn,* ed. 'Iṣām Fāris al-Ḥarastānī (Beirut, 1998), 2.

[197]For example the booklet *Maṭāli' al-Sa'd bi-Kashf Mawā'iq al-Ḥamd,* ed. Fahd ibn 'Abd al-'Azīz ibn al-'Askar (Riyadh, 1993), 13–15, which claims to be a fatwa of Ibn al-Qayyim on the issue of praise *(ḥamd)* for God.

[198]*Patience and Gratitude: An Abridged Translation of* 'Uddat as-Sabirin wa-Dhakhirat ash-Shakirin, trans. Nasiruddin al-Khattab, ed. 'Abdassamad Clarke (London, 1997), 71.

bring out the balanced teachings of Islam with regard to poverty and riches.[199]

It may seem strange that two of the most notorious literalists could produce such outstanding works on love, namely Ibn al-Qayyim′s *Rawḍat al-Muḥibbīn wa-Nuzhat al-Mushtāqīn* (The Garden of lovers and the pleasance of yearning souls) and Ibn Ḥazm (d. 1064) with his *Ṭawq al-Ḥamāmah* (The Ring of the dove). This paradox is also reflected in an article which—despite its obscure title—conveniently presents and summarizes in English the chapter contents of the *Rawḍah,* which all deal with the ″psychology and metaphysics″ of earthly love as created by God.[200] Hence, there is no need to reproduce them here. It should only be added that this work—more than most other writings by Ibn al-Qayyim—quotes a good deal of poetry.[201] Besides short versions of the *Rawḍah,*[202] parts of this monograph have been edited separately—especially chapter 29 on illegitimate desire *(hawá)*.[203] One editor cites many readers′ ignorance of the exact contents of the great compendia *(al-muṣannafāt al-kabīrah)* as the very reason for publishing parts of them as separate tracts. The chapter on *hawá* is the very last one of the book.[204] Frequently Ibn al-Qayyim provides essential information near the end of his books.[205] This very chapter of the *Rawḍah* has also been translated into English.[206] Another method to exploit the wealth of this or other writings of

---

199 Islahi, *Economic Thought of Ibn al Qayyim,* 6.

200 Germanus, ″Some Unknown Masterpieces of Arabic Literature,″ 92. The standard account of Ibn al-Qayyim′s writings on love is J. N. Bell, *Love Theory in Later Hanbalite Islam* (Albany, 1979), 92–181.

201 See *Rawḍat al-Muḥibbīn wa-Nuzhat al-Mushtāqīn*, ed. Muḥyī al-Dīn Dīb Mastū (?) (Beirut and Damascus, 1997), or any of the manifold editions.

202 For example *Al-Ḥubb fī al-Islām: Mukhtaṣar Rawḍat al-Muḥibbīn wa-Nuzhat al-Mushtāqīn,* ed. Ṣāliḥ ibn ʻUthmān al-Laḥḥām (Amman, 1994).

203 Ibn al-Qayyim, *Dhamm al-Hawá wa-Ittibāʻihi,* ed. ʻAlī Ḥasan ʻAlī ʻAbd al-Ḥamīd (Amman, 1988). It would have to be analyzed against the background of previous writings, such as Ibn al-Jawzī′s (d. 1200) ″Censure of Passion″ *(Dhamm al-Hawá);* Bell, *Love Theory in Later Hanbalite Islam,* 11–45, 99–100, and Stefan Leder, *Ibn al-Ǧauzi und seine Kompilation wider die Leidenschaft: der Traditionalist in gelehrter Überlieferung und originärer Lehre* (Beirut, 1984). Another example is the chapter on glances and gazing that was separately published as *Aḥkām al-Naẓar,* ed. Aḥmad ʻUbayd (Damascus, 1348/1929–30), but this at least admits already on the title page to being a ″section isolated from″ *(nubdhah mujarradah)* the *Rawḍah*. On *naẓar* cf. Bell, *Love Theory in Later Hanbalite Islam,* 125–47.

204 *Dhamm al-Hawá wa-Ittibāʻihi,* 4.

205 Cf. the fatwas of the Prophet Muḥammad in Ibn Qayyim al-Jawzīyah, *Iʻlām al-Muwaqqiʻīn ʻan Rabb al-ʻĀlamīn,* ed. Muḥammad ʻAbd al-Salām al-Zuʻbī (Beirut, 1418/1997), 2:486–612.

206 *From the Treasures of Ibnul Qayyim: A Chapter on The Dispraise of al-Hawaa (Desire):*

Ibn al-Qayyim is to assemble information on a certain topic from his various books—in this case, for instance, on the love for God—and to present it in a newly arranged shape while still naming the late medieval scholar as author of the new booklet, thus contributing even more to the widespread confusion about his œuvre.[207]

One might also expect to find under the topic of love Ibn al-Qayyim's "Reports on Women," *Akhbār al-Nisā'*, that is often attributed to him.[208] Häemen-Anttila[209] perceives this work as an "*adab*-monograph," so that it would not fit into our category of Sufi moral theology,[210] but he deliberately leaves the question of its authorship aside. For reasons that space does not permit us to present here, this work cannot be regarded as a product of Ibn al-Qayyim.[211] As a matter of irony, though, this is one of the very few works of Ibn al-Qayyim which has been translated into a Western language by a non-Muslim scholar of Islamic sciences.[212]

In *Miftāḥ Dār al-Sa'ādah wa-Manshūr Wilāyat al-'Ilm wa-al-Irādah* (The Key to the abode of happiness and proclamation to generate knowledge and will power) Ibn al-Qayyim, who is labeled "the very learned encyclopedic" *(al-'allāmah al-mawsū'ī),* takes his readers once again on a journey of self-realization.[213] He guides them through the panoramic landscapes of his religious-spiritual outlook and worldview. God has arranged everything in the best of all manners. Man is

Appended with Warning the Muslims Against Deviant Creeds and Methodologies (Including those of Nuh Ha Mim Keller), prepared by Saleh As-Saleh (Buraidah, Saudi Arabia, 1418/1998).

207Ibn Qayyim al-Jawzīyah, *Maḥabbat Allāh 'Azza wa-Jalla,* ed. Yūsuf 'Alī Budaywī (Damascus and Beirut, 1421/2000), 15, where he mentions an earlier work of his from the same fabrication, namely *Asmā' Allāh al-Ḥusná* as attributed to Ibn al-Qayyim, ed. Yūsuf 'Alī Budaywī and Ayman 'Abd al-Razzāq al-Shawwā (Damascus and Beirut, 1418/1997), and threatens to be already preparing another one.

208For instance Ibn Qayyim al-Jawzīyah, *Akhbār al-Nisā'* (Beirut, 1979).

209Jaakko Hämeen-Anttila, "Some Notes on Women in Classical Arabic Literary Tradition," in *Proceedings of the 14th Congress of the Union Européenne des Arabisants et Islamisants,* ed. A. Fodor, part 2, Budapest, 29 August–3 September 1988, published in *The Arabist Budapest Studies in Arabic* 15–16 (1995): 133.

210For Çelik, "İbn Kayyim el-Cevziyye," 153, *Akhbār al-Nisā'* belongs to the genre of history. Others mention it under the rubric "history and social life" *(al-tārīkh wa-al-ijtimā'), Ḥādī al-Arwāḥ ilá Bilād al-Afrāḥ,* ed 'Ādil 'Abd al-Mun'im Abū al-'Abbās (Cairo, 1988), 6.

211Cf. Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 202–8.

212Although the German orientalist Bellmann in [Pseudo-] Ibn al-Qayyim, *Über die Frauen: Liebeshistorien und Liebeserfahrung aus dem arabischen Mittelalter,* ed. Dieter Bellmann (Munich, 1986), admits the dubiousness of its attribution, he does not refrain from smug remarks: 449, 463–65.

213*Miftāḥ Dār al-Sa'ādah wa-Manshūr Wilāyat al-'Ilm wa-al-Irādah*, 1:5. Leaving aside other recent editions, there remain to be mentioned an early one from Cairo in 1323–25/1905–7 and an

created with a natural inclination toward paradise and a quest for the religious knowledge *(ʿilm)* necessary to get there. Against this background, it is up to every Muslim to consciously remedy the deficiencies of his soul *(amrāḍ al-qalb)*. In a somewhat patchwork-like manner, Ibn al-Qayyim also includes musings on phenomena of the physical and animated world, detecting all sorts of hidden wisdoms behind them, and underlines the necessity of the shariʿah while castigating astrology *(ʿilm al-nujūm)* and other pseudo-sciences.[214]

Ṭarīq al-Hijratayn wa-Bāb al-Saʿādatayn (Path of the two migrations and gate to the two happinesses) is even more varied. The Syrian legal scholar al-Zuḥaylī identifies four central topics as this book's core issues: first, "the treasures of faith and their meanings," i.e., the basic tenets of faith, including ones disputed by other groups, who have a different approach to good and evil; second, "exposition of the ways of moderate Sufism *(al-taṣawwuf al-muʿtadil)* in accordance with Quran and *sunnah;*" third, reflections on good and evil; and fourth, a clarification of terms.[215] Again, we find Muḥibb al-Dīn al-Khaṭīb as one of the early editors of this work.[216] The title of the book is understood as referring to the migration to God by complying with his will, and to his prophet Muḥammad by following the Prophet's normative example.[217] With its reference to the abode of happiness and allusion to the metaphor of door and key, the title recalls the above-mentioned *Miftāḥ Dār al-Saʿādah.*

Ibn al-Qayyim's *Al-Fawāʾid* (The Benefits) is the most patchwork-like of the writings in this section—if not in his entire œuvre. Its very general title refers the reader to Quran, *sunnah,* and early Islamic testimonies which provide him with a broad range of information. It fits less neatly than the above-mentioned monographs under the rubric of moral theology, since it contains elements of virtually every aspect of the author's broad literary production. One editor says that this book is equally relevant for hadith scholars, Quran interpreters, grammarians, rhetoricians, Sufis, theologians, experts of practical jurisprudence and of its methodology, or

poets, and that it attracts beginners as well as teachers.[218] Under a newly created title *Fawā'id al-Fawā'id* (Benefits of the benefits) an adept has reshaped and rearranged the contents of the authentic *Al-Fawā'id,* presented according to the useful lessons of the various religious branches. As this editor informs us, in the original presentation ″it is difficult to pick the fruit from the tree of its benefits.″[219] Uncertainty about the identity of *Al-Fawā'id* does not stop here. On the one hand, it should not be confused with *Badā'i' al-Fawā'id,*[220] although this does not mean that the two exhibit no overlap in content. On the other hand, there is also no connection between Ibn al-Qayyim′s *Al-Fawā'id* and the wrongly attributed *Al-Fawā'id al-Mushawwiq ilá 'Ulūm al-Qur'ān wa-'Ilm al-Bayān,* also mentioned in section four.

On balance, while perusing Ibn al-Qayyim′s writings on moral theology, the reader is struck by the repetition of familiar sub-topics. On the one hand, one recognizes specific emphases or angles of an explorative scientific character that call for a complete assembly of the relevant holy sources. Whereas *Madārij al-Sālikīn* takes the form of a commentary on the spiritual journey of the Sufi, and most dearly recommends repentance *(tawbah), Ighāthat al-Lahfān* concentrates on the diverse aspects of sin and its manifold pitfalls in the cosmos of human life. At least two works explore specific Sufi attitudes or, originally, stations of the mystic path, such as love in *Rawḍat al-Muḥibbīn,* or patience in *'Uddat al-Ṣābirīn*. On the other hand, the majority of their respective elements reappear in multiple combinations and modified variations. More or less general religious outlooks organizing one′s smooth transit from this world to the next are found in *Ṭarīq al-Hijratayn, Al-Dā' wa-al-Dawā'*, and *Miftāḥ Dār al-Sa'ādah*. They, as well as *Al-Fawā'id*, do not even seem to need a specific marker. Their repeated composition seems to bear some sort of ritualistic character, so that one might even think of writing as a devout practice. Many readers perceive this similarly. One editor confesses in his preliminary remarks:

> It became evident to me by hearing, witnessing, and personal experience that the books of Ibn al-Qayyim in general and this book [i.e., *Al-Fawā'id*] and the like in particular soothe the spirit while reading them, open the breast while studying them, and while reciting them delight the heart that turns to God in joy and longing.

---

[218]*Al-Fawā'id,* ed. Abū Khālid al-Ḥusayn Ayt Sa'īd (Beirut, 1993), 7–8.

[219]Ibn Qayyim al-Jawzīyah, *Fawā'id al-Fawā'id: Murattabah Mubawwabah,* ed. 'Alī Ibn Ḥasan al-Ḥalabī al-Atharī (Riyadh [and others], 1417/1996), 6.

[220]*Al-Fawā'id* (Miṣr, 1344/1925–26), 2. *Badā'i' al-Fawā'id* is dealt with above in the fourth rubric on Quranic sciences.

> So if the reader is in a state of distress God dispels it with the blessing of sincere devotion" *(adhhabahu Allāh bi-barakat ikhlāṣ)*.[221]

In this sphere of religious ethics, Ibn al-Qayyim's criticism of deviating Muslims and People of the Book, which is familiar from his quite polemical inter- and intra-communal theological writings, vanishes—though not completely, as can be seen in the most striking exception *Ighāthat al-Lahfān*. In this sense, Muslim and Western Islamic studies are correct to frequently state that the Hanbali scholar is "more a preacher than a polemist"[222]—undoubtedly in contrast to his famous teacher Ibn Taymīyah.

What is more, this highest degree of genre-hybridization in the rubric of moral theology in all of Ibn al-Qayyim's works has consequences for the scientific assessment of such sources and for future analytical studies of his other writings. Since theology, Quran commentary, and legal doctrines are variously interwoven, any diligent analysis of Ibn al-Qayyim would also have to take into account about half a dozen such Sufi tracts on internalizing correct behavior. This is especially true of *Ighāthat al-Lahfān*. A consideration merely of his obvious legal writings dealt with above under the rubric of *furū'* or *uṣūl al-fiqh* would be too shortsighted and would unduly blur a correct appreciation of his role in Islamic jurisprudence. With good reason, it can be assumed that a similar situation also holds true for other fields.

(9) ENACTING THE PROPHET'S ORIENTATIONS IN EVERYDAY LIFE

Their devotion to early Islamic sources inspired the traditionalists in general and the Hanbalis in particular to deduce from them normative religious examples even for spheres one might regard as everyday and, to a certain degree, secular. This retrospective commitment and expanded normativity seeks to pervade society in a variety of ways. The proclaimed hegemony of so-called early Islamic practices left no stone of the corpus of this tradition unturned in a renewed quest to find models for orientation. It is best described by a fictitious book title ascribed to Ibn al-Qayyim: *Fiqh al-Sīrah* (The Comprehension of the prophetic conduct).[223] We need not discuss here the specific historical reasons why the range of meaningful religious action was once again considerably broadened under the Mamluks and fused with exemplary procedures from the golden age of Islam. In the case of Ibn al-Qayyim, this trend expresses itself notably in the pious regulation of daily

---

[221] *Al-Fawā'id,* ed. Zakarīyā 'Alī Yūsuf (Cairo, ca. 1967), 2.

[222] Laoust, "Ḥanābila," 161.

speech habits, in the field of medicine including occult practices, and further in a discussion of sports, contests, and pedagogical doctrines. The treatment of such areas as God-willed applications of meaningful Prophetic behavior is, to a certain degree, connected to the related fields of Quran commentary, the science of hadith, of jurisprudence, and of moral psychology. Nevertheless, none of these can be considered as clearly dominating our author′s scientific approach here—apart from perhaps hadith. In this article, however, part five on hadith discusses only his contributions to either the corpus or to the status of hadith within the hierarchy of the normative sources, but not writings that simply make excessive use of hadith, because this would create an overly broad, and thus not instructive, category. Therefore, a separate section seemed necessary, in order to explore this dimension of Ibn al-Qayyim′s literary activities.

With *Jalā' al-Afhām fī al-Ṣalāh wa-al-Salām 'alá Khayr al-Anām*[224] (Clarification of understandings concerning the prayer and invoking blessings on the best of mankind) Ibn al-Qayyim reserved a complete study solely for the bliss, background, and correct manner of the *taṣliyah,* the invocation of blessings on Muḥammad before and after ritual prayer.[225] This is, of course, nothing one would imagine the Prophet himself imposing on his followers. Nevertheless, such rituals became part of the Prophetic *sunnah* insofar as hadith put relevant recommendations into the mouth of Muḥammad himself, as well as the mouths of his companions and later generations. Ibn al-Qayyim displays the relevant source material concerning this topic with unprecedented diligence and explores its applicability to various situations in daily life.

Another, even slimmer treatise, *Al-Wābil al-Ṣayyib min al-Kalim al-Ṭayyib* (The Heavy shower of good utterances), deals, more generally, with all sorts of invocation *(dhikr)* and supplication *(du'ā').* It is much less specific than *Jalā' al-Afhām* in that it offers divinely sanctioned elements of speech for a broad variety of social contexts. Its promoters compare the blissful effect of such expressions to the ″heavy shower″ that revives waste land, causing a stimulation of the hearts and opening the breasts.[226] The tract takes up and complements a work by Ibn Taymīyah with the title *Al-Kalim al-Ṭayyib*.[227] It seems that Ibn

al-Qayyim′s expanded version became the more popular one. Its publication history is characterized by several important features, common to widely accepted religious tracts in Arabic today. Its famous Salafi editor,[228] multiple editions, circulation on the Indian book market,[229] and even presentation in a complete English translation,[230] all leave no doubt of its extraordinary popularity.

The most voluminous and famous of Ibn al-Qayyim′s writings in this section of reenactment of the Prophetic *sīrah,* however, is his *Zād al-Maʻād ʻalá Hady Khayr al-ʻIbād* (Provision for the life to come with the teachings of the best of God′s servants). Once again, the Indian subcontinent is important for some editions.[231] *Zād al-Maʻād* is one of Ibn al-Qayyim′s thickest extant monographs. As one editor remarks, this compendium comprehensively exposes all aspects of the Prophet′s behavior in ″the most minute details of his life″ and in a hitherto unprecedented fashion *(bi-shakl wa-uslūb lam yasbiqhu ilayhi aḥad)*.[232] Another one adds that this even includes aspects such as Muḥammad′s favorite colors and exactly how he used to drink, pointing out that hardly anybody else′s life was ever so minutely recorded.[233] Some scholars perceive this work as being one of Hanbali jurisprudence *(al-fiqh al-ḥanbalī)*.[234] Muranyi sees it as a collection of Ibn al-Qayyim′s legal doctrines, following Ibn Taymīyah in his strictness concerning ritual questions, but displaying leniency in matters of mutual legal relations.[235] It

[230]*Ibn Qayyim al-Jawziyya on the Invocation of God.*

[231]Most editions comprise four or five volumes, such as *Zād al-Maʻād ʻalá Hady Khayr al-ʻIbād,* ed. Ṭāhā ʻAbd al-Raʼūf Ṭāhā (Cairo, 1390/1970), or the edition by Shuʻayb al-Arnaʼūṭ and ʻAbd al-Qādir al-Arnaʼūṭ (Kuwait and Beirut, 1979). There are very early editions from Kanpur/Kānfūr (?) in India from 1298/1880–81 or Cairo 1324/1906–7 as well as 1347/1928–29, which was translated in 1962 by Raʼīs Aḥmad Jaʻfarī into Urdu and published in Lahore; Ahsan, ″Ibn Qayyim al-Jawziyah,″ 246; Abū Zayd, *Ibn Qayyim al-Jawzīyah,* 260.

[232]*Zād al-Maʻād ʻalá Hady Khayr al-ʻIbād,* ed. Muṣṭafá ʻAbd al-Qādir ʻAṭā (Beirut, 1998), 1:6.

[233]*Zād al-Maʻād ʻalá Hady Khayr al-ʻIbād*, ed. al-Arnaʼūṭ and al-Arnaʼūṭ, 1:6, with criticism of previous editions, 7.

[234]For instance, according to Wahbah al-Zuḥaylī, *Āthār al-Ḥarb fī al-Fiqh al-Islāmī* (Beirut, 1981), who lists it alongside *Al-Ṭuruq al-Ḥukmīyah, Iʻlām al-Muwaqqiʻīn,* and *Aḥkām Ahl al-Dhimmah* in one rubric.

[235]Miklos Muranyi, ″Die Ḥanbalīya,″ in *Grundriß der Arabischen Philologie*, ed. Helmut Gätje, vol. 2: Literaturwissenschaft (Wiesbaden, 1987), 321–22.

is, however, different as well in its impetus and range of topics, since it frequently transcends the familiar *furū‘ al-fiqh* pattern. *Zād al-Ma‘ād* is definitely not *the* compendium of practical jurisprudence which is otherwise missing in Ibn al-Qayyim's œuvre. Instead, it is a genuine "mixture containing the biography and what branches out from it, like jurisprudence, good manners *(ādāb),* and Prophetic instructions."[236] Abū Zayd speaks of "this amazing encyclopedia of various sciences such as *sīrah,* jurisprudence, profession of the unity of God, theology, the subtleties in *tafsīr,* hadith, language, grammar, etc."[237]

Many scholars condensed this package of wisdom into a convenient short version; Muḥammad Ibn ‘Abd al-Wahhāb (d. 1792) is the most prominent of these.[238] The most highly cherished part of *Zād al-Ma‘ād,* the section in its last quarter on Prophetic medicine *(al-ṭibb al-nabawī, ṭibb al-nabī),* came to be appreciated as a sort of separate book.[239] Many people are familiar with this section, but have no clue that it was originally only a cluster of topics pertaining to a larger compendium. In recent decades it has perhaps become the most popular publication on Islamic medicine of all—even supplanting al-Suyūṭī's (d. 1505) version. Notably, both are available in an English translation.[240] In addition, Prophetic medicine is the one aspect of Ibn al-Qayyim's work most intensely researched by Western scholars of Islamic sciences.[241] Its merits have definitely not been underestimated, although the extent to which Ibn al-Qayyim is indebted to the writings of other scholars is only now gradually becoming discernible. Typically, this field is concerned with the illness *(maraḍ)* of hearts *(qulūb)* as well as the illness of bodies *(abdān).*[242] Nevertheless, in this context, Ibn al-Qayyim deals

[241]Especially Irmeli Perho, "The Prophet's Medicine: A Creation of the Muslim Traditionalist Scholars," *Studia Orientalia* (Helsinki) 74 (1995), published as a monograph, 40–42 and passim; idem, "Medicine and the Qur'ān," in *Encyclopaedia of the Qur'ān,* ed. Jane Dammen McAuliffe, (Leiden and Boston, 2001–), 3:349–67.

[242]Ibn Qayyim al-Jawzīyah, *Al-Ṭibb al-Nabawī,* ed. Shu‘ayb al-Arna'ūṭ and ‘Abd al-Qādir al-Arna'ūṭ (Beirut, 1980), 5; Ibn Qayyim al-Jawzīyah, *Medicine of the Prophet,* 3.

predominantly with bodily diseases. Noteworthy is the high percentage of occult practices,[243] especially the evil eye[244]—obviously the heritage of many Near Eastern sources, which Ibn al-Qayyim often does not quote by name and title. This is part of a general problem: in his eagerness to present the authentic early Islamic picture, he often fails to mention his more recent scholarly sources.

A topic very dear to the heart of the Mamluk aristocracy must have been Ibn al-Qayyim's monograph *Al-Furūsīyah* (Horsemanship),[245] which assembles traditions on various sports, especially riding and different contests *(sibāq, musābaqah)*. They are related to the military tradition of Islam, but also include mere leisure activities. Noteworthy are the introductory remarks of one apparently Saudi Arabian edition published around 1970. The editor suggests that Islamic sport clubs replace their official self-designation as places for "physical education" *(riyāḍah badanīyah)* with "Islamic *furūsīyah,*" in keeping with correct historical precedent, since the Europeans, in full ignorance, nowadays regard familiar types of sports as their own developments.[246]

A last concern is the raising of children and the treatment of infants in various stages of their development. *Tuḥfat al-Mawdūd bi-Aḥkām al-Mawlūd* (A Present for the beloved on the rules concerning the treatment of infants)[247] comprises legal rulings and advice for the correct behavior of pregnant women, the treatment of their newborn infants, and the raising of children at certain stages of life. Taking this work as a starting point, a German dissertation—supervised by Annemarie Schimmel—deals with the prescriptions for small children, but leaves aside some of the aspects Ibn al-Qayyim treated.[248] Giladi describes the book as "typically combining medical and religious elements"[249] and presents it as "a remarkable instance of how Islamic writings could weave popularized medical theories into

legal discussions."[250] Again, the existence of shortened versions[251] and editions from the South Asian market[252] are indicative of a wider distribution and interest beyond the smaller ideological community, since legal contents, interpretations of Quran and *sunnah,* religious ethics, and profane information are blended. A "medical appendix" *(mulḥaq ṭibbī)* at the end of one modern edition of the *Tuḥfah* includes photographic material and presents scientific knowledge of exclusively Western, specifically American, provenance.[253]

Such phenomena seem to be part of a broader trend in the modern book market in recent decades. Secular scholars, whether in medicine, psychology, pedagogy, or other fields, generate publications presenting odd mixtures of scientific manuals and quotations from the holy sources as well as relevant tracts of traditionalist authors. In the relevant bibliography, university textbooks and religious literature are, quite frequently, listed side by side—probably to show the harmony between the wisdom of the Islamic heritage and modern science.

CONCLUSION

Unlike Ibn Taymīyah, his pupil Ibn al-Qayyim did not spend his life fighting on several fronts. The latter's mini-*miḥnah* in prison and ensuing social criticism in giving fatwas and defending theological stances in line with his famous teacher's fiercely debated positions elevated him in the eyes of his admirers to the ranks of heroic resistance and moral courage. Taken as a whole, however, his life was one very much spent in writing. Ibn al-Qayyim is described as being well aware of the brevity of man's lifetime and as therefore working incessantly[254]—even when separated from his private hometown library. One of the main scientific *desiderata* remains a systematic chronology of his writings.[255] He wrote some books, such as *Zād al-Maʿād, Rawḍat al-Muḥibbīn,* and *Badāʾiʿ al-Fawāʾid,* while traveling.[256] Certain phases and influences dominating his works have to be identified. According to Bell, "the various shifts in stress or disciplinary framework discernible in the

writings of Ibn al-Qayyim correspond to fairly distinct periods in his career."[257] Although he often refrained from giving an exact title, Ibn al-Qayyim, with several explicit self-references, gives many indications of the chronology of his works, which Abū Zayd diligently registered.[258] Nevertheless, they have not yet been tied together in a convenient overview. The Hanbali is described as a bibliophile scholar and a devoted, if not compulsive, author who derives intense spiritual blessing from the procedure of pious writing as such. He must have worked as much as circumstances permitted even during his travels, thus creating for himself the air of his Damascene study. For these reasons, this article focuses on his œuvre and only to a lesser degree on his biography as important keys to his ideas about Islam. The limited path chosen for our study is first of all based on a hands-on approach to available books and booklets. The Internet proved unsuitable for a reliable initial survey, but has to come into play afterwards in a separate study.[259] Even their contemporaries were perplexed about the huge literary output of Ibn Taymīyah and Ibn Qayyim al-Jawzīyah. At the request of a group of such people, Ibn al-Qayyim himself compiled an inventory of his master's works.[260] Unfortunately, no pre-modern adept ventured a comparable service for Ibn al-Qayyim. The cause of and extent to which neo-Hanbali doctrines fell into oblivion under Ottoman supremacy still have to be explored for the period from the fourteenth to the nineteenth century. The approach to Ibn al-Qayyim's œuvre chosen for this article, however, is a different one. Since the difficulties of demarcating and categorizing his works are tremendous, we chose here to approach them with regard to their reception in modern times. "Reception" is herein understood in the narrowest sense, because the history of the exact neo-Hanbali impact on important figures, such as Ibn ʻAbd al-Wahhāb, Shawkānī, Mawdūdī, Ṣiddīq Ḥasan Khān, and the various Near Eastern Salafis like Rashīd Riḍá, has yet to be written.[261] Nevertheless, this article shows the special role of Salafi scholars such as Subḥī al-Ṣāliḥ and Muḥibb al-Dīn al-Khaṭīb, as well as of Salafi printing houses in Egypt and India. The Indian market and its scholars' attachment to Arabian libraries often blazed a trail. It seemed useful, in order to gain some access and familiarity, to focus first of all on printed works by Ibn al-Qayyim, and to follow to a certain degree the ways in which Muslims have (re)discovered this author. This methodology and the reading of introductory passages inserted by his modern

editors permit some sort of overview and provides clues for a categorization that are often missing, both from the few articles on this author in Western languages, as well as from a certain number of button-counting modern studies in Arabic. It must, however, be acknowledged that especially Saudi Arabian dissertations and academic writing have done much to enhance the level of research.

What, then, does the modern book market offer? Obviously, Ibn al-Qayyim "catered to all the branches of Islamic science."[262] As al-Zuḥaylī sums up, the scholar's activities "comprise religious knowledge *(ʻilm),* jurisprudence *(fiqh),* and legal development *(ijtihād),* and he is also the person of reference for those interested in transcendental questions *(imām ahl al-rūḥ),* in moderate Sufism *(al-taṣawwuf al-muʻtadil),* sound spiritual radiance *(al-ishrāq al-nafsī al-sawī),* forceful remembrance of God, and for those who are eager to fulfill his duties and recommendations."[263]

The problem is that such trends are often dealt with all together. His huge compendia embody an ongoing process of synthesizing the diverse elements in multiple variations and rearrangements. Genre boundaries are constantly transgressed and deliberately blurred. As a consequence, whoever researches a certain topic in Ibn al-Qayyim's œuvre has to take a broad range of partially parallel publications into account. This is certainly important for his writings with legal relevance.

Ibn al-Qayyim is a great recycler in that any of his contributions can be expected to show up in a more or less transformed shape somewhere else in his writings. The scope of this article is not broad enough to determine the degree to which he recycles not only his own ideas but also those of previous authors. However, it is very likely that an œuvre of such vast dimensions could have been produced only by borrowing on a large scale. This is not to say that Ibn al-Qayyim lacked originality, which would be missing the point. Apart from the fact that in medieval religious sciences the concept of authorship and "copyright" was quite different from our understanding, his personal originality seems to lie elsewhere: in his extraordinary capacity to create a synthesis of floating data, his overarching aim of internalizing Islamic norms on an educational and self-referential level, and his creation of comprehensive books either in the from of compendia or of monographs on highly specific topics, about which previous scholars had written merely a passage, a chapter, or a small treatise. Further, he plays an important role in the self-emancipation of Hanbali Sufism and tradition-oriented inwardness. Although his writings have been marginalized for centuries, he produced—especially from the viewpoint of twentieth-century publications—an

extraordinary number of standard works that are in line with many reformers′ reinvigorated interest in the early Islamic heritage.

Current editions, however, not only make Ibn al-Qayyim′s works much more accessible than in the dispersed manuscripts of previous times, and allow for helpful insights, but they also contribute greatly to the already existing obscurity and confusion. Since the voluminous compendia seem to be too overwhelming for ordinary readers, the modern book market offers them in the form of single chapters, piecemeal selections, shortened versions, and collections containing also the works of other authors. While such editors often congratulate themselves for the service they provide to religious knowledge, these truncated publications are confusing to specialists and general readers alike. Many a twentieth-century soulmate even fuses his own musings or his leftover university textbooks with quotations from Ibn al-Qayyim. There is a rising flood of publications, including many paperbacks, most of which claim Ibn al-Qayyim as their official author. One scholar, though, counts only three smaller epistles as authentic writings of Ibn al-Qayyim among these available, in the range of 50–100 pages.[264] As a consequence, the authenticity of the contents of the shorter publications in particular, but also of several larger synthetic works, have to be thoroughly tested. At times, pious compilers dress them up with fancy titles that deliberately recall famous, authentic works of Ibn al-Qayyim; or they fall back on titles reminiscent of generally familiar topics, such as ″The Beautiful Names of God″ *(asmā' Allāh al-ḥusná),*[265] to give but one final example. However, as a rule of thumb, these and other publications cannot be discarded, since many shorter fatwas and epistles in particular may still be uncovered and prepared for publication. Dissertations and similar studies from Arab countries play a pioneering role in this field. For Western readers it is not very easy to gain access. There may be various reasons for this: Ibn al-Qayyim′s Arabic is of medium difficulty and he uses a highly technical language. Nor do his extremely frequent quotations from the Quran and *sunnah* make for easy reading. Only a few translations into Western languages are apparently available, and these are basically addressed to pious Muslims. Ironically, Bellmann picked the wrong author. It seems at any rate that a certain mood of devoted piety is a sort of precondition to fully appreciate the bulk of Ibn al-Qayyim′s writings. Ardent readers often seek a profound elevation of spirit. Religiosity sells and Ibn al-Qayyim′s presentations in particular obviously help Muslims feel good about themselves and proud of their religion. The gap in taste between Muslim and non-Muslim readers may also explain the lack of studies by Western scholars of

[265] Ed. Budaywī and al-Shawwā. This appears even in a series called ″Publications *(mu'allafāt)* of Ibn al-Qayyim.″

Islamic sciences. The comparably small number of decent studies on Ibn al-Qayyim and possibly even other religious ″polymaths″ might also have to do with the fact that modern Western scholars are not sufficiently equipped or are too one-sided in their approach—while great medieval scholars, as a rule, were not.

Coptic Conversion and the Islamization of Egypt

Articles by Gaston Wiet in the 1920s, M. Perlmann in 1942, and Donald Little in 1976 have encouraged the perception that the first century of the Mamluk period marked a turning-point in the history of Coptic conversion to Islam. According to Wiet in his article on the Copts in the *Encyclopaedia of Islam:* ″The government of the Mamluks gave the *coup de grâce* to Christianity in Egypt,″ and he goes on, ″It can be estimated that by the 8th century [that is, the fourteenth century], the Christians were barely, as in our times, a tenth of the total population of Egypt.″ Perlmann echoes, ″The Mamluk empire contributed decisively to the crushing of the Copt element in Egypt,″ and ″The power of the Copts as a community was crushed.″ Donald Little believes that his findings ″tend to support Wiet′s generalization.″[1]

Chronological and demographic questions interested Wiet and his followers: when did the Copts become a minority in Egypt and the Muslims a majority, and what were the main stages in this process? To begin, they assumed that Coptic conversion to Islam was the main cause of demographic change in Egypt: Egyptian Muslims are thus mostly of Coptic ethnic origin. Next, they supposed that the Copts had converted in two waves—the first in the ninth century and the second in the fourteenth. Therefore, while heavily emphasizing the importance of the Mamluk period, they did not claim that the Islamization of Egypt occurred during this period alone.

Most recently, Tamer el-Leithy has made a comprehensive study of Coptic conversion during the Mamluk period.[2] In length and depth, this still-unpublished work eclipses the preceding article-length studies. Its subject is focused on conversion among the Coptic upper class in Cairo during the fourteenth century, on which there is much detailed evidence in unpublished Coptic material and in the Mamluk-period histories of al-Maqrīzī and Ibn Taghrībirdī. El-Leithy explores in depth the motives for conversion, classifies various forms of conversion, and

Perlmann, ″Notes on Anti-Christian Propaganda in the Mamlūk Empire,″ *Bulletin of the School of Oriental and African Studies* 10 (1942): 843–61; Donald Little, ″Coptic Conversion to Islam under the Bahrī Mamlūks, 692–755/1293–1354,″ *BSOAS* 39 (1976): 552–69.

[2]Tamer el-Leithy, ″Coptic Culture and Conversion in Medieval Cairo, 1293–1524 A.D.,″ Ph.D. diss., Princeton University, 2004.

analyzes the reaction to Coptic converts on the part of Muslims, especially among the ulama class. In the relatively little space he allows for the questions when and how Islamization took place in Egypt, el-Leithy agrees with Wiet that conversion was the main factor of change. Thus, in the last sentence of his work, he refers to ″[t]he pervasive (and to this day, persistent) illusion that Egyptian Muslims are all of Arab stock—rather than converted Copts. . . .″[3] Yet, he goes farther than Wiet by arguing that no conversion wave had occurred in the ninth century: this was an erroneous idea, which arose from a misinterpretation of al-Maqrīzī′s report. For el-Leithy, the fourteenth century alone marks the decisive sociological transformation of Egypt, as the only period during which the Copts converted to Islam en masse.

Wherein lies the evidence that the early Mamluk period was so decisive for the Islamization of Egypt through Coptic conversion? Wiet and his followers quote extensively from the historian al-Maqrīzī, whose *Kitāb al-Khiṭaṭ,* compiled from the 1420s, records a series of eight assaults against the Copts during the early Mamluk period from 1250 to 1354. They occurred in 1259, 1264, 1279, 1283, 1293, 1301, 1321, and 1354.[4] As described, these assaults took the form of violent outbreaks by the Muslim populace or *ʻāmmah,* especially the lowest elements in Cairo and throughout the countryside. They also took the form of government measures variously prohibiting the public employment of Copts, renewing the traditional laws that restricted and humiliated Christians, and confiscating Coptic *waqf*s. The typical pattern would see a minor incident triggering a popular outbreak in Cairo, spreading sometimes to the provinces, and then quickly followed by government measures that punished the Copts but whose main intention was to placate the Muslim populace.

Perhaps most important is al-Maqrīzī′s comment following his description of the last anti-Copt assault in 1354. This assault combined both popular riots against the Christians and their churches with government decrees forbidding the employment of Copts in public service. Such decrees had been promulgated many times before, but the difference this time was that the prohibition also covered Copts who had nominally converted to Islam. The government was now responsive to accusations that such converts were crypto-Christians who undermined the government and oppressed Muslims with impunity. Finally, the government confiscated all *waqf* land belonging to Coptic institutions. Al-Maqrīzī′s comment suggests that this persecution was the last straw for the Copts:

> In all the provinces of Egypt, both north and south, no church

---

[3]Ibid., 479.

[4]Little, ″Coptic Conversion to Islam under the Bahrī Mamluks,″ 553.

> remained that had not been razed; on many of these sites, mosques were constructed. For when the Christians′ affliction grew great and their incomes small, they decided to embrace Islam. Thus Islam spread among the Christians of Egypt, and in the town of Qalyub alone, 450 persons were converted to Islam in a single day. Many people attributed this to Christian cunning, so repugnant did the populace find them. But this was a momentous event in Egyptian history. From that time on, lineages became mixed in Egypt.[5]

So concludes al-Maqrīzī′s description of the series of anti-Coptic outbreaks, which constitutes the main support for the view that the early Mamluk period marked a decisive advance in the Islamization of Egypt through large-scale Coptic conversion. From this passage, for example, Donald Little draws the following conclusion:

> The Copts must have realized in significant numbers that their social and economic welfare lay thereafter in Islam. In this sense the year 755/1354, some seven centuries after the Muslim conquest of Egypt, may be regarded as a turning-point in Egyptian religious history, as the point in time when the second great transformation of Egyptian religion became virtually complete, as complete, at any rate, as it was to be for the next six-and-a-half-centuries.[6]

In other words, the Islamization of Egypt reached its maximum point by 1354. After that date, the proportion between Muslims and Christians in Egypt remained unchanged at about 90% to 10%, in Wiet′s estimate. Moreover, the early Mamluk period, culminating in 1354, was responsible for a significant part of the process by which the Coptic population was reduced to only 10%. This conclusion has been widely accepted. Certainly, its plausibility is reinforced by the critical military and political context of the early Mamluk period to 1300 and by the increased intensity of Muslim polemical literature against Christianity and Christians, which becomes noticeable from about 1250 and for long afterwards.[7]

Nevertheless, al-Maqrīzī′s statement does not constitute firm evidence for Little′s conclusion, even when taken in conjunction with his previous reports of anti-Coptic pressure. It exaggerates, of course, in stating that no church was left standing throughout the Egyptian countryside, and that the Christians as a whole decided to embrace Islam. Furthermore, the single example given, the mass

---

[6]Ibid., 569.

[7]Perlmann, ″Notes on Anti-Christian Propaganda in the Mamluk Empire,″ 842, 845.

conversion in the town of Qalyub, is insufficient support for the preceding generalization that Islam now spread among the Copts throughout the country. Yet, statistics on conversion are almost absent from the corpus of the Islamic literary-historical tradition, and the standard of required evidence cannot be pushed so high as to exclude valuable reports like that of al-Maqrīzī. We may accept his statement that 1354 marked ″a momentous event in Egyptian history,″ the culmination of a Coptic conversion wave that had begun in the late thirteenth century. Indeed, there is plausibility in Wiet´s suggestion that the Copts formed only 10% of Egypt´s population after 1354. For the Copts as a community did not suffer any serious blow from the late Mamluk period until the first census in 1846. This and later censuses consistently estimated the Coptic element of the population at about 8%, which may be raised to 10%, given the tendency of the Copts to underestimate their numbers to census-takers.[8]

But when and how were the Copts reduced to the proportion of 10% by the later fourteenth century? A range of possibilities appears. As to when, the reduction could have occurred mainly in the fourteenth century (el-Leithy´s position); or in two roughly equal phases, the first in the ninth century and the second in the fourteenth century (the view of Wiet and his followers); or, as argued below, mainly throughout the early Islamic period (seventh–tenth centuries). As to how, the reduction of the Coptic proportion could have occurred mainly through conversion, which seems to be the view of all modern writers on the subject. However, a more important role may have been assumed by a combination of other factors: Arab-Muslim immigration and marriage with Coptic women, together with Coptic demographic decline following the failure of repeated revolts against Muslim rule. These factors have been given relatively little consideration in historical studies of Islamic Egypt. Yet, Arab-Muslim immigration to Egypt from 641 onwards is well documented, as is the outbreak and severe repression of repeated Coptic revolts. Such factors should therefore be borne in mind as a counterpoint to the factor of Coptic conversion.[9]

Returning to the question as to when, the Islamization of Egypt may have been practically completed long before Mamluk rule began in 1250. In other words, by the eleventh century or even earlier, the proportion of Christians in Egypt may have already fallen to not much more than the 10% given by Wiet (it

---

[8]No documentary evidence exists until the first censuses of 1846 and 1882, which recorded the Copts as 8% of the population. But European travellers over the previous century had estimated similarly: Youssef Courbage and Philippe Fargues, *Christians and Jews under Islam* (London, 1997), 64.

[9]Khalīl ʻAthāminah, ″Arab Settlement during the Umayyad Caliphate,″ *Jerusalem Studies in Arabic and Islam* 8 (1986): 200–4.

would be unwise to advance percentages other than this one, which at least has a tenuous basis in nineteenth-century censuses[10]). Further reduction occurred under the early Mamluks from 1250 to 1354, but this was not significant in the wider picture. The historical evidence is too scanty to allow a decisive case for the early and rapid Islamization of Egypt. But we can reasonably argue that this is what occurred.

The main piece of evidence for this view comes from al-Maqrīzī again. He recounts the last Coptic uprising against Islamic rule, the so-called Bashmurite revolt, which took place in the Egyptian Delta in 831, during the rule of the Abbasid caliph al-Ma'mūn. The revolt was crushed by the caliph himself, and al-Maqrīzī adds:

> From that time, the Copts were subjugated throughout the whole length of Egypt, and none of them dared to revolt against the sultan, *and the Muslims began to prevail in number in most of the villages*, so they turned from armed opposition to trickery and the use of guile, ruses, and deception of the Muslims.[11]

On the face of it, this important quotation informs us that the Islamization of Egypt began early and was accelerated by the failed revolt of the Copts. However, we must examine al-Maqrīzī's crucial statement more carefully because controversy has arisen over the historian's exact meaning. Al-Maqrīzī wrote:

> wa-min ḥīna'idhin dhallat al-qibṭ . . . wa-lam yaqdir aḥad minhum baʿda dhālika ʿalá al-khurūj ʿalá al-sulṭān *wa-ghalabahum al-muslimūn ʿalá ʿāmmat al-qurá* fa-rajaʿū min al-muḥārabah ilá al-mukāyadah wa-istiʿmāl al-makr wa-al-ḥīlah wa-mukāyadat al-muslimīn.

The key phrase *wa-ghalabahum al-muslimūn ʿalá ʿāmmat al-qurá* was interpreted by Wiet and Antoine Fattal as having a numerical sense—that the Muslims now came to outnumber the Copts in the villages. But more recently, Yohannan Friedman has interpreted the phrase as meaning that the Muslims "regained control over the rebellious villages [and presumably resumed the collection of taxes]."[12] As used

[10]El-Leithy, "Coptic Culture and Conversion in Medieval Cairo," 26.

[11]Quoted in Antoine Fattal, *Le statut légal des non-musulmans en pays d'islam* (Beirut, 1958), 282.

[12]Yohannan Friedman, "A Note on the Conversion of Egypt to Islam," *JSAI* 3 (1981): 238–40, cited in el-Leithy, "Coptic Culture and Conversion in Medieval Cairo," 19–20.

here, the verb *ghalabahum ʿalá* thus means simply ″to overcome them in (the villages)″ in a political and military sense: it has no numerical reference. El-Leithy stressed this interpretation in order to disprove the hypothesis of a ninth-century Coptic conversion wave, which had been advanced by Wiet and his followers.

However, *ghalabahum ʿalá* can also have the meaning ″to prevail over them in something,″ ″to be preponderant over them in something,″ that is, in a numerical sense.[13] Wiet and Fattal supposed this to be al-Maqrīzī′s intended meaning, and its context here suggests that they were right. The preceding phrase already states that ″the Copts were subjugated throughout the whole length of Egypt,″ so that to interpret *ghalabahum* as ″to overcome [the Copts]″ would be an incongruous repetition. And secondly, the succeeding phrase, *ʿalá ʿāmmat al-qurá,* means literally ″in the *generality* of the villages,″ that is, ″in *most* of the villages.″ But to say that ″the Muslims overcame the Copts (in a military and political sense only) in *most* of the villages″ is surely a case of *non sequitur*. In crushing the Coptic revolt of 831, the Muslims necessarily overcame the Copts, militarily and politically, in *all* the villages, not most of them (to put it the other way, overcoming the Copts in most of the villages would mean, strictly speaking, that the revolt was unsubdued). It seems, therefore, that al-Maqrīzī used the phrase *wa-ghalabahum al-muslimūn ʿalá ʿāmmat al-qurá* in the numerical sense. He meant that the Muslims began to outnumber the Copts in most Egyptian villages after the revolt of 831. That meaning sensibly completes the sequence of events: first, the Copts were subjugated; second, they were reduced to a minority in their villages; and finally, in consequence of this, they turned forever from open revolt to the use of trickery and guile. For the Copts had rebelled previously in 725 and 739; had they remained in a majority after their last effort in 831, would they not have rebelled again eventually?

On balance, then, it seems that the interpretations of Wiet and Fattal were correct. Al-Maqrīzī states that the Muslims became a majority in Egypt during the ninth century, following the last Coptic revolt of 831. This is an extremely valuable piece of information as regards when Islamization occurred. Yet, it immediately raises the question as to how. For al-Maqrīzī does not confirm in this passage or anywhere else that the process of Islamization took place mainly through Coptic conversion. In fact, the only occasion where he mentions Coptic conversion without ambiguity is in the context of the anti-Coptic measures of 1354, quoted above, where he says, ″For when the Christians′ affliction grew great and their incomes

---

[13]Ibn Manzūr, *Lisān al-ʿArab* (Beirut, 1955–56), 1:651–53, leaves no doubt that the sense of numerical predominance is included in the general meaning of ″overcoming″ that is attached to *ghalaba.* He cites the obsolete verbal form *ighlawlaba,* meaning ″to be abundant″ *(ighlawlaba al-qawm idhā katharū),* and the feminine adjective *ghalbāʾ*, meaning ″luxuriant″ *(shajarah ghalbāʾ idhā kānat ghalīzah).* The modern derivations *aghlabīyah* and *ghālibīyah* both mean ″majority″ (Hans Wehr, *A Dictionary of Modern Written Arabic* [Wiesbaden, 1961], 680).

small, they decided to embrace Islam. Thus Islam spread among the Christians of Egypt. . . ."[14] Perhaps al-Maqrīzī did not mention Coptic conversion previously, especially in his account of the failed revolt of 831, precisely because it was not the main factor of Islamization in Egypt until the fourteenth century. El-Leithy implicitly concurs, holding firmly that the Copts converted more slowly than any other people conquered by early Islam: he points out that had the Copts converted as rapidly as the Persians, for example, they would also have preserved their language within Islamic culture. Instead, the Copts became entirely Arabized long before mass conversions took place.[15]

This is a convincing observation, but the Copts' late conversion does not necessarily signify Egypt's late Islamization: the tenacity of Coptic Christianity does not necessarily preclude the early spread of Islam in Egypt. Indeed, from the contrast between al-Maqrīzī's descriptions of the revolt of 831 and the anti-Copt measures of 1354, we may infer that Islamization was indeed advancing in Egypt during the early Islamic centuries, but not primarily through Coptic conversion. For in his account of the Bashmurite revolt and its aftermath, al-Maqrīzī does not state that *Islam* prevailed throughout the Egyptian countryside, which would be the natural phrase to use in the case of mass conversion of a single ethnic group from one religion to another. Instead, he refers to two separate ethnic groups, the Muslims and the Copts, and states that the Muslims came to prevail over the Copts numerically in most of the Egyptian countryside after the crushing of the revolt. He does not say how this happened. But if not primarily through conversion, then it must have occurred, on the one hand, through the widespread rural settlement of Muslim Arabs and their marriage with Coptic women; and on the other hand, through Coptic demographic decline brought about by the crushing of their revolts and the severe fiscal and other repressive measures that followed.[16]

There is evidence in the earliest Egyptian Arab writers of Arab-Muslim settlement in Egypt from the time of the conquest in 641–42. Arab tribal immigrants

---

[14]A little after his description of the Bashmurite revolt, al-Maqrīzī makes the statement, "No other nation is known to have converted in such a short time as the Copts." However, following Yohannan Friedman, el-Leithy points out that this statement has no reference whatsoever to the Islamic period: it refers instead to the Copts' supposed conversion to Islam following the miracles performed by Moses before Pharaoh: "Here the 'Islam' to which the Egyptians (Copts) converted was Moses' religion. The phrase has been violently wrenched out of context when applied to conversion to Islam" ("Coptic Culture and Conversion in Medieval Cairo," 20, n. 52).

[15]Ibid., 8, 25, 458.

[16]These measures are described at first hand by Patriarch Dionysius of Tell Mahré (818–45), who visited the caliph al-Ma'mūn in Egypt at the time of the Bashmurite revolt: his account is preserved in Michael the Syrian's history (*Chronique,* ed. and tr. Jean Baptiste Chabot [Paris, 1899–1910], 3:62–64).

were dispatched to Egypt in the 640s to reinforce the initial army of conquest. At this time, it is said, one third of the Quḍā'ah or Kalbite tribal group was transplanted from Syria to Egypt with the aim of increasing the Arab population of Egypt and reducing tribal tensions in Syria. Evidence for the increase of Muslim Arabs in Egypt comes from the Egyptian military lists *(diwān),* preserved in al-Kindī´s history, which show a constant and rapid rise in the number of soldiers enrolled. These were settled at first in the garrison center of al-Fusṭāṭ, and during Mu'āwiyah´s rule, a second large garrison of some 27,000 soldiers was established at Alexandria. But Arab-Muslim settlers were not confined to al-Fusṭāṭ and Alexandria. From the start, they were permitted ″to leave al-Fusṭāṭ in the spring . . . leading their flocks and horses to the grazing lands in the countryside.″ They were supposed to return to the garrison center in summer, but in practice, many settled permanently in the countryside: the Mudlij and other Himyarite tribes are cited as examples. Here, it seems, is a glimpse into the informal process by which Arab-Muslim soldiers *(muqātilah)* gradually turned into farmers and traders and spread throughout the Egyptian countryside.[17]

Especially well recorded is the settlement of 5,000 Qaysī families in the eastern Nile Delta, starting in 727. Their case was unusual in that they were settled by direct order of the caliph Hishām at the request of his Egyptian governor, Ibn Ḥabḥāb. Although registered in the *diwān,* the Qaysīs were allowed to practice agriculture, to breed horses, and to monopolize the export trade from Egypt to Hijaz through the Red Sea port of al-Qulzum. As a result, they soon became wealthy, building large houses for themselves in the region allotted to them. Their descendants long preserved a Qaysī tribal identity: al-Mutanabbī describes them in his visit to Egypt in the mid-tenth century.[18]

The Qaysīs´ widespread settlement in the eastern Delta only two years after the first Coptic revolt in 725 suggests that they were granted lands previously occupied by Copts but now lying abandoned because of the revolt and its repression. To judge by the example of the Qaysīs in 727, it was probably the standard policy of the Islamic state to take advantage of the failed Coptic revolts of 725, 739, and 831 by settling large numbers of Muslim Arabs in the Egyptian countryside, especially in the Delta. If we add this to the evidence that Arabs were informally spreading throughout the countryside from an early date, and that the Copts themselves were subject to early and thorough Arabization—then we can dimly discern the process by which Lower Egypt at least was transformed into an ethnically mixed region where Muslims, many of them descended from Copts on the female side, prevailed numerically in most of the villages by the mid-ninth century.

Coptic conversion may not have been the primary factor in the Islamization of Egypt during the early Islamic period. But it was nonetheless significant, especially after ʻUmar II (717–20) adopted a systematic campaign of Islamization among the subject Christians.[19] According to the historian Ibn Saʻd, ʻUmar reproached his governor in Egypt, who had warned that the caliph's measures to promote conversion could lead to a reduction in revenue, with the words "God sent Muḥammad to preach the faith, not to collect taxes."[20] The Coptic revolt in 725 had been triggered by a census, after which the governor Ibn Ḥabḥāb raised taxes and promised converts exemption from the poll-tax. The Coptic *History of the Patriarchs of Alexandria,* compiled in the eleventh century from records written mostly in the eighth century, states that in 727, the year of the Qaysī settlement, 24,000 Copts converted to Islam in order to escape the *jizyah.*[21] In 750, the first Abbasid governor of Egypt promised to lift the *jizyah* on converts, and, according to the same Coptic source, "because of the heavy taxes and the burdens imposed upon them, many rich and poor denied the religion of Christ."[22]

ʻUmar II initiated a radical change of policy by actively promoting the conversion of conquered subjects. But significant Coptic conversion is recorded even beforehand. The *History of the Patriarchs* states that about 700, the Egyptian governor al-Aṣbagh forced many people to become Muslims, including Coptic government officials and an innumerable group of peasants.[23] And John of Nikiu, a Coptic historian and probable eyewitness of the Muslim conquest of Egypt, states that many false Christians converted at that time and afterwards.[24] One of the earliest Islamic monuments, a tombstone from Aswan dated 71 A.H. (691 A.D.), commemorates the death of ʻAbbāsah bint Guraig, whose Christian patronymic suggests that she was a Coptic convert.[25]

Separately, the first Christian apologetic works, defending the Christian religion against Islamic accusations of polytheism and image-worship, appeared soon after 750, which suggests that conversion to Islam by subject Christians was then

becoming widespread in Syria and Iraq. At least half a century earlier, Christian apocalyptic works were implying the same. The most important, the *Apocalypse of Pseudo-Methodius,* originating in northern Syria or Jazira not later than the 690s, describes the rule of Islam as a ″testing furnace for all Christians″; it continues:

> For the blessed apostle said: not all of Israel are Israel. Also, all who are called Christians are not Christians, for 7000 only were left over from the Israelites in the days of the prophet Elijah. . . . Thus also in the time of punishment of these tyrants, few from many will be left over who are Christians, as our Saviour showed us in the Holy Gospel, saying: when the Son of Man cometh, will he find faith on earth? Behold also . . . the multitude of the clergy will deny the true faith of the Christians and the Holy Cross and the mysteries of power. And without compulsion, blows, and wounds, they will deny Christ and will associate with the unbelievers.[26]

A similar work, the *Apocalypse of Pseudo-Athanasius,* originated in Egypt about the time of the first Coptic revolt, corroborating the source evidence of significant conversion at that time. Clearly, Coptic conversion was not a negligible phenomenon, even in the early Islamic period.

As noted above, el-Leithy contrasted the slowness of Coptic conversion with the speed of Iranian conversion, evidenced by the successful transformation of Persian into a language of Islamic culture. It is worth considering how fast the process of Islamization took place in Iran. Richard Bulliet′s well-known study of this question examined the relative frequency of Muslim and non-Muslim names in recorded literature over different periods.[27] Although the field of evidence is limited to the urban ulama class and the study is based on questionable assumptions, his work remains valuable in the absence of documentary material. Bulliet constructed a graphed curve to show that the Muslim population of Iran rose steadily from zero at the start of the Islamic conquest in the 640s to at least 80% by the 960s. The rise occurred in three stages: a slow rate of increase until about 720, when the Muslim population had reached about 10% of the total; then a rapid increase until the 890s; finally, a progressive slowing again as the Muslim population

---

[26]Quoted in Paul Alexander, *The Byzantine Apocalyptic Tradition* (Berkeley, 1985), 46–47.

[27]Richard W. Bulliet, ″Conversion to Islam and the Emergence of a Muslim Society in Iran,″ in *Conversion to Islam,* ed. Nehemiah Levtzion (New York, 1979), 31. Bulliet attempted a similar investigation for other countries, including Egypt, using a smaller sample of names and with less positive results.

reached and surpassed the 80% mark. Of course, the curve ignores important events that accelerated, slowed, or temporarily reversed the process of Islamization. But the conclusion remains that Iran became overwhelmingly Muslim in just over three centuries.

Ottoman documentary records for the period 1520–35 reveal that the population of Anatolia during this period, about five million, was more than 92% Muslim and only 8% Christian.[28] Thus, the evidence from both Iran and Anatolia indicates a process of Islamization up to an overwhelming majority of 80–90%. The process took about 300 years in Iran and at least 400 years in Anatolia, taking the starting-point as the initial Turkish invasion in the later eleventh century. It involved the set of powerful and interlocking social mechanisms that we have discerned at work in Egypt: Muslim migration and settlement, marriage with non-Muslim native women, and conversions from among the native population. The relative importance of these factors differed in each country—conversion, for example, was especially important in Iran, whereas Turkish settlement, combined with intermarriage, was probably the main factor in Anatolia.[29] In each case, however, the process worked inexorably, with a snowballing effect, to achieve the Islamization of Iran and Anatolia within three to four centuries.

Adding these results to the evidence that Arab-Muslim immigration and Coptic conversion both took place in Egypt from an early date, and to the specific attestation by al-Maqrīzī that Muslims had achieved a majority in most Egyptian villages during the ninth century, we conclude that the Islamization of Egypt to the order of at least 80% was achieved well within the six centuries that elapsed from the Islamic conquest of Egypt to the Mamluk seizure of power in 1250. Several writers are of this opinion, although they all assume that Islamization was achieved mainly by conversion and ignore the factors of Arab-Muslim settlement, intermarriage, and Coptic demographic decline. Thus, according to ʻAbd al-ʻAzīz al-Dūrī: ″By the dawn of the third century [830] Islam had spread on a wide scale in the [Egyptian] countryside . . . and became the religion of the majority of the

[Egyptian] population in the fourth century [tenth century].″[30] G. R. Hawting thinks that Islamization in Egypt was slower than in Syria and Iraq, ″and that it was not until after the [Umayyad] dynasty had been overthrown that Islam became the religion of the majority.″[31] Garth Fowden considers that Iran converted more rapidly than any other conquered country, its population being over 90% Muslim by about 950. He continues: ″Iraq, Syria, North Africa, and Egypt lagged behind this very rapid conversion rate, but the result was the same—an almost entirely Muslim population by the 11th century.″[32] Daniel C. Dennett and the demographer Josiah C. Russell both concur that Egypt was 80% Muslim by the time of the Bashmurite revolt in 831.[33]

In the study of Egypt´s Islamization, the factor that perhaps requires more consideration than any other is that of Coptic demographic decline during the early Islamic period. The topic can be introduced here by referring to the recent demographic study of Youssef Courbage and Philippe Fargues, based on Josiah Russell´s work. Regarding Egypt, the authors take a radical stance, tentatively concluding that fully half the Egyptian population converted from Christianity to Islam within a few decades of the Islamic conquest, and that the Muslim element approached 80% as early as 800.[34] They reach this conclusion from Islamic source-historical evidence that the annual Egyptian revenue, the *jizyah,* fell precipitately from the conquest of Egypt in 641–42 to the caliphate of al-Ma'mūn (809–13): from about twelve million dinars immediately after the conquest, the Egyptian *jizyah* fell to nine million in 660, five million in 680, four million in 743, and three million in 813, remaining roughly stable thereafter.[35] Converts to Islam were exempted from paying poll-tax, which is the strict interpretation of the term *jizyah*

---

[30]Al-Dūrī, *The Historical Formation of the Arab Nation,* 64.

[33]Courbage and Fargues, *Christians and Jews under Islam,* 28.

[34]Ibid., 15–16.

[35]Ibid., 23; they quote the figures in dirhams, but dinars, the currency of Islamic Egypt, is surely meant. Al-Ya'qūbī, *Kitāb al-Buldān*, ed. M. J. de Goeje, Bibliotheca Geographorum Arabicorum no. 7 (Leiden, 1892), 339, records different figures within the same trend of rapid fall followed by relative stability: 10–12 million dinars per annum in 640–56, 4 million in 735, 4.3 million in 830, 4 million in ca. 880, 3.4 million in ca. 980, and 2.8 million in ca. 1080. See also A. S. Tritton, ″Islam and the Protected Religions,″ *JRAS* (1928): 506–7. In contrast, however, al-Balādhurī, *Futūḥ al-Buldān,* ed. M. J. de Goeje (Leiden, 1866), 216–18, states that the first governor of Egypt, 'Amr (642–46), raised only two million dinars per annum and the second governor, Ibn Sa'd (646–56), only four million

in Islamic law; consequently, Courbage and Fargues attribute the decline of the *jizyah* entirely to massive Coptic conversion during the first century of Islam in Egypt.

But this interpretation is problematic. If massive Coptic conversion during the period 641–813 explains both the *jizyah*'s large fall during that period and its stability thereafter (once Islamization was practically completed), then one is forced to suppose that the total population of Egypt remained relatively stable during the entire Islamic period. Therefore, since Egypt's population was quite reliably estimated at 2.5 million by the French in 1798, Courbage and Fargues suppose that, leaving aside temporary fluctuations, this was also the case going back to the Islamic conquest in 641: Egypt's population, then, was only 2.5 million at the end of Roman rule in 641, having declined from a peak of 4.5 million at the time of Augustus. Yet, this population estimate for Egypt in 641 seems too low compared to the estimates Courbage and Fargues give for Syria and Iraq (4 million and 9 million) and to other estimates of Egypt's population at that time;[36] it also contradicts traditional Islamic reports of Egypt's wealth during the early Umayyad period—according to al-Ṭabarī, for example, Mu'āwiyah "hoped that if he won control over Egypt, he would also be victorious in the war against 'Alī on account of the huge sum that was raised from its kharāj."[37]

But there is an alternative explanation for the apparently rapid fall of the Egyptian *jizyah* during the seventh and eighth centuries. The treaty reports relating to the conquest of Egypt, as well as the fiscal documents contained in the Aphrodito papyri from Upper Egypt, dating 700–20, reveal that the term *jizyah* was used generally to mean *all* regular annual revenues paid by local communities to the central administration in al-Fusṭāṭ. That is, *jizyah* included not only poll-tax (*diagraphon* in the papyri), payable only by adult male non-Muslims, but also land-tax (*dēmosia* in the papyri), payable by all land-owners including converts.[38] Therefore, the steady fall of the annual Egyptian *jizyah* from ten–twelve million dinars to three million during the period 641–813 would not reflect massive

The tenth-century Egyptian Melkite writer Eutychius states, with great exaggeration, that Egypt had six million adult males at the start of Islamic rule: Gilbert Dagron and Vincent Déroche, "Juifs et chretiens dans l'Orient du VIIe siècle," *Travaux et Mémoires* 11 (1991): 244–45.

[37]Al-Ṭabarī, *Tārīkh al-Rusul wa-al-Mulūk,* ed. M. J. de Goeje (Leiden, 1879–1901), ser. 1, 6:3396; tr. E. Yarshater et al. (Albany, NY, 1987–89).

[38]Dennett, *Conversion and the Poll Tax in Early Islam,* 90–98; Jørgen Bæk Simonsen, *Studies in the Genesis and Early Development of the Caliphal Taxation System* (Copenhagen, 1988), 81–129 passim; Tritton, "Islam and the Protected Religions," 494; H. I. Bell, "The Administration of Egypt under the Umayyad Khalifs," *Byzantinische Zeitschrift* 28 (1928): 282–83.

conversion because Muslims too paid *jizyah* in early Islamic Egypt. Instead, however, it ought to reflect a real decline in the total population of Egypt from the conquest onwards.[39] And this conclusion would seem to fit the picture of the demographic decline of the native Coptic population, still the great majority during this early period but caught in a cycle of repression, failed revolts, and aggravated repression—and, on the other hand, the spread and settlement of Arab-Muslim migrants throughout rural Egypt. Islamization in Egypt was achieved within three centuries—on the one hand by the shrinking of Coptic numbers; and on the other, by the introduction of a Muslim element that was small at first but grew quickly, both in absolute terms and relative to the declining native population. Coptic conversion had a significant part in the growth of this Muslim element, but it was not the primary factor.

The Islamization of Egypt was thus achieved by the ninth century, but the early Mamluk period may be seen as a long-delayed conclusion to it, since it gave rise to the last and most important in an intermittent series of Coptic conversion-waves. This was partly due to the unusually severe measures introduced by the Mamluk state against the Copts—notably the rule imposing conversion upon the wife of a convert (which practically ensured that the family´s wealth would pass out of the Coptic community), the banning of traditional Coptic festivals, and the wholesale confiscation of Coptic *waqf*s.[40] But perhaps the main cause was the decline of morale among the Copts in the early fourteenth century, possibly prompted by external factors—especially the recent conquest of Monophysite Christian Nubia by Arab tribes at that time. Their direct connection to Ethiopia now severed, the Copts were reduced into a sealed pocket community with little hope of support from the outside.

But this is not to say that the early Mamluk period was a decisive turning-point in the Islamization of Egypt. Indeed, al-Maqrīzī´s account of anti-Copt agitation and government pressure from 1290 to 1354 suggests that the Copts were by now a relatively small and weak minority in Egypt. For example, following the mass riots in 1321 that destroyed sixty churches and monasteries across the whole country, a group of monks armed with naphtha set fire to the mosques of Cairo, setting off blazes that burned for days. The sultan, according to al-Maqrīzī, refused to believe that the Christians were responsible: as he claimed, ″they did not have

[40]El-Leithy, ″Coptic Culture and Conversion in Medieval Cairo,″ 96, 117–24. However, a much earlier example of severe fiscal pressure, fully justified by appeal to tradition, is minutely recorded in the Zuqnin Chronicle´s eyewitness account of events in al-Jazira in 772–74: J.-B. Chabot, ed., *Chronique de Denys de Tell Mahré, quatrième partie* (Paris, 1895), 122 f..

sufficient strength and boldness to embark upon an enterprise of such magnitude.″ And in the last anti-Copt episode of 1354, the government confiscated all the lands in Egypt held as *waqf*s by Christian churches and monasteries. These lands were the main source of revenue for Christian institutions, yet they amounted to only 25,000 feddans—that is, a few hundred square kilometers in a country possessing at least 25,000 square kilometers of cultivated land.[41]

[41]Little, ″Coptic Conversion to Islam under the Bahrī Mamlūks,″ 564, 568; el-Leithy, ″Coptic Culture and Conversion in Medieval Cairo,″ 124. The feddan is taken to be roughly equivalent to the acre.

Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method Description: Section 2

The present article is a continuation of the first section published in this journal in 2003.[1] As discussed previously, al-Maqrīzī filled the blanks he left at the end of his resumés with numerous notes which became scattered with the passage of time. This article presents another aspect of his working method: cards which he organized to produce the first stages of his books. A complete description of these notes will be given here, following the system used in the first section of ″Maqriziana I,″ by which material is presented in its physical order, keeping in mind that some material may have been rearranged. Since the publication of the first article, I have been able to trace other works back to their original source. At the end of the article, the reader will find addenda where identification or confirmation of these sources is provided. This will end my description of the contents of al-Maqrīzī′s notebook. The analysis of his working method, based on elements discussed throughout these articles, will be dealt with in a forthcoming study.[2]

B. THE SCATTERED NOTES

[. . .] ولا يدفع عنه تلك الرذائل إلا الشريعة وأحكامها.

Commentary:

This very small excerpt (7 lines), which occupies the space left blank at the end (last quire) of resumé I (Ibn Abī Uṣaybi‘ah, *‘Uyūn al-Anbā’ fī Ṭabaqāt al-Aṭibbā’*), was taken by al-Maqrīzī from the work of one of the foremost figures of Ismaili thought, the *Kitāb Rāḥat al-‘Aql,* Ḥamīd al-Dīn **al-Kirmānī**'s *opus magnum*. Very little is known about the life of this propagandist *(dā‘ī)*[4] with the exception of what he revealed about himself in his books. We learn that he composed this book in Iraq, where he acted as a propagandist for the Fatimid caliph al-Ḥākim, in the year 411/1020, the year in which this caliph mysteriously disappeared. It is clear that al-Maqrīzī selected all the useful material for a biography of this person (full name, role, position, year of composition of the book, its subject, and an explanation of its aim), although no biography of al-Kirmānī was found in any of al-Maqrīzī's extant books, not even in *Al-Muqaffá*.[5] Nevertheless, it would be strange if he did not devote some space in it to this important representative of the Fatimid period, given the information available to him in the notebook. But the presence of such an excerpt from a book written under al-Ḥākim's rule by an Ismaili thinker suffices here to confirm, unequivocally, that al-Maqrīzī had access to it and could take notes from it. A comparison of these 7 lines with the original

---

[4]On al-Kirmānī, see Paul E. Walker, *Ḥamīd al-Dīn al-Kirmānī: Ismaili Thought in the Age of al-Ḥākim* (London-New York, 1999); Hamid Haji, *A Distinguished Dā‘ī Under the Shade of the Fāṭimids: Ḥamīd al-Dīn al-Kirmānī (d. circa 411/1020) and His Epistles* (London, 1419/1998). The *Kitāb Rāḥat al-‘Aql* has been the object of a detailed study by Daniel De Smet, *La Quiétude de l'intellect: Néoplatonisme et gnose ismaélienne dans l'œuvre de Ḥamīd ad-Dīn al-Kirmānī (Xe/XIe s.)* (Leuven, 1995), and has been translated into Russian by A. V. Smirnov (Moscow, 1995).

[5]However, only part of *Al-Muqaffá* has come down to us, representing roughly 9.6 volumes of the 16 al-Maqrīzī managed to complete before his death, far fewer than the 80 volumes he announced. See Jan Just Witkam, "Les Autographes d'al-Maqrīzī," in *Le Manuscrit arabe et la codicologie,* ed. Ahmed-Chouqui Binebine (Rabat, 1994), 96. Furthermore, the only available edition of this work (ed. Muḥammad al-Ya‘lāwī, Beirut, 1411/1991, 8 vols.) does not appear to be complete in the light of the preserved autograph manuscripts. This will be the subject of "Maqriziana X." In any case, al-Kirmānī's name is absent from these supplementary biographies.

book[6] definitely proves that it did not come from a second-hand source.[7] More importantly, it implies that al-Maqrīzī was speaking truthfully when he declared that he had access to Ismaili literature,[8] even though the great Fatimid libraries had been looted, sold, or destroyed two centuries before his birth, and the Ismaili believers had left Egypt *en masse* in the decades that followed the end of the Fatimid caliphate.[9] It does not solve, unfortunately, the mystery of how and where he consulted the so jealously guarded manuscripts of the Ismailis.

XXIV. (fol. 32r–32v[10])

Title on fol. 32r, line 1: *Faṣl* [containing a formula of salutation].

Incipit (fol. 32r, lines 2–3):

وإذا حييتم بتحية فحيوا بأحسن منها أو ردوها وهو على جمعهم إذا يشاء قدير وما ذلك على الله بعزيز [. . .]

Explicit (fol. 32v, line 8):

[. . .] إذا ركبوا زانوا المواكب هيبة وإن جلسوا كانوا صدور المجالس.

Commentary:

This short text covers the two sides of one folio which immediately follows excerpt XXIII in the same quire, showing that it was written after it. Nonetheless, it does not seem to be related at all to the *Kitāb Rāḥat al-ʿAql* or to be of Ismaili provenance. It deals with a formula of salutation and ends with a selection of poetry. So far, I have not been able to trace this text back to a source, or to any of al-Maqrīzī's surviving books.

---

[6]Reference is made here to the first edition (ed. Muḥammad Kāmil Ḥusayn and Muḥammad Muṣṭafá Ḥilmī, Cairo, 1953), where the various passages were found on pages 16, 17, 20, and 24. Some discrepancies in the readings were confirmed by the *apparatus criticus*. Another edition was published by M. Ghālib, Beirut, 1967 (2nd ed., 1983); see pp. 100, 101–2, 106, 111.

[7]See "Maqriziana II" for this comparison.

[8]Cf. in his *Khiṭaṭ,* 2:395 (unless otherwise stated, reference is always made to the Būlāq ed.) (*"wa-lahum fī dhālika muṣannafāt kathīrah minhā ikhtaṣartu mā taqaddama dhikruhu"* [and they have, in this matter, many works from which I have excerpted what precedes]). Note that this sentence does not appear in his *musawwadah,* where the same passage is quoted, however. See al-Maqrīzī, *Musawwadat Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār,* ed. Ayman Fuʾād Sayyid (London, 1416/1995), 106.

[10]See reproduction of fol. 32r in "Maqriziana IV," 26.

XXV. (fol. 32v)
Title on fol. 32v, lines 9–10: *Faṣl* [dealing with the wealth and personal estate which Ibn Ṭūlūn left upon his death].
Incipit (fol. 32v):

فصل : خلف الأمير أحمد بن طولون ذهبا مصريا عشرة آلاف ألف دينار وسبعة آلاف مملوك [. . .]

Explicit (fol. 32v, lines 16–17):

[. . .] وعلى حصن الجزيرة ثمانين ألف دينار وعلى القصر والميدان خمسين ألف ومائة ألف دينار.
(السيرة، ص ٣٤٩–٣٥١)

Commentary:
Placed at the end of XXIV, on the same folio, but written in the other direction, i.e., perpendicularly, this excerpt, containing a small passage related to Ibn Ṭūlūn, was reused word for word by al-Maqrīzī in the biography he wrote of him in *Al-Muqaffá* (1:429), without referring to any source. It was found in the main source for the Tulunid period in al-Maqrīzī's time as well as in ours: *Sīrat Āl Ṭūlūn* or *Al-Sīrah al-Ṭūlūnīyah* by Abū Muḥammad ʻAbd Allāh ibn Muḥammad **al-Balawī** (d. after 330/942).[11] Al-Maqrīzī must have dedicated some lines to this important author in the lost section of his *Al-Muqaffá*.[12] However, in his other works, he never refers to him by name, but instead refers to the title of his book, sometimes quoted as *"jāmiʻ al-sīrah al-ṭūlūnīyah"* or *"jāmiʻ sīrat (Aḥmad) Ibn Ṭūlūn."*[13] Other excerpts which derive from this source will be found under notes XXXIV, XLVII, and XLV, all regarding Aḥmad ibn Ṭūlūn. From this and the other material gleaned from al-Balawī's book by al-Maqrīzī and inserted in his works,[14] it can be conjectured that he had at his disposal, already in his time, the part of the book dealing with Ibn Ṭūlūn only, and not the part dealing with his descendants. Furthermore, he must have relied heavily on it for the first part of his triptych on Egyptian history: *ʻIqd Jawāhir al-Aṣfāṭ min Akhbār Madīnat al-Fusṭāṭ*. This work is now considered lost, but must have been finished by the time al-Maqrīzī

---

[11]Reference is made here to al-Balawī, *Sīrat Aḥmad ibn Ṭūlūn,* ed. Muḥammad Kurd ʻAlī (Damascus, 1358/[1939–40]). The actual passage is to be found on pages 349–51.

[12]A small part of the book dealing with individuals whose *ism* began with an *ʻayn* (mostly ʻAlī) was identified in the autograph copy of *Durar al-ʻUqūd al-Farīdah* (Forschungsbibliothek, Gotha, MS A1771) by M. al-Yaʻlāwī, who published these biographies at the end of vol. 8 of his edition of *Al-Muqaffá*.

A. F. Sayyid (London, 1423/2002), 2:23.*

[14]Till now, the material has been traced back in *Al-Muqaffá, Al-Khiṭaṭ,* and *Shudhūr al-ʻUqūd*.

began to write his other books, where he refers to it.[15]

XXVI. (fols. 32v–33r[16])

No title: *Faṣl* consisting of the quotation of a story regarding ʿUmar ibn al-Khaṭṭāb and a Coptic ritual performed to ensure the flooding of the Nile.

Incipit (fol. 32v, lines 17–19):

قصر مد النيل في زمن عمر بن الخطاب رضي الله عنه وكان عادتهم في الجاهلية أن يأخذوا بنتا بكرا من قومهم يغرقونها في النيل [. . .]

Explicit (fol. 33r, lines 3–6):

[. . .] فلما قذفها فيه غلق في ذلك اليوم ما كان يزيده في طول السنة.

Commentary:

This note seems to have been written in the same direction immediately after the previous one, as no change of color in the ink is discernible, although it is not connected with the subject of al-Balawī´s book. The last lines end on the following folio. The original source was not identified. The same event is reported in different words by Ibn ʿAbd al-Ḥakam in his *Futūḥ Miṣr wa-Akhbārihā*.[17] As we have seen,[18] the notebook contains a resumé of this work which ends abruptly with this very story. The last lines found in the *Futūḥ Miṣr* are missing there, while the entire story which came from Ibn ʿAbd al-Ḥakam is found in his *Khiṭaṭ* (1:58). The wording is identical, which means that al-Maqrīzī did not quote from his incomplete abstract, but rather returned to the original source. The reason why he decided not to quote the version found on this folio, which differs from Ibn ʿAbd al-Ḥakam´s version in its wording, remains unknown.

XXVII. (fol. 33r)

No title: Quotation dealing with the city of Barzah, taken from *[Tārīkh Madīnat Dimashq?]* by Ibn ʿAsākir.

Incipit (fol. 33r, lines 7–8):

---

[15]See *Khiṭaṭ,* 1:212; *Ittiʿāẓ al-Ḥunafāʾ*, ed. Jamāl al-Dīn al-Shayyāl (Cairo, 1967), 1:4; *Al-Sulūk,* ed. Muḥammad Muṣṭafá Ziyādah (Cairo, 1956), 1:9; *Ḍawʾ al-Sārī fī Khabar Tamīm al-Dārī,* ed. Muḥammad Aḥmad ʿĀshūr (Cairo, 1392/1972), 31.

[16]A large band of paper, representing about the third of the folio, has been cut horizontally from fol. 33.

[17]See Ibn ʿAbd al-Ḥakam, *The History of the Conquest of Egypt, North Africa and Spain Known as the Futūḥ Miṣr of Ibn ʿAbd al-Ḥakam,* ed. Charles C. Torrey (New Haven, 1922; Leiden, 1920), 150–51. For a folkloric interpretation of the whole story, see S. Mahdihassan, ″A Legend Attributed to Calif Omar and Its Chinese Basis,″ *Abr-Nahrain* 16 (1975–76): 115–18.

[18]″Maqriziana I/1,″ resumé II, 33–35.

برزة قرية بظاهر دمشق فيها معبد يعرف بالمقام [. . .]

Explicit (same fol., lines 14–17):

[. . .] وقيل إن أمه كانت تخبؤه في كهف بقرية برزة في الموضع الذي يعرف بمقام إبراهيم إلى اليوم. ذكره ابن عساكر.

Commentary:

The source, mentioned explicitly by al-Maqrīzī at the end of the note, is **Ibn ʻAsākir**.[19] As the passage refers to a place located in the vicinity of Damascus, it is reasonable to think that it was taken from his *opus magnum,* the *Tārīkh Madīnat Dimashq,* notwithstanding the fact that this data is not found in it. There is indeed a chapter devoted to the *Maqām Ibrāhīm*[20] situated in Barzah, but the stories differ from what is found in the notebook. Besides this discrepancy, it is hardly probable that al-Maqrīzī took this note from another source based on Ibn ʻAsākir, where the source was clearly indicated by the author. It remains puzzling that this note differs from the original text and that no other works among those compiled by Ibn ʻAsākir, except the *Tārīkh Madīnat Dimashq,* could better fit with this excerpt. Furthermore, al-Maqrīzī does not seem to have used it in any of his published books.

XXVIII. (fol. 33v)

Title on same fol., line 1: *Mukhtār min al-Muyāwamāt*/al-Qāḍī al-Fāḍil.

مختار من مياومات القاضي الفاضل.

Incipit (fol. 33v, lines 2–3):

سنة سبع وسبعين وخمسمائة جمادى الأولى مستهله فيه ركب الملك الناصر صلاح الدين يوسف لفتح نحو ابن أبي المنجى [. . .]

Explicit (fol. 33v, lines 9–10):

[. . .] وأمر المجلس العادلي بوضع يده فيه والاستخدام من قبله.

Commentary:

Written on the back of fol. 33, with the title in red ink, this extract stems from a

---

[19]Other excerpts from this source will be found under numbers LXIII and LXVII. The author and his work are quoted thrice in the *Khiṭaṭ* (see Guest, ″A List of Writers,″ 109; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 1:279 and 2:76), under the title *Tārīkh Dimashq,* but he undoubtedly used it for other works, like *Al-Muqaffá, Imtāʻ al-Asmāʻ, al-Khabar ʻan al-Bashar,* and some of his opuscules.

[20]I am referring here to the following edition: ed. Muḥibb al-Dīn Abū Saʻīd ʻUmar ibn Gharāmah al-ʻAmrawī (Beirut, 1415/1995, 80 vols.), 2:323–41 *(bāb dhikr faḍl al-masājid al-maqṣūdah bi-al-ziyārah ka-al-rabwah wa-maqām Ibrāhīm wa-kahf Jibrīl wa-al-maqābir).*

work mentioned in my previous article, where the title was not given.[21] The author, ʿAbd al-Raḥīm ibn ʿAlī al-Baysānī, better known by his title al-Qāḍī al-Fāḍil (d. 596/1200), had worked for the Fatimid administration and was put in charge of the Egyptian chancery under Saladin. Apart from his important epistolary output, he is also the author of a diary whose title, as provided by al-Maqrīzī, varies greatly, from *Taʿlīq al-Mutajaddidāt* to *Mutajaddidāt al-Ḥawādith* or *al-Muyāwamāt.* The latter is quoted here, preceded by the word *mukhtār* (extract). This passage clearly shows that the diary was organized by year, and within each year by month, etc. Al-Maqrīzī apparently managed to get an autograph copy of this work, as he confirms in several places with the words *min khaṭṭihi naqaltu,*[22] though this probably happened at a later stage in his writing process as it became necessary.[23] This can be surmised thanks to a draft (2 vols.) of his *Khiṭaṭ,* where all the quotations deriving from al-Qāḍī al-Fāḍil's diary were jotted down in the margins or on slips of paper glued in places where they were to be inserted. From these quotations, it can be deduced that this historical book covered broadly the period between 566 (earliest citation in the *Khiṭaṭ*) and his death, making it a substantial source for the end of the Fatimid period and the transition to the Ayyubid regime.

The actual excerpt reports events dated to the year 577, opening with the first day of Jumādá I, then proceeding to the 11th of the same month. Al-Maqrīzī took complete advantage of it in *Al-Sulūk* (1:73 and 107–8), but he also quoted parts of it in the draft of his *Khiṭaṭ*.[24] Here it was written on a small piece of paper and glued in the margin (Topkapı Sarayı MS 1472, fol. 122). It was inserted among other data originating from the same source and dealing with events which occurred between 577 and 587, though all this did not find its way into the final version of the book.[25] From this, we may surmise that he made various cards while composing the *Khiṭaṭ* which he collected on a slip of paper and later introduced to *Al-Sulūk* where he deemed appropriate. Some striking discrepancies in the dating of some events are conspicuous between the notebook, *Al-Sulūk,* and the draft of the *Khiṭaṭ*. Clearly, this exemplifies another aspect of his working method.

XXIX. (fol. 34r)

No title: Biographies of four Egyptians who died in the sixth and seventh centuries.

١) عثمان بن عمر بن أبي بكر بن يونس الدَوِيني أبو عمرو جمال الدين بن الحاجب الإسنائي المصري

[21]See "Maqriziana I/1," 37.

[22]Al-Maqrīzī, *Khiṭaṭ,* ed. Sayyid, 2:34.*

[23]These are *Al-Khiṭaṭ, Al-Muqaffá,* and *Al-Sulūk.*

[24]Al-Maqrīzī, *Musawwadah,* 299–300.

[25]The source is indicated there as al-Qāḍī al-Fāḍil, *Taʿlīq al-Mutajaddidāt.*

المالكي (ت ٦٤٦)
٢) أحمد بن عبد الوهاب بن خلف بن محمود بن أبي بدر اللخمي العَلاَمي (ت ٦٩٩)
٣) محمد بن محمد بن محمد بن بُنان أبو طاهر (ت ٥٩٦)
٤) محمد بن مشكور شرف الدين أبو عبد الله (ت ٦٧٤)

Commentary:
These four biographies of men who all died in Egypt, mainly during the seventh century, seem to have been written at the same time, as shown by the color of the ink and the style of script, which means that they probably come from the same source. In all cases, the first *ism* has been written in red ink, and the placement of the biographies varies according to the space left blank while al-Maqrīzī was writing his notes, ensuring that each of them would be easily visible. This explains why the first occupies the upper right quarter, beginning from the bottom towards the top of the page, the second the upper left quarter, from right to left, and the last two the lower half of the page, from top to bottom, beginning from left to right. Two of them have been mentioned in *Al-Muqaffá* (no. 2 = 1:519–21 [no. 507]; no. 3 = 7:154–57 [no. 3258]), where parts of the material in the notebook have been used. No. 4 should also have been included in this work, given that his profile corresponded to the goals established by al-Maqrīzī for the compiling of this dictionary.[26] The original source (or sources) has not been identified so far. Considering the order in which they were written, the source surely did not consist of an alphabetically-organized dictionary, nor an annalistic history. Furthermore, in none of the sources quoted by al-Maqrīzī for the biography of no. 3 in *Al-Muqaffá* does the text match the one found here.[27] The same is true for no. 2, whose biography appears in seven sources composed prior to 845.[28]

XXX. (fols. 34v–37r, 36v)
No title: Biography of Aḥmad ibn Muḥammad ibn Mudabbir.

[26]I.e., all the Egyptians from the beginning of Islam, except his contemporaries to whom he devoted another biographical dictionary entitled *Durar al-ʻUqūd al-Farīdah.* By Egyptian, he meant all those who were born in Egypt, or those who were born elsewhere but eventually established themselves in Egypt. There probably is a gap between Muḥammad ibn al-Musayyab and Muḥammad ibn Muṣṭafá in the surviving sections of *Al-Muqaffá*. However, no. 4 does not appear in the unpublished sections that I have identified, nor in the list of lost biographies established by the editor (8:669–75) on the basis of cross-references made by al-Maqrīzī in his book.

[27]Ibn al-Dubaythī, al-Mundhirī, and al-ʻImād al-Iṣfahānī.

[28]Al-Ṣafadī, *Al-Wāfī;* idem, *Aʻyān al-ʻAṣr;* Ibn Ḥabīb, *Durrat al-Aslāk;* idem, *Tadhkirat al-Nabīh;* Ibn al-Ṣuqāʻī, *Tālī Kitāb al-Wafayāt;* al-Subkī, *Ṭabaqāt al-Shāfiʻīyah;* Ibn Shākir, *Fawāt al-Wafayāt*.

Incipit (fol. 34v, lines 1–2):

أحمد بن محمد بن مدبر. كان من دهاة الناس وشياطين الكتاب والعمال الأجلاء [. . .]

Explicit (fol. 36v, lines 12–13):

[. . .] فقالت يآبا الحسن وجدنا الدواء كما وصفت فبكى وبكى كل من كان حوله.

Commentary:

This rather long biography closes quire III, connecting it with the following one.[29] The person whose life is portrayed here was one of the most emblematic rulers of Egypt, i.e., Ibn Mudabbir, governor in the name of the Abbasid caliph in Baghdad, who was eventually challenged by Ibn Ṭūlūn. Quite strangely, Ibn Mudabbir′s life is not included in *Al-Muqaffá,* although this is another example of the state in which this important work has reached us. It is, however, found in an autograph copy of the *Muqaffá* containing letters *alif* to *khā',* which came to light in the eighties of the last century and is now held by the University Library of Leiden (the Netherlands, MS 14.533, fols. 1v–2v, 20r–v). The material found in the notebook was reused by al-Maqrīzī in the *Muqaffá,* particularly Ibn Ṭūlūn′s biography (*Al-Muqaffá,* 1:420–22), as well as in other places. Other passages found on fols. 34v–35v in the notebook were inserted in the *Khiṭaṭ* where Ibn Mudabbir was the subject of the section (*Khiṭaṭ,* 1:314–15 and 316). Unfortunately, the source of the material found in the notebook remains unidentified, and possibly lost.

XXXI. (fols. 55r–55v[30])

Title on fol. 55r, line 30: [Three quotations from] *Murūj al-Dhahab*/al-Mas'ūdī dealing with the definition of *al-baqṭ, al-barbar, al-nāranj,* and *al-utrujj al-mudawwar.*

List of the quotations:

١) البقط هو الضريبة التي تحمل في كل سنة من ملك النوبة إلى مصر وهي على ما ذكر المسعودي (مروج، ج ٢، ص ١٣٠) [. . .].(fol. 55r)

---

[29]Fol. 36 is a small piece of paper pasted in the margin. The recto is blank. All this proves that text XXX, and consequently all the preceding notes, were written after the quires of resumés I and II were assembled. When al-Maqrīzī reached the end of fol. 37r., he could not go on writing on the verso of the same folio which corresponded to the beginning of text II. So, he added a scrap of paper in order to finish note XXX. On top of it, he wrote بقية خبر بن مدبر, to avoid misunderstanding in the arrangement of the folios. The text is written normally on the verso of fols. 34 and 35, while it is written vertically on the recto of fols. 35 and 37, beginning on the spine side, from bottom to top.

[30]See reproduction of fol. 55r in ″Maqriziana IV,″ 28.

٢) البربر أرض البربر كانت أرض فلسطين من بلاد الشام وملكهم كان جالوت [. . .]. من كتاب مروج الذهب (مروج، ج ٢،ص ٢٤٥).(fol. 55r)

٣) قال المسعودي في كتاب مروج الذهب : النارنج والأترج المدور حمل من أرض الهند [. . .] (مروج، ج ٢، ص ١٠٨). (fol. 55v)

Commentary:
Quire VI, which opens with fol. 55, is placed just in the middle of resumé II (Ibn ʻAbd al-Ḥakam′s *Futūḥ Miṣr wa-Akhbārihā*). It opens with the end of *dhikr bināʼ al-Iskandarīyah*[31] which al-Maqrīzī began on fol. 52r of the preceding quire. Strangely, fol. 55r bears only three lines and fol. 56r eight lines, the remaining part on the recto and the entire verso of both folios having been left blank by al-Maqrīzī, as if he intended to complete these passages with others missing in his original copy. These blank spaces were further used to scribble notes (XXXI–XXXIV) starting, as it seems, from fol. 56v backwards with XXXIV, indicating that the source in note XXXIV was undoubtedly consulted prior to those of the following notes. In this way, we are able to know in which chronological order al-Maqrīzī consulted these sources. Obviously, notes XXXI–XXXIII were written after note XXXIV, to fill in the gap. The actual note is composed of three excerpts originating from a common source, which is indicated very carefully in the three cases, i.e., the *Murūj al-Dhahab* of **al-Masʻūdī** (d. 346/956). A close examination of their placement on the folio reveals that they were jotted down in the order given here: the first one occupies the space located near the spine, written vertically from bottom to top, while the second was placed horizontally, at its side. In both cases, red ink was used for the first word to mark it as a catchword. The third extract, on the verso, is written on the right, filling the space left blank after the end of note XXXIV. Al-Masʻūdī represents an important source for al-Maqrīzī, who used his *Murūj al-Dhahab*, *Akhbār al-Zamān,* and *Al-Tanbīh wa-al-Ishrāf*.[32] The actual extracts in the notebook, together with one other (see XXXV), all come from the first book. They deal with the tax *(baqṭ)* paid by Nubia in agreement with the truce concluded in 31/652, the origin of the Berbers, and the introduction of bitter orange and citron to the Middle East. Each of them was found in the original source[33] and was incorporated into al-Maqrīzī′s works. The first as well as the third are to be found throughout the *Khiṭaṭ* (1:201 and 1:28),

[31]This end is lacking in the edition based on several manuscripts (ed. Torrey). On this, see ″Maqriziana V″ (forthcoming).

[32]For the *Khiṭaṭ,* see Guest, ″A List of Writers,″ 115; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 1:277.

[33]Reference is made here to the following edition: Barbier de Meynard and Pavet de Courteille, rev. and corrected by Ch. Pellat (Beirut, 1966), vol. 2.

where the source is clearly indicated, although, for the second, reference is made to a more generic title: *Al-Tārīkh*.[34] The second extract *(al-Barbar)* was not used in the *Khiṭaṭ*, although it could have found a place in the *Dhikr al-Bujah wa-Yuqāl innahum min al-Barbar* (1:194). However, it inspired al-Maqrīzī for another purpose, as it was identified in his opuscule on the Arab tribes in Egypt *(Al-Bayān wa-al-I'rāb 'amman fī Arḍ Miṣr min Qabā'il al-A'rāb)*.[35]

XXXII. (fol. 55v)

No title: Biography of a Damascene who died in the 6th c.

أبو البيان بنان بن محمد بن محفوظ بن أحمد القرشي المعروف بابن الحوراني الشافعي (ت ٥٥١).

Commentary:

This very short biography (10 lines) occupies the space left below the third extract of the preceding note. In this case too, the beginning (here the *kunyah*) has been written in red ink, and the text has been placed upside down. It is interesting to note that this individual was the founder of a mystical order in Damascus and Syria, called the *Bayānīyah,* of which disciples were still active more than a century after his death. Al-Maqrīzī does not seem to have made use of the data found here, but he mentioned one of its disciples (d. 675/1277), called *shaykh al-bayānīyah* of Ḥamāh, in his *Al-Muqaffá* (1:161). The source of this note has not been identified so far.

XXXIII. (fol. 55v)

No title: Quotation of a verse by Muḥammad ibn Tūmart.

من شعر محمد بن تومرت الثائر بالمغرب

Verse:

تجرد من الدنيا فإنك إنما　　　خرجت إلى الدنيا وأنت مجرد

Commentary:

Al-Maqrīzī did not devote a biography to the *mahdī* Ibn Tūmart (d. 524/1130) in *Al-Muqaffá,* even though he did pass through Alexandria, thus satisfying the

[34]Strangely, in his recent edition, A. F. Sayyid (1:75, n. 4) has indicated that this quotation was not found in *Murūj al-Dhahab, Akhbār al-Zamān,* or *Al-Tanbīh wa-al-Ishrāf.*

[35]Ed. Ramaḍān al-Bakrī and Aḥmad Muṣṭafá Qāsim, in *Rasā'il al-Maqrīzī* (Cairo, 1419/1998), 145. It had previously been quoted by F. Wüstenfeld in *Macrizi's Geschichte der Copten, aus den Handschriften zu Gotha und Wien mit Übersetzung und Anmerkungen* (Göttingen, 1847), 63 (of the Arabic text) and 11–12 (n. 6 of the translation).

prerequisite for inclusion in this biographical dictionary.[36] The presence of this verse in the margin of the notebook shows that he was interested in this individual, despite the fact that it does not appear in any of al-Maqrīzī′s extant works. Thus, it might be considered only as a note of interest to al-Maqrīzī, who did not intend to reuse it, an attitude that is confirmed in the case of other notes as well. The authors who mentioned this verse in Ibn Tūmart′s biography repeatedly say that the *mahdī* used to recite it frequently *(kāna yunshidu kathīran)*.[37] In earlier works, it is attributed to Abū al-ʻAtāhiyah.[38] Al-Maqrīzī neglected to mention the source from which he took this verse. Various possibilities may be imagined,[39] such as al-Ṣafadī, who appears in this notebook in connection with an abstract (V) from *Al-Wāfī bi-al-Wafāyāt,* but al-Maqrīzī more likely took it from *Al-Mughrib fī Ḥulá al-Maghrib* by Ibn Saʻīd (ʻAlī ibn Mūsá, d. 685/1286), clearly given by al-Ṣafadī as his source in this particular case. Ibn Saʻīd was also an important source from whom al-Maqrīzī benefited, and excerpts from two of his works appear later in the notebook (LVII, LX, LXI).[40]

XXXIV. (fols. 56v–55v)
No title: Quotation dealing with Ibn Ṭūlūn and the discovery of a treasure.
Incipit (fol. 56v, line 1):

من خبر مصر. لما ورد على أحمد بن طولون كتاب المعتمد بما استدعاه من رد الخراج بمصر إليه [. . .] (السيرة، ص ٧٤–٧٧)

Explicit (fol. 55v, line 7):

[. . .] وألزمهم أشياء ضجوا منها فقبض عليه وأخذ ماله وحبسه فمات في حبسه.

Commentary:
As for most of the extracts dealing with the period of Aḥmad ibn Ṭūlūn (see XXV), this particular one also comes from the source already identified, although never mentioned explicitly in the notebook. It is referred to generally by al-Maqrīzī as the *Jāmiʻ al-Sīrah al-Ṭūlūnīyah,* and more commonly known by the name of its

[36]He made only a short reference to his leaving Egypt in 511 in *Ittiʻāẓ al-Ḥunafāʼ,* ed. Muḥammad Ḥilmī Muḥammad Aḥmad (Cairo, 1393/1973), 3:56.

[37]Ibn Khallikān, *Wafayāt al-Aʻyān,* ed. Muḥyī al-Dīn ʻAbd al-Ḥamīd (Cairo, 1948), 4:145; al-Dhahabī, *Siyar Aʻlām al-Nubalāʼ,* ed. Shuʻayb al-Arnaʼūṭ (Beirut, 1417/1996), 19:551; al-Ṣafadī, *Al-Wāfī,* ed. S. Dedering (Damascus, 1953), 3:327.

[38]See for instance Abū al-Faraj al-Iṣbahānī, *Al-Aghānī* (Beirut, 1955), 4:102.

[39]See n. 37.

[40]His books are quoted in *Al-Muqaffá,* 1:390, 3:412, 6:112; and *Al-Khiṭaṭ*. See Guest, ″A List of Writers,″ 118; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 1:27; and Sayyid′s ed., 5:967 and 989.

author, **al-Balawī**. The passage quoted here was found in the only available edition.[41] The text, written backwards starting from fol. 56v, is simply introduced by the words *"min khabar Miṣr"* in red ink, and recounts the events that took place when the Abbasid caliph demanded that Ibn Ṭūlūn give him the *kharāj* of Egypt and the accidental discovery he made of a treasure in the desert. This text was reused verbatim by al-Maqrīzī in both versions of his *Khiṭaṭ* (the draft[42] and the final text (2:266–67)), under the heading *"ḥadīth al-kanz."* This proves that the passage in the notebook was already considered by al-Maqrīzī to be the final version to be included in his work. Also noteworthy is the fact that the text in the notebook is a verbatim quotation, implying that he did not change anything.

XXXV. (fol. 82r)

Title on fol. 82r, line 1: *Faṣl fī Nīrān al-'Arab*

فصل في نيران العرب

Incipit (fol. 82r, line 1):

وهي أربعة عشر نارا : نار المزدلفة توقد ليراها من دفع من عرفة [. . .]

Explicit (fol. 82r, line 17):

[. . .] ويرفعونها لمن يلتمس القرى كلما كانت أضخم وموضعها أرفع كان أفخر وهم يتمادحون بها.

Commentary:

This extract initiates a series of notes placed at the end of quire VIII, where the aforementioned resumé II ends. Those notes occupy the last three folios (82r–86v) which were left blank. Two slips of paper were added to complete some of them (fols. 83–84). The section dealing with the fires of the Arabs occupies all of fol. 82r, being placed vertically, starting from the spine. As usual, the first word was written in red ink, and strokes in the same color over the name of the various fires help to easily differentiate them. No source is indicated, but it can be assumed that the text comes from **al-Nuwayrī** (d. 733/1333), *Nihāyat al-Arab fī Funūn al-Adab,* since the fires are organized in the same way and the wording is almost identical.[43] However, al-Nuwayrī mainly relied on another source, i.e., al-Jāḥiẓ's *Kitāb al-*

---

[41]Al-Balawī, *Sīrah,* 74–77.

[42]Istanbul, Topkapı Sarayı Müzesi Kütüphanesi MS 1405, fols. 73v–75r. It is worth mentioning that the name of one of the protagonists in this passage is vocalized in one occurrence in the notebook as Ibn al-D?suwamah. In the draft, this is not the case, but the ductus is identical. Thus, the reading that appears in A. F. Sayyid's edition of the *Khiṭaṭ* (Ibn al-Dashshūmah) must be corrected accordingly.

[43]This work was already considered as a possible source of resumé IV/6. The actual passage is to be found in vol. 1:103–29.

Ḥayawān,[44] adding original data taken from other books. Al-Maqrīzī utilized the extract he scribbled in his notebook for his book dealing with pre-Islamic times, *Al-Khabar ʻan al-Bashar,* a work that remains unpublished despite its vast amount of material gathered from many lost and extant sources.[45] In the *Dhikr Nīrān al-ʻArab,*[46] the author has interspersed the information he collected in al-Nuwayrī´s work, but the most interesting feature is the fact that he went back to al-Nuwayrī´s original source (al-Jāḥiẓ), from which he quotes extensively, while also adding new material to both of them. This trait illustrates al-Maqrīzī´s insistence on going back to older texts.

XXXVI. (fols. 82v–83r)

No title: *Faṣl* [regarding the tribe of Shuʻayb and their genealogy, taken from] al-Masʻūdī.

Incipit (fol. 82v, lines 1–2):

فصل. قال المسعودي : وقد تنازع أهل الشرائع في قوم شعيب بن نوفل بن رعويل بن مرا بن عنقاء بن مدين بن إبراهيم الخليل صلى الله عليه [. . .]

Explicit (fol. 83r, lines 5–6):

[. . .] ولهؤلاء الملوك أخبار عجيبة من حروب وسير وكيفية تغلبهم على هذه الممالك وتملكهم عليها وإبادتهم من كان فيها وعليها قبلهم من الأمم.

Commentary:

The name of the author helps to establish the source of this extract. We have seen elsewhere in the notebook (see XXXI) that quotations from this author came from the *Murūj al-Dhahab,* which must still be identified as the source in this case (2:281–83). Considering the fact that al-Maqrīzī probably wrote both of them at the same time, and given the place of this note in the quire (just after the extract from al-Nuwayrī) and that of the other extract (XXXI, in the middle of a quire, to fill the blank spaces), it may be presumed that he had access to this source after

---

[44]Ed. ʻAbd al-Salām M. Hārūn (Cairo, 1385/1966), 4:461–92 and 5:5–148. See also more generally T. Fahd, ″Le Feu chez les anciens Arabes,″ in *Le Feu dans le Proche-Orient antique: Aspects linguistiques, archéologiques, technologiques, littéraires: Actes du Colloque de Strasbourg (9 et 10 juin 1972)*, Travaux du Centre de recherche sur le Proche-Orient et la Grèce antiques (Leiden, 1973), 43–61 (based on al-Jāḥiẓ and al-Nuwayrī).

Tauer, ″Zu al-Maqrīzī´s Schrift *al-Ḫabar ʻan al-Bašar*,″ *Islamica* 1 (1925): 357–64; for an appraisal of the work´s importance, see M. Lecker, ″Idol Worship in Pre-Islamic Medina (Yathrib),″ *Le Muséon* 106 (1993): 331–46.

[46]Istanbul, Süleymaniye Kütüphanesi MS Fatih 4339 (autograph), fols. 66r–74v (particularly 69r–71v).

having consulted al-Nuwayrī's *Nihāyat al-Arab*. When he obtained a copy of the *Murūj al-Dhahab,* he first jotted down his notes in the remaining space on fol. 55, then went on to the next blank pages in the notebook, i.e., fols. 82–83. We have already seen that such a chronological classification could be proposed for text XXXIV (see under XXXI). The entire text was later integrated into the *Khiṭaṭ* (1:187), without any modification in the phrasing.

XXXVII. (fol. 83r[47])

No title: Two biographies of persons who died in Cairo in the fourth and seventh centuries.

١) إبراهيم بن عبد الله أبو إسحاق البغدادي النحوي الكاتب النجيرمي (ت ٣٤٣).

٢) إبراهيم بن عبد الرحمن بن علي بن عبد العزيز بن علي بن قريش بن علي بن محمد بن أحمد بن سلامة بن الحسن بن سليمان بن خالد بن الوليد أبو إسحاق القرشي المخزومي المصري الكاتب شرف الدين (ت ٦٤٣).

Commentary:

The preceding note ended on fol. 83r, with only 6 lines occupying the upper part, leaving the rest of the folio available for further notes. Al-Maqrīzī used this space for two biographies. The first one was written vertically, from top to bottom, on the left, while the second occupies the right side, horizontally. Red ink was used for the first *ism*. Both of them were obviously taken from the same source, which is not cited. This source probably consisted of a comprehensive biographical dictionary. This can be inferred from the names, which follow in alphabetical order, and from the death dates, which are not contemporaneous with each other. This source has not been identified so far. The material was partly reused for *Al-Muqaffá,* where a biography has been devoted to both of them (1:239–41 [no. 274]; 1:213–14 [no. 238]). Furthermore, the second one is mentioned in *Al-Khiṭaṭ* (2:93), where the text exactly matches the one in the notebook! But al-Maqrīzī intended to include both of them in his other book dedicated to the secretaries of the chancery entitled *Khulāṣat al-Tibr fī Akhbār Kuttāb al-Sirr,*[48] considered lost.

---

[47]Fol. 83 is a little bit smaller than the other folios in the quire, missing a small strip of paper horizontally and vertically. It was added to the quire by al-Maqrīzī when he saw that he needed a place to complete the notes. See "Maqriziana IV," 27 (n. 13).

[48]See al-Maqrīzī, *Al-Khiṭaṭ* (Sayyid ed.), 1:45*, and also LXXI below.

XXXVIII. (fol. 82bis r–82bis v[49])

No title: Text describing the sessions of wisdom held by the *dāʻī* in the Fatimid period.

Incipit (fol. 82bis r, lines 1–3):

كان الداعي يواصل الجلوس بالقصر لقراءة ما يقرأ على الأولياء والدعاة والمتصلة [. . .]

Explicit (fol. 82bis v, lines 10–11):

[. . .] وكتب آخر بقطع مجالس الحكم التي تقرأ على الأولياء يوم الخميس والجمعة.

Commentary:

The short text appears on a very small loose slip of paper which was never bound to the notebook. It is to be found throughout *Al-Khiṭaṭ* (1:391), where the source is given as **al-Musabbiḥī**, i.e., al-Mukhtār Muḥammad ibn ʻUbayd Allāh (d. 420/1030). His main work consisted of a history of Egypt and was entitled *Akhbār Miṣr* in its shorter form. Al-Maqrīzī depended heavily upon it for several of his books.[50] The unicum of vol. 40 dealing with the last months of the year 414 and the greater part of 415, now held in the Escorial in Spain, bears witness to the fact that he had access to at least that volume,[51] but there is no reason to believe that he did not have access to other volumes as well. In fact, another excerpt from this source, concerning the year 396, will be found under LXV (fol. 145v). As in that case, the actual loose leaf played the role of a card, which al-Maqrīzī could attach to the relevant subject in the preliminary stage of redaction. Indeed, beside the actual evidence, the same text can be read both in the final version of the *Khiṭaṭ* as well as in *Al-Muqaffá* (3:627–28, biography of al-Qāḍī al-Nuʻmān [al-Ḥusayn ibn ʻAlī ibn al-Nuʻmān]) and in *Ittiʻāẓ al-Ḥunafāʼ* (2:82). It is interesting to notice that the notebook also contains a biography of al-Musabbiḥī, which al-Maqrīzī picked up from a hitherto unidentified source (see LVI, no. 13). At the end of the biographical data, a small—in comparison with what is found in other sources—list of al-Musabbiḥī's works is provided, ending with the following: "*wa-lahu ʻiddah taṣānīf ghayrahu* wa-qad dhakartuhā ʻinda dhikr mā intaqaytuhu min tārīkhihi"!

---

[49]This folio, which was found between fols. 82–83 unfoliated, is a loose scrap of paper. It appears to be a card, as I will try to demonstrate in "Maqriziana II."

[50]For the *Khiṭaṭ,* see Guest, "A List of Writers," 116; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 1:260.

[51]The manuscript has been the object of two complete editions: W. J. Milward, *Akhbār Miṣr fī Sanatay 414–415 h.* (Cairo, 1980); Th. Bianquis and A. F. Sayyid, *Al-Juzʼ al-Arbaʻūn min Akhbār Miṣr* (*al-Qism al-Tārīkhī)* (Cairo, 1978); Ḥ. Naṣṣār, *Al-Juzʼ al-Arbaʻūn min Akhbār Miṣr (al-Qism al-Adabī)* (Cairo, 1984). For the reading note in the handwriting of al-Maqrīzī, see the reproduction of the title page in the Bianquis and Sayyid edition. Other passages originating in volumes now lost and found in various sources were gathered by A. F. Sayyid, "Nuṣūṣ Ḍāʼiʻah min Akhbār Miṣr," *Annales islamologiques* 17 (1981): 1–54.

The last words should probably be attributed to al-Maqrīzī,[52] rather than to the author from which he extracted this biography. In this way, al-Maqrīzī confirmed that he had made a selection *(intiqā')* of the *Tārīkh* of al-Musabbiḥī, a fact that is corroborated by his working method.[53] Apart from al-Maqrīzī, another author also seems to have completed a selection of this work, although he has been ignored until now. Ḥājjī Khalīfah mentioned it mistakenly,[54] yet the author was never identified as being Rashīd al-Dīn al-Mundhirī (Muḥammad ibn ʻAbd al-ʻAẓīm ibn ʻAbd al-Qawī, d. 643/1245–46).[55] This was confirmed by the quotations made by the Meccan historian Taqī al-Dīn al-Fāsī (d. 832/1429) in his *Shifā' al-Gharām,*[56] establishing that the *Mukhtaṣar* was still available in Mecca at that time, in al-Maqrīzī's lifetime.

XXXIX. (fols. 83v–84v[57])

No title: Text containing obituaries for the year 761 and a historical report of the persons who were in charge of the *ḥisbah* between 737 and 745/Ibn al-Naqqāsh.

Incipit (fol. 83v, lines 1–2):

ذي الحجة سنة إحدى وستين وسبعمائة توفي فيه القاضي ضياء الدين يوسف بن أبي بكر بن محمد الشهير بابن خطيب بيت الآبار [. . .]

Other names mentioned:

وفي سلخه توفي الملك الصالح صالح بن محمد بن قلاون في محبسه [. . .] (fol. 83v)

---

[52]See the reasons invoked under LVII. However, unsurprisingly, al-Maqrīzī did not refer to this resumé in the biography he gave of al-Musabbiḥī in *Al-Muqaffá* (6:163–65, no. 2632).

[53]See "Maqriziana II."

[54]Ḥājjī Khalīfah, *Kashf al-Ẓunūn* (ed. Sh. Yaltakya and R. Bilge, Istanbul, 1360/1941), 1:304: *"wa-ikhtaṣarahu Taqī al-Dīn al-Fāsī."* He probably meant that al-Fāsī used al-Mundhirī's *Mukhtaṣar*. See also A. F. Sayyid, "Lumières sur quelques sources de l'histoire fatimide en Egypte," *Annales islamologiques* 13 (1977): 14.

[55]Al-Maqrīzī does not mention this resumé or his books in the biography he gave for al-Mundhirī in *Al-Muqaffá,* 6: 91–92. Note also that the date of his death is mentioned in other sources as being 644. Al-Mundhirī is known to have written a *Tārīkh Miṣr* which has not been preserved (see Sayyid, "Lumières," 32–33). An edition *(takhrīj)* he made of the *Mashyakhat al-Naʻʻāl al-Baghdādī Ṣā'in al-Dīn al-Anjab* has been preserved and was published in Baghdad in 1975 (ed. Bashshār ʻAwwād Maʻrūf and Nājī Maʻrūf). His father is better known than him for his book *Al-Takmilah li-Wafayāt al-Naqalah.*

[56]Ed. Saʻīd ʻAbd al-Fattāḥ (Mecca-Riyadh, 1417/1996), *Shifā' al-Gharām,* 1: 203: *ʻalá mā dhakara al-Musabbiḥī fī Tārīkhihi ʻalá mā wajadtu bi-khaṭṭ al-ḥāfiẓ Rashīd al-Dīn ibn al-ḥāfiẓ Zakī al-Dīn al-Mundhirī fī ikhtiṣārihi li-Tārīkh al-Musabbiḥī;* 1:233: *naqaltu dhālika min khaṭṭ al-Rashīd al-Mundhirī fī ikhtiṣārihi li-Tārīkh al-Musabbiḥī.*

[57]Fol. 84 is somewhat smaller than fol. 83 and was also added by al-Maqrīzī for the same reason invoked for fol. 83. See n. 47.

خليل بن عثمان الزولي جمال الدين الشافعي أولا ثم الحنفي ثانيا التيمي [. . .] (fol. 83v)

قال ابن النقاش وممن توفي في هذا الوبأ أيضا صاحبنا الفاضل المتقن العلامة جمال الدين عبد الله بن الزيلعي الحنفي المحدث [. . .] (fol. 83v)

The office of *muḥtasib* (fol. 84r):

وكانت ولاية الحسبة في ثمان عشر جمادى الأولى سنة سبع وثلاثين وسبعمائة بعد موت نجم الدين محمد الإسعردي في يوم الجمعة خامس عشرة وكان قد سعى في الحسبة أحمد بن الحاج علي طباخ السلطان بالأمير قوصون والأمير بشتاك [. . .]

Explicit (fols. 84r, line 18–84v, lines 1–2):

[. . .] وتولى نظر الدولة علم الدين بن سهلول بدله وعاد الضياء إلى وظيفة نظر المارستان.

Commentary:

The name of the author is found at the beginning of a note placed at the bottom of fol. 83v. Here the name of a person who died during the plague that struck Cairo in 761, which is discussed in the text covering most of the folio, is given. Attributing the whole text to Ibn al-Naqqāsh on the sole basis of this coincidence would have been presumptuous. Fortunately, some data found in the upper anonymous part (fol. 83v, lines 13–15) was inserted by al-Maqrīzī in *Al-Khiṭaṭ* (2:279), where he explicitly quoted the source: Ibn al-Naqqāsh. It thus can be assumed that excerpt XXXIX comes entirely from this source, which is also mentioned under LI. There, an obituary from the same year, but dated to the month Dhū al-Qaʻdah (i.e., just before the month of Dhū al-Ḥijjah reported here), demonstrates that it was written prior to this one. The title of the book is also given there fully as *Al-ʻIbar fī Man Maḍá wa-Ghabar,* a work composed by Shams al-Dīn Muḥammad ibn ʻAlī ibn ʻAbd al-Wāḥid **Ibn al-Naqqāsh** al-Maghribī al-Dukkālī (d. 763/1362).[58] From the citations gleaned from al-Maqrīzī's *Khiṭaṭ,*[59] it can be deduced that it consisted of

[58]For al-Dukkālī, see Carl Brockelmann, *Geschichte der Arabischen Litteratur* (Weimar and Leiden, 1898–1949), 2:247; S2:95. The title of this book is not mentioned in the sources where his biography is given. See al-Maqrīzī, *Al-Khiṭaṭ,* ed. Sayyid, 4:1:118 (n. 1).

[59]See Guest, "A List of Writers," 116; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 1:346 and 2:91; al-Maqrīzī, *Al-Khiṭaṭ,* ed. Sayyid, 5:987. This editor is not sure that the Shams al-Dīn Muḥammad ibn al-Naqqāsh mentioned in the *Khiṭaṭ* (ed. Būlāq, 2:279 = ed. Sayyid, 4:1:118) is the same one who died in 763/1362. However, the passage quoted there, which also appears in the notebook, refers to the destruction of al-Hirmās's house built in front of al-Ḥākim's mosque. Al-Hirmās appears in the events recorded by the historians with regard to Ibn al-Naqqāsh's life (see, among others, Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* ed. M. M. Amīn [Cairo, 1423/2003], 10:221–22). The second quotation indicated in Sayyid's index (5:981) refers to another individual whose name is given by al-Maqrīzī as Zayn al-Dīn Abū Hurayrah ʻAbd al-Raḥmān. That passage appears only in the

an obituary arranged according to the day and month of death. The analogy with al-Dhahabī´s *Al-'Ibar fī Khabar Man Ghabar* might suggest that the book was similar in its organization. The data gleaned here was reused, as indicated earlier, in the *Khiṭaṭ* as well as in *Al-Sulūk,* where the name of the source is never given.

XL. (fols. 85r–86v)
No title: Text relating the events which took place after 446 between al-Basāsīrī and the caliph al-Qā'im bi-Amr Allāh until his death in 451.
Incipit (fol. 85r, lines 1–3):

البساسيري : في سنة ست وأربعين وأربعمائة ابتدأت الوحشة بين الخليفة القائم بأمر الله وبين البساسيري بسبب أنه طلب من الخليفة أن يسلم إليه أبا الغنائم وأبا سعد ابني المحلبان صاحبي قريش [. . .]

Explicit (fol. 86v, lines 21–22):

[. . .] وأطلق لها في كل يوم أربعة أرطال لحم واثنين وعشرين رطلا خبزا.

Commentary:
The excerpt is introduced by the name of the protagonist written in red ink. The text presents itself as a digest of al-Basāsīrī´s career at the end of his life, and particularly the role he played in Baghdad and the region in the service of the Fatimid caliph al-Mustanṣir. No source is indicated here, nor in the works where the material was interspersed (*Itti'āẓ al-Ḥunafā'*, 2: 232–33; *Al-Muqaffá,* 3: 389–93 [biography of al-Basāsīrī]; *Al-Khiṭaṭ,* 1:356). It can hardly be identified, since most of the preserved sources for the given period do contain some parts of it.[60] Ibn al-Jawzī´s *Al-Muntaẓam* seems most likely, as it is the one source consulted that gives two pronouncements by the Abbasid caliph al-Qā'im bi-Amr Allāh on that occasion, and is also present in the notebook. Notwithstanding this fact, the *Muntaẓam* can not be considered the original source of the present extract, because other elements from it do not appear in Ibn al-Jawzī´s work. On the other hand, we cannot regard it as a preliminary stage of redaction in al-Maqrīzī´s handwriting, as the text reveals erasures demonstrating that he was summarizing while reading, as usual.[61] A striking feature might convince us to consider Ibn Muyassar (d. 677/1278) as a potential candidate. Ibn Muyassar´s *Tārīkh* has reached us only in

---

Musawwadah and was not meant to find its way into the final version of the *Khiṭaṭ*.

[60]Under the years 446–51 Ibn al-Jawzī, *Al-Muntaẓam;* Ibn al-Athīr, *Al-Kāmil fī al-Tārīkh;* al-Nuwayrī, *Nihāyat al-Arab;* Ibn al-'Adīm, *Bughyat al-Ṭalab;* idem, *Zubdat al-Ḥalab;* al-Bundārī, *Zubdat al-Nuṣrah;* al-Khaṭīb al-Baghdādī, *Tārīkh Baghdād;* Ibn al-Qalānisī, *Dhayl Tārīkh Dimashq;* anonymous, *Al-Fakhrī;* al-Dhahabī, *Tārīkh al-Islām;* Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah.*

[61]See "Maqriziana II."

a summary made by al-Maqrīzī himself.[62] The abstract opens with 4 lines dealing with al-Basāsīrī's activity in Iraq under the year 447.[63] This text opens with the exact words found in the notebook (*"ibtada'at al-waḥshah bayna"*), except that the following names have been put in a different order and the date is different.[64] The comparison ends here: the excerpt in the notebook is far longer than what is found in that resumé, and some details differ, such as the origin of al-Basāsīrī's *nisbah*. However, let us remember that the *Muntaqá min Akhbār Miṣr li-Ibn Muyassar* is nothing more than a memorandum, and that al-Maqrīzī usually went back to the original text when he had to quote a passage, which explains why passages absent in an abstract in the notebook may be found in al-Maqrīzī's books.[65] In the present stage, the source of this extract remains to be identified.

XLI. (fol. 96v)

No title: Quotation of two events which occurred in 501 at Baghdad and in 508 at Ghaznah.

Incipit of first event (fol. 96v, lines 18–21):

في سنة إحدى وخمسمائة قد ظهر ببغداد صبية عمياء تتكلم على أسرار الناس فاجتهدوا في تعرف حالها فلم تلعم. قال ابن عقيل : وأشكل امرها على [. . .]

Explicit of first event (fol. 96v, lines 29–30):

---

[62]Al-Maqrīzī, *Al-Muntaqá min Akhbār Miṣr li-Ibn Muyassar,* ed. A. F. Sayyid (Cairo, 1981). The resumé, which only covers the second part of Ibn Muyassar's *Tārīkh,* is not preserved in al-Maqrīzī's hand. An interesting feature is al-Maqrīzī's indication of the date he finished his resumé ("the evening of Saturday, six days before the end of the month of Rabī' I of the year 814"). The unique manuscript (Paris, Bibliothèque National Ar. 1688) consists of a copy made from the autograph. The editor, A. F. Sayyid, in his introduction (p. *mīm*) was convinced that the copyist discovered al-Maqrīzī's cards *(biṭāqāt)* regarding Ibn Muyassar's *Tārīkh* and that he put them in the order now found in the Paris manuscript. In comparison with the Liège manuscript, it is clear that the copyist of the Paris manuscript found only a part of one of al-Maqrīzī's notebooks, and surely not cards, as we can see in all resumés studied in "Maqriziana I/1." This is corroborated by the presence, in the Paris manuscript, of excerpts originating from other sources, which Cl. Cahen ("Ibn Muyassar," *The Encyclopaedia of Islam*, 2nd ed., 3:894) identified as being al-Musabbiḥī and Ibn Zūlāq. Furthemore, the manuscript ends with a biography of a person also present in the Liège manuscript (see below, under LV, no, 5), but with different content. This was probably added by al-Maqrīzī at the end of the abstract, where he found blank space, a practice confirmed by the notebook.

[63]Al-Maqrīzī, *Al-Muntaqá,* 14. Other passages dealing with al-Basāsīrī will be found on pp. 20–21.

[64]In the notebook, this event is said to have occurred in 446. Al-Maqrīzī sometimes made mistakes in copying dates (see "Maqriziana II," regarding excerpt LXIV/LXV [fol. 145]).

[65]See an unambiguous example in "Maqriziana V."

[. . .] وثبت بالتواتر أن جميع ما تتكلم به بتفاصيل لا يدركها البصر.

Incipit of second event (fol. 96v, line 31):

[. . .] ولما ملك السلطان سنجر في سنة ثمان وخمسمائة مدينة غزنة حصل لأصحابه من المال ما لا يحصى [. . .]

Explicit of second event (fol. 96v, lines 44–46):

[. . .] وسبعة عشر سريرا من الذهب والفضة.

Commentary:

This quotation was added in the lower margin and written from the spine towards the right margin. It is composed of two reports without any separation, indicating that they both come from the same source. Trying to identify both of them in historical works, I have found the first one, in the same words, in Ibn al-Jawzī's *Al-Muntaẓam.* This is confirmed by the fact that the name of Ibn ʿAqīl is quoted here, as can be seen in the incipit. Ibn ʿAqīl was one of the many sources used by Ibn al-Jawzī.[66] Accordingly, it could be considered the source of this extract. Unfortunately, the second event is not reported in this work, but was found in Ibn al-Athīr's *Al-Kāmil,* where the first event is lacking. This puzzling situation will probably be solved in the future with the discovery of an additional source. In any case, this material was not incorporated into any of the extant works of al-Maqrīzī, which is not surprising, considering that the first one tells the strange story of a blind girl who, despite her disability, could see better than anyone else, while the second deals with the city of Ghaznah and the treasures seized by Sanjar and his troops. Both must have piqued al-Maqrīzī's curiosity, which pushed him to scribble them down in his notebook.

XLII. (fol. 122v)

Title on fol. 122v, line 1: [Quotation from] *Al-Mutajaddidāt*/al-Qāḍī al-Fāḍil.

Text (fol. 122v, lines 1–2):

رأيت بخط القاضي الفاضل من جملة المتجددات في سنة ٥٧٧ أن رجلا من أهل حماة زرع اثني عشر مدا فحمل منها مائة وخمسين حملا.

Commentary:

---

[66]However, Joseph de Somogyi does not list him among the authorities of this book ("The 'Kitāb al-muntaẓam' of Ibn al-Jauzī," *Journal of the Royal Asiatic Society* [1932]: 49–76). On Abū al-Wafāʾ ʿAlī ibn ʿAqīl al-Baghdādī al-Ẓafarī (d. 513/1119), see George Makdisi, *Ibn ʿAqīl et la résurgence de l'islam traditionaliste au XI^e siècle (V^e siècle de l'Hégire)* (Damascus, 1963). Ibn al-Jawzī probably used his *Kitāb al-Funūn,* of which he is known to have prepared a resumé entitled *Muntakhab al-Funūn.* See ibid., 510–11.

Fol. 122, which is now a fly-leaf, contains several notes taken from various sources, regarding events mostly from the Ayyubid and Fatimid periods. The equivalent of the actual verso appears in a particularly bad state and hinders easy reading. Having been removed from the codex, it was paginated as it was found, but a thorough analysis of various extracts from it has revealed that what is now considered the recto was originally the verso. This explains why the study of the notes begins with this side. Chronologically, on the basis of their arrangement on the page, the various notes were presumably copied in the following order: XLII, XLIII, XLIV, XLV, XLVII, XLVI, XLVIII, XLIX, L.

This one, which consists of two lines written in red ink, clearly indicates the source, which has been previously identified (see XXVIII): **al-Qāḍī al-Fāḍil**, *Al-Mutajaddidāt,* a title that underwent great variations in the notebook and in al-Maqrīzī's works.[67] The report may be classified as one of the curious phenomena that amazed al-Maqrīzī, though he did not use it in *Al-Sulūk* (under the year 577), the more appropriate book for this, or anywhere else.

XLIII. (fol. 122v)
No title: Biography of an Egyptian.
Incipit (fol. 122v, lines 3–4):

شهاب الدين أبو يوسف يعقوب بن محمد بن علي بن محمد بن المجاور [. . .]

Explicit (fol. 122v, line 5):

[. . .] فيما يتعلق بأمر الوزارة وقوانينها عشر مجلدات.

Commentary:
A short biography of an individual who composed a book in ten volumes on the vizierate and its rules. He is mentioned here as having particularly praised a vizier of the Ayyubid period, Ṣafī al-Dīn ʿAbd Allāh ibn ʿAlī Ibn Shukr (d. 622/1225). This author has not been identified in the sources so far. Consequently, the origin of the excerpt found here remains unknown. It was probably meant to be included in his biography in the missing part of *Al-Muqaffá.*

XLIV. (fol. 122v)
No title: Extract dealing with al-Ṣāliḥ Ṭalāʾiʿ ibn Ruzzīk.
Incipit (fol. 122v, lines 6–7):

غنى مطرب في مجلس الصالح بن رزيك : لا خيل عندك تهديها ولا مال فغضب [. . .]

Explicit (fol. 122v, line 12):

---

[67]See "Maqriziana I/1," 37.

[. . .] لكن تفآلت والأقدار غالبة والله يبسط إما لا فينبسط.

Commentary:
Al-Maqrīzī scribbled on this folio several verses exemplified by the circumstances in which they were pronounced, and among which the present one is an example. Another feature found on this folio regards the source: in only two cases did he take pains to indicate it clearly. Here it is impossible to know its origin, since these verses have not yet been identified in any source consulted, nor in any of al-Maqrīzī´s writings. However, al-Maqrīzī undoubtedly reused this passage because a symbol indicating this can be found at the beginning.[68] It was probably intended for Ibn Ruzzīk´s biography in *Al-Muqaffá,* from which only a few entries have come down to us for the letter *ṭā'*.

XLV. (fol. 122v)
No title: Three quotations regarding Ibn Ṭūlūn and 1) his attitude towards his emissaries, 2) economic problems, and 3) a secretary named Andūnah.
Incipit of first quotation (fol. 122v):

كان أحمد بن طولون إذا أنفذ رسولا في حاجة برسالة قال له أعد علي ما قلت [. . .] (السيرة، ١٠٠–١٠١)

Incipit of second quotation (fol. 122v):

[. . .] زاد السعر في زمن أحمد بن طولون واضطرب البلاء [. . .]

Incipit of third quotation (fol. 122v):

أندونة كاتب أحمد المدائني صاحب موسى بن بغا [. . .] (السيرة، ٨٨–٨٩)

Commentary:
Once again, the material dealing with Ibn Ṭūlūn stems from **al-Balawī**, *Sīrat Aḥmad ibn Ṭūlūn,* from which other excerpts have already been identified (see XXV, XXXIV above, and XLVII below). It is very interesting to notice that all these notes were included in the notebook. The first and third were traced back to their source, but the second one is lacking in the text. It is also missing in al-Maqrīzī´s works, but the other two were identified in two different books.[69]

XLVI. (fol. 122v)
Title on fol. 122v: [Quotation regarding Tamīm ibn al-Mu'izz ibn Bādīs taken

---

[68]See ″Maqriziana II.″

[69]The first one was placed in Ibn Ṭūlūn´s biography in *Al-Muqaffá,* 1:443 and 447, while the second is present in *Al-Khiṭaṭ,* 1:208 *(dhikr minyat Andūnah).*

from] *Jinān al-Janān*/Ibn al-Zubayr.
Incipit (fol. 122v):

قال ابن الزبير في كتاب جنان الجنان إن الطبول ضربت يوما على عقلة في قصر السلطان تميم بن المعز بن باديس [. . .]

Commentary:
The note occupies the space in the lower margin and was clearly added after the preceding passages. In this particular case, al-Maqrīzī indicated the source as being *Jinān al-Janān* by Ibn al-Zubayr. He is to be identified as **al-Rashīd ibn al-Zubayr** (d. 562/1166) and the full title of his book is *Jinān al-Janān wa-Riyāḍ al-Adhhān*.[70] This is one of the sources al-Maqrīzī relied upon for the Fatimid period, and essentially for *Al-Muqaffá,* as it dealt with the poets and writers up until his own time.[71] It was relied upon heavily by later authors like al-ʿImād al-Iṣfahānī in his *Kharīdat al-Qaṣr,* Ibn Khallikān in his *Wafayāt al-Aʿyān,* and Ibn Saʿīd in his *Al-Mughrib fī Ḥulá al-Maghrib* (the parts regarding Fusṭāṭ and al-Qāhirah),[72] sources which were also used by al-Maqrīzī. However, as his working method reveals, he was always eager to go back to contemporaneous sources, and from the quotations in *Al-Muqaffá,* one understands that he had access to a copy of Ibn al-Zubayr's book. This note on an event which occurred in al-Mahdīyah doubtlessly found its way into many of al-Maqrīzī's books, given that it concerns the Zirid Tamīm ibn al-Muʿizz, even though his name appears in *Ittiʿāẓ al-Ḥunafā'*.

XLVII. (fol. 122r)
No title: Extract which concerns the secretaries of Ibn Ṭūlūn.
Incipit (fol. 122r, line 1):

ما خلت دار أحمد بن طولون قط من كاتب خفي الشخص يقف عنده يعرف بكاتب السر [. . .] (السيرة، ص ٢١٠)

Explicit (fol. 122r, lines 3–4):

[. . .] فإن كان فيه شيء يحتاج إلى تغيير أو زيادة تقدم في ذلك بما يمتثل.

Commentary:
This passage, which was scribbled down at the same time as XLV, was found in

[70]Al-Maqrīzī gives the title in the biography he wrote on Ibn al-Zubayr as *Al-Jinān wa-Riyāḍ al-Adhhān* (*Al-Muqaffá,* 1:534–35).
[71]See 8: 573.
[72]See Sayyid, "Lumières," 24, n. 3.

al-Balawī´s book on Ibn Ṭūlūn.[73] Al-Maqrīzī integrated it into Aḥmad ibn Ṭūlūn´s biography in *Al-Muqaffá,*[74] although it differs slightly from al-Balawī´s wording.

XLVIII. (fol. 122r)
No title: Quotation regarding the fact that the witnesses *(ʻudūl)* in the Fatimid period used to wear their turban with the end tied under their chin in order to differentiate themselves.
Incipit (fol. 122r, line 7):

كان العدول في زمن المصريين بالدولة الفاطمية يتحنكون ولا يفعل ذلك إلا العدول ليتميزوا بذلك عن غيرهم [. . .]

Explicit (fol. 122r, line 12):

شاهد الحسن في محياك عدل كيف لا وهو بالموزار محنك

Commentary:
This note was written just below the previous one. Al-Maqrīzī used a symbol in red ink to attract attention *(qif)* and differentiate it. The poet whose verses are quoted here, Ibn Qalāqis (d. 567/1172),[75] played a role in Fatimid diplomacy as a cultural envoy to Sicily and Yemen.[76] The source is not indicated and could not be identified,[77] but could be the same as one considered for the next entry.[78] The material was not found in the works of al-Maqrīzī, who probably devoted a biography to this poet in the lost part of *Al-Muqaffá*.

XLIX. (fol. 122r)
No title: Report of an event dealing with the Fatimid caliph al-Ḥāfiẓ and the poet Tilmīdh Ibn Sābiq (d. 536/1141–42).
Incipit (fol. 122r, line 13):

اجتمع الشعراء بباب الحافظ فتناهوا في القول [. . .]

Explicit (fol. 122r, line 19):

---

[73] Al-Balawī, *Al-Sīrah,* 210.

[74] *Al-Muqaffá,* 1:452 (biography of Aḥmad ibn Ṭūlūn).

[75] On Ibn Qalāqis, see U. Rizzitano, ″Ibn Ḳalāḳis,″ *EI*², 3:814.

[76] See al-Maqrīzī, *Al-Muntaqá,* 135.

[77] These verses are not quoted in his biography in al-ʻImād al-Iṣfahānī, *Kharīdat al-Qaṣr wa-Jarīdat al-ʻAṣr*: *Qism Shuʻarāʼ Miṣr,* ed. A. Amīn, Sh. Ḍayf and I. ʻAbbās (Cairo, 1951), 1:145–65. His *Dīwān* (ed. Kh. Muṭrān, Cairo, 1905) was not available to me.

[78] I have some doubt that Ibn al-Zubayr (d. 562/1166) would have included verses from one of his contemporaries who passed away after him.

فأمروا بالعود إلى ما كانوا عليه.

Commentary:
The position, just below the preceding note, the script, and the color of the ink would imply that this report comes from the same source. In this case, fortunately, the passage has been identified in several sources. In chronological order, they are: al-ʻImād al-Iṣfahānī, *Kharīdat al-Qaṣr,*[79] Ibn Muyassar, *Akhbār Miṣr,*[80] and Ibn Saʻīd, *Al-Nujūm al-Zāhirah.*[81] Ibn Muyassar looks like the most plausible source for al-Maqrīzī, because he provides the introduction to Tilmīdh ibn Sābiq′s verses in detail, as given here. However, regarding the wording, there is a slight difference. On the other hand, in the biography al-Maqrīzī devoted to this poet,[82] he quoted a similar passage citing his source as al-Rashīd ibn al-Zubayr′s *Jinān al-Janān!* There, the verses are very briefly introduced and one wonders if the *qāla* that precedes them really means that al-Maqrīzī is quoting verbatim. An analysis of the sources mentioned earlier will help to clear up this confusion. Al-ʻImād al-Iṣfahānī and Ibn Saʻīd both admit that they rely on the *Jinān al-Janān.*[83] Even if the latter added that this poet is among those mentioned by al-ʻImād al-Iṣfahānī, there is no doubt that he quoted the verses directly from Ibn al-Zubayr′s work, as he supplied information not found in the *Kharīdah* in the introduction to the poem. Turning to Ibn Muyassar, one must presume that he also relied on the same source. In this case, he did not summarize, but surely changed the words.[84] Strikingly, the passage found in al-Maqrīzī′s *Muntaqá min Akhbār Miṣr* was copied, almost verbatim, in his *Ittiʻāẓ al-Ḥunafāʼ*,[85] although he quoted the present excerpt in *Al-Muqaffá.* It proves that he could not manage his many notes and cards as he would have liked to. Another decisive argument for considering Ibn al-Zubayr can be found in note XLVI (see above), on the same folio (122v), where his name and the title of his book are explicitly given. Its position in the lower margin, just after extract XLV, which was followed on the recto by XLVII

---

[79]Al-ʻImād al-Iṣfahānī, *Kharīdat al-Qaṣr,* 2:64.

[80]Al-Maqrīzī, *Al-Muntaqá,* 134.

[81]Ibn Saʻīd, *Al-Nujūm al-Zāhirah fī Ḥulá Ḥaḍrat al-Qāhirah,* ed. Ḥ. Naṣṣār (Cairo, 1970), 328–29.

[82]*Al-Muqaffá,* 1:668.

[83]Al-ʻImād al-Iṣfahānī, *Kharīdat al-Qaṣr,* 64 *(dhakara Ibn al-Zubayr fī al-Jinān);* Ibn Saʻīd, *Al-Nujūm al-Zāhirah,* 329 *(anshada lahu ṣāḥib al-Jinān qawlahu).*

[84]Unless this is due to al-Maqrīzī, given that we only have his resumé of Ibn Muyassar′s *Akhbār Miṣr.* There is no reason to believe that he did not proceed in this case as with the other excerpts. A. F. Sayyid already noticed that passages attributed to Ibn Muyassar in the *Khiṭaṭ* are not found in the *Muntaqá* made by al-Maqrīzī. See Sayyid, ″Lumières,″ 36.

[85]Ed. M. Ḥilmī M. Aḥmad (Cairo, 1393/1973), 3:176.

(same source) and XLVIII (which may also come from Ibn al-Zubayr), shows that he continued to take notes from Ibn al-Zubayr′s book, where he could find enough blank space. Based on this and what has been said, Ibn al-Zubayr′s *Jinān al-Janān* must be considered the most likely source for this passage (see also the next entry, no. 1). From a chronological point of view, this means that he had access to this source after *Al-Sīrah al-Ṭūlūnīyah* of al-Balawī.

L. (fol. 122r)
No title: Three biographies not linked to one another.

١) علي بن جعفر بن الحسن أبو القاسم بن البوين التنوخي المعري
٢) أحمد بن عثمان بن هبة الله بن أحمد بن عقيل فتح الدين أبو الفتح المعروف بابن أبي الجواهر القيسي (ت ٦٥٧)
٣) جحي يحيى بن عبد الله أبو زكرياء مولى عثمان بن عفان

Commentary:
The three biographies occupy two different spaces on the page: the first is on the right side which was left blank after al-Maqrīzī copied the preceding entry, while the other two were placed in the left margin, beginning from the edge of the page. It is clear that no. 1 was written before the other two. Moreover, these appear to have been written at a later date (the first *ism* is written very carefully for both of them, while this is not the case for no. 1). Consequently, the first one possibly comes from a source which differs from the other two. No. 1 could stem from Ibn al-Zubayr′s *Jinān al-Janān* for these reasons and those mentioned for the previous entry. This hypothesis is supported by the fact that the subject of the biography lived during the vizierate of al-Afḍal (d. 515/1121), the presence of poetic verse, and a passage found in the biography: *″min al-ṭāri'īn ʻalá Miṣr″* (among those who came unexpectedly to Egypt), which echoes the definition given for the *Jinān al-Janān.* The information is untraceable not only in *Al-Muqaffá* and *Ittiʻāẓ al-Ḥunafā',* but also in other sources for the same period.[86] No. 2, as well as no. 3,

[86]In the indexes to Ibn al-ʻAdīm, *Bughyat al-Ṭalab fī Tārīkh Ḥalab*, ed. S. Zakkār (Damascus, 1408/1988), 11:5209, an ʻAlī ibn Jaʻfar ibn Buwayn al-Maʻarrī is mentioned as appearing on pp. 1831–35. This is a mistake due to a shift in the page numbers. He appears in fact in 10:4545. There the author reports facts concerning Abū al-ʻAlā' ibn Buwayn al-Maʻarrī, said to be a relative of Abū al-Ḥasan ʻAlī ibn Jaʻfar ibn Buwayn al-Maʻarrī, the famous poet. Ibn al-ʻAdīm managed to obtain two verses of this Abū al-ʻAlā' through Abū Jaʻfar Muḥammad ibn Abī al-Bayān Muḥammad ibn ʻAlī al-Tanūkhī al-Maʻarrī. He also transmits two verses through al-Silafī. In the chain of transmitters, we find once again this Abū Jaʻfar (with another name appended, ″Ibn al-Jawārī″) who says that he heard these two verses when they were recited to his father in Egypt by his relative who, afterwards, requested a diploma *(ijāzah)* for them. From this it appears that his

obviously come from another source, due to the dates and their style. The first appears in several sources of the Mamluk period, but the text in the notebook does not match them exactly, giving additional or different information. An interesting feature appears in the addition by al-Maqrīzī, just at the end of it: *″yudhkar fī Khiṭaṭ Miṣr.″* He must have completed this since the mark symbolizing the accomplishment of this task is also found over the first *ism* of this person.[87] In fact, in the section dealing with the *Ḥammām Ibn Abī al-Ḥawāfir,* a short identification of the builder is provided, where the date is more complete, corresponding to what is found in al-Nuwayrī.[88] The day of his death has been corrected, for example, but the wording is al-Nuwayrī′s. He also added some of the data from the notebook. The third biography was also reused with the same mark, but was not located. Perhaps it is in the missing part of *Al-Muqaffá.*

LI. (fols. 198v–199r)

Title on fol. 198v: [Quotation regarding an obituary taken from] *Kitāb al-ʻIbar fī Akhbār Man Maḍá wa-Ghabar*/Shams al-Dīn Muḥammad Ibn al-Naqqāsh.

Incipit (fol. 198v):

قال العلامة شمس الدين محمد بن النقاش في كتاب العبر في أخبار من مضى وغبر يوم الثلثاء ثاني ذي القعدة سنة ٧٦١ توفي الشيخ العلامة الفاضل البليغ المتضلع الإمام في العربية والنحو جمال الدين عبد الله بن يوسف بن هشام المصري [. . .]

Explicit (fol. 199r):

[. . .] للقاضي الحنبلي وإحسانه إليه فقال ولد سنة ٧٠٨.

Commentary:

The biography begins in the lower margin of the page and then runs onto the other folio, along the spine. It is found in the quire containing the resumé of al-Ṣafadī′s *Al-Wāfī bi-al-Wafāyāt.* The source is clearly indicated as being **Ibn al-Naqqāsh**′s *Kitāb al-ʻIbar fī Akhbār Man Maḍá wa-Ghabar.* (See entry XXXIX, where quotations from the same source appear, some also dealing with obituaries of the year 761). The subject of the biography is the famous grammarian Ibn Hishām (d. 761/1360), author of *Mughnī al-Labīb ʻan Kutub al-Aʻārīb*. Al-Maqrīzī undoubtedly devoted some space to him in his *Al-Muqaffá,* but it is missing in the extant manuscripts. One can see evidence of this in Ibn Taghrībirdī′s biography of this

father was probably the same person whose biography is given in the notebook, even though the *kunyah* is different (Abū al-Bayān). However, individuals could have more than one *kunyah*.

[87]See above, XLIV.

[88]Al-Nuwayrī, *Nihāyat al-Arab* (ed. M. Ḍiyā' al-Dīn al-Rayyis, Cairo, 1992), 29:470.

scholar.[89] At the end, he added a statement different from that of his master about the date of his death: *"wa qāla al-Maqrīzī: fī yawm al-thulathā' thānī dhī al-qa'dah min al-sanah."* It agrees exactly with the date mentioned in the notebook. This could mean that Ibn Taghrībirdī had access to this manuscript, as Ibn Ḥajar did,[90] although it is also conceivable that he referred in fact to *Al-Muqaffá*.

LII. (fol. 204v)

No title: Quotation of an event regarding the sultan Berk-yaruq and Maḥmūd ibn Sebüktigin.

Incipit (fol. 204v, lines 12–16):

بعث السلطان برقياروق أبا الحسن الطبري الملقب بإلكيا إلى محمود بن سبكتكين. قال : فدخلت عليه وهو جالس في طارمة عظيمة [. . .] (المنتظم، مج ١٧، ص ٤٩)

Explicit (fol. 204v, lines 27–28):

[. . .] رويت له الخبر عن النبي عليه السلام لمناديل سعد بن معاذ في الجنة أحسن من هذا فبكى.

Commentary:

With fol. 204v, the resumé al-Maqrīzī decided to make from al-Ṣafadī's *Al-Wāfī bi-al-Wafāyāt* ends abruptly with an *Aḥmad*. Some space remained (about one quarter) that was later filled in with the present note, which belongs to a series of moralistic reports: after having been shown the treasuries of the Sultan of Ghaznah, the visitor concludes his visit with a hadith reminding him of the vanity of terrestrial wealth. Dealing exclusively with events that occurred in the eastern part of the Islamic empire, it must have been selected from a book written by a well-informed scholar from that region. Indeed, the note was identified as corresponding, almost word for word, to Ibn al-Jawzī's *Al-Muntaẓam fī Tārīkh al-Mulūk wa-al-Umam.*[91] There is a substantial difference: in the note, al-Maqrīzī connected the event to Maḥmūd ibn Sebüktigin, while Ibn al-Jawzī connected it to Ibrāhīm ibn Mas'ūd ibn Maḥmūd ibn Sebüktigin, which is of course correct.[92] Notwithstanding, *Al-Muntaẓam* must be considered the source, which is confirmed by another entry (LV) that contains data identified in the same text. Thanks to the position of this excerpt and the other connected with it (LV), we can postulate that al-Maqrīzī

[89]Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá ba'da al-Wāfī*, ed. M. M. Amīn (Cairo, 1993), 7:132.

[90]See "Maqriziana I/1," 25.

[91]Ed. M. 'Abd al-Qādir 'Aṭā and M. 'Abd al-Qādir 'Aṭā (Beirut, 1412/1992), 17:49.

[92]Ibn Kathīr also made a mistake by giving his name as Ibrāhīm ibn Maḥmūd ibn Mas'ūd ibn Maḥmūd ibn Sebüktigin. See Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah* (Cairo, n.d.), 12:157 (under year 492).

first had access to the source where he wrote entry LIII, placed in between, and only then to *Al-Muntaẓam*. Once again, the notebook provides precious information on the chronological order in which this historian consulted his sources, and consequently will help to reconstruct the chronological order in which he composed his books. Unfortunately, in this particular case, the material of this note was apparently not reused by al-Maqrīzī.

LIII. (fols. 204r–123r)
No title: A *faṣl* whose subject is the sky.
Incipit (fol. 204r, lines 1–2):

فصل : قال عبد الله بن المعتز في وصف السماء
كان سماؤنا لما تجلت خلال نجومها عند الصباح [. . .] (نهاية الأرب، مج ١، ص ٣٣-٣٩)

Explicit (fol. 123r, line 13):

[. . .] فهذا الارتداد شبه التحير.

Commentary:
The recto of the folio was later covered with passages dealing exclusively with the sky and the planets. Defined by al-Maqrīzī himself as a section (*faṣl*—this word written in red ink), it can be divided into several parts: 1) some verses of poets like Ibn al-Muʿtazz, Ẓāfir al-Ḥaddād, Abū al-ʿAlāʾ al-Maʿarrī, and al-Buḥturī, 2) a commentary on the Quran 81:15–16, and 3) an explanation of the meaning of the names of the planets. The latter two found their way in the same order and with almost the same wording into *Al-Khiṭaṭ* (1:5–6), where the source is not given.[93] The whole could be identified as coming from **al-Nuwayrī**´s *Nihāyat al-Arab fī Funūn al-Adab*.[94] The distance between no. 1 and 2–3 explains why they were organized in a different manner on the folio: the first lies in the first two thirds of it, while the second and the third begin beneath it, running horizontally from the margin towards the spine, and then in the same direction on fol. 123r. Despite the fact that al-Maqrīzī reused nos. 2 and 3 in his *grand œuvre,* he neglected the first one containing only poetry.[95]

LIV. (fol. 123r)
No title: A *faṣl* dealing with the shifting of the year of reference for the *kharāj.*
Incipit (fol. 123r, lines 14–17):

---

[93]It was not identified by A. F. Sayyid in his edition (1:11–13).
[94](Cairo, 1342/1923), 1:33–35 (passage no. 1), 38 and 39 (passages 2–3).
[95]Neither al-Nuwayrī´s name nor the title of his book appear in *Al-Khiṭaṭ*.

فصل تحويل السنة الخراجية بديار مصر لا يكون إلا بأمر السلطان [. . .]

Explicit (fol. 123r, lines 32–33):

[. . .] يحولون السنة الخراجية إلى الهلالية والله أعلم.

Commentary:

In *Al-Khiṭaṭ* (1:273), al-Maqrīzī dedicated a section to this particular subject which he entitled *″dhikr taḥwīl al-sanah al-kharājīyah al-qibṭīyah ilá al-sanah al-hilālīyah al-ʻarabīyah wa-kayfa ʻumila dhālik fī al-islām.″* It would have been strange if he did not insert the data found here, which is also the subject of a section (called here *faṣl,* written in red ink). And indeed, the first half of it was introduced at the beginning. Curiously, the end of this small excerpt, which gives an explanation for the use of the word *″taḥwīl,″* was not deemed by al-Maqrīzī important enough to be included there or anywhere else. The source from which he selected the data is not indicated and could not be identified. Its position, at the end of the preceding entry, which has been identified as originating in al-Nuwayrī′s *Nihāyat al-Arab,* might suggest that it is of the same origin, but this is not the case.[96]

LV. (fol. 123v)

No title: Five biographies of individuals who died in Baghdad in the fifth century.

List of the biographies:

١) أبو جعفر مسعود بن المحسن بن الحسن بن عبد الرزاق البياضي الشاعر (ت ٤٦٨) (المنتظم، مج ١٦، ص ١٧٥-١٧٦، رقم ٣٤٥٩)

٢) محمد بن الحسن بن عبد الله بن أحمد بن يوسف بن الشبل الشاعر (ت ٤٧٣) (المنتظم، مج ١٦، ص ٢١٣-٢١٤، رقم ٣٥١١)

٣) عبد السلام بن محمد بن يوسف بن بندار أبو يوسف القزويني (ت ٤٨٨) (المنتظم، مج ١٧، ص ٢١-٢٢، رقم ٣٦٥١)

٤) يحيى بن عيسى بن جزلة الطبيب (ت ٤٩٣) (المنتظم، مج ١٧، ص ٦١، رقم ٣٧٠٦)

٥) أبو سعد العلاء بن الحسن بن وهب بن موصلايا الكاتب (ت ٤٩٧) (المنتظم، مج ١٧، ص ٨٩، رقم ٣٧٤٧)

Commentary:

These biographies completely cover the folio. A mark in red ink, already examined in other circumstances *(qif),* has been placed over the first part of their names in

[96]This observation is also valid for the other encyclopedias like al-Qalqashandī, *Ṣubḥ al-Aʻshá* (13:54 ff.), or books dealing with the *kharāj* like al-Makhzūmī, *Al-Minhāj.*

order to separate them distinctly. A close examination of the dates of death reveals that they were taken from a book in the chronicle or *ṭabaqāt* genre. Moreover, their Baghdad origin means that the book focused mainly on that region. Proper identification is facilitated by al-Maqrīzī´s habit of relying on original or the most contemporary biographical data available. In this case, the five biographies were located in Ibn al-Jawzī´s *Al-Muntaẓam,* already identified as the source of no. LII. It is interesting to note that no. LII pertained to the year 492, which means that al-Maqrīzī came across it after biography no. 3 here. He decided to scribble it down elsewhere in the notebook, presumably because it was not related to his purpose of taking notes on biographies. No common link could be established between all the biographies, except their origin which normally should have excluded them from al-Maqrīzī´s interest. In fact, none of them was found mentioned in his works, and surely not in *Al-Muqaffá,* although one of the subjects (no. 3) lived for 40 years in Egypt, which should have ensured a place for him in the dictionary.[97] The last one, a secretary under three Abbasid caliphs for no less than 65 years, might have caught his attention for his book on secretaries.[98] This is confirmed by the presence of another biography of this same individual found at the end of the resumé al-Maqrīzī wrote of Ibn Muyassar´s *Akhbār Miṣr*.[99] The copyist, who relied on al-Maqrīzī´s autograph, probably found it at the end of the resumé or on a slip of paper and decided to place it at the end of the abstract, just after al-Maqrīzī´s colophon. The text is different from what we read in the notebook, indicating that this biography comes from another source, but it is intriguing that al-Maqrīzī was interested in this individual for the purpose mentioned earlier. What appears as a double entry is nothing else than two excerpts regarding one person, taken from two different sources.

LVI. (fols. 125v–130v)

No title: Biographies of men, mostly Egyptians, who died mainly in the seventh and eighth centuries.

List of the biographies:

١) محمد [بياض] بن عين الدولة أبو المكارم (ت ٦٣٩) (fol. 125v) (المغرب، ص ٢٥٦–٢٥٧)

٢) محمد بن سعد القرطي (ت قرن ٦) (fol. 125v) (المغرب، ص ٢٦٧–٢٦٨)

٣) محمد بن عبد العزيز بن عبد الرحيم بن عمر بن سلمان الإدريسي الشريف الحسني أبو عبد الله وأبو جعفر الفاوي المصري (ت ٦٤٤) (fol. 126r)

[97]He may have been included in the now-missing part of *Al-Muqaffá*.

[98]See above, XXXVII.

[99]Al-Maqrīzī, *Al-Muntaqá,* 158 and plate 6.

٤) محمد بن عبد المجيد بن عبد الكريم بن علوان بن خروف بن نجم بن أحمد بن علي بن جعفر بن يحيى بن عمر بن سليمان بن عبد الله بن الحارث بن هشام بن المغيرة بن عبد الله بن عمر بن مخزوم أبو عبد الله القرشي المخزومي شرف الدين بن الخطباء (ت ٦٨٦) (fol. 126r)

٥) محمد بن عبد المحسن بن عبد الكريم بن علوان بن خروف أبو عبد الله بن الخطباء (ت ٦٨٩) (fol. 126r)

٦) محمد بن عبد المنعم بن محمد بن يوسف بن أحمد أبو عبد الله الأنصاري اليمني المصري (ت ٦٨٥) (fol. 126r)

٧) محمد بن عبد الوهاب بن منصور بن عبد الوهاب أبو عبد الله شمس الدين الحراني الحنبلي (ت ٦٧٤) (fol. 126v)

٨) محمد بن عثمان بن علكان أبو عبد الله الأمير سيف الدين بن الأمير شجاع الدين الكردي (ت ٦٣٧) (fol. 126v)

٩) أحمد بن عمر بن محمد بن عبد الله أبو الجناب نجم الدين الصوفي الخوقي المعروف بالنجم الكبراء الخوارزمي (ت ٦١٨) (fol. 126v)

١٠) إسماعيل بن محمد بن عبيد الله أبو الطاهر المنصور بنصر الله بن القائم بن المهدي (ت ٣٤١) (fol. 3r)

١١) محمد بن علي بن إبراهيم بن شداد بن خليفة بن شداد أبو عبد الله عز الدين الأنصاري الحلبي (ت ٦٨٤) (fol. 3r)

٤٢) محمد بن أحمد بن علي أبو عبد الله الأزدي عرف بابن جاره (ت ٦٤١) (fol. 130v)

Commentary:

The fourteenth quire of the notebook opens with two sections *(faṣl)* on juridical matters.[100] Only two folios were used for this purpose, which means that the remaining parts of the quire, to which was probably added what is now fol. 3, were available for further notes. The space was used for 42 biographies and other unrelated notations, scribbled in all directions. An examination of this list reveals that it can be divided into several groups alphabetically. These biographies follow the traditional system of ordering in biographical dictionaries, which begins with individuals named Muḥammad, and then proceeds to those whose first name began with *hamzah,* etc. Al-Maqrīzī took great pains to write the first *ism,* in all cases, in red ink, to better catch his attention. Nonetheless, there are gaps in the sequence of the biographies. For instance, nos. 9–12 do not fit in the sequence of the first group represented by nos. 3 to 30, as well as nos. 36–37 in the second group (nos. 31 to 39). For nos. 10–12, an explanation can be found in the fact that they all figure on fol. 3, now a fly-leaf, which was not there initially. No. 9, instead, is written on fol. 126v, in a script different from the other two found on the same folio, showing that it was jotted down at a different time. Finally, from this long list, six groups may be identified: the first one is represented by nos. 1–2, the second by nos. 3–8 and 13–30, the third by nos. 9–12, the fourth by nos. 31–35 and 38–39, the fifth by nos. 36–37, and the sixth by nos. 40–42. My hypothesis is that each group comes from a different source. It is partly confirmed

[100]See "Maqriziana I/1," resumé VI, 46–48.

by groups 1 and 5. Group 1 is found only on fol. 125v, together with two other notes with a historical content (see below LVII, LVIII). As is shown under LVII, the source indicated there, *Kitāb al-Kamā'im,* is quoted indirectly by al-Maqrīzī from **Ibn Sa'īd**'s *Al-Mughrib fī Ḥulá al-Maghrib,* where the passage could be precisely located. A quick search in the same book demonstrates that both biographies share the same origin with note LVII.[101] The text is clearly the same, even though al-Maqrīzī simplifies Ibn Sa'īd's ornate style. It is not surprising that other notes from Ibn Sa'īd's books appear in the same quire (those indicated above and also LX[102] and LXI). For group 5, both biographies were taken from **Ibn 'Asākir**'s *Tārīkh Madīnat Dimashq,* which is stated as the source of LXIII and LXVII.[103]

As for groups 2–3–4–6, the subject (or subjects) conform to the classic organization of the biographical dictionaries: first *Muḥammad*s, followed by other *ism*s in alphabetical order. Considering the dates of death (the earliest 358, the latest 749), research to find their origin should focus on a biographical dictionary with a large temporal scope,[104] such as al-Ṣafadī's *Al-Wāfī bi-al-Wafāyāt.* As already noticed, the notebook contains a summary of some parts of this book (see V), corresponding exactly to the letters represented in this group.[105] In fact some of them can be found in this work, but it would be illogical to consider that al-Maqrīzī prepared an epitome, and that he later reconsidered, choosing other biographies from *Al-Wāfī* and writing them elsewhere in the notebook. Besides the fact that not all the biographies in it were identified, this claim is also supported by the material evidence. Biography no. 21 already appears in the resumé of *al-Wāfī*,[106] and both differ from each other, in terms of the information they provide. A collation with several books of the genre considered yielded no result, nor did a study of the internal evidence in the notebook or in al-Maqrīzī's works where the data was introduced.[107] For instance, one can read a statement of al-Yaghmūrī (d.

[101]Ibn Sa'īd's *Al-Ightibāṭ fī Ḥulá Madīnat al-Fusṭāṭ (min Kitāb al-Mughrib fī Ḥulá al-Maghrib),* ed. Zakī Muḥammad Ḥasan, Shawqī Ḍayf, and Sayyidah Kāshif (Cairo, 1953), 256–57 (no. 1), 267–68 (no. 2).

[102]This was placed on fol. 3, which explains why this fly-leaf was replaced in that quire.

[103]Al-Maqrīzī cites Wardān in *Al-Khiṭaṭ,* 2:190, which explains the presence of his biography in the notebook.

[104]The geographical link between all these biographies (all these individuals were born, lived, or passed away in Egypt) would be too restrictive. What appears as a common link in the notebook could be nothing more than the result of al-Maqrīzī's selection in a biographical dictionary with a broader geographical scope.

[105]*Muḥammad*s, then names beginning with *hamzah* up to Aydamur.

[106]See "Maqriziana I/1," 42 (no. 26).

[107]Most of them will be found in *Al-Muqaffá,* but some parts also appear in *Al-Sulūk* and *Al-Khiṭaṭ*.

673/1274, see below LIX) regarding the reliability of the subject of biography no. 27 on hadith matters. This statement was not found in any of the sources where a biography of this scholar was identified,[108] and more curiously not even in *Al-Muqaffá* where al-Maqrīzī kept silent on it.[109] No. 3 (al-Idrīsī) constitutes another interesting example of this kind of cross-reference work. He is the author of a book on the Pyramids,[110] quoted in his biography in the notebook. He has not been the subject of many reports in the works that have been preserved.[111] In his notice in *Al-Muqaffá,* al-Maqrīzī quotes Ibn Musdī[112] (d. 663/1265), who composed a *Muʿjam* in three volumes, again demonstrating his ability to find contemporary sources. None of the sources preceding al-Maqrīzī match the biography in the notebook. For instance, the date of his death appears in the notebook and in *Al-Muqaffá* as being 644, although the year 648 is recorded in the other sources.[113] No. 33 can also be studied in this way. Al-Maqrīzī mentioned his sources in the biography he wrote about him in *Al-Muqaffá* (5:594–95, no. 2144). These sources were al-Qifṭī's *Tārīkh al-Nuḥāt* and al-Musabbiḥī. A comparison with these data in the notebook reveals that some of the information came from both of these sources, but that the quotations are more complete in *Al-Muqaffá.* From this, it must be understood that the biographical dictionary from which the actual biography has been summarized in the notebook relied on both these sources and that al-Maqrīzī later had access to them. In fact, he always tried to discover more reliable or direct sources.

Notwithstanding all this, the ultimate source of these biographies remains to be discovered. Meanwhile, the data provided will enlarge our knowledge of Egyptian historiography, as many of the subjects of these biographies were historians, and all the data was not reused by al-Maqrīzī in *Al-Muqaffá*. A good example is no. 13, which consists of a biography of al-Musabbiḥī. The notice contains a very interesting passage already quoted.[114] The question arises whether this is a statement made by the author of this biography or by al-Maqrīzī himself. A *Muntaqá Tārīkh al-Musabbiḥī* is registered, but Rashīd al-Dīn al-Mundhirī (d. 643/1245–46 or 644/1246–47) cannot be considered the author of this statement because it does

---

[108] Al-Mundhirī, *Al-Takmilah li-Wafayāt al-Naqalah,* ed. Bashshār ʿAwwād Maʿrūf (Beirut, 1401/1981), 1:185 (no. 193).

[109] Al-Maqrīzī, *Al-Muqaffá,* 1:104 (no. 54).

[110] See al-Idrīsī, *Anwār ʿUlwī al-Ajrām fī al-Kashf ʿan Asrār al-Ahrām,* ed. U. Haarmann (Beirut, 1991).

[111] See Haarmann's introduction, ibid., 66. The sources preceding al-Maqrīzī are but a few: al-Udfuwī, *Al-Ṭāliʿ al-Saʿīd;* Ibn Saʿīd, *Al-Mughrib;* Yāqūt, *Irshād al-Arīb.*

[112] Or Masdī. See for the proper vocalization al-Maqrīzī, *Al-Muqaffá,* 5:516–17 (no. 3618).

[113] See Haarmann's introduction, al-Idrīsī, *Anwār ʿUlwī al-Ajrām.*

[114] See above, XXXVIII.

not belong with the other biographies. As I have tried to demonstrate, these other biographies came from a single source. Moreover, some of them deal with individuals who died well after al-Mundhirī.[115] The fact that al-Maqrīzī prepared a resumé of al-Musabbiḥī´s *Tārīkh* proves, however, his interest in historical matters, particularly from the Fatimid period. Thus, the only answer that can be put forward is that the statement is al-Maqrīzī´s, and that he added this personal information in the middle of a biography he summarized.

LVII. (fol. 125v)

Title on fol. 125v (lines 6–7): [Quotation from] *Kitāb al-Kamāʾim.*

من خبر مصر. قال في الكمائم : وأما فسطاط مصر فإن مبانيها كانت في القديم متصلة بمباني عين الشمس وجاء الإسلام وبها مبنى يعرف بالقصر حوله مساكن.

Commentary:

As argued above (see preceding entry), this short quotation is found on a folio where biographies were identified as coming from **Ibn Saʿīd**´s *Al-Mughrib*. This conclusion is partly thanks to the mention of the indirect source from which al-Maqrīzī said he took it: *Al-Kamāʾim*. This book was written by al-Bayhaqī (ʿAlī ibn Zayd, d. 565/1169[116]), and is exclusively cited on several occasions by Ibn Saʿīd in his own work. Indeed, the passage is found in the second book of *Al-Mughrib* dealing with the history of Fusṭāṭ: *Al-Ightibāṭ fī Ḥulá Madīnat al-Fusṭāṭ*.[117] In *Al-Khiṭaṭ* (1:40), where it was reused, al-Maqrīzī indicated the direct source *(Al-Mughrib)* from which he took it, although he did not indicate this source in the notebook. This is probably due to the fact that he knew that all excerpts he took from *Al-Kamāʾim* were taken only from this source. Ibn Saʿīd´s books appear later in the notebook (see LX, LXI).

LVIII. (fol. 125v)

No title: Quotation of a passage regarding the plunder that took place during al-Mustanṣir´s reign (460–61).

Incipit (fol. 125v, lines 22–24):

من خبر المستنصر : بيعت البيضة في غلاء المستنصر بعشرة قراريط والراوية الماء بدينار وخرج من خزانة السلاح أحد عشر ألف درع [. . .] (المنتظم، مج ١٦، ١١٦–١١٧)

Explicit (fol. 125v, line 29):

115His lost *Tārīkh Miṣr* might have contained data regarding al-Musabbiḥī.

116On Bayhaqī, see *GAL* S1:557–58.

117Ibn Saʿīd´s *Al-Ightibāṭ,* 1.

[. . .] اشتري بها أقل من كارة دقيق.

Commentary:
The excerpt is introduced by an indicative title written in red ink: *"min khabar al-Mustanṣir."* It was placed in front of the preceding entry, and logically one could conclude that it shares the same origin as the other items on the folio. However, this is contradicted by the color of the red ink which differs from the ink used elsewhere on this folio, which indicates that it was jotted down at a later date. These notes deal with horrific events that happened during the famine which struck the entire country during the years 460–61, events he treated comprehensively in *Al-Khiṭaṭ* and *Itti'āẓ al-Ḥunafā'*. A positive event from this period was the extraction of treasures from the *khizānat al-silāḥ*. In *Al-Khiṭaṭ,* he devoted a section to the *khazā'in al-silāḥ* (1:417–18) where the same subject is scrutinized on the basis of *Al-Dhakhā'ir wa-al-Tuḥaf,* the well-known treatise on treasures, mostly those plundered in al-Mustanṣir's reign.[118] Unfortunately, the data in the notebook was not used there. However, it is found verbatim in *Itti'āẓ al-Ḥunafā'* (2:296 [ll. 3–6] and 296–97 [ll. 15–1]). It is interesting to note that al-Maqrīzī provides crucial information there for the identification of the data, as he introduces it thus: *"wa-waṣala ilá Baghdād 'alá yad al-tujjār mimmā khurrija min al-qaṣr,* 'alá mā waqaftu fī tārīkh ba'ḍ al-baghdādīyīn." One wonders why he did not give the name of this *History* composed by a scholar from Baghdad! There could have been many potential candidates with such a vague indication, but, as already proven in several cases, it is better to consider a source already mentioned in the notebook for the given period. This leads us unequivocally to **Ibn al-Jawzī**'s *Al-Muntaẓam*. Under the year 462 (16:116–17) he recalls some events that happened in Egypt during that year through the testimonies of Egyptians who fled from the country to find relief in other areas. Among these is the passage excerpted by al-Maqrīzī. The order as well as the wording leave no doubt that *Al-Muntaẓam* was the source in this case too.

LIX. (fol. 3v)
No title: Excerpt from a book by al-Yaghmūrī.
Incipit (fol. 3v, line 1):

رأيت بخط الحافظ اليغموري ما مثاله : قرأت بخط العلامة أبي محمد عبد اللطيف بن يوسف بن محمد البغدادي قال : كان السوق يعني في عسكر صلاح الدين [. . .]

---

[118]Falsely attributed to al-Rashīd ibn al-Zubayr. Ed. Muḥammad Ḥamīd Allāh (Kuwait, 1959) on the basis of a resumé made by al-Awḥadī. See Sayyid, "Lumières," 23–25. Trans. Ghādah al-Ḥijjāwī al-Qaddūmī, *Book of Gifts and Rarities* (Cambridge, MA, 1996).

Explicit (fol. 3v, lines 9–10):

[. . .] وصار حماما يغسل الرجل رأسه بدرهم وأكثر وندم صلاح الدين على خراب عسقلان وأبقى عكاء.

Commentary:

The excerpt occupies half of the page and was written from bottom to top, from the spine toward the middle of the page. The source is given as **al-Yaghmūrī** (Yūsuf ibn Aḥmad ibn Maḥmūd ibn Aḥmad al-Asadī, d. 673/1274),[119] who is quoted, almost always for personal testimonies, on several occasions in *Al-Muqaffá*[120] and *Al-Khiṭaṭ*.[121] Al-Maqrīzī explains how he became acquainted with it in this excerpt and in *Al-Muqaffá:*[122] he managed to obtain an autograph copy of al-Yaghmūrī´s book. In this particular case, the author himself relied on an autograph copy of al-Baghdādī´s work. He is to be identified as ʿAbd al-Laṭīf ibn Yūsuf ibn Muḥammad al-Baghdādī (d. 629/1231), the author of *Al-Ifādah wa-al-Iʿtibār fī al-Umūr al-Mushāhadah wa-al-Ḥawādith al-Muʿāyanah bi-Arḍ Miṣr,*[123] also cited as a direct source by al-Maqrīzī in *Al-Khiṭaṭ*.[124] But obviously, al-Maqrīzī deemed al-Yaghmūrī´s work valuable for the first part of *Al-Sulūk,* because it is there that

[119]On al-Yaghmūrī, see R. Sellheim, *Die Gelehretenbiographien des Abū ʿUbaidallāh al-Marzubānī in der Rezension des Ḥāfiẓ al-Yaġmūrī,* part 1 (Wiesbaden, 1964), 8 ff.; al-Sakhāwī, *Al-Iʿlān bi-al-Tawbīkh,* in F. Rosenthal, *A History of Muslim Historiography,* 2nd ed. (Leiden, 1968), 322, 422, 467. Quotations from this source can also be found in Ibn Ṣaṣrá, *Al-Durrah al-Muḍīʾah fī al-Dawlah al-Ẓāhirīyah,* ed. W. Brinner as *A Chronicle of Damascus, 1389–1397* (Berkeley, 1963).

[120]Al-Maqrīzī, *Al-Muqaffá,* 7:160 *(qāla al-ḥāfiẓ Jamāl al-Dīn Yūsuf ibn Aḥmad al-Yaghmūrī: wa-akhbaranī al-shaykh . . .);* 6:122 *(wa-qāla al-ḥāfiẓ Jamāl al-Dīn al-Yaghmūrī: anshadanī al-shaykh . . .);* 5:131 *(wa-qāla al-ḥāfiẓ Jamāl al-Dīn Yūsuf al-Yaghmūrī wa-min khaṭṭihi naqaltu: qāla lī al-shaykh . . .);* 3:442 *(wa-qāla al-ḥāfiẓ Jamāl al-Dīn Yūsuf ibn Aḥmad al-Yaghmūrī: wajadtu bi-khaṭṭ al-sharīf . . .).*

[121]Al-Maqrīzī, *Al-Khiṭaṭ,* 2:25 *(wa-qāla al-ḥāfiẓ Jamāl al-Dīn Yūsuf ibn Aḥmad ibn Maḥmūd ibn Aḥmad ibn Muḥammad al-Asadī al-Dimashqī al-maʿrūf bi-al-Yaghmūrī: anshadanī al-imām . . .);* 2:87 *(wa-qāla al-ḥāfiẓ Jamāl al-Dīn Yūsuf ibn Aḥmad ibn Maḥmūd al-Yaghmūrī: samiʿtu al-amīr al-kabīr . . .);* 2:183 *(qāla al-ḥāfiẓ Jamāl al-Dīn Yūsuf ibn Aḥmad ibn Maḥmūd ibn Aḥmad al-Asadī al-shahīr bi-al-Yaghmūrī: samiʿtu al-amīr al-kabīr . . .).* For other impersonal quotations, see ibid., 1:7 and 496–97.

[122]See the third extract given in n. 119 above.

[123]Ed. Aḥmad Ghassān Sabānū (Damascus, 1403/1983). Since the note found in the notebook concerns ʿAkkā, the city near which Saladin established his camp, and which was visited by ʿAbd al-Laṭīf al-Baghdādī in 587/1191, it is no surprise that it does not appear in his book entitled *Al-Ifādah wa-al-Iʿtibār* in which he recorded his stay in Egypt during the years 588–89.

[124]See Guest, ″A List of Writers,″ 120; Harīdī, *Fihris Khiṭaṭ Miṣr,* 1:408; Sayyid ed., 5:972.

this passage is found.[125] The wording is exactly the same,[126] with a considerable difference: in *Al-Sulūk,* al-Yaghmūrī's name is omitted, as if he wanted to imply that al-Baghdādī was his direct source in this case. Be that as it may, he did not dare to quote al-Yaghmūrī's words *(ra'aytu bi-khaṭṭ . . .),* but replaced them with a more pragmatic *"qāla."*

LX. (fol. 3v)

Title on fol. 3 v, lines 32–33: [Quotation of] *Al-Muḥallá bi-al-Ash'ār*/Ibn Sa'īd.

[. . .] نقلته من كتاب المحلى بالأشعار لابن سعيد.

Incipit (fol. 3v, lines 11–14):

غانة من بلاد السودان في المغرب الأقصى عزا ملكها وهو من ولد صالح بن عبد الله بن الحسين بن الحسن بن علي بن أبي طالب [. . .]

Explicit (fol. 3v, lines 31–32):

[. . .] وأوسعها متجرا وأهلها مسلمون.

Commentary:

The second half of fol. 3v was later covered with a quotation extracted from **Ibn Sa'īd**'s *Al-Muḥallá bi-al-Ash'ār,* al-Maqrīzī being very precise in this case (*"naqaltuhu"*). From a chronological point of view, it means that he had access to this work of Ibn Sa'īd after al-Yaghmūrī's book. *Al-Muḥallá bi-al-Ash'ār* is attested for the first and last time in the notebook: al-Maqrīzī rather exploited Ibn Sa'īd's other book entitled *Al-Mughrib fī Ḥulá al-Maghrib* (see XXXIII, LVI, LVII, LXI), at least the part dealing with Egypt. The content of this passage is interesting in that it contains an indirect quotation of the *Kitāb Ujār* [or better *Rujār*], better known under its full title *Nuzhat al-Mushtāq fī Ikhtirāq al-Āfāq,* compiled by al-Idrīsī (Muḥammad ibn Muḥammad, d. 560/1164). These few lines do not appear in this source,[127] and this is not surprising: two other excerpts known to come from this book in *Al-Khiṭaṭ* were not found in the version that reached us. The first one[128] is mentioned by al-Maqrīzī through al-Nuwayrī, who probably borrowed it from al-Waṭwāṭ (see below under LXX), while the second[129] came through Ibn Sa'īd's *Al-Mughrib*. The interesting point concerns the first of these because it deals with the Nile and how it divides various areas in Nubia and beyond, with

---

[125] Al-Maqrīzī, *Al-Sulūk,* ed. Muḥammad Muṣṭafá Ziyādah (Cairo, 1934), 1:94.

[126] Except that the last sentence in the notebook is not cited there.

[127] Italian ed. (Rome, 1970–84), in 9 parts.

[128] Al-Maqrīzī, *Al-Khiṭaṭ,* 1:53 (quoted with its full title).

[129] Ibid., 1:341 (quoted as *Kitāb Ujār*).

specific mention of the Ghana river. Here in the notebook, information is precisely provided on the king of Ghana and the palace he built on the Nile in 510. There is also a description of his habits. Al-Maqrīzī does not seem to have taken advantage of any part of this note, either in *Al-Khiṭaṭ* or in *Itti‘āẓ al-Ḥunafā’*.[130]

As for *Al-Muḥallá bi-al-Ash‘ār,* al-Maqrīzī used it in two other cases,[131] in which another indirect source appears: al-Qurṭī (see LVI, no. 2), who makes reference to the *Thousand and One Nights*. On this basis, Z. M. Ḥasan[132] refuted C. Brockelmann′s view[133] that *Al-Muḥallá* was identical with *Al-Qidḥ al-Mu‘allá fī al-Tārīkh al-Muḥallá,* another item of Ibn Sa‘īd′s production. For Ḥasan, this attribution could be inaccurate, since the latter deals exclusively with Andalusian poets, while *Al-Muḥallá*, as we know thanks to the quotations taken from it by al-Maqrīzī, also deals with Egypt. Ḥasan′s view is confirmed by this passage in the notebook, demonstrating that Ibn Sa‘īd also took into account the sources on the Nile.

LXI. (fol. 130v)

Title on fol. 130v, line 1: [Quotation from] *Al-Mughrib*/Ibn Sa‘īd.

قال ابن سعيد في المغرب.

Text (fol. 130v, lines 1–2):

القرافة. قال ابن سعيد في المغرب : وهي في شرقها بها منازل لأعيان الفسطاط والقاهرة وقبور عليها.

Commentary:

The first word was written in a red ink similar to the other excerpts taken from Ibn Sa‘īd′s *Al-Mughrib.* Fol. 130 is the last of quire XIV in which several of these have been identified. Here, the inscription lies in the upper part of the page. The source is clearly indicated and the material can be read in the section on Fusṭāṭ where it appears with the same wording.[134] Al-Maqrīzī reused it in *Al-Khiṭaṭ* (2:444), illustrating another aspect of his working method: while the excerpt in the notebook consisted of two lines selected from a paragraph of ten in the printed text, the passage quoted in *Al-Khiṭaṭ* contains the whole paragraph. In this case, al-Maqrīzī went back to his source to enlarge the quotation.

---

[130]For the year 510, the autograph contained three blank folios. See al-Maqrīzī, *Itti‘āẓ al-Ḥunafā’,* 3:56.

[134]Ibn Sa‘īd, *Al-Ightibāṭ,* 10.

LXII. (fol. 142r)

No title: Various quotations of events and biographies regarding the fifth century.
List of the events and the biographies:

١) سنة سبع وأربعين وأربعمائة فيها ظهر باليمن أبو كامل علي بن محمد الصليحي ودعا للمستنصر [. . .]

٢) علي بن الحسن بن أحمد بن عمر بن المسلمة أبو القاسم (ت ٤٥٠)

٣) سنة اثنتين وخمسين وأربعمائة فيها حصر محمود بن شبل الدولة بن صالح بن مرداس [. . .]

٤) قريش بن بدران صاحب الموصل ونصيبين (ت ٤٥٣)

٥) شكر العلوي أمير مكة (ت ٤٥٣)

Commentary:

Folio 142 is part of a quire (no. XVI) composed of two bi-folios which were added by al-Maqrīzī to conclude resumé no. VII. The unused portion (from fol. 142r, where only five lines of the abstract were neatly written, to 144v) was later covered with notes from two different sources. Here, al-Maqrīzī included some events which took place between 447 and 453. From its arrangement, it can be deduced that he borrowed them from a chronicle or another kind of historical book. Because they treat events which mainly took place in the East, although linked to the Fatimid state, it is more reasonable to consider an eastern author. We have seen with other excerpts (LII, LV, LVIII) dealing with the same period and region that al-Maqrīzī primarily used Ibn al-Jawzī's *Al-Muntaẓam*. In this case, however, one must consider another possibility, given that the texts do not match each other. Some parts of it were identified in Ibn al-Athīr's *Al-Kāmil fī al-Tārīkh,* a chronicle al-Maqrīzī knew and used.[135] Notwithstanding the parallels that could be drawn, the notebook contains data absent in *Al-Kāmil*. This means that both authors relied on a common source which has not been identified so far. Some of what is found here was used by al-Maqrīzī in some of his works.[136]

LXIII. (fols. 144v–142v)

Title on fol. 144v, line 1: [Biographies and events from] *Tārīkh Dimashq*/Ibn ʿAsākir.

أنشد ابن عساكر في تأريخ دمشق [. . .]

---

١٦) محمد بن بزال أبو عبد الله الملقب قائد الجيوش (fol. 142v) (تاريخ مدينة دمشق، مج ٥٢، ص ١٤٨، رقم ٦١٣١)

Commentary:

These notes were written from fol. 144v onward. This means that al-Maqrīzī wrote the beginning of these notes at the end of the quire going backward until the end of the resumé, which stopped in the middle of it, on fol. 142r. The source is identified by al-Maqrīzī himself who opened the notes with the formula *"anshada Ibn ʿAsākir fī Tārīkh Dimashq."* The *Tārīkh Madīnat Dimashq* by **Ibn ʿAsākir**

[137]Fols. 143r–142v contain various historical reports dealing with the Umayyads.

(ʿAlī ibn al-Ḥasan, d. 571/1176)[138] is quoted several times in *Al-Khiṭaṭ,*[139] mostly for hadiths. The material preserved here shows that al-Maqrīzī was also interested in facts dealing with the Umayyad period. This is confirmed by examples of his own production, such as *Al-Nizāʿ wa-al-Takhāṣum fīmā bayna Banī Umayyah wa-Banī Hāshim*.[140] Here, his interest mainly centered upon poetry recited by or about these women. The last numbers represent men of later periods, which he found in other volumes.[141] The entry is connected with LXVII, where biographies were selected from the same source, but from previous volumes. This implies that he had access to several parts of this monumental work, either in Cairo,[142] or during one of his stays in Mecca. The data found here was partially reused, as no. 16 appears in *Al-Muqaffá* (5:433–34), where sentences from the notebook can be read. Nos. 14–16 probably also found their way into the now lost sections of this biographical dictionary.

LXIV. (fol. 145r)

Title on fol. 145r, line 1: [Excerpt from] *Al-Tārīkh*/Ibn al-Maʾmūn al-Baṭāʾiḥī.

قال ابن المأمون البطائحي في تأريخه في سنة اثنتي عشرة وخمسمائة [. . .]

Incipit (fol. 145r, lines 2–3):

[. . .] وفي يوم عاشوراء عبئ السماط بمجلس العطايا يعني من دار الأفضل بن أمير الجيوش وهو السماط المختص بعاشوراء [. . .]

Explicit (fol. 145r, line 18):

[. . .] والوعاظ والشعراء وغيرهم على ما جرت به عادتهم.

Commentary:

This text and the one following it are written on a smaller piece of paper which was pasted on a narrow strip, in order to attach it to the manuscript. This was made at a later date, by one of the most recent owners of the manuscript. An almost invisible inscription (three words) appearing on the recto indicates that the

---

[138]Reference is made to the new complete edition, though not as critical as the one published in Damascusby the Arab Academy: ed. ʿAlī Shīrī (Damascus, 1415–21/1995–2000), 80 vols.

[139]See Guest, ″A List of Writers,″ 109; Harīdī, *Fihris Khiṭaṭ Miṣr,* 1:279, 2:76; Sayyid′s ed., 5:973.

[140]Ed. Ḥusayn Muʾnis (Cairo, 1988).

[141]No. 16 was added at a later date, as suggested by the color of the ink and its position on the page, as well as by its location in a volume which corresponds, in print, to vol. 52. The other biographies were selected mainly in what are now vols. 69–70 and 74. The passages in *Al-Khiṭaṭ* appear in volumes other than those represented here.

[142]See an interesting reference, in *Al-Muqaffá* (7:392), to a transmitter of more than 200 *juz*ʾs of the *Tārīkh Madīnat Dimashq* directly from the author, who stayed in Egypt.

paper had been previously used for another purpose, i.e., a chancery note. The excerpts found on both sides deal with the etiquette observed for the feast of *'Āshūrā'* during al-Afḍal's vizierate. The recto contains two passages referring to the years 512 (to be corrected to 513) and 516 and coming from **Ibn al-Ma'mūn**'s *Tārīkh*. As previously mentioned,[143] the first of these passages can also be read literally in a short resumé of this source by al-Maqrīzī (XVIII, fols. 158b, line 16–159a, line 3). Due to the nature of this folio (a small, originally loose piece of paper), the similar subject of the notes, and the chronological order,[144] it can be identified as a notecard, as I will try to demonstrate in "Maqriziana II." Besides the appearance of the first passage in the abstract of the original source, both passages were also identified in *Al-Khiṭaṭ*.[145] We can thus follow the evolution of the text through no less than four versions!

LXV. (fol. 145v)
No title: [Quotation taken from *Al-Tārīkh*]/al-Musabbiḥī.

قال المسبحي في حوادث سنة ٣٩٦ [. . .]

Incipit (fol. 145v, lines 2–3):

[. . .] وفي يوم عاشوراء جرى الأمر فيه على ما يجري كل عام من تعطيل الأسواق وخروج المنشدين [. . .]

Explicit (fol. 145v, line 12):

[. . .] وسبوا السلف وقدم الرجل بعد النداء فضربت عنقه.

Commentary:
Closely linked to the previous excerpt, this quotation, as we are told by al-Maqrīzī himself, has been taken from **al-Musabbiḥī**'s *Tārīkh*. In this case, he drew it from the volume covering the year 396, which is now lost.[146] This passage was inserted by al-Maqrīzī at the appropriate place in *Al-Khiṭaṭ* (1:431), where it precedes the previous excerpt chronologically, which naturally implies that the actual leaf was later bound incorrectly. It also found its way into the draft version of *Al-Khiṭaṭ*[147] at the same place as the preceding one, confirming the status of this leaf.

---

[143]See "Maqriziana I/1," 63.

[144]What appears to be the recto was in fact the verso.

[145]Al-Maqrīzī, *Musawwadah,* 315–16; idem, *Al-Khiṭaṭ,* 1:431.

[146]See above, XXXVIII.

[147]Al-Maqrīzī, *Musawwadah,* 315.

LXVI. (fol. 156v)

No title: Excerpt of events regarding the *khuṭbah* in Mecca, Damascus, and Jerusalem, which took place mainly during the reign of al-Mustanṣir (years 462, 465, 468, 470, 472, 478, 490, 491, 492).

Incipit (fol. 156v, lines 4–6):

سنة اثنتين وستين وأربعمائة قطعت دعوة المستنصر صاحب مصر من مكة ودعي بها للقائم العباسي وللسلطان عضد الدولة ألب أرسلان [. . .]

Explicit (fol. 156v, lines 20–21):

[. . .] وقتل في المسجد الأقصى ما يزيد على سبعين ألف من المسلمين.

Commentary:

Quire XVIII was added by al-Maqrīzī to complete the resumé (XVII[148]) he began on the last folio of the preceding quire. Apparently, he was reluctant to start a new resumé on the basis of a different source at the end of the preceding one, though it occupies only two lines. Thus he decided to leave the remaining part blank for further notes, and commenced his new resumé (XVIII) on the next folio. The blank space was indeed not spared. Notes reporting events that occurred in various cities under Fatimid rule and where the name of the caliph was pronounced during the Friday prayer were placed perpendicularly starting from the lower margin. They are preceded by the following phrase in red ink: *″yunqal bi-khabar al-Qāhirah.″* No source is indicated in this case, but the material was indeed introduced, although not literally, in some places of *Itti‘āẓ al-Ḥunafā’*.[149] Several soundings have been made in various chronicles, based on the order of the reports, in order to identify the source, but without satisfying results. Some reports correspond to *Al-Muntaẓam* of Ibn al-Jawzī. This is the case for the inscription on the minbar sent by the Abbasid caliph to Mecca in 470, which does not appear in many sources. But, alas, this is surely not valid for the whole excerpt. This means that Ibn al-Jawzī relied on the same source al-Maqrīzī later summarized in his notebook. Another possibility concerns Atzız′s surname, given here as al-Aqsīs (probably the Arabic form of his name). Al-Maqrīzī mentioned it in *Itti‘āẓ al-Ḥunafā’* (2:315) on the basis of this excerpt, and Ibn al-Athīr explains that this form is given by *″al-Shāmīyūn,″*[150] indicating the Syrian historiographers. Unfortunately, I did not reach any conclusion after searching published works. It thus remains to be identified.

148For the identification of the source of this resumé, see the addendum at the end of this article.

149*Itti‘āẓ al-Ḥunafā’*, vol. 2, *passim* (under the years mentioned).

150See the editor′s note in the preceding reference.

LXVII. (fols. 160v, 163v–164r)

Title on fols. 160v and 164r: [Biographies of various persons taken from] *Tārīkh Dimashq*/Ibn ʿAsākir.

٦) أبو منصور سديد الدولة (fol. 164r) (تاريخ مدينة دمشق، مج ٦٧، ص ٢٥٤، رقم ٨٨٥٦)

Commentary:

Quire XVIII contains three resumés made from two different sources.[151] Some folios (163–65), left blank, were later utilized for several notes. Among these, one finds what must be considered the first in the chronological order, i.e., another excerpt from Ibn ʿAsākir′s *Tārīkh Madīnat Dimashq.* All these biographies follow an alphabetical order, a succession confirmed by the printed edition of this source. But al-Maqrīzī did not begin his note-taking on a plain blank folio, as can be seen. Rather, he wrote the first note at the end of the second resumé, in the lower margin, where some space remained. Then he moved forward to the end of the next resumé, once again exploiting the blank space at the bottom, and finally placed all the other biographies on fol. 164, where the full page was available for notes. From this, it can be understood that he did not consider the *Tārīkh Madīnat Dimashq* important enough to prepare a resumé of it, but it can also be inferred that he had access to this text after 831, as this is the date at which he could

[151]See ″Maqriziana I/1″ (XVII–XIX) and the addendum at the end of this article for the identification of the source of XVII.

consult the source of summaries XVII and XIX.[152] Additionally, given that no. 5 was selected from what is now vol. 64, we can say that he did not consult the volumes in numerical order.[153] This is confirmed by entry LXIII, where biographies were found in vols. 69–70, 74, and 52, whether they were scribbled down before or after these. These notes were reused primarily in *Itti'āẓ al-Ḥunafā'*[154] as well as in *Al-Muqaffá*.[155]

LXVIII. (fols. 164v–165v, 175v, 184r, 185v, 192r[156])

No title: Biographies of persons who died mainly in the sixth, seventh, and eighth centuries.

List of the biographies:

١) محمد بن إسماعيل بن القاسم الرسي بن إبراهيم طباطباء بن إسماعيل الديباج بن إبراهيم بن الحسن بن الحسن بن علي بن أبي طالب المدني المعروف بالشعراني (ت ٣١٥) (fol. 164v)

٢) العكبري المنجم (ت ؟) (fol. 164v)

٣) محمد بن أبي بكر بن عيسى بن بدران أبو عبد الله تقي الدين الإخنائي المالكي (ت ٧٥٠) (fol. 165r)

٤) محمد بن أبي بكر بن عيسى بن بدران أبو عبد الله علم الدين الإخنائي الشافعي (ت ٧٣٢) (fol. 165r)

٥) محمد بن أبي بكر بن محمد بن محمد بن حسن أبو عبد الله شمس الدين الفارسي الأيكي (ت ٦٩٧) (fol. 165r)

٦) محمد بن بركات بن هلال بن عبد الواحد وقيل محمد بن بركات بن علي بن هلال بن عبد الواحد أبو عبد الله المصري السعيدي النحوي (ت ٥٢٠) (fol. 165r)

٧) محمد بن أسعد بن علي بن المعمر بن عمر بن علي بن أبي هاشم الحسين نسابة بغداد بن أحمد نسابة بغداد بن علي نسابة الكوفة بن إبرهيم بن محمد بن الحسين بن محمد الجواني بن عبيد الله الزاهد بن الحسين بن علي بن الحسين بن علي بن أبي طالب أبو علي بن أبي البركات الحسيني العبيدلي الجواني النسابة المالكي (ت ٥٨٨) (fol. 165v)

٨) محمد بن إسماعيل بن أحمد بن علي بن منصور بن محمد بن الحسين أبو عبد الله شمس الدين الصاحب الوزير بن الصاحب المؤرخ شرف الدين الأمدي ابن التيتي (ت ٧٠٤) (fol. 165v)

---

[152]See below, no. XVII in addendum.

[153]No. 6, which is found in vol. 67 like all the others, was written in the margin, near the spine. Thus, no. 5 was surely written prior to no. 6.

[154]For instance, no. 5 (*Itti'āẓ,* 2:268 [read *al-Ḥusaynī* instead of *al-Ḥasanī!*]).

[155]For instance, no. 2 (*Al-Muqaffá,* 4:616–18).

[156]See reproduction of fol. 184r in "Maqriziana IV," 25.

٩) محمد بن محمد بن إبراهيم بن الحسين بن سراقة أبو القاسم وأبو بكر وأبو عبد الله الأنصاري الشاطبي المالكي (ت ٦٦٢) (fol. 175v)

١٠) محمد بن محمد بن أسعد بن علي بن معمر بن عمر بن علي أبو عبد الله الحسيني الجواني (ت ٦١٦) (fol. 175v)

١١) محمد بن محمد بن محمد أبو عبد الله الوهراني (ت ٥٧٥) (fol. 175v)

١٢) إبراهيم بن جعفر أبو محمود الكتامي (ت ٣٧٠) (fol. 184r)

١٣) محمد بن يوسف بن إبراهيم بن عبد الرحمان بن علي بن عبد العزيز بن علي بن قريش أبو عبد الله المخزومي المصري (ت قرن ٧ ؟) (fol. 185v)

١٤) محمد الشيخي تاج الدين (ت ٧٠٤) (fol. 185v)

١٥) محمد بن الحسن بن سعيد عز الدين الحميدي (ت ٦٤٦) (fol. 192r)

١٦) محمد بن الحسين بن الحسن أبو عبد الله المرتضى المعروف بالمحنك الطرابلسي (ت ٥٤٩) (fol. 192r)

١٧) محمد بن خاص بك بن عمر وهو بزغش بن كحت بن شيرك أبو عبد الله بن الأمير أبي سعيد الشوباشي العزيزي (ت ٦٥٣) (fol. 192r)

Commentary:
As with LVI, this long list of biographies, organized in alphabetical order and divided in several groups, cover many folios. However, here the biographies are sometimes separated by large gaps corresponding to resumés. Clearly, once again, al-Maqrīzī has taken utmost advantage of the blank spaces. In this case, some biographies can be attributed to different sources, such as no. 2 and no. 12, as confirmed by the script and their location on the page. Apart from these, we note names starting with *Muḥammad,* then followed by another *ism* beginning with *hamzah* and continuing in alphabetical order. The classification is respected until no. 6, followed by another group from nos. 7 to 13, and then another group of four, respecting the order, but going backward somewhat with respect to the previous ones. These three groups (nos. 1–6 [less 2], 7–13 [less 12], and 14–17) might indicate three different sources. The span of time evidenced by the death dates demonstrates that one must look for biographical dictionaries organized alphabetically, but nonetheless respecting the priority of Muḥammad´s name. Such a dictionary or dictionaries must have been written by a scholar or scholars of the eighth century. In this case, as with LVI, which consisted of a similar list, the system of cross-references has yielded no positive result in my attempt to identify the source(s). Nos. 1 to 8, for instance, appear in al-Ṣafadī´s *Al-Wāfī*, but the collation of both texts ended in failure. One must thus look in other directions. A

search in *Al-Muqaffá* revealed that al-Maqrīzī transferred half of these notes to the respective biographies, where he hardly quoted his sources. Yet, for no. 16 (the Fatimid historian al-Muḥannak[157]), he indicated[158] that he relied on Ibn Muyassar, which is confirmed by the resumé he made of it.[159] His biography in the notebook corresponds to what is found in that source, but it cannot be regarded as the source on which he based the biography appearing in the notebook. Instead, he relied on a biographical dictionary, a genre to which Ibn Muyassar's *Tārīkh* does not belong. In this matter, he probably relied on an intermediary source whose author had access to Ibn Muyassar's book. This hypothesis is corroborated by no. 6 (another author of the Fatimid period who is known as the writer of a book on the *Khiṭaṭ* of Egypt). In *Al-Muqaffá* (5:431), al-Maqrīzī mentioned this fact through Ibn Muyassar in the following words: *"wa-lahu Kitāb fī Khiṭaṭ Miṣr ajāda fīhi."*[160] Unfortunately, Ibn Muyassar's *Tārīkh* in the summary made by al-Maqrīzī does not contain any data regarding this person. The same sentence can be read in his biography in the notebook. Once again, this means that Ibn Muyassar must not be considered the source; instead, it must have come from another book relying on it. Proceeding further with no. 7 (the historian al-Jawwānī[161]), one can see that the source used by al-Maqrīzī here was also common to al-Mundhirī:[162] they share the same explanation for his *nisbah* and other details, but the notebook is far more comprehensive, with 19 lines devoted to this person. So far, none of the sources investigated perfectly corresponds with the information found in the notebook.

LXIX. (fol. 184r)

No title: Some verses by Abū al-ʿAtāhiyah and Ḥunayn.

Incipit (fol. 184r, lines 9–10):

أبو العتاهية : نادت بوشك رحيلك الأيام أفلست تسمع أم بك استصمام

Explicit (fol. 184r, line 17):

---

[157]One can only be astonished by the number of biographies regarding authors of books on the *Khiṭaṭ* or history that appear in this list, as well as in LVI.

[158]*Al-Muqaffá,* 5:578.

[159]Al-Maqrīzī, *Al-Muntaqá,* 153.

[160]Al-Maqrīzī added the following sentence after this: *"wa-lam aqif ʿalayhi,"* to which he appended later: *"waqaftu ʿalayhi bi-khaṭṭ Muḥammad ibn Asʿad ibn al-Jawwānī."* This last addition is found in the margin of *Al-Muqaffá* (Leiden Ms. 1366, fol. 136b), indicating that he found that manuscript after he drafted the author's biography. In the edition, there is no indication of this, giving the impression that these statements come from Ibn Muyassar.

[161]A biography of his son will be found under no. 10. In the biography of the father (*Al-Muqaffá,* 5:306–8), al-Maqrīzī refered to the biography of his son, which belongs to the now lost section of this work.

[162]Al-Mundhirī, *Al-Takmilah li-Wafayāt al-Naqalah,* 1:177–78.

[. . .] من رأيت المنون خلدن أم من ذا عليه من أن يضام خفير.

Commentary:
These verses were written by al-Maqrīzī at the end of epitome XXI. They do not originate in a *dīwān,* since two poets are concerned here. Thus, research must be done in anthologies or encyclopedias. In this case, the verses have been found in several sources, including some used by al-Maqrīzī, which complicates the work of properly identifying them. But considering the author of the source identified for the next resumé that closes the quire, I would be inclined to regard it as the one from which al-Maqrīzī selected the verses. Al-Nuwayrī´s *Nihāyat al-Arab* (4:310 and 288) offers indeed a similar text, but I am still doubtful because the ink and the script differ from those in the following resumé. In any case, al-Maqrīzī did not take advantage of them.

LXX. (fols. 186v–184v[163])
Title on fol. 186v, line 1, and fol. 185r, line 1: *Dhikr A'yād al-Qibṭ bi-Miṣr* and *A'yād al-Yahūd.*

ذكر أعياد القبط بمصر [. . .]، أعياد اليهود التي نطقت بها التوراة خمسة [. . .]

Commentary:
The section in *Al-Khiṭaṭ* (2:472–501) devoted to the non-Muslim communities has been considered since the nineteenth century as one of the best sources for this subject, although this appreciation is now tempered by the discovery of other sources unknown at that time,[164] which include al-Maqrīzī´s own sources. Given his efforts to render as comprehensively as possible the complexity of Egypt´s different religions, it is not surprising to find some notes here dealing with the feasts celebrated by the Copts and the Jews. Each entry is highlighted by an outline in red ink, with the stroke intentionally elongated by al-Maqrīzī between the *yā'* and the *dāl* of the word *'īd*, which introduces each feast. No source is indicated here, nor in *Al-Khiṭaṭ*[165] where the data was reused verbatim and in the same order. He undoubtedly relied on **al-Nuwayrī**´s *Nihāyat al-Arab* (1:191–97), as confirmed by the phrasing and the order in which the feasts are detailed. Al-Nuwayrī did not quote his source, but it can be identified as al-Waṭwāṭ al-Kutubī´s (Muḥammad ibn Ibrāhīm, d. 718/1318) *Manāhij al-Fikar wa-Mabāhij*

---

[163]These notes were written from fol. 186v. onward. This system has already been observed for no. LXIII.

[164]Wüstenfeld, *Macrizi´s Geschichte der Copten;* al-Maqrīzī, *Tārīkh al-Yahūd wa-Āthāruhum fī Miṣr,* ed. 'Abd al-Majīd Diyāb (Cairo, 1997) [from *Al-Khiṭaṭ*].

[165]*Al-Khiṭaṭ,* 1:264–67 and 2:501 for the Copts; 2:473–74 and 479 for the Jews.

al-'Ibar:[166] The parallelism between the two texts cannot be a coincidence.

LXXI. (fols. 191v–195bis v,[167] 1v)

Titles on fols. 191v, 192r, 192v: Four *faṣl*s dealing with the fact that history sometimes repeats itself, as well as persons who held authority despite their young age, and finally with those who were secretaries in Egypt.

List of the *faṣl*s:

١) فصل من الاتفاقات الغريبة : كل قائم بدولة يخرج الملك عن عقبه واعتبر ذلك : معاوية بن أبي سفيان خرج الملك عن عقبه إلى بني مروان [. . .] (fol. 191v)

٢) فصل ما قامت دولة باسم ملك إلا انقرضت بمثل ذلك الاسم الذي قامت به :بنو حرب أولهم معاوية بن أبي سفيان آخرهم معاوية بن يزيد [. . .] (fol. 192r)

٣) فصل فيمن رأس وهو صغير السن : أسامة بن زيد ولاه النبي عليه السلام على حشر فيه كبار الصحابة وهو دون العشرين سنة [. . .] (fol. 192v)

٤) فصل فيه تراجم من ولي كتابة السر بمصر (fol. 192v)

١) عبد الوهاب بن فضل الله العدوي شرف الدين (ت ٧١٧)

٢) علي بن أحمد بن سعيد بن الأثير القاضي علاء الدين بن تاج الدين الحلبي (٧٣٠)

٣) يحيى بن فضل الله بن مجلي محيي الدين بن محمد بن جمال الدين العمري (٧٣٨)

٤) فتح الدين محمد بن محيي الدين عبد الله بن عبد الظاهر بن نشوان بن عبد الظاهر (ت ٦٩١)

٥) أحمد بن علي بن أحمد بن خيران أبو محمد (ت ٤٣٢)

٦) علي بن منجب بن سليمان أبو القاسم المعروف بابن الصيرفي (٥٤٢)

٧) علي بن يحيى بن الحسن بن الحسين بن علي بن محمد الأسدي الحلي أبو الحسن نجم الدين (ت ٦٤٢)

٨) حسين بن جوهر أبو عبد الله (ت ٤٠١)

٩) علي بن محمد بن كاسيبويه أبو الحسين المؤتمن المصري وقيل علي بن أحمد (ت ٥٨٨)

١٠) محمد بن الحسين بن إبراهيم بن المسلم بن محمد بن عبد الله بن يوسف بن سلاح أبو عبد الله الفهري (ت ٥١٥)

١١) محمود بن عبد الله الكلستاني التركي بدر الدين الحنفي (ت ٨٠١)

---

[166]See the facsimile edition of the Istanbul Ms. Fatih 4116 produced by F. Sezgin (Frankfurt, 1990), 1:214–16 (Copts) and 216–18 (Jews).

[167]Fol. 195bis is another sample of a card added by al-Maqrīzī at a place where it coincided with the main text.

Commentary:
The remaining space at the end of quire XXI was filled later on with four sections written at the same time, at least for the first three and the beginning of the fourth, as indicated by the color of the ink and the general style of the script. This could suggest that al-Maqrīzī was once again copying from a source, although I am more disposed to consider these sections to be the result of his own reflection on history. The following statement found at the end of the first section could confirm this impression: after having listed the various dynasties which originated with a founder whose power was passed on to his descendants, he gives a final contemporaneous example, saying ″Barqūq awwal qā'im min mulūk al-jarākisah intaqala al-mulk 'an 'aqibihi ilá mamlūkihi al-Mu'ayyad Shaykh wa-naḥnu al-ān fī zamanihi.″ On this basis and assuming that this is really al-Maqrīzī′s own statement, this passage constitutes an important clue for dating this part of the notebook (between 815/1412 and 824/1421).

The first three sections must be considered together as far as the theme is concerned: it is announced in the first section only, but the following two undoubtedly belong to it. The coincidences *(ittifāqāt)* noticed in history amazed Muslim historians who regularly stressed these in their books.[168] In this case, however, complete lists are given rather than individual cases, showing al-Maqrīzī′s process of systemization. Nonetheless, he does not seem to have proceeded further in this direction in any of his books. It should remind us, however, of al-Maqrīzī′s personal relation with Ibn Khaldūn during his stay in Cairo and the influence the latter must have had on his younger colleague.

The fourth section is completely different as it gathers several biographies of secretaries in Egypt, from the Fatimid to the Mamluk period. No chronological or alphabetical order is respected in this section. This indicates that al-Maqrīzī, at different dates as confirmed by the variation of the ink, added data, which he acquired from his readings. No doubt it was intended for his work on secretaries entitled *Khulāṣat al-Tibr fī Akhbār Kuttāb al-Sirr*.[169]

C. ADDENDUM

Since the publication of the first section of this article, I have been able to identify the source of some abstracts dealt with there, or to verify some of my hypotheses.

---

[168]See Barbara Langner, *Untersuchungen zur historischen Volkskunde Ägyptens nach mamlukischen Quellen* (Berlin, 1983), 111–12, where the author points out several samples collected in various histories written by later historians (Ibn al-Dawādārī, Ibn Taghrībirdī, and Ibn Iyās), but pertaining to earlier periods such as the Fatimid period. She studied them in a section entitled *″gharā'ib al-ittifāq.″* To these, one may add the following one found in Ibn al-Jawzī, *Al-Muntaẓam,* 16:54, where the author concluded saying: *″wa-hādhā min al-ittifāqāt al-ẓarīfah.″*

[169]See above, XXXVII.

The progressive study of many other sources will probably lead to further identification of the sources of other resumés, excerpts, and notes listed in both sections of this article which remain unknown.

No. VII (″Maqriziana I/1,″ 48–52), entitled *Faṣl fī Manāfi' al-Ḥayawān,* is very close to Ibn Zuhr′s *Khawāṣṣ al-Ḥayawān,* although the order in which the animals are listed differs. I concluded that al-Maqrīzī probably relied on an intermediate source which reordered Ibn Zuhr′s data. The source was finally found to be **Ibn Faḍl Allāh al-'Umarī**′s *Masālik al-Abṣār fī Mamālik al-Amṣār,* of which volume 20 is dedicated to animals and plants.[170] The resumé made by al-Maqrīzī exactly matches the text both in its wording and order.

No. XVII (″Maqriziana I/1,″ 60–62) contains excerpts dealing with numismatics and metrology of the eastern parts of the Muslim world. I made no proposal for the source of this excerpt, but since the publication of the article I ascertained that one of the most well-informed sources for this matter outside the areas concerned was **Ibn Faḍl Allāh al-'Umarī**′s *Masālik al-Abṣār,* which must be considered al-Maqrīzī′s primary source for many matters. The data found in the resumé corresponds to what one can read on this subject in this encyclopedia.[171] As already noted, al-Maqrīzī had access to this source precisely in 831,[172] meaning that this part of the notebook can be dated accordingly. But another conclusion can be made: no. XIX was already identified as a resumé of another part of Ibn Faḍl Allāh al-'Umarī′s *opera omnia,* and together with no. XVII now clearly identified as coming from the same source, we can determine that no. XVIII (a resumé of Ibn al-Ma'mūn al-Baṭā'iḥī′s *Sīrat al-Ma'mūn al-Baṭā'iḥī*), which is inserted in the same quire, was consequently written at the same date. This is extremely important for the dating of the redaction of some portions of *Al-Khiṭaṭ* and *Itti'āẓ al-Ḥunafā'*.

No. XX (″Maqriziana I/1,″ 64–65) consisted of several *faṣl*s dealing with juridical matters. The first of these regarded problems of metrology and I surmised that it could have been taken from a work written by Ibn al-Rif'ah (d. 710/1310), entitled *Al-Īḍāḥ wa-al-Tibyān fī Ma'rifat al-Mikyāl,* on the basis of the appearance of his

---

[171]See Etienne Quatremère, ″Notices sur l′ouvrage qui a pour titre: *Mesalek alabsar fi memalek alamsar, Voyage des yeux dans les royaumes des différentes contrées* (Manuscrit arabe de la Bibliothèque du Roi, no. 583),″ *Notices et extraits des manuscrits de la bibliothèque du Roi et autres bibliothèques* 13 (1838): 151–384, particularly 210–12, 223. For more details, see ″Maqriziana VI: Numismatics and Metrology in al-Maqrīzī′s Notebook″ (forthcoming).

[172]See ″Maqriziana I/1,″ 64.

name in the resumé for a personal statement and the collation made by one editor of al-Maqrīzī's *Shudhūr al-'Uqūd* with the original text. Since that time, I have obtained a copy of the edition of Ibn al-Rif'ah's work[173] and can confirm that it corresponds literally to the resumé found in the notebook. The problem of the source of the first *faṣl* is thus solved, and there remains to be determined whether the other parts of these sections come from Ibn al-Rif'ah's commentary on al-Shīrāzī's *Al-Tanbīh,* as I suggested.

No. XXII ("Maqriziana I/1," 66–68) occupies the majority of the last quire found in the notebook. It differs slightly from all the other resumés as it contains a long biography of a Mamluk amir who was al-Maqrīzī's contemporary (d. 812). At that time, I concluded that al-Maqrīzī devoted a biography to him in his biographical dictionary of his contemporaries, *Durar al-'Uqūd al-Farīdah fī Tarājim al-A'yān al-Mufīdah,* although the complete manuscript of this text was unavailable to researchers. Since then, an edition prepared by its owner has appeared on the market.[174] The biography of this amir can be found in the last volume (3:562–72). My conviction was that the text present in the notebook was nothing other than a preliminary stage of redaction for that work. Now that a collation can be made between both texts, one notices that the final version found in *Durar al-'Uqūd* is more elaborate, although some passages appear verbatim in the notebook. Al-Maqrīzī also added some personal information not found in the notebook to complete the portrait. Considering the material facts stressed earlier (the impression of rapid writing, numerous marginal additions and cancellations), I am confident that the version in the notebook is not the result of a summarizing process, but rather is actually a preliminary version of what became *Durar al-'Uqūd*.

D. LIST OF THE SOURCES[175]

Entry no.	Author	Title
I	Ibn Abī Uṣaybi'ah	*'Uyūn al-Anbā' fī Ṭabaqāt al-Aṭibbā'*
II	Ibn 'Abd al-Ḥakam	*Futūḥ Miṣr wa-Akhbārihā*

Crime in Mamluk Historiography: A Fraud Case Depicted by Ibn Taghrībirdī

Fraud and crimes related to corrupt fiscal practices figured prominently among references to criminal activity as chroniclers of the Mamluk period reported such episodes. A crime, as distinct from other categories of violence, may be defined as an act deemed by its recorder(s) as worthy of investigation, apprehension, prosecution, and retribution.

Of roughly 1,100 cases discerned in a group of prominent Mamluk-era histories, fraud-related crimes constituted some fifteen percent (167 incidents).[1] Included in this broad category were cases involving manipulation of *waqf* properties, fiscal extortion, generalized corruption (the largest group with 60 incidents), embezzlement, false witness, forgery, and fraud itself (defined as a crime linked specifically to mendacity). The range of actions the chroniclers described, and the diversity of their contexts, were truly multifarious. While the majority of incidents touched upon the laundering or other misappropriation of fiscal assets (but not larceny or theft, which constituted a separate category), fraud-related crimes included sale of defective goods, faking weights and measures, forcing purchases of otherwise unsalable goods, hoarding and price fixing, racketeering through connivance with gangs, falsification of accounts, spreading of rumors deliberately to stimulate civic unrest, and a host of elaborate con schemes.

I am still in the process of collating these crimes among their various types, since few incidents fit neatly into one category and most can be considered in several. I have also discovered that generalizations about classification of criminal acts offer few insights unless they are closely tied to discrete incidents as illustrations. I therefore have selected one well-documented case of fraud for discussion, as an example of the kind of activity that attracted the notice of historians active during the Mamluk period. It emerged as perhaps the most interesting scheme by a con artist that I have encountered.

The incident was recorded by only one chronicler, albeit among the best

[1]The collection of criminal cases was conducted to support a study, ongoing at the present time, of crime and its social context in Mamluk Cairo and Damascus. The incident discussed here is indicative of the nuanced detail frequently included in the narratives presented by contemporary chroniclers such as Ibn Taghrībirdī.

known: Ibn Taghrībirdī, in his *Ḥawādith al-Duhūr*.[2] The incident, or at least its prosecution, occurred during the month of Shawwāl 858/September–October 1455. The case involved an individual of the *awlād al-nās* (descendants of first-generation Mamluk soldiers) named Muḥammad ibn ʻAlī ibn Īnāl (no relation to the sultan of that name). Ibn Taghrībirdī initiated his discussion by stating that this Muḥammad went into hiding when a princess *(khawand),* daughter of the former sultan al-Mu'ayyad Shaykh (815–24/1412–21), brought suit against him after he had instigated the demolition of a belvedere, or *manẓarah,* known as al-Tāj, the Crown, with Five Sides (i.e., a pentagon, although some described it with seven sides or a septagon) and his expropriation of its materials for resale.

Ibn Taghrībirdī described this person as ″one repugnant″ to the sultan, al-Ẓāhir Jaqmaq (842–57/1438–53). The latter had raised Muḥammad from childhood since the ruler had shared a bond of camaraderie with his father. Indeed, Jaqmaq had begun his career in the father′s service, prior to his own promotion by Sultan Barqūq (two reigns: 784–801/1382–99). Jaqmaq as an amir had placed Muḥammad in his own company of mamluks. But this Muḥammad had other ideas about his future, apparently, since he abandoned soldiering for the path of an itinerant Sufi. Ibn Taghrībirdī described him, contemptuously, as adopting the guise of a mendicant or *faqīr* who solicited (more bluntly, begged, *sa'ala*) alms from the populace. Ibn Taghrībirdī claimed that this individual was lazy, lethargic, and quite content with his chosen agenda, until Jaqmaq was enthroned as sultan. He then summoned Muḥammad and ordered him to resume his military garb. But Muḥammad refused his patron′s demand, unlike his brother Aḥmad, who conformed to behavior more appropriate to his class.

When Jaqmaq promoted the brother Aḥmad to the rank of amir of ten, Muḥammad was ″consumed with envy″ but still refused to conform. Instead, he became even more audacious with his solicitation, and took to riding a donkey up to the citadel where he collected alms from the elite stationed there. Muḥammad displayed unique skills in his calling, it would seem, since he gained status among the influential, abandoned his donkey for a horse, and ultimately won the post of court audiencer *(amīr shakkār)*. He attained his brother′s rank as amir of ten that he had coveted. Ibn Taghrībirdī noted that he was awarded several allotments *(iqṭāʻāt)* set aside for the *ḥalqah* reserve corps.

But none of this satisfied Muḥammad′s ambition, and it is at this stage of the narrative that Ibn Taghrībirdī noted his cross-over into crime. Muḥammad alleged to Sultan Jaqmaq that frequenters of the Tāj belvedere were committing ″fornication and other shocking acts″ on the premises. ″Its demolition would thus be meritorious.″

---

[2](Beirut, 1994), 2:500, line 16; ed. William Popper, University of California Publications in Semitic Philology, vol. 8, pts. 1–4 (Berkeley, 1930–42), pt. 2:216, line 1.

Ibn Taghrībirdī emphatically dismissed this claim. He described the belvedere as ″one of the loveliest buildings in Miṣr—and one of the most respectable.″ He mentioned that its resident shaykh, by the name of Ḥaydar, was ″among the worthiest of persons, religious, pious, and righteous.″ Indeed, the populace came to him with their supplications, presumably for his intercession with the Divine on their behalf. Shaykh Ḥaydar had established a *zāwiyah* at the site and had attracted a devout community of mystics.

Ibn Taghrībirdī went on to note that the belvedere, located in the vicinity of Kawm al-Rīsh outside al-Qāhirah, had deteriorated prior to the sultanate of al-Mu'ayyad Shaykh. The latter had intervened to invest 20,000 dinars in its restoration. The sultan developed a special affinity for the site, and visited it on numerous occasions after its restoration. Subsequently, Sultan Barsbāy (825–41/1422–38) established the shaykh Ḥaydar, now described more precisely as a Rifā'ī, in the belvedere. The shaykh had founded the *zāwiyah* in the *ṭarīqah* of this order. Sultan Barsbāy granted the shaykh a stipend for this purpose, and Ḥaydar had presided over his *zāwiyah* for three decades, with all due propriety—before this Muḥammad impugned his reputation. Ibn Taghrībirdī was himself a close friend of the shaykh Ḥaydar, noting that he was ″decent and upright with regard to what the riffraff of Persians cast at him.″

Yet despite his unsavory past, Muḥammad managed to persuade Sultan Jaqmaq about the veracity of his allegation. The sultan ordered the belvedere razed—under Muḥammad′s supervision. He appropriated all of its material (whether known to Jaqmaq is unclear), which he sold. Ibn Taghrībirdī mentioned ″an exorbitant quantity of building stones, wood, iron window fixtures, and other items beyond calculation.″ The belvedere became ″a ruin inhabited by mendicants.″ The audacious Muḥammad actually used some of the razed materials to build a structure at the Hill of the New Quarter *(kawm al-qanṭarah al-jadīdah)*. Ibn Taghrībirdī stated that the locals mockingly dubbed it ″the wanton″ (*al-makhlū'ah*). ″Hashish users and others steeped in depravity repaired to it.″ The populace were profoundly grieved over the demolition of the lovely belvedere.

Ibn Taghrībirdī now digressed into a detailed description of the sordid Muḥammad. He was tall, long of beard, bushy of mustache, reckless in speech. As for his dress, he wore the cloth headgear of (common) marketeers, and a mantle with wide sleeves—in the guise of the Bedouin from al-Buḥayrah. He rode on a Bedouin-style saddle, in the fashion of the *'Arab* also. On occasion, he held a hunting falcon on his arm. This individual was indeed so adept in altering his appearance that he often went unrecognized in the streets. Ibn Taghrībirdī did not admire his skill at image transformation, however, since he found his demeanor ″repulsive and ridiculous,″ even comical—his bearing ″indicative of triviality of mind, (proof that) insanity appears in diverse forms.″ Nonetheless, Muḥammad

continued on his trajectory of schemes and depravity with success until al-Ashraf Īnāl (857–65/1453–61) succeeded Jaqmaq. He immediately stripped Muḥammad of his amir′s rank and dismissed him as court audiencer. His status declined until al-Mu'ayyad′s daughter formally denounced him. In suit, she demanded the value of materials expropriated from the demolished belvedere her father had built—presumably as an inheritance due her (possibly under *waqf* trust). Ibn Taghrībirdī stated that the accused remained in custody for several days, yielded up a fraction of the value of the expropriated materials—less than 1,000 dinars—and then went into hiding until the *khawand* expired (no date given, but other data suggest a lengthy seclusion). He eventually reappeared and took to his house. The entry terminated without further disclosure.

So, what to make of this intriguing affair? First of all, Ibn Taghrībirdī lavished far more detail on Muḥammad′s deviance from the stance of a respectable member of the *awlād al-nās* and their *ḥalqah* corps, entitled to a comfortable if not profligate living from his allotments, than he did on particulars of the fraud case itself. Perhaps he knew nothing more about its facts, but no chronicler was better informed of court intrigues than Ibn Taghrībirdī. Ibn Taghrībirdī was particularly incensed by Muḥammad′s smirching of Shaykh Ḥaydar′s reputation. Quite possibly, his vitriolic denunciation masked a rivalry between two sharply contrasting representatives of Sufi activism in Cairo. Ibn Taghrībirdī loathed the heterodox life-style of the mendicant Sufis, who disdained the shari'ah-oriented strictures of the more conventional *ṭarīqah*s, and indulged in drug use and other practices castigated by the formal religious establishment but appealing to many elements of the commons.

But for whatever reason, Ibn Taghrībirdī disclosed little about the actual nature of the suit and its litigation, presumably in the appeals *(maẓālim)* court presided over by Sultan Īnāl. The substantive facts warranting the suit were only two: 1) that Muḥammad had allegedly lied to Sultan Jaqmaq about sordid, possibly illegal, acts occurring on the premises of the belvedere, and 2) that the daughter of the belvedere′s founder, al-Mu'ayyad Shaykh, could put a lien on the materials removed from the belvedere upon its demolition that Muḥammad had sold.

With regard to the first, Ibn Taghrībirdī made clear his own revulsion over behavior exhibited by visitors (he would describe as revelers, by inference, fornicators) to the belvedere. But despite his choler, it is possible to envisage some debate at a court hearing over the illegality of such behavior. And in any case, Ibn Taghrībirdī provided no details about whether such acts were formally attested by sworn witnesses. As noted above, Ibn Taghrībirdī′s denunciation of these acts, and his defense of Shaykh Ḥaydar, likely conceal a long-standing tension between the shaykh and Muḥammad—and more broadly, over opposing orientations within Sufi life-styles. But whatever rancor existed between the two

over their contrasting Sufi paths, Ibn Taghrībirdī's assertions remain allegations unsupported by description of the litigious proceedings themselves. We have his word only about Muḥammad's character. Indeed, Muḥammad's personal decisions about his abandonment of a soldier's career as a *walad nās* in the *ḥalqah* corps for the life of a mendicant, his solicitation of influential persons for alms, or his adoption of peculiar modes of dress that effectively disguised him may have sullied Ibn Taghrībirdī's own standard of conduct (recall that he too was a *walad nās*). But there was nothing intrinsically illegal about these decisions—unless they could be tied to specific malfeasance.

In fact, this Muḥammad, considered objectively, comes across as an imaginative figure who elected to cross boundaries that defined behavioral norms considered appropriate to class conduct and fixed by time-honored tradition. And more relevant to this case, he got away with crossing them and prospered accordingly. An incident that relies solely on one observer's version does not allow for the offender's voice to be heard. So, we do not have any indication of Muḥammad's perspective on these events.

With regard to the second fact, supporting details are sparse. The daughter of al-Mu'ayyad Shaykh is not named, but simply referred to as the princess or *al-khawand.* Although her death date cannot be ascertained from Ibn Taghrībirdī's account, she may not have died in 858/1455 or soon after the events of this case. Al-Mu'ayyad Shaykh produced several children who lived beyond infancy, including two sons and at least three daughters whose deaths can be dated. One of the sons, Aḥmad, would briefly succeed Shaykh upon his demise in 824/1421, as Sayf al-Dīn Abū al-Sa'ādāt. Deposed within months, at less than two years of age, Aḥmad would be imprisoned in Alexandria along with his surviving brother, Ibrāhīm. Both would die by the plague nine years later. I raise this issue because of its possible relevance to the daughter's claim. No male heirs survived to 858/1455 and thus could not demand right of precedence in any legal proceeding. With regard to the daughter, this individual seems somewhat elusive. A check of relevant biographical sources (Ibn Ḥajar al-'Asqalānī and al-Sakhāwī), and obituaries at the end of year logs in relevant chronicles turned up three females fathered by al-Mu'ayyad Shaykh. Two of these individuals died in 816/1413 and 842/1438–39 respectively.[3] I also found obituaries of two women: one described as Khawand Āsīyah, wife of the prominent *dawādār* Yashbak al-Faqīh, and Shaykh's last surviving child. She died in Shawwāl of 891/September–October 1486.[4] The other was listed as Shaykh's granddaughter, and thus was the probable child of this

---

[3]Al-Sakhāwī, *Al-Ḍaw' al-Lāmi' fī A'yān al-Qarn al-Tāsi'* (Cairo, 1353/1934), 12:163, nos. 1022, 1023.

[4]Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr* (Cairo and Wiesbaden, 1960–63), 3:234.

Khawand Āsīyah. She died in 918/1512.[5] While her mother was not named in the obituary, her father was the same Grand *Dawādār,* Yashbak al-Faqīh. Al-Sakhāwī mentioned a husband for only one of the two daughters he listed (the first died at the age of nine and was unmarried), and this was one Qurqmās. So Āsīyah, deceased in 891 according to Ibn Iyās, was likely the *khawand* noted here by Ibn Taghrībirdī. (If Āsīyah was indeed the relevant individual, then she would not appear in obituaries listed in the *Ḥawādith al-Duhūr*, which terminates in 873/1469.)

Returning to the lien claimed by the *khawand,* Ibn Taghrībirdī makes no mention of the property′s legal status. The term *waqf* appears nowhere in the entry, nor do any details about the belvedere′s heritability. The possibility of the belvedere′s inclusion among Shaykh′s *waqf* properties is strong, but cannot be ascertained pending an examination of his *waqf* deed. The possibility is bolstered by the properties listed at the end of Shaykh′s biography in the *Ḍaw'*.[6] The belvedere is noted prominently, and may have represented the second most costly site among Shaykh′s endowments, following the sultan′s tomb mosque at the Bāb Zuwaylah. If the belvedere did belong to the properties protected by Shaykh′s trust, then, on the assumption that *waqf* provisos granted its heirs perpetual access to at least some of its proceeds following any sale, this *khawand* had a legal case.

Other possible circumstances must be considered. For example, an anomaly is apparent in this incident. Ibn Taghrībirdī claims that Sultan Jaqmaq had been discomfited for years about his ward′s rejection of a soldier′s duties and his subsequent behavior. Yet when Muḥammad raised his allegations about heinous acts occurring at the belvedere, the sultan accepted them at face value. How probable would this be, unless other circumstances influenced his decision? The possibility of collusion between the sultan and mendicant for mutual profit cannot be discounted here. Plundering materials from existing structures is well known as a practice widespread during the Circassian period, when the economy was stagnating and cash flows available to the elites for new construction were depleted. But such expedients, especially if they involved properties shielded under *waqf,* were usually restricted to the sultan himself. Note that it was Jaqmaq who endorsed the demolition. But did he endorse Muḥammad′s subsequent sale of the razed materials? While this is unclear, collusion for mutual profit is a plausible scenario.

Also note that when Īnāl was enthroned, he reviewed acts of nepotism by his predecessor, and stripped Muḥammad of his sinecures. Only then did the *khawand* file her claim. Ibn Taghrībirdī stated that she received less than 1,000 dinars, a fraction of the original expenditure by her father decades earlier—even discounting for inflation. Ibn Taghrībirdī claimed that Muḥammad went on to build a structure

---

[5]Ibid., 4:258.

[6]Al-Sakhāwī, *Al-Ḍaw' al-Lāmi',* 3:308, no. 1190; see p. 310 bottom.

that was popularly derided as a den of iniquity. But he makes no mention of Īnāl demolishing it to provide restitution. Presumably, Shaykh Ḥaydar's Rifā'ī *zāwiyah* did not survive the belvedere's demolition. But the entry concludes with Muḥammad re-emerging and seeking seclusion in his house. If Khawand Āsīyah was actually the instigator of the suit, then Muḥammad remained a recluse for more than thirty years. Could he have resumed his old tricks after so long an interval? Did he do so clandestinely while in hiding? Did his disguises aid him in this endeavor? Who knows? Ibn Taghrībirdī asserted that Muḥammad's personal depravity would indeed be assessed and retribution imposed—but only by the All-High on Judgment Day *(yawm al-qiyāmah).*

APPENDIX I: Translation of the Original Entry

Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr* (1994 edition), 2:500, line 16; (1932 Popper edition), 8:216, line 1
In these days (Shawwāl 858), Muḥammad ibn ʻAlī ibn Īnāl fled *(haraba),* and no one knew where he had gone. The reason for his retreat *(tasaḥḥubihi):* the *khawand,* daughter of al-Malik al-Mu'ayyad, complained about him due to his demolition of the observatory/belvedere *(manẓarah)* of five sides *(al-khams wujūh)* known as al-Tāj, and seven sides. Also, his expropriation of its debris/material *(anqāḍihi).*

line 20: This Muḥammad was one of those offensive/repugnant *(musī')* to al-Malik al-Ẓāhir Jaqmaq. He had raised him while young *(rabbāhu ṣaghīran),* because al-Ẓāhir, prior to his arrival [in the service of] al-Malik al-Ẓāhir Barqūq, was a mamluk of the amir ʻAlī, father of the aforementioned Muḥammad. In consequence of that, he [al-Ẓāhir] took custody of him and raised him. Then, he placed him *(jaʻalahu)* in his company *(jumlah)* of mamluks when he grew up *(kabara)*. He continued this way for several years. Then, it seemed appropriate for him to cease soldiering *(yatraku zayy al-jund)* and dress as a mendicant (Sufi) person *(faqīrī)*. He became a mendicant *(tafaqqara)* and begged *(sa'ala)* from the populace. He became lethargic *(tukhūmila),* and continued like that for a time *(dāma ʻalá dhalika dahran),* until al-Malik al-Ẓāhir became sultan. He [then] summoned him and ordered him to dress as he had done initially. He refused to do so, and persisted as he was. His brother Aḥmad was also in the service of al-Malik al-Ẓāhir Jaqmaq.

p. 501, line 1: Aḥmad was the elder. They were carefree *(ghayr ashqā')*. Al-Malik al-Ẓāhir promoted his brother Aḥmad to the rank of amir of ten. When Muḥammad noted what had befallen his brother Aḥmad, envy consumed him. He remained unwilling to return to soldiering. He opened another door of soliciting *(fataḥa bāban ākhir min al-sawā'il),* begging *(ṭalab),* and extortion *(balṣ)*. Yet he was not satisfied/content *(ṣāra la yaqnaʻu)* with what was in the treasury *(bayt al-māl)* from al-Malik al-Ẓāhir Jaqmaq. He persisted in riding a donkey, ascended to the Citadel, and frequented *(yataraddadu ilá)* prominent persons *(al-akābir)* and solicited them *(yas'aluhum)* properly and illegally *(ṭayyibatan wa-ghaṣban)*. He behaved *(aẓhara)* in repulsive ways *(min qabīḥ al-khiṣāl),* and with gross greed *(ʻiẓam al-ṭamaʻ),* as will be related about him on the Day of Judgment *(yawm al-qiyāmah).* Then, after a while he rode a horse and assumed [the rank of] amir audiencer *(shakkāran)*. Subsequently, he was promoted amir of ten. That was after he assumed *(akhadha)* several allotments *(iqṭāʻāt)* of the *ḥalqah* reserve corps.

None of this satisfied him so that he alleged/disclosed *(anhá)* to al-Malik al-Ẓāhir that in al-Tāj fornication *(fawāḥish)* and horrendous acts *(umūr ʻaẓīmah)* were occurring on the part of the observers/spectators *(mutafarrijīn).* Its demolition [therefore] would be highly meritorious *(min akbar al-maṣāliḥ).* There was no truth to his speech. For indeed, this site was one of the loveliest buildings in Miṣr and the most respectable *(anzahuhā)*. As for the shaykh Ḥaydar who was dwelling there, he was one of the worthiest of people, religious, pious, and righteous *(ʻiffah).* He was among those of whom supplications were solicited. A mihrab had been built there [or he did so] and was called none other than the *zāwiyah*.

line 14: Altogether *(bi-al-jumlah),* the Tāj was one of the handsomest [of structures] in the world. It was one of the old buildings near Kawm al-Rīsh outside Cairo. Its structure had deteriorated [literally, disrupted, *tashaʻʻaba*] and it was demolished. Al-Malik al-Mu'ayyad Shaykh, may God praise him, restored it, and spent on it [literally, indemnified it, *gharama ʻalayhi*] approximately 20,000 dinars. He descended to it from the Citadel several times. He resided there and held a review *(khidmah)* there. He wished to build up *(ʻamara)* its surroundings, and his desire was fulfilled [literally, Fortune overtook him, *adrakathu al-manīyah*]. Then, when al-Malik al-Ashraf Barsbāy was enthroned, he established this Shaykh Muḥammad Ḥaydar al-Rifāʻī and his brotherhood [there]. He [Barsbāy] granted him a stipend *(rizqah)* near to it. The aforementioned Ḥaydar dwelled there some thirty years. There was a firm friendship *(ṣuḥbah akīdah)* between me and him. He was among the singular *(al-afrād)* in his qualities *(maʻanāhu)*—religious, decent, upright *(ʻafīfan)* in what the riffraff of Persians [Sufis?] *(awbāsh al-ʻajam)* cast at him. May God the All-High have mercy on him.

line 22: When al-Malik al-Ẓāhir heard this Muḥammad′s speech, he believed it and ordered its [the belvedere′s] demolition. This Muḥammad supervised its razing and appropriated *(istawlá)* all its debris/material, which he sold—an exorbitant quantity *(bi-jumal mustaktharah)* of stones, wood, windows *(shabābīk)* of iron, and [many] other items, impossible to calculate *(la tudkhalu taḥt ḥaṣr).* The aforementioned al-Tāj became a ruin of the mendicants *(kharāb al-fuqarā')*. He [Muḥammad] was not satisfied with the demolition of al-Tāj until he built with some of its debris *(anqāḍihi)* a locality *(mawḍiʻan)* on the Hill of the New Quarter *(kawm al-qanṭarah al-jadīdah),* which the commons named the wanton *(al-makhlūʻah).* Hashish users and depraved ones repaired to it. All the people were sorrowed by the demolition of the aforementioned al-Tāj—to the extreme.

p. 502, line 1: The appearance *(hay'ah)* of this Muḥammad: he was a tall man, long of beard *(liḥyah)* and mustaches *(shawārib),* reckless *(ahwaj)* in his speech.

As for his dress, he wore on his head a piece of cloth *(shāsh)* like the common marketeers. He wore a mantle *(thiyāb)* with wide sleeves *(akmām kubār),* in the guise of the Bedouin *(ʻarab)* of al-Buḥayrah. He rode on a saddle of Bedouin type, in the style of the Arabs also. Then, on some occasions he held in his hand a bird of prey *(ṭayr al-jawāriḥ)* [falcon]. He walked in the streets in this guise. When one looked at him, one did not recognize him due to the changeability of his bearing *(amrihi)* and varied costume. His demeanor was repulsive and ridiculous/comical *(muhawwilah muḍḥikah)*. All that [indicating] one of the trivial of mind *(khiffat al-ʻaql),* [proof that] insanity appears in diverse forms *(wa-al-junūn funūn)*. He continued in this way until al-Malik al-Ashraf Īnāl became sultan. He stripped him of his officer′s rank and forbade him the [office of] amir audiencer *(shakkārīyah).* His status *(amruhu)* began to diminish until the daughter of al-Mu'ayyad denounced/brought suit against him. She demanded of him the price/value of what he had sold of the material from al-Tāj. He remained in custody for several days and yielded up some money—less than 1,000 dinars. Then he fled, where no one knew, until the time when she expired. Some days later he reappeared and took to his house.

APPENDIX II: AUTHOR OF THE SOURCE

Ibn Taghrībirdī (813–74/1411–69) was an admiring, but on occasion critical, disciple of the eminent historian al-Maqrīzī. Jamāl al-Dīn Abū al-Maḥāsin Yūsuf stood in awe of his mentor′s formidable intellect and moral integrity. Yet he was aware of al-Maqrīzī′s inner turmoil over ideological controversies, and endemic bitterness over his stalled career. Ibn Taghrībirdī appreciated the effect such emotions could have on his predecessor′s depiction of events. More relevant to issues at hand, he applied this realization to his own scholarship.

Ibn Taghrībirdī envisioned his second historiographical work, in which the preceding incident was discerned, as an extension of the detailed coverage and rigors of analysis maintained by al-Maqrīzī. *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr* (Episodes of the epoch that pass in days and months) begins where al-Maqrīzī′s *Kitāb al-Sulūk* left off, with the year 845/1441. It continues to 873/1469. More compact chronologically than its predecessor, the *Nujūm al-Zāhirah,* the *Ḥawādith* deals with events contemporaneous to its author. It focuses almost exclusively on incidents in Cairo. Although intrigues in the sultanic court loom with predictable prominence, the *Ḥawādith* offers myriad glimpses of life in the city′s teeming streets. Crimes committed at all levels of society, from members of the sultan′s household to unruly gangs of urban riffraff or *zuʿar,* are reported frequently, their depiction marked by the sobriety and thoroughness characteristic of al-Maqrīzī′s methodology. Ibn Taghrībirdī rarely let an incident pass without comment on motives, often followed by condemnation of moral laxity or falsification of evidence. Ibn Taghrībirdī did not confine his castigations to the lower orders. He reserved his intense vituperations for those at the apex of the ruling class. As a *walad nās* and son of a former amir, Ibn Taghrībirdī exploited his connections at court to fulminate against the excesses of its most exalted residents. His descriptions of their crimes were among the most gripping narratives noted in these texts. Overall, the *Ḥawādith* ranked among the most productive sources consulted for the larger study. The appearance of the preceding case is therefore consistent with the author′s objectives.

The Making of a Sufi: al-Nuwayrī´s Account of the Origin of Genghis Khan

Shihāb al-Dīn Aḥmad ibn ʿAbd al-Wahhāb al-Nuwayrī (d. 733/1333), an administrator and historian in the reign of the Bahri Mamluk sultan al-Nāṣir Muḥammad ibn Qalāwūn (r. 693–94/1293–94, 698–708/1299–1309, 709–41/1310–41), authored the monumental encyclopedia and history entitled *Nihāyat al-Arab fī Funūn al-Adab* between the years 714/1314 and 731/1330.[1] The fifth book of al-Nuwayrī´s gigantic work contains his dynastic histories, including a significant section on the history of the Mongols.[2] Reuven Amitai noted that this section on the Mongols has been largely overlooked by historians, describing it as ″*terra incognita* for virtually all scholars of the Mongol Empire in general.″[3] Amitai selects six episodes in al-Nuwayrī´s history of the Mongols to evaluate, comparing them briefly with other source materials. Among the six episodes is the account of the rise of Genghis Khan.

Al-Nuwayrī introduces his section on the Mongols by stating that he has gleaned his information from multiple sources, two of which are written histories: al-Nasawī´s (d. 638/1241) *Sīrat al-Sulṭān Jalāl al-Dīn Mankubirtī*[4] and Ibn al-Athīr´s (d. 630/1233) *Al-Kāmil fī al-Tārīkh*.[5] In addition to these, he claims to have compiled other information ″which was transmitted to us by their envoys who arrived at our rulers´ court from their direction, and others who came from their land.″[6] Amitai notes that the account of Genghis Khan´s rise to prominence is not found in either of the written sources and therefore appears to have been an

addition of al-Nuwayrī.[7] Amitai has correctly evaluated this passage as apocryphal; however, he appears to have misinterpreted the historiographical intent of the episode. He has read the account as an attempt to describe Genghis Khan's Mongolian nomadic origins. This, however, does not seem to be the paradigm within which al-Nuwayrī is working. On the contrary, as will be shown below, this episode is apocryphal in the sense that it projects a fourteenth-century image of a Sufi ascetic upon the figure of Genghis Khan. It is from this perspective that al-Nuwayrī's account of the origin and rise of Genghis Khan is important, for it provides an example of Mamluk historiography concerning the history of the Mongols.

Al-Nuwayrī relates that Genghis Khan, early in his life, asked a Jew why Moses, Jesus, and Muḥammad had attained such an exalted station and great fame. The Jew replied by saying that they loved God and had consecrated themselves to him, and thus God granted them their exalted positions. Genghis Khan asked the Jew, "And if I love God and consecrate myself to him, will God give this to me?" The Jew said, "Yes, and I must also tell you that our books state that you will have a dynasty." So Genghis Khan left his work, which al-Nuwayrī says was a blacksmith, *ḥaddād,* for according to "their language" the *nisbah* Timurchi refers to the blacksmith,[8] and practiced asceticism, *tazahhada*. He withdrew from his people and his tribe and sought refuge in the mountain where he would eat those things which were permissible, *mubāḥāt*.

As a result of his ascetic practices, Genghis Khan's fame spread abroad. Groups from his tribe would go out to visit him but he would not speak with them. He would indicate to them to clap their hands. They would then say, "O God, O God, he is good" *(yā Allāh yā Allāh yakhshidir)*. They would continue this clapping and chanting while Genghis Khan danced.

Al-Nuwayrī closes this episode of Genghis Khan's life by mentioning that this practice was his routine with those who visited him. Even though he engaged in these practices, Genghis Khan is said to have not held to a particular religion or to have embraced a particular faith. Instead of affiliating with a religion, he devoted himself solely to the love of God *(maḥabbat Allāh)*. He dwelt in this state of isolation from his society as long as God desired for him to remain so.

The above episode presents multiple challenges for the interpreter. Amitai perceives that al-Nuwayrī's addition of this episode is intended to portray the Turkish and shamanistic roots of Genghis Khan. He states that this passage "appears to reflect several motifs in early Mongolian imperial history and culture."[9] While

[7]Amitai, "Al-Nuwayrī," 27.

[8]وقد اختلف في نسبة جنكزخان الى التمرجى فقال قوم إنه كان حدادا والتمرجى بلغتهم هو الحداد (Al-Nuwayrī, *Nihāyah*, 27:301).

[9]Amitai, "Al-Nuwayrī," 28.

some of the elements of the account could be understood in this manner, the preponderance of evidence indicates that al-Nuwayrī's objective is not to write the story of the rise of Genghis Khan according to "Mongolian imperial history and culture" but instead to strike him in the mold of a Sufi ascetic who manifests an honest spiritual desire for God in spite of his non-Islamic heritage. By doing so, al-Nuwayrī may be offering nominal religious justification for the success of Genghis Khan and the Mongols. This episode, therefore, must be interpreted in light of the Sufi terminology and themes evident within the account.

From the outset, al-Nuwayrī attempts to formulate the rise of Genghis Khan according to traditional motifs as indicated in his conversation with the Jew. The fact that Genghis Khan is made to ask about the success of Moses, Jesus, and Muḥammad establishes a foundation for the religious tropes that pervade the episode. Firstly, the importance of these figures within the Islamic tradition, they being the primary figures of their respective religious traditions of which Islam is the culmination, is undeniable. By placing the names of the primary figures of this monotheistic continuum on the lips of Genghis Khan, al-Nuwayrī attests to Genghis Khan's awareness of these men and his recognition of their superiority in the history of mankind. Amitai understands the reference to these religious figures as "an expression of the equanimity which the Mongols showed to different religions, what some scholars have called 'religious tolerance.'"[10] It is more likely, however, that the presence of these men in the account is an attempt to affiliate Genghis Khan with these men and to present him as a sympathetic, if not enthusiastic, seeker of the divine sanction enjoyed by these leaders. In fact, this reading of the encounter is confirmed later by his question to the Jew, "And if I love God and consecrate myself to him, will God give this [exalted station] to me?"

Moreover, the fact that Genghis Khan's discussant is a Jew and not a Christian or Muslim, and that this Jew mentions that his book refers to Genghis Khan and his future success, is most obviously an allusion to the Muslim claim that there are references to Muḥammad in the previous scriptures. In this regard, Amitai has adroitly assessed the text, "we may have here an echo of Muslim claims that the Jews had in their bible passages referring to the appearance of the prophet Muḥammad."[11] Later, Amitai implies that the reference to the future success of Genghis Khan as the leader of an empire is "an echo of the heavenly mandate to rule the world which Chingiss Khan and his descendants claimed."[12] Yet this text should not be read as a justification of Mongol power in the sense of validating belief in the heavenly mandate, but as an explanation to a Muslim community of

[10]Ibid.

[11]Ibid.

[12]Ibid, 28–29.

the reasons for the rise of these infidels.[13] Thus, these statements are not intended to reflect Mongol imperial ideology but to explain the great success of the Mongols to the Muslim community. Additionally, the inclusion of divine sanction upon the progenitor of the Mongol empire may reflect an indictment by al-Nuwayrī of his masters, the Mamluks. By stating that Genghis Khan enjoyed a degree of heavenly approval, our author may be implying that the rise of the Mongols is a divine judgment upon the decadence of the current Mamluk ruling elite. In any case, it is clear that from the beginning of this episode al-Nuwayrī's intention is to portray Genghis Khan in terms that would be understandable to his Muslim audience. His interest in the major figures of the monotheistic tradition is inserted to indicate a seminal affinity for Islam and its history.

After establishing this religio-ideological connection between Genghis Khan and the Islamic tradition, al-Nuwayrī proceeds to describe Genghis Khan's pursuit of God and those blessings that have been prophesied for him in manifestly Sufi terminology. He states that Genghis Khan practiced asceticism, *tazahhada,* utilizing a term that by the fourteenth century was employed with its technical meaning for the practice of Sufi orders.[14] As evidence of his ascetic pursuits, Genghis Khan withdrew from society and dwelt in the mountains. Once again, the insertion of this act conjures up a Sufi motif of the denial of the world with its concomitant isolation from society. In addition, al-Nuwayrī states that Genghis Khan ate food that was permissible according to Islamic law *(mubāḥāt)*.[15] By attributing to Genghis Khan foods that were acceptable, al-Nuwayrī affirms that Genghis Khan, though not a Muslim in the truest sense of the term, lived according to the strictures of Islamic law and thus did not defile himself by eating forbidden foods.

Al-Nuwayrī then relates one of the more interesting aspects of this episode. He states that Genghis Khan's fame spread abroad and that people from his tribe would travel to the mountains to visit him. When they arrived, Genghis Khan would not speak to them, *fa-lā yukallimuhum*. Instead he would indicate to them to clap their hands together and to chant, "O God, O God, he is good," *wa-yushīru*

---

[13]The justification of foreign domination over Muslim lands was not uncommon in the literary productions of the Mamluk period as indicated by Ibn al-Nafīs' *Al-Risālah al-Kāmilīyah*. See Remke Kruk, "History and Apocalypse: Ibn al-Nafīs' Justification of Mamluk Rule," *Der Islam* 72, no. 2 (1995): 324–37.

[14]For a medieval discussion of the terms *zuhd* and *taṣawwuf* and their use as both general terms referring to asceticism in the early period of Islam and in connection to organized Sufi orders in the medieval period, see Ibn al-Jawzī's *Kitāb Ṣifat al-Ṣafwah* (Hyderabad, 1968), 1:4.

[15]For discussions on foods that are permissible and forbidden and the variations within the different sects of Islam, see M. Rodinson, "Ghidhā'," *EI*², 2:1057–72, and C. Pellat, "Ḥayawān," *EI*², 3:304–9.

ilayhim an yuṣaffiqū bi-akuffihim wa-yaqūlū: yā Allāh yā Allāh yakhshidir.[16] Al-Nuwayrī says that his visitors would perform this act for him while he danced, *fa-yafʿalūna dhalika wa-yuwaqqaʿūna lahu wa-huwa yarquṣu.*[17] It seems clear that al-Nuwayrī is describing a Sufi *dhikr* and projecting this form of spiritual devotion back onto Genghis Khan. The assembly of a crowd clapping their hands and chanting while Genghis Khan danced is certainly indicative of Sufi practice and, contrary to Amitai, should not be interpreted as ″some type of shamanistic ritual.″[18] Amitai states, ″it is known that Chinggis Khan himself had acted in a shamanist capacity early in his career, although apparently not in such a demonstrative capacity.″[19] Here, Amitai notes the unusual nature of this episode when compared to the traditional view of Genghis Khan′s early shamanistic tendencies but fails to recognize that this episode is not intended to be descriptive of Genghis Khan′s shamanism but of fourteenth-century Sufism.

When the text is interpreted according to a proper understanding of al-Nuwayrī′s historiography, other unusual aspects of the text become clearer. This is the case with the *dhikr* that is chanted by the tribal members.[20] The repetition of the phrase *yā Allāh* presents no interpretative challenges. However, the ensuing phrase is of particular interest. Amitai interprets this phrase by editing the text and claiming that the word *yakhshī* should be read *bakhshī*, a reference to a Buddhist lama.[21] He includes a transliteration of the root of this word in his footnotes but dismisses it as incorrect.[22] He implies that since the term *bakhshī* is used among later pro-Mongolian sources its inclusion in the text indicates that al-Nuwayrī was drawing his information from later sources.[23] However, he does not address the significance or meaning of the *d-r* which follows *yakhshī*. By failing to recognize al-Nuwayrī′s objectives in this episode, Amitai has confused the meaning of this phrase.

The phrase *y-kh-sh-y-d-r* must be read as a Turkish phrase meaning, ″he is good.″[24] The phrase cannot be read correctly in Arabic without the addition of an *alif* as a seat for the *tanwīn fatḥah* after the *d-r*, which would make the word *darr* function grammatically in the accusative, *mansūb*. This addition would allow for

---

[16]The Arabic text reads: يشير إليهم أن يصفقوا بأكفهم، ويقولوا: يا الله يا الله يخشى در (al-Nuwayrī, *Nihāyah,* 27:302).

[17]The Arabic text reads: فيفعلون ذلك ويوقعون له وهو يرقص (ibid.).

[18]Amitai, "Al-Nuwayrī," 28.

[19] Ibid.

[20]The Arabic text reads: يا الله يا الله يخشى در (al-Nuwayrī, *Nihāyah,* 27:302).

[21]On the meaning of the term *bakhshī,* see P. Jackson, "Bak̲šī," *Encyclopaedia Iranica,* 3:535–36.

[22]See Amitai, "Al-Nuwayrī," 28, n. 20.

[23]Amitai, "Al-Nuwayrī," 29; Jackson, "Bak̲šī," 3:535–36.

[24]See Sir James W. Redhouse, *A Turkish-English Lexicon,* 2199.

the possible reading of *yakhshá darran,* meaning ″he fears bounty.″[25] While this reading could support the thematic emphasis upon asceticism, it does not incorporate the true sense of the phrase as is contained by rendering it in Turkish. In addition, a Turkish reading would seem to indicate that the phrase is used in reference to God in contrast to Amitai′s edition of the text which places the focus upon Genghis Khan as the *bakhshī.* As a result, when read as a Turkish phrase, it carries a clear and obvious meaning and does not need to be edited away. It also functions extremely well in the general tenor of the passage by maintaining the connections to Sufi terminology and practice. Thus, when taken as a whole, this *dhikr* must be interpreted as al-Nuwayrī′s utilization of a Sufi ritual to describe the spiritual pursuits of Genghis Khan and as having no relation to Buddhist lamas or authentic shamanistic practices.

According to al-Nuwayrī, the *dhikr* in which Genghis Khan participated was his normal practice when people came to visit him. He describes it as part of ″his habit,″ *da'bahu,* and ″his manner,″ *ṭarīqatahu*. It is noteworthy that al-Nuwayrī reinforces the term *da'b* with a synonym, a practice common in Arabic literature, which could also be interpreted in a technical sense meaning a Sufi order, *ṭarīqah.*[26] He follows this by stating that Genghis Khan did not espouse a particular religion, *diyānah,* nor did he embrace a certain faith, *millah,* but rather he devoted himself solely to the love of God, *bal mujarrada maḥabbat Allāh*. He closes this episode in Genghis Khan′s life with the statement that he dwelt in this state as long as God desired for him to remain there.

This last section is carefully constructed by al-Nuwayrī. The passage would appear to have conjured up in the mind of a fourteenth-century reader the concrete images of traditional Sufi practices. The implication of course would be that one may draw the connection between these practices and Genghis Khan being a proto-Muslim, as Amitai has said, ″a sort of Chingissid hanifism.″[27] By emphasizing that Genghis Khan was not an adherent to any formal religion, al-Nuwayrī refutes any such interpretation from his readers that his practices indicate he was a Muslim. Yet at the same time, he does not disparage Genghis Khan for his faith. On the contrary, he commends him as a genuine seeker of God who had devoted himself to loving God in the manner in which he knew how. Sufi asceticism seems to have offered al-Nuwayrī the most logical template from which to construct such an image of the great Mongol ruler.

The fact that this incident in the life of Genghis Khan has not yet been located

---

[25]The term *darr* literally means "milk" though by extension it carries the connotation of "wealth," "beneficence," "bounty," etc. See Edward William Lane, *An Arabic-English Lexicon,* 3:863.

[26]See E. Geoffroy, "Ṭarīḳa," *EI*[2], 10:243–46.

[27]Amitai, "Al-Nuwayrī," 29.

in other sources and that it therefore may very well have been a construct of al-Nuwayrī´s literary mind should not lead one to demean his *Nihāyah* as an historical source. Al-Nuwayrī himself states that his work is not solely a work of history but it also a literary work: ″our work is not based on history only; it is a book of *adab*.″[28] As a result, the inclusion of fictional accounts such as the above account of the early life of Genghis Khan should be understood as one component of al-Nuwayrī´s work. In this case, the lack of information for the rise of one of the great conquerors of the world lies as a *tabula rasa* for an inquisitive mind and prolific writer of the stature of al-Nuwayrī. Therefore, accounts of this nature must be studied not for their value as accurate history nor as a description of the apocryphal histories of those Mongols with whom al-Nuwayrī came in contact, but as a reflection of the historiography of the author and of the current status of affairs in fourteenth-century Cairo. This apparently fictional account can consequently be interpreted as a medieval template for the rise of a world conqueror. In other words, al-Nuwayrī´s account seems to indicate that truly epic figures in world history, such as Moses, Jesus, and Muḥammad, have all attained that position by virtue of a seminal form of submission and devotion to God demonstrated by a period of seclusion from the rest of civilization, a form of purging in preparation for the task at hand.

In addition, a thorough evaluation of this passage must consider its use as justification for the growing strength of and constant opposition of the Mongols on the borders of the Mamluk empire. Al-Nuwayrī´s history could be read as an attempt to justify the rise of an infidel army which has taken Baghdad, removed the caliph, and remains an ever-present threat to the existence of the Islamic world. An apocalyptic reading of this section could easily accommodate the religious aspects of Genghis Khan´s early life by revealing a degree of divine sanction upon the leader which could, at the very least, offer a theological justification for this growing threat. Other texts of Mamluk Egypt, such as Ibn Nafīs´ *Al-Risālah al-Kāmilīyah,* appear also to use apocalyptic motifs to justify the rise and eventual fall of the Mamluk sultanate. This passage, therefore, may be the initial piece in al-Nuwayrī´s attempt to describe the Mongols as tools in the hand of God for correcting the failures of the current leaders of the Islamic empire. As an influential administrator in the Mamluk sultanate, al-Nuwayrī may not have felt capable of directly confronting the Mamluk regime. While as a religious scholar intimately connected with both the ulama and the Sufis, he may be explaining the reasons for the rise of the Mongols and the ultimate fall of the Mamluks.[29]

---

[28]Chapoutot-Remadi, "Al-Nuwayrī," 159.

[29]M. Chapoutot-Remadi described al-Nuwayrī as being "acquainted with Ṣūfī *shaykhs.*" These connections may have influenced his fictionalization of Genghis Khan's origins. M. Chapoutot-

The above analysis of this passage in al-Nuwayrī´s history of the Mongols has revealed that our author has not attempted to present an accurate account of the rise of Genghis Khan but has attempted to create out of the great leader a man who, from his earliest years, had spiritual desires and pursuits. For an Egyptian writer in fourteenth-century Cairo who was most definitely familiar with and quite possibly directly affiliated with Sufi practices, the most logical model for expressing these character traits seems to have been that of a Sufi mystic. Amitai is correct in viewing this section as important for historians of the Mongol empire. Yet, it does not appear to be beneficial as a projection of Mongol imperial ideology but rather as an expression of how the Mongols were viewed by the Mamluk Sultanate and, quite possibly, of how a powerful insider within the Mamluk administration may have utilized a work of history as an indictment of his patrons.

Remadi, "Al-Nuwayrī," 158.

The Turbah of Tankizbughā

Turbah: A New Interpretation

The *turbah* developed in the Mamluk period from a simple tomb or mausoleum into an independent multifunctional complex consisting of several architectural units. The building of large *turbah*s became widespread and popular due to the vital role they played in Mamluk society. The *turbah* not only provided a place for burial and tomb visitation, but also became a focal point for many other activities. Religiously, it served as a place for worship, the reading of the Quran and hadith, and Sufi rituals such as *dhikr* and *ḥuḍūr*. On the social level it was the venue for charitable and philanthropic acts serving the community by providing free water, food, clothing, and education for orphan children. Politically, it served as a monument for the commemoration of the Mamluk elite, a phenomenon hitherto reserved only for the Prophet, his family and companions, and other religious figures. Such commemoration of the elite was justified on the grounds that they served to protect Islam against attack, while at the same time upholding Sunnism and the shari‘ah internally. Finally, the *turbah* served an important economic function through the institution of *waqf,* a means of transmitting wealth and protecting it from the threat of confiscation. This was particularly important in a society known for meteoric changes in the fortunes of the elite, which often led to the seizure of private property by those in power.

The architectural form of the *turbah* reflected these functions, and thus consisted of several units. These included a courtyard as a burial place for the founder′s dependents; a grand portal which sometimes included a minaret; a dome and a *maqṣūrah* (pavilion) for burial of the founder and other religious rituals; and often a *sabīl* (public fountain) and *kuttāb* (elementary Quranic school) which served charitable functions. A residential section and the *maq‘ad* (loggia) provided the setting for tomb visitation and served as living quarters for the *turbah* residents.

The *turbah* of Tankizbughā is a prime example of such a multi-functional building complex, as will be shown in the present article.[1] The remains of Turbat Tankizbughā,[2] known also as Tankizīyah, are located in the south-east of the

[1]This new interpretation of the *turbah* and most of the research here were part of my unpublished Ph.D. dissertation presented to the Faculty of Archaeology of Cairo University in January 2004.

[2]Survey of Egypt, *Index to Mohammedan Monuments in Cairo* (Cairo, 1951), 85, 764/1362. Many contemporary sources refer to it as a *khānqāh* but I will refer to it as a *turbah* in line with the foundation inscription.

Northern Cemetery outside its boundaries on an outcrop at the foot of the Muqaṭṭam Hill. Early photos taken at the beginning of the twentieth century show it as a solitary building in a deserted area (fig. 2). Today it is completely surrounded by the buildings and workshops of the slum of Manshi'at Nāṣir that sprang up at the beginning of the 1970s.

The significance of this *turbah* lies in its unique plan and architectural features as well as the ambiguity of its function. The plan is unusual for having a dome in the middle of an *īwān* and two side enclosures which were added to the *turbah* proper at a later date. The presence of a large minaret and the combination of innovative decorative methods on the dome and the minaret are in contrast with the traditional zones of transition and the upper part of the minaret. The building site is curious and its functions are not clear; in addition to its isolated location we do not know who was buried there, or if it was a *khānqāh* as well as a *turbah*. It could also have been used for military and surveillance purposes. Who completed the building after the early death of the founder and why?

DATE AND FOUNDER

The foundation inscription that flanks the portal reads as follows:

> Bismillāh . . . this blessed *turbah* is constructed by the order of the poor slave of God almighty Tankizbughā *amīr majlis al-aḥkām,* may God surround him with his mercy on the date of Rabīʿ I, the year 764.[3]

In spite of its brevity, the inscription provides all the data we need to date and identify the building. We learn the name of the founder was Tankizbughā[4] and that he served as *amīr majlis*.[5] The request for the mercy *(raḥmah)* of God for the founder indicates that the monument was built or at least finished after his death. It gives the date of foundation as Rabīʿ I 764/1362–63. Most importantly, it defines the building as a *turbah,* a distinct architectural form.

[4]It consists of two parts: Tankiz, which means ″sea″ in Turkish, and Bughā, which means ″bull″ and can connote ″big″ or ″strong.″ See: J. Sauvaget, ″Noms et Surnoms de Mamlouks,″ *Journal Asiatique* 238 (1950): 45.

[5]Amir of the council chamber, which was one of the highest positions in the Mamluk hierarchy. His functions were to guard and supervise the sultan′s council chamber, as well as to control and direct the court′s physicians, surgeons, and oculists. See: William Popper, *Egypt and Syria under the Circassian Sultans, 1382–1468 A.D.: Systematic Notes to Ibn Taghrîbirdî′s Chronicles of Egypt* (Berkeley and Los Angeles, 1955–57), 16:92.

WHO WAS TANKIZBUGHĀ?

Amir Tankizbughā Sayf al-Dīn ibn ʿAbd Allāh al-Mārdīnī was *shādd al-sharābkhānah* (superintendent of the buttery or store of the court potables)[6] during the first reign of Sultan al-Nāṣir Ḥasan (748–52/1347–51).[7] He was one the sultan′s favorites and became amir of the first rank in the second reign of al-Nāṣir Ḥasan. He was appointed *amīr majlis* in 758/1357[8] and was married to the sultan′s sister.[9] Tankizbughā was appointed *nāʾib al-shām* but he refused the appointment. He fell sick and died shortly afterwards in Ramaḍān 759/1358. He was one of the state elite, known to be wise, shrewd, and efficient.[10] Yalbughā al-ʿUmarī succeeded Tankizbughā as *amīr majlis* and received his *iqṭāʿ*.[11]

Tankizbughā died in 759/1358, four years before the date of the foundation inscription. Who financed and completed the construction of this large monument? Was it his wife, the sultan′s sister, or his successor Yalbughā al-ʿUmarī? The contemporary sources did not deal with this issue, but we will come back to this point at the end of this article.

DESCRIPTION OF THE *TURBAH*

The *turbah* plan is a rough rectangular figure (fig. 1) with two parallel sides to the east and west and the two other longer sides to the north and south. It consists of six parts: the portal and minaret, the residential area (both occupying the main western façade), a courtyard *(ḥawsh)* behind the residential area, a large *qiblah īwān* to the east, a dome within the *īwān,* and what I will call a *ziyādah* occupying the north and south sides of the *turbah*. A *ziyādah* is an enclosure or space added around a mosque, serving a function complementary to the main function of the mosque.

The portal and the minaret occupy the southwest corner of the *turbah* and are

[11]Muḥammad ibn Aḥmad al-Ḥanafī Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Cairo, 1982–84), 1:1:568.

made of bare stone. The portal has a pointed arched recess containing the only entrance to the *turbah,* rectangular in shape and flanked by two stone benches *(maksalah).* The foundation inscription is written above it, and below a rectangular window. A roofless vestibule *(dirkah)* lies behind the entrance and is now filled completely with rubbish and debris (fig. 3). The northern wall of the vestibule has an arched doorway which leads into the adjacent residential area. The eastern wall, opposite the entrance, is completely covered by debris. However, Christel Kessler′s plan, which I consulted at the Rare Books and Special Collections Library of the American University in Cairo, shows a door leading to a chamber, now completely hidden under the debris (fig. 4). The northern and eastern walls of the first story of the minaret occupy the south side of the vestibule.

The stone minaret is composed of a square shaft and an octagonal pavilion *(jawsaq)*. The stonework of the minaret and portal walls is integrated. There is an obvious gap between the minaret walls and the adjacent wall of the southern *ziyādah.* The square part of the minaret consists of two stories with an internal spiral staircase leading to the pavilion. The lower story is the same height as the portal. The main entrance of the minaret is at the eastern wall and there is an arrow slit in the southern wall. The upper story has an opening at the eastern side overlooking the inside of the *turbah,* most probably intended for the call to prayer *(adhān),* and an arrow slit at the north wall for lighting and ventilation of the staircase. The remaining walls of the minaret are solid with no openings or ornamentation.

The top of the square section is a platform with *muqarnas* (squinches) supporting the octagonal pavilion which has arched windows on all the eight sides except the eastern side, where the entrance to the pavilion is located. It is topped by a *mabkharah,* the latest example of its kind.[12] The *mabkharah* rests on a platform with three tiers of *muqarnas* and a peculiar stone motif consisting of protruding triangles forming a saw-tooth pattern.[13] The height of the minaret and the fact that the *turbah* is built on high ground allows a wide view of the surrounding area and the towers of the Citadel, a point that will be discussed.

The minaret has an octagonal band under the *mabkharah* with an inscription of Quran 24:37, ending with ″for the remembrance of Allah″ *(ʻan dhikr Allāh)*.[14]

The residential quarters (figs. 9 and 10) lie to the north of the portal and can

---

[13]A similar motif appears earlier at the top of the transition zone of the dome of Tankizbughā (*Index* 298, 760/1359).

[14]Bernard O′Kane, *Documentation of the Inscriptions in the Historic Zone in Cairo, Prepared for the Egyptian Antiquities Project of the American Research Center in Egypt, Inc. (ARCE)* (forthcoming), inscription no. 85.5.

be entered through the door at the portal vestibule which leads to a stone cross-vaulted vestibule with two recesses in the western and northern walls and a door at the eastern wall. The door leads to a roofless passage parallel to the façade and to another door leading to the courtyard *(ḥawsh).*

This roofless passage divides the residential area into two parts. The western part has the remains of five vaulted cells (fig. 9) (the northern three have a long narrow window similar to an arrow slit for lighting and ventilation) and the eastern part has the remains of walls of several rooms which are now covered under layers of debris. The northern side of the residential part has a two-storied wall with a window at each floor overlooking the area to the north of the *turbah*. We can conclude that it consisted of two apartments *(riwāq)*.

The passage′s eastern door leads to the courtyard which is an open rectangular area (fig. 5). A water well is now hidden under debris. The courtyard′s ground level is the same as that of the residential area.

A large roofless *īwān* (a space enclosed on three sides) lies at the eastern side of the courtyard (fig. 7); the *īwān*′s ground level is slightly higher than that of the courtyard. The *īwān* walls are thick, made up of rubble lined by dressed stone on both sides. The outer side of the eastern wall is the eastern façade of the *turbah,* now overlooking a street with modest modern buildings and workshops. The outer wall is smoothed with no decoration and reveals the outward projection of the mihrab. The other two sides probably overlooked the area around the *turbah* before the addition of the two *ziyādah*s, the walls of which are thinner and of a different material than that of the *īwān,* which indicates that they were built at different dates.

The inner eastern *(qiblah)* wall of the *īwān* has a mihrab in its middle (fig. 6). The mihrab consists of a semi-cylindrical niche flanked by two engaged columns, now lost, and a conch in the form of a semi-dome with a pointed arch profile. The conch has two layers of *muqarnas* at the base and a ribbed shell-like motif on top. It is covered by plaster painted with arabesque designs obviously added at a later stage.

The *īwān* walls are all covered by smooth plaster and have no decoration. There is a slightly recessed horizontal band running around the three sides of the *īwān.* The band is of the same width as the first layer of *muqarnas* on the mihrab and at the same level. The recessed band has nail holes indicating that the band once bore wooden panels, probably with inscriptions, which have disappeared. The *īwān* is roofless at present but it could well have had a wooden roof that was dismantled when the dome was built.

A stone domed cube stands in the middle of the *īwān* (fig. 7); its east-west axis passes through the mihrab at the eastern wall of the *īwān.* The dome consists of the three traditional sides of a cubic base, transitional zone, and domed roof.

The cubic base has four thick walls with the same height as the walls of the *īwān* and is of the open type (canopy),[15] as each of its four walls has a large pointed arched opening. The inside and outside walls of the cube are smooth with no decoration or recesses. An inscription runs along the top part of the four walls of the cube. It begins with Quran 2:255–56, and then reads, ″This blessed dome was completed on the first of the month of Rabīʻ I in the year 764/19 December 1362.″[16]

The transition zone on the inside (fig. 8) is octagonal consisting of four corner *muqarnas* alternating with four recesses, each with two windows in a horseshoe arch. The transition zone thus transforms the square shape of the cube into the cylindrical base carrying the dome roof. The lower part of the base has eight keel-arched windows. Above these is an inscription of Quran 3:191–92.[17]

The outer transition zone is simple, consisting of a square base supporting the octagonal transition zone with eight openings corresponding to the inner windows mentioned above. The outside of the cylindrical base of the dome consists of two parts; the lower part has eight keel-arched openings corresponding to the eight inner windows alternating with eight similar blind keel arches. The upper part features an inscription of Quran 2:255–56 and 258, ending with ″each one who believes in Allah″ *(kull man āmin billāh)*.[18]

The roof has the typical Mamluk keel-arched profile, bare on the inside except for an inscription of Quran 3:190–93. Verse 3:193 is not complete and ends with ″Believe you in your Lord, so we believed″ *(an āminū bi-rabbikum fa-āmannā)*. The dome apex has a circular Quranic inscription which starts with the continuation of verse 3:193 mentioned earlier, reading ″Our Lord! Therefore forgive us″ *(rabbanā fa-ighfir lanā)*, and verse 3:194 until ″by thy messengers″ *(ʻalá rusulika)*.[19]

The most striking feature of the dome is the outer ribbing of the roof which was an innovation in its time, where convex ribs alternated with concave flutings.[20]

---

[15]The open-type domes are not common in Mamluk Cairo. We know of only two other examples. One is the dome built by al-Ashraf Barsbāy for his brother Yashbak (d. 833/1429) at his *turbah* in the Northern Cemetery (*Index* 121, 835/1432). The other is that of Ilbāz al-Ashhab built at the rear courtyard of the *turbah* of Khayrbik in Bāb al-Wazīr street (*Index* 248, 908/1502–3), which has an octagonal plan rather than the traditional square plan.

[16]O′Kane, *Documentation of the Inscriptions in the Historic Zone in Cairo,* inscription no. 85.1. The Quranic verses are quoted from the monument′s file no. 85 at the archives of the Supreme Council of Antiquities at the Citadel of Cairo.

[17]These verses are recorded in the monument′s file no. 85 at the archives of the Supreme Council of Antiquities at the Citadel of Cairo.

[18]O′Kane, *Documentation of the Inscriptions in the Historic Zone in Cairo,* inscription no. 85.4.

[19]Ibid., inscription no. 85.3.

[20]The same technique was used shortly before at the dome of the same Tankizbughā in the

This technique adds an aesthetic impact created by the play of light and shade when light is reflected on the ribbed dome′s undulating surface.

The most controversial parts of the *turbah* are the enclosures flanking the central part of the *turbah* to the north and south which we will call *ziyādah* for reasons to be discussed shortly (fig. 11). These parts are obvious additions to the main part; they are made of different material, with obvious gaps at the points of contact with the outer walls of the central part.

The northern *ziyādah* is a rectangular enclosure adjacent to the *īwān* and the courtyard to the north. Its eastern wall is an extension, with a gap, of the eastern wall of the *īwān*.

The northern and western walls now constitute the outer walls of the *turbah*. The *ziyādah* has a large rectangular room to the east, adjacent to the *īwān*. The southern wall of this room is the north wall of the *īwān*. This room was barrel vaulted as indicated by its arched eastern wall and opens onto the courtyard through a door at the western wall. Without a *waqfīyah* or excavation it is hard to determine the function of the room. It is unlikely to have been a mosque since it has no mihrab.

The remaining part is covered up with debris. However, the upper part of a vaulted roof made of bricks protrudes from the debris. We can conclude therefore that this part consisted of windowless vaulted cells. We can distinguish the remains of a wall between the courtyard and the northern *ziyādah* that has since disappeared, giving the wrong impression that the *ziyādah* is an integral part of the *turbah* proper.

The walls of the southern *ziyādah* are also made of material different from that of the main part of the *turbah*. It is aligned with the stone façade of the *turbah* to the west and the *īwān* wall to the east, yet not integrated with either of them. The eastern part is an oblong enclosure with a recess at the short eastern side that could have served as a mihrab since the enclosure could well have been a mosque. The remaining part extends to the west adjacent to the courtyard and is totally covered by dirt and debris. Thus, without an excavation, any attempt to recreate a detailed plan or understand its function would be pure conjecture.

WHY *ZIYĀDAH*?

Generally speaking the term *ziyādah* traditionally denotes a space (roofed or open to the sky) added to a mosque, intended to serve a function different from the main function of the mosque.[21] The most famous *ziyādah*s outside Egypt were

---

Mamluk Qarāfah (*Index* 298, 760/1359). See C. Kessler, *The Carved Masonry Domes of Mediaeval Cairo* (Cairo, 1976), 9.

[21]Creswell limited the function of the *ziyādah* to isolating and sheltering the mosque from its surroundings. See: K. A. C. Creswell and J. Allan, *A Short Account of Early Moslem Architecture*

found at the Great Mosque of Samarra (third/ninth century),[22] the mosque of Abū Dulaf (245/859–60), also in Samarra,[23] and the *ziyādah* added to the Great Mosque of Sūsah in Tunisia (236/850–51).[24] In Egypt several examples of *ziyādah*s are known but all vanished except that of the Mosque of Ibn Ṭūlūn. It is well known that the al-Azhar and al-Ḥākim mosques also had *ziyādah*s; however, the oldest *ziyādah* in Egypt was that of the Mosque of ʻAmr. We will discuss it here in more detail since it will help us to understand the *ziyādah* of Tankizbughā.

At the outset we have to distinguish between an addition or an extension and the *ziyādah* as defined above; for example the addition of an arcade *(riwāq),* a dome,[25] a mihrab, a *maqṣūrah,*[26] a minaret,[27] or even a madrasah[28] is not considered a *ziyādah* but an extension.

In the case of the mosque of Amr, the *ziyādah* does not refer to the extensive additions started by Musālamah ibn Mukhālad, the Umayyad governor of Egypt, in 53/672–73 and completed under ʻAbd Allāh ibn Ṭāhir, the Abbasid governor, in 212/827, which doubled the area of the original mosque built by ʻAmr.[29] Rather, we mean here the *raḥbah* that was suggested by Bernard O´Kane and was defined by al-Maqrīzī as a spacious area.[30] The Mamluk documents used the term *raḥbah* to mean a spacious area within a house, a mosque, or in front of a building,

(Cairo, 1989), 395–96.

22Ibid., 361–62.

23Ibid., 369, 373.

24Ibid., 355.

25The most striking examples are the four arcades and the dome added to the courtyard *(ṣaḥn)* of the Azhar mosque by the Fatimid caliph al-Ḥāfiẓ during the years 524–44/1129–49. See ʻAbd al-Wahhāb Ḥasan, *Tārīkh al-Masājid al-Atharīyah* (Cairo, 1994), 51.

26The governor of Egypt, Qurrah ibn Sharīk, added a mihrab and a *maqṣūrah* to the mosque of ʻAmr on the orders of the Umayyad caliph al-Walīd ibn ʻAbd al-Malik in 94/712. See: ibid., 24; Aḥmad Fikrī, *Masājid al-Qāhirah wa-Madārisuhā: al-Madkhal* (Cairo, 1961), 69.

27Musālamah ibn Mukhalad al-Anṣārī, governor of Egypt under the Umayyad Caliph Muʻāwiyah, added four minarets to the mosque of ʻAmr in 53/672. See: Fikrī, *Masājid al-Qāhirah,* 68. Two minarets were also added to al-Azhar mosque by the Mamluk sultans al-Ashraf Qāytbāy in 873/1468 and al-Ashraf Qānṣūh al-Ghawrī in 915/1510.

28Three madrasahs were added to al-Azhar mosque; al-Ṭaybarṣīyah (*Index* 97, 709/1309), al-Aqbughāwīyah (*Index* 97, 740/1340), and al-Jawharīyah (*Index* 97, 844/1440).

29For details of such works refer to: Ibrāhīm ibn Muḥammad Ibn Duqmāq, *Al-Intiṣār li-Wāsiṭat ʻIqd al-Amṣār* (Beirut, n.d.), 59–74; al-Maqrīzī, *Al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1854), 2:247–50; ʻAbd al-Wahhāb, *Tārīkh al-Masājid al-Atharīyah,* 24–25; Fikrī, *Masājid al-Qāhirah,* 67–73.

30Bernard O´Kane, ″The Ziyada of the Mosque of Al-Hakim,″ in *L´Egypte fatimide: son art et son histoire,* ed. Marianne Barrucand (Paris, 1999).

generally without a roof but sometimes totally or partially covered by a roof.[31] Since the *raḥbah*s in question have vanished, Bernard O´Kane depended mainly on al-Maqrīzī´s (d. 845/1442) account in his *Khiṭaṭ* and did not refer to Ibn Duqmāq´s (d. 809/1407)[32] account in his *Intiṣār*. Obviously, both of the Mamluk historians were quoting Ibn al-Mutawwaj (d. 730/1329–30), as acknowledged by al-Maqrīzī but not by Ibn Duqmāq. I will therefore use here Ibn Duqmāq´s *Intiṣār,* since it is the older and more detailed of the two accounts.

As a word of caution we should note that Ibn Duqmāq used the term *ziyādah* interchangeably to mean an extension as well as in the more restricted sense we outlined above. However, he uses the term *raḥbah* when he refers to the *ziyādah* in this strict sense rather than as an extension. Within his general description of the mosque, Ibn Duqmāq mentions specifically that the mosque had three *ziyādah*s at the western (opposite the qiblah) and southern façades of the mosque.[33]

The oldest of these was the *raḥbah* added to the south façade in 175/791–92 by Mūsá ibn ʿĪsá, the Abbasid governor of Egypt.[34] It had a door opening to the street and leading to the interior of the mosque, and was covered by a ceiling supported by fifteen columns.[35] It was designated for the court of the chief judge which convened there twice a week.[36]

The second *ziyādah* was built in 258/871–72 by Abū Ayyūb, the tax collector *(ṣāḥib al-kharāj)* for Ibn Ṭūlūn. It occupied the remaining part of the southern façade as an extension to the *raḥbah* of Mūsá.[37] It had two doors opening to the

[37]Ibn Duqmāq, *Al-Intiṣār,* 66–67.

street and two doors leading to the interior of the mosque. It was also covered by a ceiling supported by forty-two columns and divided into two sections. One section was assigned to the court of the Shafiʿi judge and the other was assigned to the Maliki judge. Each section had its own mihrab flanked by two columns.[38]

The third *ziyādah* is the *raḥbah* occupying the northern part of the western façade, built by Ibn al-Ḥārith who became the chief judge of Egypt in 237/851–52. He built the *raḥbah* in the same year to give additional space for the congregation. It was also used for trading on Fridays.[39] It had three doors leading to the outside and two doors to the mosque interior. It was covered by a roof supported by twenty-four columns and a mihrab flanked by two columns.[40] Almost 120 years later, in 357/967–68, al-Khāzin added an arcade *(riwāq)* connected to the *raḥbah* of Ibn al-Ḥārith as an eastern extension.[41] This arcade is not considered a *ziyādah* in the strict sense, but as an extension to the mosque proper. Ibn Duqmāq described it as a *riwāq* and not as a *raḥbah,* as was the case in the three previous examples.[42]

We conclude from these accounts that a *ziyādah* could also be a roofed addition to the outer façades of a building in the form of a *raḥbah,* built at a later date than the original structure. Normally it could have doors (opening to the outside as well as to the inside of the building), windows, and mihrabs. The functions of the *ziyādah* are normally different from the functions of the building proper, as we have seen in the case of the three *ziyādah*s of the mosque of ʿAmr outlined above. Obviously they were different from those of the mosque proper whose main functions were the Friday prayer, teaching, and housing the public treasury *(bayt al-māl).*

The purpose of this long digression is to show that the features of the two enclosures added to the *turbah* of Tankizbughā are very similar to those of the three *ziyādah*s of the mosque of ʿAmr. They were built after the *turbah* proper as evidenced by the obvious separation of the walls and the use of different construction materials. They take the form of roofed *raḥbah*s added along the external façade, with doors leading to the interior of the *turbah*. The only exception is that they do

---

[38]Ibid., 61.

[39]Ibid., 66.

[40]Ibid., 61.

[41]Ibid., 68.

[42]Bernard O´Kane mentions also *ziyādah*s for the mosque based on the account of al-Maqrīzī, who was quoting Ibn al-Muttawaj, but O´Kane combined the *raḥbah*s of Mūsá and Abū Ayyūb and considered them as a single *ziyādah* added to the western façade opposite the qiblah side. He also combined the *raḥbah* of al-Ḥārith with the arcade of al-Khāzin and considered them as the second *ziyādah* added to the southern façade of the mosque. He assumed therefore the presence of a third anonymous *ziyādah* added to the northern façade. See O´Kane, ″The Ziyada of the Mosque of Al-Hakim,″ 153.

not appear to have had doors opening to the outside like the *ziyādah*s of the mosque of Amr. This was no doubt for security reasons in what was then an isolated location that dictated the use of only one entrance to the *turbah*.

I therefore have called this part a *ziyādah.* Identifying a specific function for the *ziyādah*s of Tankizbughā, in the absence of *waqf* documents and with the highly dilapidated state of the *turbah,* would be sheer speculation. It suffices to say that it provided an additional space serving part of the functions of the *turbah,* as will be discussed later.

FUNCTIONS OF THE *TURBAH*

The main function of any *turbah* is to provide a burial place for the founder, and his family and dependents. The burial courtyard and the dome served this function but it is highly unlikely that the founder himself was buried here. The *turbah* proper and the dome in particular were finished, according to the foundation inscription, in Rabīʿ I 764/1362–63, while Tankizbughā had died four years earlier, in Ramaḍān 759/1358. The sources do not mention his burial place but it is likely that he was buried in another domed mausoleum in the Mamluk Qarāfah, which is also attributed to him.[43] Otherwise we have no clue as to who is buried in this *turbah*.

The large residential area indicates that a reasonably large community lived on the premises, most likely to perform the normal religious, social, and administrative services for the inhabitants of the *turbah*. The religious tasks included prayer, Sufi rituals, reading of the Quran, recitation of hadith, invocation of blessings, and teaching. The social services included charitable works such as the dispensation of water, and the distribution of alms, clothes, or food. The administrative tasks were those related to the management of the establishment, including its endowed property, financial resources, and expenditures, by a hierarchy of administrators headed by the superintendent *(nāẓir* or *shaykh al-turbah).* Finally, maintenance related to cleaning and guarding the building and its facilities was carried out by a staff of servants and janitors *(farrāsh)*.

An outline of the general tasks that could have been performed is only tentative due to the absence of an endowment deed or contemporary sources dealing with this subject. However, the architectural units of the *turbah* could have conveniently supported many if not all the activities mentioned. There was a vast residential area, a minaret for the call to prayer, a *qiblah īwān* with a mihrab for prayer, several halls *(qāʿah),* two *ziyādah*s for Sufi practices or teaching functions, a water well, and a large courtyard for the convenient movement of the residents among the various units of the *turbah*.

---

[43]*Index* 298, 760/1359.

Another unconventional function can be suggested for this *turbah* based on the political circumstances at the time of its foundation, its location, and its architectural features. Tankizbughā, as we have seen, died four years before the completion the *turbah,* leaving us to wonder who finished it and why. Two individuals are the most likely contenders for such a task: his wife, the sister of al-Nāṣir Ḥasan and scion of the wealthy Qalawunid family, or Yalbughā al-ʻUmarī, who succeeded Tankizbughā as *amīr majlis* and was awarded his *iqṭāʻ* upon his death in 759/1358.[44] It is unlikely that such a relatively small and simple structure would have taken four years to be completed, which would suggest that his wife must have taken a long time to mourn him after his death. Such prolonged periods of mourning were not common among the Mamluks.[45] Thus, Yalbughā al-ʻUmarī is the more likely person to have completed the building since he was assigned his *iqṭāʻ,* which probably included the *waqf* of the *turbah*. This was no doubt an act of piety and devotion, although worldly motives cannot be discounted.

The second reign of al-Nāṣir Ḥasan (755–62/1354–61) was stormy and full of political strife. Like his father al-Nāṣir Muḥammad, he eliminated members of the elite and gradually replaced them with his own mamluks. He banished from Cairo Amir Tāz, the favorite amir of Sultan al-Ṣāliḥ Ṣāliḥ (brother and predecessor of al-Nāṣir Ḥasan during the interregnum of 752–55/1351–54) by appointing him, against his will, viceroy *(nāʼib)* of Aleppo in 755/1354.[46] In 758/1357 the *amīr kabīr* Shaykhū was conveniently murdered by a minor amir over a petty complaint. The sultan denied any knowledge of the crime but quickly rounded up all the senior amirs loyal to Shaykhū and promoted his own, including Yalbughā al-ʻUmarī.[47] Finally the last of the great amirs, Sarghatmush, was arrested, exiled to Alexandria, and murdered there in 759/1358.[48]

In the same year that Tankizbughā died, Yalbughā was promoted to the highest military rank, *amīr majlis,* replacing Tankizbughā, and was granted his *iqṭāʻ*. He became the most influential figure in the state after the sultan himself, a situation which led to an inevitable confrontation. Before long, each started to distrust the other and wait for a chance to get rid of his rival. Finally, Yalbughā prevailed and the sultan was murdered in 762/1361.[49] Yalbughā appointed a new puppet sultan,

al-Manṣūr Muḥammad from the Qalawunid family, and became the ruler in fact if not in name.[50] The following seven years saw more internal struggle between Yalbughā and the rival amirs till finally he was murdered by his own mamluks in 768/1366–67.[51]

Under these circumstances and given the constant threat to his authority, security issues must have been of primary concern to Yalbughā. The area around the *turbah*, known as the *sharā'*[52] in the Mamluk period, was of strategic importance as it dominated the route to Syria, *al-darb al-sulṭānī*. The area was spacious with sparse population, representing the last line of defense of the citadel against invasion from Syria, while also providing ample space for military maneuvers among warring mamluk factions. During the Bahri Mamluk period the area was the theater of many important political events.[53]

The first threat to the authority of Yalbughā after the murder of al-Nāṣir Ḥasan came from Baydamur, the *nā'ib al-shām*. Thus, an invasion from Syria was a serious possibility.[54] Yalbughā was in the habit of visiting and staying in the *turbah*s of his lieutenants. For example, he was at the *turbah* of Maliktamur al-Mārdīnī when he received the news that Taybughā al-Ṭawīl, *amīr silāḥ* and the most influential of his amirs, was plotting rebellion in protest of his transfer to Damascus in 767/1365–66.[55] The ensuing military confrontation that took place between them was at the Northern Cemetery, not far from the *turbah* of Tankizbughā.[56]

It would not be unreasonable therefore to suggest here that Yalbughā, setting piety and loyalty to a deceased colleague aside, completed the *turbah* after the death of Tankizbughā to be used for surveillance and as a base for military operations. That it was used for both of these functions is further evidenced by its site and many architectural features.

The *turbah* was built on an outcrop near the Muqaṭṭam Hill, dominating the nearby strategic route to the north. Building a tall minaret on an already high site is not justified by the simple needs of the call to prayer in this isolated area. The open pavilion on top of the minaret provided a perfect setting for watching the road and communicating with the Citadel. An individual standing at the pavilion

could easily see and communicate by signals with the two eastern towers of the Citadel: Burj al-Ramlah and Burj al-Ḥaddād. The size of the residential area and the addition of the *ziyādah* could have provided ample space for a garrison barracks. The *turbah* has high walls with a limited number of small windows and only one entrance that could be easily defended from the minaret roof and the arrow slits.

The use of religious buildings for military functions was known, though not very common in Cairo. Farid Shafei suggested such functions for Mashhad al-Juyūshī on the Muqaṭṭam Hill.[57]

Peculiar *Turbah?*

The analysis of Mamluk or any other type of buildings must consider three intersecting aspects. An interactive matrix of utilitarian, expressive, and formal considerations all work together within a framework of the prevailing socioeconomic conditions and technology.

The changing utilitarian functions of the *turbah* of Tankizbughā influenced its formal and expressive aspects. The religious and charitable functions intended by the founder soon gave way to the propaganda and security needs of his ambitious successor, Yalbughā. The roof of the *qiblah īwān* was thus dismantled and an unusual dome erected overhead, creating an internal visual focus, a change which infused a new vitality into a dull sanctuary and signalled the profound changes to come. A tall and formidable minaret, which went beyond the needs of the call to prayer in this secluded place, must have been added at this time together with the solitary portal, as evidenced by the foundation inscription. Both represent a response to increasing security needs in a turbulent time. The *ziyādah* was added to meet the needs of increased Sufi activity and to serve as a garrison.

The *turbah* here, more than any other, is both an expression of religious functions and military might, typical of the Mamluk character. The decorations are scarce and subdued but innovative, best suiting a funerary, religious building which was also constructed with worldly considerations. Walls are bare, thick, imposing, with no fenestration, inspiring awe and providing security.

The richest and most popular expressive medium in the Islamic context is Quranic epigraphy. Here it was employed with discretion, as a statement and as a decorative tool to punctuate spaces. The so-called Throne Verse (2:255–56) is depicted twice on the dome. This verse is the most widely used in Islamic monumental epigraphy.[58] The verse 24:36–37 on the minaret is utilitarian and

common on minarets and mosque portals as it encourages people to perform prayers and pay alms *(zakāt).*

Finally, formal analysis of the *turbah* shows some odd characteristics, in plan, form, and decoration. A glance at the plan, in addition to the rare *ziyādah,* shows that the placement of the dome at the middle of the *qiblah īwān* is unusual. Normally domes are either attached to a part of the complex or placed over the courtyard. We have demonstrated before that the eastern part of the *turbah* is an *īwān* and not part of the courtyard. It could well be that the *īwān* roof was taken off to give way to the dome. This was perhaps carried out by Yalbughā as the dome was built, which, according to its foundation inscription, was four years after the death of Tankizbughā. It is likely that Tankizbughā was content to build the *īwān* without a dome, since he had another similar dome at Qarāfat al-Mamālīk.

In form and decoration there is quite an unusual mix of the old and the new. The use of the traditional squinches on the internal zone of transition, common in the Fatimid and Ayyubid periods but not in the Mamluk era, stands out in contrast to the outer ribbing of the dome which was an innovation at the time.

The minaret consisting of a square base supporting a pavilion topped by a *mabkharah,* the latest existing example of its kind, is definitely a throw-back, yet it has a stone motif consisting of protruding triangles forming a saw-tooth formation. Again this formation was an innovation at the time sharply in contrast with the traditional shape of the minaret.

Book Reviews

ʿAbd al-Bāsiṭ ibn Khalīl, *Nayl al-Amal fī Dhayl al-Duwal*, edited by ʿUmar ʿAbd al-Salām Tadmurī (Beirut: al-Maktabah al-ʿAṣrīyah, 2002). 9 vols.

Reviewed by Boaz Shoshan, Ben Gurion University of the Negev

This edition is based on the Oxford MS Huntington 610 and 685, which covers the *hijrī* years 744–896. The author, who—as his *nisbah* al-Malaṭī indicates—was born in 844/1440 in the Anatolian town of Malatia, where his father, Khalīl ibn Shāhīn, a Mamluk administrator and somewhat of a scholar, known for his *Zubdat Kashf al-Mamālik,* served at the time as the local *nāʾib*. Moving from there due to the requirements of his father's career, ʿAbd al-Bāsiṭ was educated in Tripoli and, as a young man, settled in Cairo. He spent the rest of his life in the Mamluk capital and died in 920/1515.

Of his numerous works, the most important is his still-unpublished chronicle *Al-Rawḍ al-Bāsim fī Ḥawādith al-ʿUmr wa-al-Tarājim,* which covers the years 844–90 and is extant in a single, incomplete, Vatican manuscript. What we have before us is arguably ʿAbd al-Bāsiṭ's less important historical work. What is its value for modern historians?

In his introduction Tadmurī, the editor, claims that ʿAbd al-Bāsiṭ was an unacknowledged source for Ibn Iyās, the author of the essential *Badāʾiʿ al-Zuhūr*. This claim is questionable, given the fact that one can find Ibn Iyās, on occasion, narrating events in a more complete form than ʿAbd al-Bāsiṭ does in the *Nayl.* Tadmurī also points out that ʿAbd al-Bāsiṭ travelled to Syria, Anatolia, the Maghreb and Spain, as opposed to Ibn Iyās, who hardly left Cairo. This fact, however, bears only marginally on content of the chronicle.

As already observed by scholars, contrary to expectations, with the exception of Ibn al-Dawādārī and Ibn Taghrībirdī, chroniclers who belonged to the Mamluk caste, and there are a few of them, hardly used their social origin to the benefit of shining light on the Mamluk elite. This seems to apply to our chronicler as well. As noted by the editor, for the major part of the *Nayl,* in other words, the first one hundred years up to the 840s, ʿAbd al-Bāsiṭ relies on al-Maqrīzī's, Ibn Ḥajar al-ʿAsqalānī's, and other standard chronicles, and thus adds almost nothing to the available information.

As for the second half of the ninth *hijrī* century, it can tentatively be suggested that for the 850s–870s the *Nayl* and Ibn Taghrībirdī's *Ḥawādith,* although to a large extent similar, must be used together, for each provides information that is

not always to be found in the other. This is the case also as regards al-Jawharī's *Inbā' al-Haṣr,* which covers the 870s. Only when it comes to the closing decades of the century does the *Nayl* largely supersede Ibn Iyās, although it must be stressed that the additional material that ʻAbd al-Bāsiṭ provides is of secondary importance and is unlikely to change our basic knowledge of the end of the Mamluk era. His additions are minor and extremely variegated: price data, notes on diseases, or piquancies such as the birth of a deformed child or the conversion of a Jew, curious material devoid of major significance. On the other hand, sometimes ʻAbd al-Bāsiṭ does not include information that one may find in the *Badā'iʻ,* a lack the significance of which is not easy to ascertain, however. For example, in the obituary of Amir Qānṣawh al-Khasīf al-Aynālī (d. 892/1487), only the *Badā'iʻ* includes information about his dispute with Sultan Qāytbāy. Did ʻAbd al-Bāsiṭ apply here censorship because of political calculation?

Tadmurī, the editor, presents the reader with a fine edition, which he prefaces with a comprehensive biography of our relatively unknown chronicler and a list of his (mostly lost) works. An additional merit of the edition is a systematic collation of each of ʻAbd al-Bāsiṭ's reports with the other available sources, indicating which of the *Nayl*'s data are unique. The editor also includes in the eighth and the entire ninth volume a variety of useful indexes.

Angus Donal Stewart, *The Armenian Kingdom and the Mamluks: War and Diplomacy during the Reigns of Hetʻum II (1289–1307)* (Leiden: Brill, 2001). Pp. 215. Includes genealogical chart, photographs of castles, and map.

Reviewed by Patrick Wing, University of Chicago

The Armenian Kingdom of Cilicia and its steady decline under military pressure from the Mamluk Sultanate in the late thirteenth century is the subject of Angus Donal Stewart's *The Armenian Kingdom and the Mamluks.* Stewart's stated aim is to address an aspect of scholarship on the Armenian Kingdom which neglects the wider political context in the Middle East, and ascribes a leadership role to the Armenians, arguing that, in fact, they were more often the subject of larger regional powers. The author's solution to this problem is to make use of the rich historiographical tradition written in Arabic under the Mamluks in order to understand the relations between the Cilician Kingdom and the Mamluk Sultanate. The result is a thorough, highly detailed analysis, focused on the period of Hetʻum II, in which the Cilician Kingdom was weakened by Mamluk military campaigns,

a lack of consistent support from the Mongol Ilkhanate, and internal instability and conflict among the Armenian royal family.

In his Introduction, Stewart identifies the failure to use Arabic sources by scholars of Armenia and the Crusades as one of the major shortcomings in the field. This weakness has limited the view of previous studies on the Armenian Kingdom, which does not reflect an adequate understanding of the non-Christian powers, particularly the Mamluks and Ilkhans. An exception is Marius Canard′s article ″Le royaume d′Arménie-Cilicie et les Mamlouks jusqu′au traité de 1285,″[1] whose methodology Stewart cites as a model and inspiration for his own work. In his discussion of sources, Stewart emphasizes his goal to demonstrate the potential value of the Arabic sources for the history of the Armenian Kingdom. Limiting his survey to ″widely available printed editions,″ he cites al-ʻAynī′s *ʻIqd al-Jumān,* al-Maqrīzī′s *Kitāb al-Sulūk,* and Abū al-Fidā'′s *Mukhtaṣar* among his primary sources. For sources from the Armenian point of view, the author relies foremost upon Hayton of Gorigos′ 1307 work *La Flor des Estoires de la Terre d′Orient,* originally written in French for Pope Clement V. The *Chronicle of Smpad* (d. 1276), brother of King Hetʻum I, and the *Gestes des Chiprois,* composed in Cyprus in the fourteenth century, also reflect an Armenian perspective. The Introduction concludes with a survey of the geography of the Armenian Kingdom.

The main body of the book is divided into two parts. Part One on the Historical Background begins with a chapter on the origins of the four principal political groups active in the eastern Mediterranean in the thirteenth century: the Armenians, Mamluks, Mongols, and Franks. Chapter Two traces the history of relations between the Armenian Kingdom and the Mamluk Sultanate, from the rise of the Mamluks until the truce of 1285, in which King Lewon II was forced to accept a tributary status in the face of military pressure. Stewart analyzes the truce of 1285 in the context of Armenian isolation due to the fall of the Frankish state at Antioch to Baybars in 1268, and the lack of support from the Ilkhans, who were engulfed in a succession struggle following the death of Abāghā Khān in 1282.

The paradigm of gradual Armenian political decline, due to unreliable support from the Mongols and growing Mamluk military pressure, shapes Stewart′s description and analysis in Part Two. This section comprises the bulk of the work, and consists of one long chapter on the reigns of King Hetʻum II, from his accession after Lewon II′s death in 1289 until his murder by a Mongol garrison commander in 1307. The focus is on Mamluk military activity in Cilicia in an attempt to take Armenian castles, force the payment of tribute, and punish the Armenian king for his alliance with the Mongols. Stewart deals extensively with Sultan al-Ashraf Khalīl′s conquests in Cilicia in 1292 and 1293, as well as the

campaign led by Sultan al-Manṣūr Lāchīn in the summer of 1298. These discussions combine a thorough treatment of the Mamluk histories with a precise knowledge of the physical geography of the region.

Stewart does not neglect the internal politics of the Armenian royal house, and ascribes some of the weakness of the Cilician kingdom in this period to Het‘um′s vacillations between kingship and a cloistered life as a monk, and the related disputes among his brothers for the throne. Consideration is also given to the role of the Armenian kingdom in the continuation of the war between the Mamluks and Ilkhans during the reign of Ghāzān. Stewart emphasizes the participation of Het‘um II in Ghāzān′s Syrian campaigns between 1299 and 1303 as motivation for Mamluk reprisals in Cilicia after the Ilkhans had withdrawn. The attention given to the Mongol-Mamluk conflict after the 1281 Battle of Homs provides a useful companion to Reuven Amitai′s *Mongols and Mamluks: The Mamluk-Ilkhanid War, 1260–1281*. Although Stewart relies on secondary interpretations and translations of Persian sources, he does address the issues in the conflict in the period after that covered by Amitai.

In the Epilogue, a brief summary of the Kingdom of Cilicia is given up to the year 1375, when King Lewon V was captured by the Mamluks and the region was left to the Türkmen of the Ramazan Oğulları. Stewart concludes that the turn of the fourteenth century was a period of decline for the Cilician Kingdom due to Mamluk pressure after the disappearance of the Frankish Crusader states and a lack of sustained support from the Ilkhanate.

Stewart succeeds in his aim to demonstrate the significance of Arabic sources for the history of the Cilician Kingdom of Armenia, while at the same time drawing the attention of Mamluk scholars to the ways in which the internal developments of the Sultanate related to its policy toward the Armenians. In addition, attention to developments within the Ilkhanate and its military operations in Syria help to emphasize the difficult diplomatic position of the Cilician Kingdom as a subject state between two larger polities. Overall, this work stands as a useful contribution to the history of the Christian eastern Mediterranean, as well as the Mamluk Sultanate.

REVIEWED BY CARL F. PETRY, Northwestern University

This monograph (likely a revised doctoral dissertation, although unspecified by the author) surveys the proliferation of prisons and diversity of their functions during the independent Mamluk period in Egypt. The author, on the faculty of history in the Teachers′ College of Dumyāṭ, Manṣūrah University, initiates his study with a discussion of primary sources consulted. While Ḥusayn pays lip service to the significance of Quranic, hadith, and literary texts for relevant legal theory or criminal images, his emphasis on narratives compiled by on-site historians of the Mamluk period underscores their centrality as repositories of the concrete evidence on which a credible analysis must rely. Predictably, the eminent but acerbic chronicler Taqī al-Dīn al-Maqrīzī emerges as the authority of first rank. Ḥusayn confirms the primacy of his *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk* for reportage of specific criminal episodes, and his *Khiṭaṭ* for its detailed description of jails, background to their construction, and conditions endured by their inmates. The author lists al-Maqrīzī′s disciple and self-styled successor, Ibn Taghrībirdī, next in order of prominence, but dwells on his voluminous yet diffuse *Al-Nujūm al-Zāhirah,* and biographical dictionary, *Al-Manhal al-Ṣāfī* (largely unquoted in the text), while passing over his more focused *Ḥawādith al-Duhūr,* which the historian compiled as a continuation of al-Maqrīzī′s *Sulūk* (Ḥusayn refers to the California edition of the *Ḥawādith* edited by W. Popper in the bibliography, but does not mention it among the ″encyclopedic″ *[mawsūʿīyah]* sources most replete with relevant data). The author goes on to note the works of Ibn al-Ṣayrafī *(Nuzhat al-Nufūs, Inbāʾ al-Ḥaṣr)* and al-Qalqashandī *(Ṣubḥ al-Aʿshá)* but does not acknowledge Ibn Iyās′s chronicle *(Badāʾiʿ al-Zuhūr),* although he mines it frequently throughout the study (he does list it in the bibliography).

Among the sources the author finds less important are al-Maqrīzī′s treatise on economic and fiscal decline *(Kitāb Ighāthat al-Ummah bi-Kashf al-Ghummah),* al-Subkī′s *Muʿīd al-Niʿam wa-Mubīd al-Niqam,* useful for its details on judges and court officials, Abū Yūsuf′s *Kitāb al-Kharāj* for its information on jails and criminal penalties, al-Māwardī′s *Al-Aḥkām al-Sulṭānīyah,* Ibn Taymīyah′s *Al-Siyāsah al-Sharʿīyah,* and Ibn Qayyim al-Jawzīyah′s *Al-Ṭuruq al-Ḥukmīyah* for their transcriptions of fatwas and classifications of criminal offenses. Ḥusayn then briefly credits Ibn Khaldūn′s *Muqaddimah fī-al-Tārīkh* for its description of criminal procedures in court, such popular literary sources as the *Sīrat al-Ẓāhir Baybars* and *Alf Laylah wa-Laylah* for their picaresque portrayal of felons, and the *Hazz*

al-Quḥūf fī Sharḥ Qaṣīdat Abī Shādūf for its depiction of rural violence in local villages. None of these works assume a prominent role among sources actually utilized by the author.

Ḥusayn does dwell on modern scholars who have addressed the topic of criminality in medieval Egypt, broadly considered. While limited largely to twentieth-century historians in Egypt, his remarks about their findings are illustrative both for the insights they disclose, and the glaring lack of cognizance among Western authorities of their contributions. First among these Ḥusayn ranks M. Muṣṭafá Ziyādah, who wrote an extensive article on jails published over 1943–44 in three parts ("Al-Sujūn fī Miṣr fī-al-'Uṣūr al-Wusṭá," *Majallat al-Thiqāfah* 260, 262, 279). Since Ziyādah edited the first two volumes of al-Maqrīzī's *Sulūk,* he drew most of his data from that work, and presumably the *Khiṭaṭ*. Ḥusayn acknowledges one foreign scholar among the significant analysts of Egypt's unsettled economy during the Circassian Mamluk period: (Eliyahu) Ashtor, depicted here as an "Austrian" historian (p. 13). Ashtor's *A Social and Economic History of the Near East in the Middle Ages* is referenced in its Arabic translation periodically, albeit the author does not list the original in the bibliography. Several other Egyptians have explored the topic of crime and punishment in Mamluk Egypt, with whose assertions Ḥusayn sporadically disagrees.

Ḥusayn's introduction lists verses from the Quran that refer to criminal activity: reciprocal killing for murder (al-Baqarah, v. 178, al-Mā'idah, v. 45), condemnation of homicide except in retaliation (al-Mā'idah, v. 32), exhortation to base legal judgments on divine revelation (al-Mā'idah, v. 44, 47), and the exercise of patience before imposing punishment (al-Mā'idah, v. 39, al-Naḥl, v. 126) (pp. 16–18). The author subsequently quotes hadith transmitted by al-Tirmidhī and al-Bukhārī that emphasize clemency and repentance over harsh penalties (pp. 18–19). He then proceeds to a short statement on the establishment of shari'ah courts in Egypt following the Arab conquest, emergence of the prefect *(wālī)* as chief of police, the earliest references to prisons by chroniclers during the Fatimid and Ayyubid periods, and the marked increase of data on crime in narrative sources during the second half of the Mamluk era. Having set the stage for his first chapter, on prisons and their variants, the author distinguishes two types: houses of detention administered by judges and prefects *(ḥubūs, tarāsīm, sujūn al-ḥukm),* and "prisons more generalized" *(al-sujūn al-'āmmah)*. Of the latter, Ḥusayn notes four categories: 1) prisons reserved for eminent members of the military elite, primarily amirs and offspring of sultans, such as the Armory *(al-Zardkhānah)* in the Cairo Citadel, or the *Sijn al-Thaghr* in Alexandria; 2) prisons for political criminals from the military caste or civil notables: the *Sijn al-Abrāj al-Qal'ah*, *Khizānat al-Bunūd*, *Sijn al-Raḥbah*; 3) prisons for violent felons, primarily civilians or Bedouins: *Khizānat al-Shamā'il*, *al-Maqsharah*, *Sijn al-Daylam*—all in Cairo; and 4) a jail for women:

the *Sijn al-Ḥajarah*, also in Cairo. Ḥusayn relies primarily on the descriptions listed for these sites by al-Maqrīzī in his *Khiṭaṭ*. The author, while quoting extensively from al-Maqrīzī's comments on several prisons notorious for the inhumane conditions suffered by their inmates, offers an interesting hypothesis behind the chronicler's ambivalence over their efficacy. Ḥusayn (pp. 46–47) speculates that the covert source of al-Maqrīzī's anger was his animosity toward Sultan Barqūq's controversial son and successor, al-Nāṣir Faraj (801–15/1399–1412, with interregnum). Ḥusayn argues that al-Maqrīzī regarded Faraj as an offender far more heinous than many of the hapless officers and notables he incarcerated, frequently without sustainable proof. Ḥusayn notes that al-Maqrīzī counted more than four hundred Mamluk amirs and soldiers detained by Faraj unfairly under dreadful conditions. In an article I wrote on al-Maqrīzī's description of jails (*Mamlūk Studies Review* 7, no. 2 [2003]: 137–44), I mused about al-Maqrīzī's ire over these harsh conditions endured by inmates, but could identify no specific reason behind his anger. Ḥusayn has provided a plausible explanation. Ḥusayn concludes this chapter with the admittedly sparse references he has gleaned on the detention of women (primarily for adultery, debt, and prostitution), exile as an alternative to imprisonment in Cairo, and the responses of inmates desperate over their suffering: attacks on prison guards, self-mutilation, attempts at escape, and suicide. The author acknowledges the infrequency of data on the behavior of jailed prisoners, but claims that its occurrence, however rare in the sources, yields an indication of the individual's capacity to survive in the face of unbearable odds.

Ḥusayn's second chapter considers the "state" *(dawlah)* of prison inmates, under which term he includes the contrasts in status demarcating criminal classes, variations in circumstances of their confinement, and the underlying motives of the authorities who imposed these circumstances. The author claims that, despite the obvious inducement to crime brought on by the flawed trajectory of the economy during the later Mamluk era, its defects nonetheless provided the ruling establishment with multiple opportunities for reaping quick profits. Persons who thwarted these opportunities, in the name of upholding justice and equity, were equally subject to incarceration as repeating felons. Ḥusayn observes that debtors, otherwise guiltless, were often exposed to procedures such as torture, formally reserved for accused embezzlers or convicted brigands concealing their illicit gains—to compel their disclosure. The author links this violation of shari'ah principles to a broader tendency of the sultanate to exploit imprisonment as an expedient for enhancement of its revenues. He sees a clear connection between this tendency and the rise in harsh treatment meted out to inmates, often for allegations unproved in a court of law. Ḥusayn thus reaches the conclusion that imprisonment failed to rectify the growing trend toward lawlessness that plagued

the sultanate in its latter decades. Yet since such rectification was not the sultanate's prime goal, jails proliferated as a symbol of its asserted authority to bypass licit procedures and aggrandize its power. But withal, Ḥusayn claims that the narratives are filled with references to inmates of many stations maintaining a semblance of their social interactions, even under straitened conditions.

The study's third chapter deals with the authorities presiding over criminal prosecution and imposition of penalties. Much of the text treats matters widely studied in the field: officials such as the prefect *(wālī),* market inspector *(muḥtasib),* district inspector *(kāshif),* or judge *(qāḍī)* and their formal duties, or the distinction between shariʻah and appeals *(maẓālim)* courts. Few original details emerge in this discussion, although the author differentiates between appeals courts open to civilians, those reserved for militarists, and those convened for foreigners. Whether these categories of plaintiffs were consistently recognized in actual practice the author does not demonstrate. But Ḥusayn does dwell on the connection between the final, irrefutable quality of a ruling in the *maẓālim* court and the sultan's growing reliance on it as a means of curtailing the *sharʻī* judges' authority while advancing his own. Ḥusayn considers this trend particularly ominous, a prime reason behind the inexorable corruption of criminal proceedings under the late sultanate. He observes that over time judges were less able to shape criminal justice, their authority insidiously eroded by the sultan and senior amirs. As a corollary, judges were progressively subjected to brutality as a means of coercion toward following the regime's party line. And the civilian masses, largely ignorant of legal theory but street-wise in the ways of power politics, did not challenge the regime's usurpation of judicial authority, but rather emulated those who held the power to influence their fate.

The monograph's final chapter elaborates on typologies of punishments and means of their infliction. Most of the text is taken up with the bland penalties sanctioned by law, in contrast with lurid depictions of punishments meted out as reprisals for violent crimes, treason, or vengeance; devices to force disclosure of assets; or means of settling vendettas between rival troop factions. Ḥusayn's description of bisection *(tawsīṭ)* (pp. 151–53) is the most graphic I have encountered. Ḥusayn concludes (p. 165) that the frequency of harsh penalties paralleled the growing politicization of criminal prosecution, at the expense of humane treatment mandated by the shariʻah. Yet statistically, incarceration remained the penalty of choice from the regime's perspective, useful for isolating (and thus neutralizing) potential adversaries or rivals, and detaining client officials whose release could be offered as a reward for revealing hidden assets. Ḥusayn discerns an interesting tension between sultans seeking to ameliorate their reputations through periodic proclamations of amnesty or clemency, and senior amirs, subordinates ideally but rivals in fact, who deliberately defied them by callously abusing the prison

population. Overall, augmentation of cruel penalties failed to stem the steady rise in crime rates tarnishing the late sultanate. But, as Ḥusayn argues, the regime′s overarching goal was to aggrandize its power in tense times rather than to improve its subjects′ lot.

Professor Ḥusayn has produced a worthy, if succinct, study. This writer wishes to close with an observation all too characteristic of the divide between scholarship generated in Arab countries and Western states at present. A cursory glance at this monograph′s bibliography will reveal the almost complete dearth of articles and books written in Western languages (those few included are marred by printing errors) that deal with criminality in the Islamic world—not to mention the vast literature on the subject as it evolved in medieval and Renaissance Europe. Yet this deficiency is no less evident in the bibliographies of Western authors. I counted no fewer than fourteen individuals listed among Ḥusayn′s secondary sources who have studied crime but write in Arabic. Four of them were known to me prior to my perusal of this monograph, and for topics other than the one at hand. Whatever the strengths and weaknesses of a body of scholarship, its merits or defects cannot be ascertained if it remains unread by colleagues from different societies who examine the same phenomena. Our common enterprise of historical research is ill-served.

ALBRECHT FUESS, *Verbranntes Ufer: Auswirkungen mamlukischer Seepolitik auf Beirut und die syro-palästinensische Küste (1250–1517),* Islamic History and Civilization, vol. 39 (Leiden: Brill, 2001). Pp xiv + 520.

REVIEWED BY PATRICK FRANKE, Martin-Luther-Universität Halle-Wittenberg

When Sultan Baybars in 1265 captured the Palestinian towns of Caesarea, Haifa, and Arsuf from the Crusaders, he ordered the destruction of their fortresses. Instead of the coastal line of fortifications, which was completely demolished, he established a new line of defence along the foothills deep in the country, more defensible by the Muslim forces. In order to make it impossible for the Franks to effect a new landing, Baybars in 1270 levelled also the last vestiges of Ashkelon, filling the harbor with trees and rubble. It is this successful strategy of ″scorched shore″ (in German: *Verbranntes Ufer*) to which Albrecht Fuess alludes with the title of his book. Later on in the Mamluk period, the military strategy was transformed into a general policy: as a precaution against a return by the Crusaders, the Mamluks kept the Syro-Palestine coast in a state of devastation.

In an article published in 1967, David Ayalon had argued that the main reason for the destruction of the Levantine coast by the Mamluks was their naval weakness. It is for this reason that Fuess devotes the first chapter of his book to a general discussion of Mamluk naval policy. He emphasizes that the naval weakness of the Mamluks was not primarily caused by the lack of timber and iron. The fact that in the beginning of the fifteenth century the Mamluks were able to build up a short-lived fleet for their military expeditions against Cyprus and Rhodes shows in his view the general availability of both of these raw materials. Nor was it the lack of maritime expertise that hindered the Mamluks from pursuing a powerful naval policy. The existence of a manual on sea warfare written by a Mamluk officer together with the Mamluk tradition of navigation on the Red Sea proves for Fuess that the theoretical and practical knowledge of seafaring the Mamluk rulers had at their disposal would have been sufficient to serve as a base for a successful naval policy also on the Mediterranean had there only been the political will to pursue such a policy. But since the Mamluk rulers had preference for warfare on horseback rather than in galleys they did not use this naval knowledge, but chose to secure their Mediterranean flank through a policy of alliances with trading European sea powers, at the same time devastating the Syro-Palestinian shoreline in order to make it unattractive for future invaders.

In chapter 2 Fuess discusses the negative effects of this policy for the Levantine coast and the coastal populations. Since the line of defence was moved into the interior of the country, the formerly illustrious harbor towns of the Syro-Palestinian shoreline were left unarmed against attacks and piracy activities of European freebooters. Almost all of them were downgraded to a peripheral political and administrative status. While they still played an important role in the international trade, it was not they who benefited from the revenues of this business, but the towns of the hinterland such as Damascus, Aleppo, and Cairo where the Mamluk decision-makers resided. The only town on the Levantine coast which was able to gain a certain political importance during the Mamluk period was the provincial capital Tripoli, but since this city had been moved into the interior of the country by Sultan al-Manṣūr Qalāwūn in 1289, when he took it over from the Crusaders, it could not be counted as a classical harbor town anymore.

Notwithstanding the general neglect to which the Levantine coast was exposed during the whole Mamluk era a certain flavor of normality returned to the coastal cities in the second half of this period. This is what Fuess exemplifies by a thorough study of the local situation in Beirut. After its surrender to the Mamluks in 1291, the number of Muslims living in this city gradually increased. As in the rest of the Mamluk empire, daily life in Beirut was characterized by quarrels between local notables and by the repetitive occurrence of epidemics and minor natural catastrophes. A special problem of the shoreline were the recurrent raids

of European corsairs. In spite of these sufferings, the inhabitants of Mamluk Beirut had also some little pleasures, as for instance the annual river festival *(ʿīd al-nahr),* which was celebrated harmoniously by Muslims and Christians. The revival of international commerce during the fifteenth century which was conducted mainly by the Venetian trading fleet led also to a detente in the greater conflict between Mamluks and Europeans.

For more than 200 pages of his book, Fuess discusses topics concerning the history of Beirut during the Mamluk period: he deals with the administrative structures (ch. 3), the urban topography (ch. 4), the demographic situation and some details of popular culture (ch. 5), as well as the presence of Europeans of different sort (traders, missionaries, pilgrims) in this city (ch. 6). It is regrettable that he has missed the opportunity to expand these parts of his book into a proper history of Mamluk Beirut. A detailed and source-oriented monograph focussing on this little-studied subject could have brought him much more credit than his ″combined history,″ which packs together three different subjects (Mamluk naval policy, Levantine coastal history, local history of Beirut) and by this becomes a kind of grocery store. In his introduction, Fuess justifies his combined description of the different subjects by stating that they are strongly interlaced with each other (p. 6). Undoubtedly Mamluk naval policy had certain effects on the situation in the Syro-Palestinian coastal towns, but was there also an influence in reverse? And, another question, is it really necessary to discuss Mamluk naval policy in its totality, when it was only a detail, the strategy of ″scorched shore,″ which had an impact on the Levantine coast?

In its individual chapters, Fuess′s study supplies the reader with a lot of interesting and exciting information. For the inner coherence of the whole book, however, it would have been of great benefit if the author had maintained a stricter adherence to one (e.g., local) perspective. The reviewer cannot help feeling that Fuess, who prepared his study while staying in Beirut, extended it to the other two subjects because he considered the source material for Mamluk Beirut itself too meager for a Ph.D. thesis. A compensation of this meagerness, however, could have been accomplished much better by an enlargement of the theoretical and methodological base of the study and a more profound source criticism than by the strategy of thematic dispersion of which the author has made use.

Helena Hallenberg, *Ibrahim al-Dasuqi (1255–1296): a Saint Invented* (Helsinki: Finnish Academy of Science and Letters, 2005). Pp. 293, three appendices, index.

Reviewed by Richard McGregor, Vanderbilt University

Several studies relating to Mamluk-era Sufism have appeared over the last decade. Among the most notable are monographs by Catherine Mayeur-Jaouen and Eric Geoffroy, and edited collections by Chih and Grill, as well as McGregor and Sabra. Mayeur-Jaouen's *Al-Sayyid Ahmad al-Badawi: un grand saint de l'Islam égyptien* (Cairo: IFAO, 1994) functions as an important precursor to the monograph under review. Hallenberg adopts a similar descriptive approach, one that is heavy on details and light on analysis. At its best, this style can be quite illuminating, bringing much new material to light. The downside, signaled by a dense four-page table of contents, is a disjointed structure that jumps from sub-section to sub-section.

As a contribution to our knowledge of an elusive but very popular Egyptian Sufi figure, this monograph is quite welcome. In scope it surpasses everything done on the topic to date. I will not summarize here the seventy-five or so sub-sections of the book, but will briefly describe the contents of the five chapters. First, however, are the author's forward and introductory comments, in need of an English-language editor, laying out the trajectory of the book. Here and in chapter one she tells us she has chosen the theme "invention" to reflect the variations and evolution in the biography of al-Dasūqī, allowing her to move away from an approach that seeks to reconstruct the original historical figure. The development of the saint's order, the Burhāmīyah, and analyses of his teachings and writings (the few that exist) are not of primary concern to Hallenberg. Her aim in this book is to carefully sort through the biographical material.

The second chapter surveys the available historical material for the life of al-Dasūqī. We learn that the earliest mention of him in written sources does not occur until 787/1385, thanks to Ibn al-Mulaqqin. Another reference is made to al-Dasūqī and his grave, by al-Maqrīzī. Hallenberg will later identify this short passage in *Kitāb al-Sulūk* as the earliest mention of pilgrimage *(mazārah)* to the saint's tomb (p. 139). (I should note here an additional source that likely predates al-Maqrīzī, though not by much. This is Abū al-Laṭā'if, hagiographer to Muḥammad Wafā' and his son ʻAlī [d. 807/1405]. In *Al-Minaḥ al-Ilāhīyah,* written around the year 830/1426, he relates an episode in which ʻAlī travels to al-Dasūqī's grave.) In addition to a *waqf* document identifying Sultan Qāytbāy as a patron of al-Dasūqī's shrine, Hallenberg wades through a variety of biographical sources, historical and devotional, extending into the twentieth century. An important part of this task is to untangle, as much as is possible, the confusion between three different Ibrāhīm

al-Dasūqīs—individuals from the seventh/thirteenth, eighth/fourteenth, and tenth/sixteenth centuries.

Chapter three presents a synthesis of the saint′s hagiography, organized according to typical themes such as miracles associated with his birth and death, and his esoteric knowledge. Of interest also are accounts relating his opposition to Crusaders, Mongols, and Egyptian tyrants, although most of these seem to be of later origin. Drawing further from the hagiographies, using a similar synthetic approach, the fourth chapter describes al-Dasūqī′s lofty spiritual status as evidenced by his miracles and gnostic insights. His position as one of the four saintly ″poles″ is significant, as it is in the hagiographies of other early medieval saints such as al-Rifāʿī and al-Badawī.

Chapter five attempts analysis of a number of key themes and events relating to the veneration of al-Dasūqī. A discussion of his *mūlid,* or saint day, addresses problems in dating and its parallel and likely competition with the much better known *mūlid* of al-Badawī. Hallenberg′s analysis here is rather unconvincing. She points to the possible connections between the *mūlid* of al-Badawī and Coptic antecedents—although she notes Mayeur-Jaouen has found no sound evidence for this. The implication here is that perhaps this is relevant to al-Dasūqī′s case (p. 216); a few mythical themes are then presented from al-Dasūqī′s miraculous life, and related in passing to Coptic art. These connections are not developed, and left quite tentative. On page 223 the quotation from Gilsenan on the tension between the ulama and Sufis flies in the face of the subsequent description of al-Dasūqī as ″an ideal Muslim scholar.″ Hallenberg is on more solid ground when she describes the evolution of al-Dasūqī′s image. In brief, the seventeenth-century writers underline the saintly miracle worker, writers in the eighteenth century show him primarily as a learned author, the nineteenth-century sources refine his cosmic position as one of the ″poles,″ and the latest material stresses al-Dasūqī as the opponent of injustice and a defender of Islam. In support of this schema, appendix C presents a useful chronology of texts and themes. (On the expansion of the Burhāmīyah order outside of Egypt in the twentieth century, see the recent article by Michael Frishkopf, ″Changing Modalities in the Globalization of Islamic Saint Veneration and Mysticism: Sidi Ibrahim al-Dasuqi, Shaykh Muhammad ʿUthman al-Burhani, and their Sufi Orders,″ *Religious Studies and Theology* [2001]: 20, I and II.) Appendix B is an exhaustive list and description of the writings attributed to al-Dasūqī.

Hallenberg has given us the first comprehensive treatment of the life of Ibrāhīm al-Dasūqī. The descriptive approach adopted, one that is admittedly less concerned with the historical retrieval of the real Ibrāhīm al-Dasūqī, allows us to skip across time periods following the hagiographical portrait as it evolves. Hallenberg has overcome a paucity of sources for the early period, and managed to disentangle

several strands of textual tradition in the later centuries. Although the resulting monograph suffers from a certain disjointedness, and is weak in sustained analysis, we owe the author thanks for presenting us with an impressive collection of relevant materials. She has put all future studies al-Dasūqī on a firmer foundation.

Making Cairo Medieval, edited by Nezar AlSayyad, A. Irene Bierman, and Nasser Rabbat (Lanham, Boulder, New York, Toronto, Oxford: Lexington Books, 2005). Pp. 266.

REVIEWED BY JOHN RODENBECK

This collection of eleven essays originated as a series of papers delivered during a one-day conference sponsored by the Misr Research Group at Berkeley in 2004. Although its major focus is on Cairo in the nineteenth century, Mamlukologists and other folk concerned with the history of al-Maḥrūsah will find it provocative. The most impressive contributions, moreover, are probably Nairy Hempikian's on Bāb Zuwaylah and the Comité de Conservation des Monuments de l'Art Arabe (1881–1961), otherwise known as the Comité, without which there would have been little left of Mamluk Cairo, and Nasser Rabbat's on al-Maqrīzī, the great Mamluk-era topologist, a brilliantly expanded version of an essay that appeared in *The Cairo Heritage,* the Festschrift published in 2000 to honor Laila Ali Ibrahim.

As I observed in that same volume, a major element in Laila's formidability was her strategic vision, her "insistence upon regarding the whole city as an evolving ensemble, rather than as a haphazard agglomeration that someone has arbitrarily divided into a modern/'Western' metropolis and an old/'Oriental' madinah, the latter architecturally characterized by its incidental possession of a piecemeal accumulation of 'monuments.'" Such an understanding by no means denies the real historical division of late-nineteenth-century Cairo into "Eastern" and "Western" cities, but urges instead an effort to accommodate these two realities to each other without discomfiture to either. The same division is likewise the chief persistent theme throughout this collection, where it is treated with varying degrees of finesse, acuity, and historical awareness.

A "Prologue" asserts, for example, that "Europeans, through representations of architecture and urban spaces . . . constructed dualities like East/West and modern/medieval which remain with us today." This declaration implies that such a distinction is merely an Idealist or Foucaultian abstraction with no basis in physical reality. Its physical basis is presumed to be real, however, by André

Raymond, the foremost historian of the city, and is the very pivot of Janet Abu Lughod's *Cairo* (1971), which the editors correctly describe as "the classic work in the field." The central section of Abu Lughod's book is actually called "A Tale of Two Cities" and the five chapters within it (pp. 83–166) deal with an inescapable physical and historical fact. But abstract conceptions and brute realities can change places in this collection willy-nilly according to political or rhetorical whim. Raymond and Abu Lughod are thus somehow exempted from the recurrent recrimination of "Europeans," "Westerners," "colonialists," or a generalized "West" for having observed the same physical distinction that both of these authorities in fact not only accept, but treat at length.

Irene Bierman's opening essay, "Disciplining the Eye: Perceiving Medieval Cairo," introduces several alleged agents of perception that will appear in later chapters: the *Description de l'Égypte* (1810–29), E. W. Lane, ʿAlī Mubārak, the Exposition Universelle (Paris) of 1867, the Comité des Monuments de l'Art Arabe, the World's Columbian Exposition (Chicago) of 1893. Like most commentators, she exaggerates the influence of the *Description* and its illustrations. Fewer than 2000 copies of both editions of the *Description* were printed, only 1490 were ever sold, and there was plenty of competition. The superb graphic collections of Shaw, Norden, Pococke, Luigi Mayer, and Vivant Denon, for example, were all published before the *Description* and were widely owned and perused. Denon's two-volume *Voyage dans la Basse et la Haute Égypte,* for example, with its 141 large plates, some of them half-elephant size, went through more than 40 editions, translations, and adaptations and was quite possibly the most popular Egyptological book ever written. After the publication of the *Description* came the magnificent collections of Coste, Hay, Roberts, Owen Jones, and Prisse d'Avennes, compared with which the *Description*'s renderings were inaccurate, their reproduction technically backward. What the *Description* lacked, of course, was the advantage of two significant inventions that had arrived on the scene during its twenty-year gestation and been ignored: Wollaston's camera lucida and the process of lithography. It might also be noted that ʿAlī Mubārak was not born until 1823, a year after the publication of the first (incomplete) edition of the *Description,* and that he therefore certainly does not belong, as Bierman says, "to these same years." Neither did the Comité, despite using French for its deliberations, ever use the outdated proto-Disneyesque interventionist methods of Viollet-le-Duc, now on display at sites like the Cité at Carcassonne, which I see from my house in Languedoc. Nor is there any evidence that tourism entered into the Comité's considerations. Bierman rightly deplores, though, the use of the term "Islamic Cairo."

Nasser Rabbat's chapter, an analytic survey of the life, career, and vision of the indispensable al-Maqrīzī, is suavely impeccable, the more useful and impressive

in that it adduces recent Egyptian scholarship and recent Egyptian literature, concluding with an analysis of al-Maqrīzī's influence on two contemporary novelists, Gamal al-Ghitani and Khayri Shalabi. Such an analysis could be extended into the work of Naguib Mahfouz, whose Cairene cityscape—in *Zuqāq Midāq,* for example, or *Al-Liṣṣ wa-al-Kilāb*—has a moral meaning that al-Maqrīzī would obviously have understood.

Nezar AlSayyad's chapter on ʿAlī Mubārak, composer of the next most important Egyptian *khiṭaṭ* after al-Maqrīzī's, describes him as "the central character in our story" and treats him with sensitivity and candor. Paralleling "The Modern Vision of ʿAli Mubarak," the ground-breaking paper delivered by B. F. Musallem at the colloquium on the Islamic city held at Cambridge in 1976, it provides the sole instance in this collection of the use of the word "positivist," which defines more concisely than any other Mubārak's background, training, and vision. If Mubārak had had his own positivist way, of course, the entire historic zone would have been leveled, a handful of approved architectural examples being spared solely "for educational purposes." He must have been a thorn in the side of the Comité, of which he was a member from its second year until his death.

Derek Gregorys's "Performing Cairo: Orientalism and the City of the Arabian Nights" focuses on E. W. Lane and his ethnographic masterpiece, *Manners and Customs of the Modern Egyptians,* the definitive 1860 edition of which, edited by Jason Thompson, was republished in 2003. Mustering a mass of theory, Gregory attempts to show that Lane's equation of Cairene life in 1835 with the social background of the Arabian Nights became a fixture among nineteenth-century European travelers and tourists, who thus arrived in al-Maḥrūsah expecting to find the Baghdad of Hārūn al-Rashīd. If so, however, these wandering naïfs must have skipped over Lane's remarks in the last chapter of all editions of *Manners and Customs:*

> European customs have not yet begun to spread among the Egyptians themselves; but they probably will ere long; and in the expectation that this will soon be case, I have been most anxious to become well acquainted (before it is too late to make the attempt) with a state of society which has existed, and excited a high degree of interest, for many centuries, and which many persons have deemed immutable.

Nor had they read the observations of Edward Stanley Poole, Lane's nephew, in his editor's preface to the 1860 edition, published sixteen years before Lane's death: "To continue [the ethnographic record] would be only to chronicle the gradual disuse of their national and characteristic customs and the adoption of

Western habits that must mark a new era in their history as a nation.″

Countering calumniators (Edward Said and Rana Kabbani) who allege that Lane suffered from pathological sexual repression, Gregory suggests that Lane′s robust description of his own participation in a *mawlid* exaggerates its licentious atmosphere and thus indicates an undue degree of sexual susceptibility. Even contemporary Cairo, however, bears out Lane′s objectivity, as any woman could testify who ever rode alone in a crowded car during the nine decades before the Metro afforded separate accommodation for females. Certain large-scale *mawlid*s—those of Sayyidah Zaynab, for example, and Sayyid Aḥmad al-Badawī in Tanta—still have well-deserved reputations for unleashed libido of which daintily bred non-participant bourgeois Egyptians may well remain quite unaware, as they apparently did until recently of female circumcision.

Much of this collection is less about Cairo than about European attitudes towards Cairo, a subject that demands as much acquaintance with the history of European taste and culture as with the history of al-Maḥrūsah. Caroline Williams′ ″Nineteenth-Century Images of Cairo: From the Real to the Interpretative″ rests on solid ground in both respects, offers rewarding analysis with minimal theory or speculation, and supplies a consciously aesthetic dimension that is otherwise virtually absent from this collection. She concentrates upon a handful of the most distinguished Orientalist depictors of Cairo: Coste, Hay, Lane, Roberts, Frith (whose photography necessarily excluded human subjects), Lewis, Gérôme, and Deutsch. Her thesis—that artists before 1860 sought to make an accurate visual record, while those afterward created capriccios uniting authentic materials in fanciful and anachronistic ways—is neatly sustained and is perfectly conformable with historical fact: the manners and customs that Lane recorded in 1835 indeed no longer existed in 1860.

Williams′ illustrations aptly tell the tale: the reproduction of Deutsch′s ″Le Tribut″ (1898), for example, gives us an accurately detailed study of the portico of Sultan Ḥasan, but adorns it, as Williams points out, with some superfluous Turkish tiles and peoples it with personnel wearing the Ottoman costume of more than seventy years earlier. Two small observations: the caption of the reproduction of a print from the *Description* calls it a ″lithograph″ and Roberts is said to have intended his own work as a corrective to the *Description*′s ″views.″ None of the illustrative plates in the *Description* is in fact a lithograph (see above) and Roberts′s remark about their inadequacy, quoted here, was made only after he had already been in Egypt for nearly three months. The motives that had brought him to Egypt in the first place obviously remained primary and had nothing to do with mere rivalry over verisimilitude.

David Preziosi′s ″The Museum of What You Shall Have Been″ bristles with ideas, but many of them are slightly suspect. His guesses as to the motives of the

Comité and his linking it directly with the Egyptian Museum remain particularly unconvincing. Henri Pieron—the same passage from an article of his published in a popular French-language Egyptian magazine in 1911 is quoted as an epigraph later in this collection—may well represent a particular view of the morphology of Arab cities held during that era by certain empire-oriented Frenchmen, probably positivists, whose chief experience was in North Africa, but he can hardly represent the whole of ″the colonial order,″ as Preziosi claims, and certainly not the views of the Comité or even of the three Frenchmen in it (out of some sixteen members at the time, nine of them Egyptian). The French-North-African urban paradigm—a walled medieval Arab *madīnah* separated from a modern French ville by a *cordon sanitaire*—has had occasional official proponents in Cairo, but they have been Egyptian, rather than European: the Arab Bureau of Design, for example, a public-sector architectural firm, proposed exactly such a model for radical intervention in the historic zone as recently as 1980.

There are also mistakes based on legend and hearsay. The Khedivial Opera House, for example, was not built for the premier of *Aida,* but for the celebration of the opening of the Suez Canal, in the autumn of 1869. (The libretto for *Aida* was not delivered to Verdi until the following year and the opera premiered in Cairo on 24 December 1871.) And what is ″the Christian quarter″ that is mentioned two or three times? Preziosi′s text suggests that he means Miṣr al-Qadīmah, but in fact al-Maḥrūsah has several other quarters that have long been traditionally Christian, including neighborhoods in Azbakīyah, Shubrā, al-Muskī, al-Jamalīyah, al-Waylī, Rawḍ al-Faraj, and elsewhere.

Heba Farouk Ahmed′s chapter, ″Nineteenth Century Cairo: a Dual City?″ is burdened with a shaky and ill-defined thesis. Material is squeezed for dubious generalizations, which lead to misreadings, anachronisms, or irresolvable contradictions. One of her illustrations, for example, is a picture dating from 1877 showing an elaborately invented Ottoman doorway and a dim figure seated within who apparently offers something unidentifiable for sale. Her caption refers to ″[Western] interest in contemporary Cairenes and their everyday life—a new phenomenon in the nineteenth century.″ Such a reading, however, ignores both the far more informative illustrations in the ″Arts et Métiers″ section of the *Description de l′Égypte,* published shortly after the beginning of the century, but also the fact that the *Description* itself, a classic Enlightenment project, was the last major example of an encyclopædic tradition that had already achieved its finest flower in the great French *Encyclopédie ou dictionnaire raisonné des sciences, des arts, et des métiers* (1751–80). What the uninformative picture of the invented doorway thus demonstrates, if anything, is that by 1877 Western interest in Cairene everyday life had dwindled remarkably, as Caroline Williams′s survey (above) very clearly shows.

On the next page Ahmed declares that ″among the best known early [sic] European travel writers [sic] were Edward William Lane and David Roberts. Both were inspired to visit Egypt,″ she goes on to say, ″after reading the mammoth Napoleonic Description de l′Égypte″ [9500 pages of text? 1000 plates?]—a piece of misinformation which she owes, I′m afraid, to Tim Mitchell′s *Colonising Egypt* (1988, p. 29). Two pages later she reproduces a sensational illustration from a 1913 American edition of Lane′s *Arabian Nights* in the apparent belief that it was actually penned by Lane himself, who died a full generation earlier. (The illustrator even for Lane′s own ″standard″ edition was not himself. but William Darbey.) On the following page, in a paragraph summarizing the career of the historian Stanley Lane-Poole, Lane′s grandnephew, every statement is untrue. One could point to further errors. It must also be observed that, having been compelled by her thesis to deal with Western subjects, Ahmed was thus condemned to play down far more promising material about Egyptian subjects—al-Ṭahṭāwī, ʻAlī Mubārak, and al-Muwayliḥī—which is buried in her footnotes. One will look for something better from this scholar.

In his ″Modernizing Cairo: A Revisionist Narrative,″ Khaled Fahmy gives us the sort of tour de force we have come to expect from this scholarly virtuoso, a skilled and gratifyingly readable overview of the legal and bureaucratic apparatus that was so busily transforming al-Maḥrūsah before 1882. His punctilious reliance on archival material leads to at least one strange statement, however, an assertion that the cemetery of Sayyidah Nafīsah″ stopped receiving bodies for burial in the 1870s″ and ″was replaced by the Imamein cemetery south of the Aqueduct.″ In reality, interments at the Sayyidah Nafīsah cemetery continued—I myself saw several between 1964 and 2002—and the Qarāfat al-Imamayn, otherwise known as the Southern Cemetery, had already been a burial ground since the Abbasid era.

His narrative in general, however, is a star performance, well written, rousing, and sound. He does not embark upon it, though, without setting up a straw horse or two—the idea that ″modern″ Cairo was the creation of Ismāʻīl and that the entire inspiration for it came from his and ʻAlī Mubārak′s visit to Haussmann′s Paris in 1867—then cunningly knocking them down. Unfairly, he ascribes such notions to Janet Abu Lughod. But no serious historian of al-Maḥrūsah, including Abu Lughod, has ever believed that ″modernization″ commenced only with Ismāʻīl; and Haussmann′s influence is patent in the ″ambitious thirty-four article plan″ that was submitted to Ismāʻīl by ʻAlī Mubārak, as Fahmy himself observes, immediately after the latter′s return from Paris. Even if very little of the plan was actually subsequently implemented, it is clear that both Ismāʻīl and Mubārak found the speed and style of Haussmann′s transformations exciting. Both, after all, had known Paris in the 1840s, when much of the Ville Lumière was still composed of

fœtid medieval warrens as yet without such urban amenities as sewerage or abattoirs, a city walled (newly, under the Thiers government), but otherwise by no means unlike Cairo.

The major difference would have been in provision for wheeled traffic. No essay in this book notes that when the French landed in 1798, Egypt was a country virtually without wheels or the fact that every major intervention in the historic zone from the reign of Muḥammad ʻAlī to that of Fu'ād was primarily intended to facilitate the movement of wheeled traffic. These interventions included the shift, by seven meters (not thirty, as Bierman says), of the *zāwiyah* of Faraj ibn Barqūq to the south side of what is now Sh. Aḥmad Māhir.

Nairy Hempikian's magisterial chapter, "Medievalization of the Old City as an Ingredient of Cairo's Modernization: The Case of Bab Zuwayla," examines this move in due course during her analysis of the Comité's work at Bāb Zuwaylah, an analysis informed by her own labors there and elsewhere in the historic zone as an architectural conservationist. Exemplary in nearly all respects, even Hempikian can misread evidence at hand. The fact that the "Palais d'Egypte" at the Paris Exposition of 1900 included Pharaonic elements for the first time at any such an event does not show that European interest in Ancient Egypt was being replaced by interest in contemporary life, but rather the reverse. As Cairene life became more Westernized and less "exotic" (see above), Western tourists became increasingly more interested in Pharaonic monuments than in local culture. This trend, given a big boost by King Tut in 1922, has of course continued; and thanks to "packaging" and a shortage of parking lots for buses, very few Western tourists now see anything of Cairo's historic zone, while multitudes go gawking in Luxor and Aswan or content themselves with beach resorts. What is also in question here, of course, is the motives for architectural preservation. In Europe this question need never even be asked. In Egypt since the demise of the Comité, however, except among architects and historians, the only motive one usually hears for preserving Cairo's historic zone—a unique medieval urban complex almost the size of Venice—is Tourism.

Hempikian's survey of the Comité's work at Bāb Zuwaylah, which rightly ignores this motive, is authoritative and refreshingly concrete. Her study was intended, as she says, to counter "hasty conceptual and political judgments on its activities," judgments or prejudices of the sort, in fact, that lurk in the background of other chapters in this collection, which have a heavy ideological coloring. The Bulletins of the Comité, as she points out, are a treasure-house of accurate information. (The complete series is now available on-line, but unindexed.) "The love and care," she says, moreover. which was transmitted to these monuments through the work of the Comité, the meticulous professionalism by which its members worked, and their sincerity is often under-appreciated. Furthermore, the

seriousness with which these people approached their work is only apparent when one follows its line of thinking with regard to a single structure over a number of years.

She is critical, needless to say, of the insistence of the Comité on restoring monuments to their *aspect primitif*—an aim despised in current conservationist theory—but applauds the Comité for the rest of its program, especially its documentation. Under Ismāʿīl it necessarily employed strategies that paralleled those of Mubārak′s Ministry of Public Works in other parts of Cairo. but its standards and practices were far ahead of the norms pertaining generally in Europe and America.

The final chapter, May el-Ibrashy′s ″The Cemeteries of Cairo and the Comité de Conservation,″ looks at the Comité from a slightly different angle. Apart from the curious convictions that it was founded only after ″extensive lobbying . . . by the European community″ (whatever that may have been) and that its major motive was to encourage European tourism, her essay is solid and workmanlike. She corrects, for example, Khaled Fahmy′s comment on the Sayyidah Nafīsah and Imamayn cemeteries (see above) with information about what actually happened both on and under the ground. The cemeteries have, of course, always been lived in and have been traditional sites of periodical festivities, as cemeteries normally were in the Hellenistic and Roman worlds and in Romanized Europe down to at least the thirteenth century. What this fact means is that the present relative crowdedness in the old cemeteries of Cairo is not due to a poor and under-housed populace being suddenly forced to find new habitation in strange places, but to sheer steady population growth, which has also increased the number of the dead, the richer of whom wanted to be interred in large walled permanent structures that occupied more and more of what had formerly been open space. El-Ibrashy discusses some of the differences between shrines—few of which, having been constantly refurbished, possess any architectural beauty and many of which are not now in any cemetery—and other kinds of monuments, but omits mention of funerary structures such as the Ḥawsh al-Bāshā, the mausoleum of Tawfiq Pasha, or the tomb of Sulayman Pasha, which are not shrines and are not aesthetically distinguished, but possess extraordinary historic and technical interest.

This book is as remarkable for what is left out as for what it contains. Wheeled traffic is one important missing item. (The so-called ″traditional″ crafts of wheel-making and cart-making in Egypt were entirely nineteenth-century creations, based upon models imported from Turkey, France, England, and Austria. The high-wheeled cart used for moving stone is still referred to locally as a *faransawī*.) One also wonders why the most obvious and important of all recent colonialist ventures in Egypt—the British Occupation—is never even alluded to. I′d have liked to see a specific consideration of the Mamluk inheritance, not only the remnants of the

historic zone, but also the neo-Mamluk architectural style that became the signature of the Muḥammad ʻAlī dynasty. And although the Comité comes in for a certain amount of post-colonialist *afrangī*-bashing, inspired largely by Donald Malcolm Reid, no one touches upon the high-handed depredations that instantly ensued after the Comité was dissolved and that continue to this day: future historians will find it very difficult in relation to many other architectural complexes to duplicate Nairy Hempikian's history of Bāb Zuwaylah because the necessary documentation will be missing and the physical record will have been altered beyond recuperation. The paradoxical fixation in much of this book on what are supposed to be European attitudes, finally, as if they possessed some sort of validating secret for good or for ill, is bemusing. The attitudes in question are not always well defined or understood, for one thing, and obsession with them excludes much of what Cairenes themselves have had to say, quite often passionately and intelligently (e.g., al-Maqrīzī), about their city.

KHALĪL IBN AYBAK AL-ṢAFADĪ, *Ikhtirāʻ al-Khurāʻ*, edited by Fārūq Aslīm (Damascus: Ittiḥad al-Kuttāb al-ʻArab, 2000). Pp. 142.

REVIEWED BY VANESSA DE GIFIS, University of Chicago

THE PRIMARY WORK

Al-Ṣafadī is perhaps best known for his massive biographical dictionary, *Al-Wāfī bi-al-Wafayāt,* but he also wrote extensively in other literary genres, such as rhetoric and poetry.[1] His *Ikhtirāʻ al-Khurāʻ* belongs in this last category, and, as Brockelmann has indicated, is a tongue-in-cheek parody of poetical analysis.[2] *Ikhtirāʻ* can mean inventing, breaking, and deceiving, among other possibilities; *khurāʻ* means madness, or a disease that afflicts a camel whereby she collapses. Both words share the root *kh-r-ʻ*, which has the sense of limpness or laxity. Combining these various connotative elements, we are faced with a title that foreshadows the playful mood of the work.

The premise of *Ikhtirāʻ al-Khurāʻ* is an imagined *majlis* in which someone composes two absurd verses of poetry, which are then analyzed. The resulting

---

[1]For example, *Jinān al-Jinās fī ʻIlm al-Badīʻ; Faḍḍ al-Khitām ʻan al-Tawriyah wa-al-Istikhdām; Al-Kashf wa-al-Tanbīh ʻalá al-Waṣf wa-al-Tashbīh.*

[2]Carl Brockelmann, *Geschichte der Arabischen Litteratur* (Weimar and Leiden, 1898–1949), S2:29; rev. ed., 2:33.

sharḥ is divided into six topics: 1) language *(lughah),* 2) parsing *(iʿrāb),* 3) meaning/syntax *(maʿná),* 4) style *(badīʿ),* 5) meter *(ʿarūḍ),* and 6) rhyme *(qāfiyah).* Through this concocted *sharḥ,* al-Ṣafadī parodies contemporary commentary on poetry. His parody targets scholars of Arabic grammar, figurative rhetoric, meter, and rhyme, and incorporates jokes about historians, philosophers, physicians, and politicians.

Clever parody and wordplay pervade every part of *Ikhtirāʿ al-Khurāʿ*. Even the opening formula is a play on the *basmalah: bismihi subḥānahu ʿazza sha'nuh* (p. 27). Then the name of the man al-Ṣafadī imagines as the narrator of this *sharḥ* is hilarious: Abū Khurāfah al-Hudhā' means ″the father of superstition, delirium.″ This name suggests al-Ṣafadī′s estimation of the pedantic intellectualism for which this character appears to be a satirical personification. Other names that appear in the text are also occasions for comedy, e.g., Naṣīr al-Dīn Abū al-Hazā'im, ″the helper of religion, father of defeats″ (p. 28), the components of which (help and defeat) seem incompatible. Also, formulae following names are humorous, e.g., ″the commentator, may God forgive him *(ʿafá Allāh ʿanhu),* said . . .″ (p. 30).

Al-Ṣafadī deliberately confuses historical figures (e.g., his saying that ″al-Saffāḥ [was] the first of the caliphs of the Umayyads″ [p. 73], while in fact he was the first of the Abbasids), as well as authors (e.g., his claiming that Ibn Miskawayh wrote *Kitāb al-Lumaʿ* and Ibn Jinnī wrote *Kitāb al-Fawz al-Akbar* [p. 51], while in fact the reverse is true).

Al-Ṣafadī justifies false statements with further false statements or impertinent true ones, demonstrating how erroneous information and reasoning can be made to seem sound if presented in a consistent manner or woven into an apparently obvious argument. For example, in parsing the preposition *fī* (in), al-Ṣafadī contradicts the rules of grammar by explaining that it is a noun, and he proceeds to furnish examples of how this ″noun″ may be used with the definite article, with *tanwīn,* and in an *iḍāfah* (pp. 54–55). In another example, he defines a word by adding inappropriate information to the right definition: ″[a mirror] is that in which one sees his own face if [the mirror] is in his pocket″ (pp. 31–32). While the reflective nature of a mirror is correctly described, the additional criterion that it is in a pocket is not a definitive feature of a mirror, and so the proper definition of mirror is falsely qualified.[3]

This combination of truth and falsehood, soundness and absurdity, is the basic thrust of the work as a whole. Given absurd verses, a commentator can apply a

---

[3]The inclusion of this discussion of a mirror is inappropriate in itself, for it is introduced in the context of the word *mar'ah* (woman), which al-Ṣafadī relates to the word *mir'āh* (mirror). Though these two words appear at first glance to share the same root, they do not. The root of *mar'ah* is *m-r-'*, while the root of *mir'āh* is *r-'-y*.

sound analytical method to arrive at an appropriately absurd commentary, wherein the contents and conclusions of the analysis, though nonsensical, take on a respectable image thanks to the methodical presentation. Intellectual propriety lends an air of legitimacy to the absurd. Yet this does not read like a somber critique on scholarship; rather, it is a light-hearted jab at pedantry. Since al-Ṣafadī has, in other works, dealt seriously with the science that he parodies here, we are assured that the analytical method itself is not being totally debunked; rather, we see that a respected method is playfully employed in the service of comedy. Al-Ṣafadī is aware of his ridiculous activity and aims precisely for such ridiculousness as an achievement in cleverness. Indeed, in the opening section, al-Ṣafadī writes: ″[these two verses] require a commentary to join them in strangeness″ (p. 28). In other words, the goal of the work is to create a commentary of equal absurdity to the verses themselves. Just like the verses, the commentary comes in the form of a legitimate art/science, while the content is in fact nonsense.

The scenario he has constructed seems like the kind of thing we can imagine a group of scholars doing for a good laugh, having a bit of fun with their skills. Rather than being a mockery of a serious undertaking, we are witnessing a deliberately joking endeavor that is undertaken with full knowledge of the ridiculousness of the task and its results. In light of such absurdity, the fun itself justifies the exercise. It is really a self-parody on the part of the invented *majlis,* and indeed on the part of al-Ṣafadī himself, who is the real voice represented in the *majlis*. Elaborating on the absurd as if on something serious reflects the impulse of the expert to do what he does best. As al-Ṣafadī says, ″the bow is given to him who knows how to shape it″ (p. 28).

Parodying scholarly method requires serious knowledge of the method parodied. Al-Ṣafadī possesses this knowledge, as his other, more sober, literary works attest. Yet even the less educated can enjoy *Ikhtirāʿ al-Khurāʿ*. Although some of the information with which al-Ṣafadī plays is specialized, a good deal of the subjects, such as lexical items and popular historical figures, are well known to a wider audience; therefore, the jokes played with them can be readily identified. For example, al-Ṣafadī defines the word *layl* (night) as the time between the rising and the setting of the sun (p. 39), which is, of course, the opposite of its real definition. One need not be a learned littérateur to understand and appreciate this and similar jokes. It is possible that al-Ṣafadī intended his audience to consist of scholars and non-scholars alike, and so wrote this work with something for everyone.

Al-Ṣafadī′s precision in parodying grammar, semantics, logical argumentation, all in the context of poetical composition, is possible only because he is well trained in these practices and he is intimately familiar with those who also engage in it and their methods and attitudes. His own poetic skill makes his play on the discipline of poetical criticism all the more effective. The parody pokes fun at

literary analysts, and therefore equally targets al-Ṣafadī himself, who is a willful participant in such analysis. It is this implicit self-parody that most tickles the reader. This short book is a delightful testimony to al-Ṣafadī´s erudition, his intellectual independence, his critical insight into formal scholarship, and above all his clever sense of humor.

THE EDITORIAL WORK

This edition of *Ikhtirāʿ al-Khurāʿ* is based on two photocopied manuscripts. One is at the National Library in Tunis, MS 3742, and is complete. The other is at the Chester Beatty Library, MS 5200, and has three sizable lacunae. The former is dated 1167 A.H., while the latter lacks dating. Through an analysis of the marginal notes, which elaborate upon some of the more subtle and obscure satirical remarks, Aslīm concludes that these two manuscripts are either both derived from a shared source, or that one of them is derived from the other. Aslīm treats MS 3742 as the *aṣl* on account of its completeness. At the end of his introduction, Aslīm provides some photocopy images of both manuscripts.

In the introduction, the editor provides a brief biography of al-Ṣafadī, gathering biographical information from modern secondary works on the author, as well as from primary sources, including some of al-Ṣafadī´s own writings. Aslīm lists al-Ṣafadī´s teachers in poetry, language, *fiqh,* and political and prophetic history. He points out that al-Ṣafadī had a reputation for attacking the writings of his contemporaries (p. 7). This point is appropriate in light of the nature of *Ikhtirāʿ al-Khurāʿ,* which pokes fun at contemporary scholarly treatments of poetry. At the same time, al-Ṣafadī was accused of having pilfered the poetry of his teacher Ibn Nubātah.

Although Aslīm mentions al-Ṣafadī´s teachers, he does not give any details about the relationships he had with them. Moreover, he does not orient al-Ṣafadī´s work in the larger context of Mamluk literary activity, so we do not get an idea of how innovative a work like *Ikhtirāʿ al-Khurāʿ* may have been when it was composed. Joking and wordplay were not unique to al-Ṣafadī, but Aslīm does not give any indication of such activity among al-Ṣafadī´s contemporaries.

Aslīm´s list of the works of al-Ṣafadī that have been edited and published numbers seventeen; his list of the unpublished works numbers twenty-three. This list of works, though not entirely comprehensive, clearly reflects the diverse interests of al-Ṣafadī, which included poetry, epigrams, rhetoric, linguistics, and *adab.* Listed as unpublished is *Al-Tanbīh ʿalá al-Tashbīh,* which, as Everett Rowson has noted, must be either the *Kashf* that Rowson reviews or an earlier version thereof.[4]

[4]Everett K. Rowson, review of *Al-Kashf wa-al-Tanbīh ʿalá al-Waṣf wa-al-Tashbīh*, ed. Hilāl Nājī and Walīd ibn Aḥmad al-Ḥusayn ibn ʿAbd Allāh al-Zubayrī, *Mamlūk Studies Review* 8, no. 1

The *Kashf* was published in 1999, a year earlier than *Ikhtirāʿ al-Khurāʿ,* which is recent enough to excuse Aslīm for not acknowledging its publication in his own edition. *Rumūz al-Shajarah al-Nuʿmānīyah* is listed here, although Franz Rosenthal has pointed out that the attribution of this work to al-Ṣafadī is false.[5] Not listed is al-Ṣafadī's *Tawshīʿ al-Tawshīḥ*, a *muwashshaḥāt* work, which would have been a suitable addition to the list for illustrating al-Ṣafadī's poetical activity.

Aslīm confirms the authorship of *Ikhtirāʿ al-Khurāʿ* with Ḥājjī Khalīfah (pp. 9–10). He does not, however, confirm this with any indication to internal evidence in the text itself. Nonetheless, it is widely accepted that this is indeed a work of al-Ṣafadī.

Aslīm contrasts the satire of al-Ṣafadī to that of al-Maʿarrī (d. 449), saying that while both men are steeped in intellectual culture and rely on a rich literary heritage, al-Ṣafadī is not as serious as al-Maʿarrī in his satire, opting to take a more humorous approach to mocking contemporary intellectual production (p. 11). I agree with this observation. *Ikhtirāʿ al-Khurāʿ* does not exude the pessimistic misanthropy that we sense in the works of al-Maʿarrī.

The edition of the work is well executed. There are copious footnotes, in which Aslīm indicates variations and marginal glosses in the manuscripts and explains many of al-Ṣafadī's jokes. Many of the marginal notes in the manuscripts identify historical figures, define lexical items, and attribute poetic citations to the correct composers. The editor provides his own glosses in the absence of marginal notes, or to supplement or correct marginalia. These glosses offer valuable information that is necessary to fully appreciate the irony and mockery of al-Ṣafadī's jokes. Also in the footnotes are occasional references to other primary sources, such as biographical dictionaries and literary works.

The end matter consists of a bibliography and indices for individuals, groups, places, books, and poetry. The bibliography is arranged alphabetically by title, and includes primary and secondary sources in a single list. The index of names includes real people as well as those whom al-Ṣafadī invents; the invented names are marked with an asterisk. Most names are listed according to the given name or *nisbah,*[6] and cross-listings are provided when necessary. Death dates are not provided. The index of books is arranged by title, followed by the author's name. The index of poetry includes the opening words of a verse, the *qāfiyah,* the number of lines, and the names of both the actual poet and the person to whom the poetry is attributed, when applicable.

REVIEWED BY PETER HEATH, The American University of Beirut

This is an interesting and useful book, within the rather significant limitations that its author, a professor of Mamluk and Ottoman literature at Tishrīn University in Syria, himself acknowledges. It would be more fitting if the two parts of the title were reversed, since the intent of the book is to study the corpus of prominent Sufi poets from late Ayyubid, Mamluk, and Ottoman times and through these works to offer an introduction to their theories of mysticism. The utility of this study is that rather than present these theories as derived from prose texts of these and other authors, the book at least attempts to study them as presented in their poetry first and to refer to prose works secondarily. This approach may be expected in the case of a poet such as Ibn al-Fāriḍ (d. 1235/632), but it is less common among students of his contemporary Ibn ʿArabī (d. 1240/638), whose ideas are usually studied based mainly on his prose works. In addition to these two writers, the book focuses on three others: al-ʿAfīf al-Tilimsānī (father of the poet Ibn al-ʿAfīf; d. 1291/690), al-Būṣīrī (d. 1297/697), and ʿAbd al-Ghānī al-Nabulusī (d. 1143/1731). Other poets and mystics from these periods are mentioned but more in passing than in detail.

The book is perhaps more a series of linked essays than a cohesive study. Individual sections are dedicated to presenting and analyzing the poetry of the five poets mentioned above. These sections are framed by rather general sketches of Sufism as practiced at the time, mention of secondary poets, and some analysis of such important poetic motifs as wine or praise of the prophet Muḥammad. As such the book does provide introductory accounts of the poetry and the ideas of these major writers, but its scope does not extend beyond this. As the author himself admits in his preface, this work is only an "initial preparatory study" *(tawṭiʾah)*.

While there are advantages to starting with poetry rather than with prose compositions, the more inquiring or ambitious reader is left unfulfilled. For one thing, although the book relies on primary sources it hardly refers to any secondary study, in Arabic or a Western language, on any of these writers. The author, it seems, is either working in an intellectual vacuum or assumes from his readers prior acquaintance with secondary sources. Second, each of the major poets presented easily deserves full-length individual study that more thoroughly examines his poetry and how the ideas presented therein relate to his theories or the ideas of others. Finally, with the exception of an excursus on the motif of wine, there is

little literary analysis of any kind, traditional or contemporary, in this book. Hence, poetry is reduced to representation of theory rather than as a mode of expression in itself.

With these caveats, which will be major or minor depending on the level of knowledge of the reader, the book does serve its introductory purpose. Nonetheless, it also whets one′s appetite for a more penetrating analysis of mystical poets from these neglected ages.

Fahmī ʻAbd al-ʻAlīm, *Al-ʻImārah al-Islāmīyah fī ʻAṣr al-Mamālīk al-Zharākisah: ʻAṣr al-Sulṭān al-Mu'ayyad Shaykh* (Cairo: Wizārat al-Thaqāfah, al-Majlis al-Aʻlá lil-Āthār, 2003). Pp. 388.

Reviewed by Nasser Rabbat, Massachusetts Institute of Technology

This book is a monograph dealing with the architectural oeuvres built in Cairo (plus one industrial building in al-Ashmunin) during the reign of the Circassian Mamluk sultan al-Mu'ayyad Shaykh (1412–21). It surveys twenty-six structures, ranging from the monumental Mosque of al-Mu'ayyad Shaykh to two sultanic *basātīn* (sing. *bustān,* i.e., a large garden). Three madrasahs among the surveyed structures were built by officials in the court of al-Mu'ayyad Shaykh: Amir Qānī Bay al-Muḥammadī, Amir Fakhr al-Dīn ibn ʻAbd al-Ghanī, and the qadi (judge) ʻAbd al-Bāsiṭ ibn Khalīl. The sultan himself presumably endowed the rest of the structures since they are all, with one exception, listed in his *waqf* document. They consist of two mosques, one *khānqāh,* one *bīmāristān,* two *ṣihrīj*s (water tank, or possibly *sabīl-kuttāb* complex), one *ḥammām,* one *wikālah,* one *ṭibāq* (residential units) above the Zuwayla Gate, a series of shops, and a sugar factory, in addition to five items identified as *makān* (place) and four as *binā'* (construction). Only the non-extant Manzarat al-Tāj wa-al-Khams Wujūh (Belvedere of the Crown and the Five Faces), rebuilt by al-Mu'ayyad Shaykh in 1420, is not listed in the *waqf.* The author extracted its description from al-Maqrīzī′s and ʻAlī Mubārak′s *Khiṭaṭ*s.

The survey is followed by two comparative and typologically-organized studies: one on the architectural elements and another on the decorative patterns of the structures of al-Mu'ayyad Shaykh. In both studies, ʻAbd al-ʻAlīm extends his purview to famous examples in Islamic history. His main concern is to establish provenance, precedence, and development of the elements he identifies as characteristic of the Circassian Mamluk architecture of the age of al-Mu'ayyad

Shaykh. His knowledge of these structures is amply displayed: he is clearly someone who has examined their minutest details very thoroughly and had access to those upper parts and closed spaces in them that are usually unavailable to other visitors. The most valuable section in this chapter is the one that lists the inscriptions in the four main monuments examined: the Mosque of al-Mu'ayyad Shaykh and the madrasahs of Amir Qānī Bay, Amir Fakhr al-Dīn ibn ʻAbd al-Ghanī, and Qadi ʻAbd al-Bāsiṭ. One drawback, however, is that no attempt is made to illustrate any of these inscriptions, nor is any explanation offered for the choice or the significance of their content.

The next chapter is perhaps the most interesting to Mamluk historians. It contains the entire text of the general *waqf* of al-Mu'ayyad Shaykh, redacted during his lifetime in 1420, minus the substantial part on the *waqf*s in Syria (135 lines out of a total of 954 lines), which ʻAbd al-ʻAlīm unfortunately excluded because it falls outside the scope of his study. The *waqf* text is followed by several glossaries: first, of the architectural terms in the *waqf;* second, of titles and offices; third, of *waqf* terms; fourth, place names; fifth, measures and scales; and sixth, names of cities and villages. The value of this section is less in its new or historically precise readings of the terms and more in its grouping of these terms in the context of one document. The book closes with a bibliography of both Arabic and English sources, 150 relatively clear black and white illustrations, and a hodgepodge of badly reproduced line drawings of plans, sections, and maps copied from various sources and left in their variegated scales and techniques of representation. The drawings are in fact mostly unusable, even in the case of the maps, which are supposed to offer new information on the location of some no-longer-extant structures of al-Mu'ayyad Shaykh.

Fahmī ʻAbd al-ʻAlīm worked for many years in the Egyptian Supreme Council of Antiquities, first as inspector and finally as director in the Section of the Islamic and Coptic Antiquities of Cairo. This has lent him a great familiarity with the monuments of Cairo and a hands-on knowledge of their recent past and current status, especially after the frenzy of restoration that swept the city in the last ten years and irretrievably changed the appearance of many of its premier structures. ʻAbd al-ʻAlīm had also written an unpublished master's thesis on the Mosque of al-Mu'ayyad Shaykh in 1975 (no doctorate is mentioned although he is identified as Dr.). This indicates that his interest in the architectural work of this sultan is long-lasting and that he has had the time to revise and fine-tune his student-days observations on al-Mu'ayyad's masterpiece. Only some of these expectations are met in the book under review, which was published in 2003, namely the detailed descriptions of the monuments and their present topographical surroundings, while others are strangely missing or only perfunctorily mentioned. The most glaring lack is in the English-language bibliography, which, besides

being severely incomplete, seems to stop in 1970 (the only exception is Doris Behrens-Abouseif's book on the minarets of Cairo, published in 1985). The Arabic bibliography is only slightly better. It includes a few entries from the 1980s, but nothing later, although a large number of monographs on the Mamluk monuments of Cairo have been published in the last decade, of which the book under review is but one example.

In fact, *Al-'Imārah al-Islāmīyah fī 'Aṣr al-Mamālīk al-Zharākisah* thoroughly exhibits three main conceptual problems encountered in a contemporary type of Egyptian scholarship on Islamic architecture, so that we can use it to illustrate them here. The first is that, notwithstanding the inclusion of photos and line drawings, the study of buildings is primarily textual and is reminiscent of the medieval method and language of historical and *khiṭaṭ* tracts. No use is made of the figures to comprehend or question an aspect of a building. They play an illustrative role to the descriptive passages in the strictest sense and add no information on their own. The second is that architectural history, whether it be presented synchronically as in this book or diachronically as in many other studies, is depicted essentially as an endogenous development suffused with self-conscious nationalism (sometimes expressed as pan-Islamism), which unfolds over time with minimal interaction with the outside world. The third drawback is the absence of critical interpretation that would contextualize the architecture and use it to throw some light on the social, intellectual, economic, political, or ideological factors that contributed to its production and were in turn affected by it. The short (8 pages) introduction of the book under review purports to address these connections, but ends up only repeating some banal, and hugely debated, remarks on the Mamluk class structure and the economic and artisanal basis of the country's wealth.

This is very different from what we expect from a contemporary study on architectural history in Western academe. Why is this so?[1] And how did this difference obtain, especially given that art and architectural history as fields of study were introduced to Egypt and the rest of the Islamic world by Western scholars and via Western academic training and influence? Many explanations can be proposed, but the most important one in my opinion is the rising intellectual split in Islamic studies (and scholarship in general) between the Islamic world and the West that has been intensifying in recent years. Analyzing this situation, a

---

[1]This is not the first time that reviewers for *MSR* have confronted these issues when reviewing contemporary Mamluk studies published in Egypt. Two examples are: Stephan Conermann's review of N. Maḥmūd Muṣṭafá, *Al-'Aṣr al-Mamlūkī min Taṣfiyat al-Wujūd al-Ṣalībī ilá Bidāyat al-Hajmah al-Ūrubbīyah al-Thāniyah, MSR* 4 (2000): 257-60, and Nasser Rabbat's review of Ḥusnī M. Nuwaysar, *Al-'Imārah al-Islāmīyah fī Miṣr: 'Aṣr al-Ayyūbīyīn wa-al-Mamālīk, MSR* 5 (2001): 205-8.

tempting and pressing endeavor indeed, does not belong in this short review. It requires grounding the argument within the larger issue of an Orientalist predicament loaded with overtones of elitism, cultural and religious misgivings, and a perverse nostalgia for the colonial age, which is countered by reciprocally hostile attitudes in the Islamic world.[2] Suffice it to say that both sides are the poorer on account of this state of affairs, with the scholars in the Islamic world missing much more simply because of the top heavy censorship and the shortage in academic books, journals, and funds for research they must endure.

[2]The predicament of the Arab intellectual in general has been a subject of great concern in progressive contemporary Arabic debates. A sample of recent books is: Samāḥ Idrīs, *Al-Muthaqqaf al-ʻArabī wa-al-Sulṭah: Baḥth fī Riwāyat al-Tajribah al-Nāṣirīyah* (Beirut, 1992); ʻAzīz al-ʻAẓmah, *Dunyā al-Dīn fī Ḥāḍir al-ʻArab* (Beirut, 1996); Muṣṭafá Murtaḍá ʻAlī Maḥmūd, *Al-Muthaqqaf wa-al-Sulṭah: Dirāsah Taḥlīlīyah li-Waḍʻ al-Muthaqqaf al-Miṣrī fī al-Fatrah min 1970-1995* (Cairo, 1998). For a devastating and gratuitously cynical indictment of modern Arab intellectuals, see Fouad Ajami, *The Dream Palace of the Arabs: a Generation´s Odyssey* (New York, 1998).

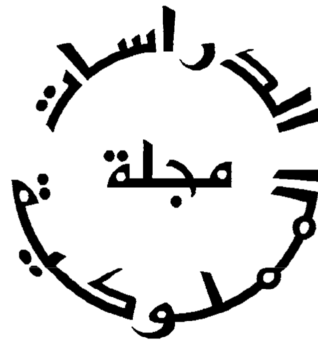
Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	ʼ	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	ʻ				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
اَ	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy



Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before ″sun″ letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʼah, ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʻi, Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

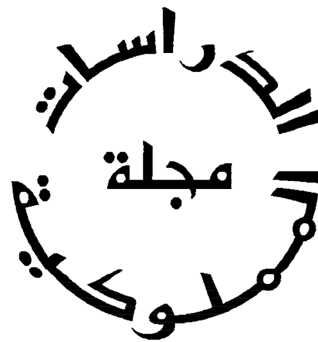
// MAMLŪK STUDIES
REVIEW
Published by the MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. Submissions should be composed with current word-processing software, and if possible should use a Unicode font, such as Charis SIL (see the website below for further information). Submissions may be made via email, but authors must also send a printed copy and a labeled CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.



Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC′s websites, including http://www.lib.uchicago.edu/e/su/mideast and http://mamluk.uchicago.edu. These sites provide links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, and The Chicago Online Encyclopedia of Mamluk Studies, as well as other resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in *MSR*.

ISSN 1086-170X.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA. The editor can be contacted by email at brcr@uchicago.edu.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig
Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2007 Prize, dissertations must be defended by December 31, 2007, and submitted to the Prize Committee by January 31, 2008. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

Previous Prize Winners:
2004: Tamar el-Leithy, Princeton University, ″Coptic Culture and Conversion in Medieval Cairo: 1293–1524.″

2005: Zayde G. Antrim, Harvard University, "Place and Belonging in Medieval Syria, $6^{th}/12^{th}$ to $8^{th}/14^{th}$ Centuries."

Preface

This volume of *Mamlūk Studies Review* is dedicated to the Mamluk provinces, highlighting the rich and diverse lines of inquiry currently being used by scholars working in Bilād al-Shām. While the methodologies and source material used by the authors of the articles in this issue vary considerably, they all share an appreciation for the rural dimension, particularly that of the imperial frontier, and emphasize local and regional cultures and identities. Collectively they suggest ways in which ″the imperial″ alternatively conflicted with and complemented ″the local,″ on the political, economic, administrative, and cultural levels.

The authors represent a variety of disciplines—diplomatic history, art and architectural history, archaeology, and social and economic history—and pull together a wide range of written and material sources underutilized in more traditional, and Egypt-based, Mamluk studies. The cross-disciplinary approach of all the essays suggests alternative venues for future study of the Mamluk empire.

I would like to thank Bruce Craig for the invitation, and challenge, to put together this special theme volume and each of the authors for their contributions.

Making Syria Mamluk: Ibn Shaddād's *Al-A'lāq al-Khaṭīrah*

The consolidation of the Mamluk Empire in Egypt and Syria in the second half of the seventh/thirteenth century provided a new context for what I have called a "discourse of place" among Syrian intellectuals.[1] Representations of Syria and Syrian cities in the Arabic written record, the earliest extant examples of which date back to the geographical literature of the third/ninth century, had proliferated by the turn of the seventh/thirteenth century. This proliferation marked the maturation of a discourse, or an established area of scholarly inquiry characterized by intertextuality and a set of common, if changing, terms and conventions, about "place." The concept of place has been subject to increasing scrutiny in the past few decades in the fields of geography, anthropology, and literary criticism, a scrutiny that has generated complex and varied theoretical frameworks for understanding the human relationship to physical, economic, social, political, and cultural environments.[2] In this article, however, place is defined simply as a locality, most often a town or region, represented in writing. Since representations are, by their very nature, constructed and contingent, this definition of place implies a relationship between the representer and the locality being represented. In other words, some type of belonging, often but not limited to that of the resident or native, is always tied up with the representation of a locality. To participate in the discourse of place in and about medieval Syria, therefore, was to evoke various categories of belonging by composing geographies, topographies, local histories, or other works from established genres of Arabic literature that treated the locality as their prime focus.[3]

---

[1]See my "Place and Belonging in Medieval Syria, 6th/12th–8th/14th Centuries" (Ph.D. diss., Harvard University, 2005).

[2]See, for examples, Erica Carter, James Donald, and Judith Squires, eds., *Space & Place: Theories of Identity and Location* (London, 1993); James Duncan and David Ley, eds., *Place/Culture/Representation* (London, 1993); Steven Feld and Keith H. Basso, eds., *Senses of Place* (Santa Fe, 1996); Paul C. Adams, Steven Hoelscher, and Karen E. Till, eds., *Textures of Place: Exploring Humanist Geographies* (Minneapolis, 2001); and David Jacobson, *Place and Belonging in America* (Baltimore, 2002).

[3]The other genre of Arabic writing most commonly used by participants in the discourse of place was a branch of literary anthology listing the *faḍā'il* ("merits") of a town or region. For more on *faḍā'il* literature in general, see R. Sellheim, "Faḍīla," *The Encyclopaedia of Islam*, 2nd ed., 2:728; and Ernst August Gruber, *Verdienst und Rang: Die Faḍā'il als literarisches und gesellschaftliches*

Appearing after a period of more than a century distinguished by the active production of written representations of Syria and Syrian cities, the multi-volume historical topography *Al-Aʻlāq al-Khaṭīrah fī Dhikr Umarāʼ al-Shām wa-al-Jazīrah* (Valuable and important things on the subject of the princes of Syria and the Jazīrah), composed by the Aleppan scholar ʻIzz al-Dīn ibn Shaddād, marked a major shift in the discourse of place. Ibn Shaddād's work subsumed the territorial referents for belonging evoked by earlier participants in the discourse, such as Ibn ʻAsākir's Damascus or Ibn al-ʻAdīm's northern Syria, into a new territorial referent for belonging, a unified "al-Shām" increasingly integrated into the broader geopolitical context of Mamluk rule.[4] What made the *Aʻlāq al-Khaṭīrah* unique in the discourse of place up to its time was that it represented the region of Syria through topographies of *both* of its major cities, Damascus and Aleppo, as well as through descriptions of its secondary towns and rural areas, while making its author's loyalty to a regime based in Cairo explicit throughout. Thus, the political and military history of the first decades of Mamluk rule in Syria is inseparable from the new direction in which Ibn Shaddād's *Al-Aʻlāq al-Khaṭīrah* took the discourse. It was Mamluk rule that made Ibn Shaddād's representation of Syria possible, and it was Ibn Shaddād's representation that, at least in the discursive sense, made Syria Mamluk.

The Historical Context

By the second half of the seventh/thirteenth century, the experience of decades of Ayyubid infighting, persistent Crusader aggression, and a devastating Mongol invasion had created an increasing sense of vulnerability among Syrians, many of whom must have looked to the early Mamluk sultans, despite their origins as slave-born usurpers, for relief. Indeed, after sacking Baghdad and killing the Abbasid caliph, a Mongol army under the leadership of Hülegü, grandson of Genghis Khan, marched into northern Syria in the winter of 658/1259–60 and occupied Aleppo. Having negotiated secret deals with several remaining Syrian Ayyubids, including an off-and-on relationship with al-Nāṣir Yūsuf, prince of Aleppo and Damascus, the Mongol advance southward in Syria met little resistance. Over the next six months, the Mongols set up a skeleton occupation of Damascus and embarked upon a mission of looting and terror in the districts of Palestine and Jordan. The Mamluk sultan in Cairo, Quṭuz, after reconciling with his rival and commander of the formidable Baḥrīyah faction, Baybars, mobilized an army to

confront the Mongols in Syria. The historic confrontation occurred at a Palestinian site called ʿAyn Jālūt in the fall of 658/1260, and the resounding Mamluk victory carried symbolic significance far beyond its practical repercussions. Syria would be harassed for another half century by Mongol forces and, even in the short run, would see violent confrontations between Mongols, Mamluks, and Crusaders on its soil. Nevertheless, the Battle of ʿAyn Jālūt proved for the first time that the Mongols were not unstoppable and helped portray the Mamluk regime as the defender of Syria and of Islam.

When Baybars took over the sultanate soon thereafter, he prioritized the development of a top-notch military machine to keep the Mongols at bay and initiated the renovation and repair of Syrian fortifications and urban infrastructure destroyed by the Mongols. At the same time, he sought to strengthen the regime's legitimacy in the eyes of its Muslim subjects through the installation of an Abbasid puppet caliph in Cairo and the adoption of hard-line rhetoric targeting infidels, both Mongol and Crusader, as its enemies. Under his successors Syria would be stabilized and divided into administrative provinces of a centralized, bureaucratic Mamluk state with its capital in Cairo. By the early eighth/fourteenth century, the last Crusaders would be definitively expelled from the Syrian coast, and the Mongol threat on Syria's eastern borders eliminated for the foreseeable future. It is not difficult to see why many Syrian Muslims welcomed this new "Pax Mamlukia," some like Ibn Shaddād actively pledging their loyalty to the Mamluk sultans by entering their service.

Ibn Shaddād had spent the early part of his career serving the last Ayyubid prince of Aleppo, al-Nāṣir Yūsuf, in administrative posts that required him to travel him all over Syria and to undertake financial and diplomatic missions to the Jazīrah. He even conducted negotiations on behalf of his Ayyubid patron with the Mongols when they occupied Mayyāfāriqīn shortly before invading northern Syria. However, after the Mongol occupation of Aleppo, Ibn Shaddād fled to Egypt and quickly found employment with the new Mamluk sultan Baybars. He returned to Syria again in 669/1271 in the company of the sultan and spent most of the following decade composing the *Aʿlāq al-Khaṭīrah.* When Baybars died unexpectedly in 676/1277, Ibn Shaddād served his successors until his own death in Cairo in 684/1285. Thus, the *Aʿlāq al-Khaṭīrah* was not only among the earliest compositions of the Mamluk era, but it was also the first representation of Syria dating after the Battle of ʿAyn Jālūt.[5]

---

[5]Although, like Ibn Shaddād, Ibn al-ʿAdīm had been in the service of the Ayyubid rulers of Aleppo until he fled to Cairo after the Mongol invasion, where he lived until his death in 660/1262, Ibn al-ʿAdīm's representation of northern Syria, in the form of the topographical introduction to the *Bughyat al-Ṭalab,* was composed in Ayyubid Aleppo and completed by 655/1257 (see David Morray, *An Ayyubid Notable and his World* [Leiden, 1994], 169).

IBN SHADDĀD´S ˝AL-SHĀM˝

As its full title implies, Ibn Shaddād´s *Al-Aʿlāq al-Khaṭīrah* took the territories known by the toponyms ˝al-Shām˝ and ˝al-Jazīrah˝ as the subjects of its representation. When the classical geographers of the third/ninth and fourth/tenth centuries divided the Islamic world by region, or *iqlīm,* both ˝al-Shām˝ and ˝al-Jazīrah˝ figured among the twenty or so regions considered.[6] According to them, the region of ˝al-Shām,˝ often referred to as ˝Greater Syria,˝ ˝Geographical Syria,˝ or the ˝Bilād al-Shām˝ in secondary scholarship but translated here simply as ˝Syria,˝ was bound in the west by the Mediterranean Sea, in the north by the Byzantine Empire, in the north-east by the Euphrates River, in the east and south by the Arabian desert, and in the south-west by the region of Egypt.[7] The early geographers treated the territory to the east of the Euphrates, an ˝island˝ of land lying among its tributaries in north-western Mesopotamia, as a separate region called ˝al-Jazīrah.˝ Though the neighboring Jazīrah would be frequently associated with Syria in the discourse of place, later authors tended to follow the classical geographers in treating the two regions as distinct, if related, territorial entities. In the context of the shifting allegiances and movements of people that characterized the late Ayyubid period, the Jazīrah formed a key corridor connecting northern Syria to the lands and peoples to the east and the north, a corridor that had been featured prominently, for instance, in Ibn al-ʿAdīm´s writing. However, Ibn Shaddād consistently distinguished ˝al-Jazīrah˝ from ˝al-Shām,˝ and there is no sense that the eastern bank of the Euphrates formed a sub-district of Syria in his representation. In fact, as will be discussed below, the *Aʿlāq al-Khaṭīrah* suggested a fundamental shift in the representation of northern Syria, from an orientation toward the Jazīrah to an orientation toward southern Syria as its primary political partner.

At the most basic level, Ibn Shaddād´s *Al-Aʿlāq al-Khaṭīrah* may be distinguished from earlier works in the discourse of place by the detail and balance with which it represented the territory of Syria and its internal divisions. The work is divided into three major sections of more or less equal length and detail: the first dealing with Aleppo and northern Syria,[8] the second with Damascus and southern

Syria,[9] and the third with the Jazīrah.[10] The first two parts of the *A'lāq al-Khaṭīrah,* on Aleppo and northern Syria and on Damascus and southern Syria respectively, may be characterized as the first representation of "al-Shām" that neither situated it in the greater context of the Islamic world nor reflected the perceived or aspired-for regional dominance of Damascus or Aleppo. Instead, despite his Aleppan roots, Ibn Shaddād featured both cities as key focal points of the region of Syria, not as rivals, but as complementary urban nodes. Furthermore, he established the territory surrounding each city as an immediately relevant and integral component of the greater regional entity. In fact, Ibn Shaddād was one of the first authors in the discourse of place to use the terms "bilād al-Shām" and "al-bilād al-shāmīyah," as well as the simple toponym "al-Shām," regularly, underscoring his conception of Syria as a conglomerate of territories and localities. As such, Syria was not reduced to two urban landmarks on which abstract region-wide descriptions or generalizations were superimposed, but was represented as a collectivity of interrelated territorial entities—cities, towns, villages, mountains, and rivers—that together made Syria a comprehensive and inclusive (geographically, if not necessarily socially) referent for belonging.

In the preface to the work as a whole, Ibn Shaddād presented four hadith-based tributes to "al-Shām." Together the first three constituted what can only be described as a gesture toward the deep reservoir of hadith material tapped extensively by authors in the Syrian branch of the discourse of place up to his time.[11] The fourth, however, made explicit the geographical parameters within which Ibn Shaddād conceived the subject of his representation in the *A'lāq al-Khaṭīrah*. Commenting on a hadith from Ibn al-'Adīm's *Bughyat al-Ṭalab fī Tārīkh Ḥalab* in which the Prophet defined the land God blessed as that stretching between al-'Arīsh and the

[11]Ibn Shaddād (Aleppo), 5–8.

Euphrates, an exegetical tradition as good as ubiquitous in earlier representations of Syria, Ibn Shaddād clarified the location of the region's borders in all four directions: "Those who pay close attention to the delimitation of 'routes and realms' specify that [Syria's] southern border is al-'Arīsh, in the direction of Egypt; its northern border is the territory of the Byzantines; its eastern border is the desert from Aylah[12] to the Euphrates; and its western border is the Mediterranean Sea." [13] This description of Syria's borders was reminiscent of that provided by the classical geographers and defined Syrian territory with more specificity than had, for example, Ibn al-'Adīm or Ibn 'Asākir.[14]

Next, Ibn Shaddād drew from al-Ṭabarī's *Tārīkh* and Qudāmah ibn Ja'far's *Kitāb al-Kharāj* to sketch a brief history of the division of Syria during the caliphate of Abū Bakr into four *ajnād* (sg. *jund*).[15] The term *ajnād,* which can be translated as "armies," came to refer directly to the geographic districts in which the original armies of conquest had been based, i.e. Homs, Damascus, Jordan, and Palestine, the former two districts taking their names from their principal cities.[16] Likewise, the fifth *jund,* Qinnasrīn, created under the Umayyad caliph al-Yazīd, and the sixth *jund,* the 'Awāṣim, created under the Abbasid caliph Hārūn al-Rashīd, initially owed their existence to the exigencies of military conflict with the Byzantine Empire but quickly came to signify, particularly in the case of Qinnasrīn, the extension and consolidation of the political and economic administration of Syria in the second/eighth century. The *jund* of the 'Awāṣim, often associated with a further set of frontier outposts, the Thughūr, as in the oft-repeated phrase "al-'Awāṣim wa-al-Thughūr," retained its military purpose and remained more loosely administratively integrated into Syria until much later than the rest of the *ajnād.*[17] By the Saljuq period, however, the Syrian *ajnād* were no longer a political or military reality, and Syrian territory was divided according to the shifting spheres

[13]Ibn Shaddād (Aleppo), 8.

[14]The Ayyubid-era geographer/gazetteer Yāqūt al-Rūmī (d. 626/1229), in his entry on "al-Shām" also provided a more specific description of Syria's borders than those found in works since the great geographical treatises of the third/ninth and fourth/tenth centuries: Yāqūt, *Mu'jam al-Buldān*, (Beirut, 1957–95), 3:312.

[15]Ibn Shaddād (Aleppo), 8–9.

of influence of a succession of sovereigns. Syrian cities served as centers of *mamālik* (sg. *mamlakah*), here best translated as ″kingdoms″ or ″principalities,″ and the Ayyubid period saw an increased regularization of the Syrian *mamlakah* system. In the Mamluk period, the *mamlakah* divisions of the empire′s Syrian territories became more systematized and the structures of provincial government more consistent.[18]

During the first decades of Mamluk rule, however, as the last Ayyubids were being divested of their Syrian holdings, the Mamluk system for Syrian provincial administration was not yet solidified. Thus, Ibn Shaddād′s highlighting of the origins of the *jund* system and his subsequent use of the *ajnād* to organize his representations of northern and southern Syria could be seen as an early Mamluk-era attempt to bring some sort of order to a region that was in marked disorder.[19] This is not to say that Ibn Shaddād′s use of the *ajnād* to organize the *A'lāq al-Khaṭīrah* acted as a policy recommendation for the Mamluk sultans, but it seems possible that Ibn Shaddād aspired to discursive order in making Syria Mamluk, even if the only ordering system at hand was the admittedly archaic *ajnād*. Furthermore, in the absence of contemporary administrative divisions by which to proceed in his representation, Ibn Shaddād′s chapters cataloguing the towns, citadels, and rural areas associated with each of the six *ajnād* allowed him to provide a counterweight to the lengthy stand-alone representations he devoted to the cities of Aleppo and Damascus.[20] Thus, Ibn Shaddād established the geographical parameters and internal structure of the *A'lāq al-Khaṭīrah,* geographical parameters that explicitly demarcated Syria′s borders and an internal structure that used the *jund* system to address each constituent part of the region systematically.

PERSONAL LOSS AND POLITICAL LOYALTY

The second major difference between Ibn Shaddād′s representation of Syria and those prevalent in the discourse of place up to his time lies in the preface to the *A'lāq al-Khaṭīrah* in which Ibn Shaddād personalized his relationship to his native country and highlighted nostalgia as a prime motivation for his composition of the work. Juxtaposed with this evocation of nostalgia was a panegyric to his newfound Mamluk patron in Cairo, Sultan Baybars. Ibn Shaddād′s firsthand experience of

---

[18]For more on the Mamluk ″*mamlakah* system,″ see Nicola A. Ziadeh, *Urban Life in Syria under the Early Mamluks* (Beirut, 1953), 11–24; and Le Strange, *Palestine under the Moslems,* 24–43.

[19]It must be said here, however, that Ibn Shaddād was not the first participant in the discourse of place to feature the obsolete *ajnād* in his representation of Syria. See, for instance, Yāqūt, *Mu'jam al-Buldān*, 3:311–15.

[20]No manuscripts survive of his chapter on the *jund* of Homs, and it may never have been completed, but mention of it occurs in the table of contents Ibn Shaddād supplied at the beginning of the volume on northern Syria. See Ibn Shaddād (northern Syria), 7; and idem, *Description,* 1.

Mongol aggression, which coincided for most Syrians with the shift from the decentralization and instability of Ayyubid rule to the centralization and militancy of Mamluk rule, infused the *A'lāq al-Khaṭīrah* with a sense of personal vulnerability mitigated by political optimism.

Although Syrian authors in the past had composed poetic representations of their hometowns that evoked feelings of nostalgia or homesickness, prose representations of Syrian localities had not generally communicated such explicitly personal perspectives.[21] One exception was Usāmah ibn Munqidh's preface to his monumental anthology of poetry dedicated to loss and place, *Kitāb al-Manāzil wa-al-Diyār,* in which he described his decision to collect such poetry as a strategy for dealing with his own grief after the loss of his hometown of Shayzar in an earthquake in 552/1157.[22] Not unlike Usāmah, Ibn Shaddād explained that the *A'lāq al-Khaṭīrah* was inspired by the destruction of his hometown of Aleppo. However, unlike Usāmah's Shayzar, lost to a natural disaster, Ibn Shaddād's Aleppo—and with it most of Syria—was lost to a political and military enemy against whom retaliation was possible. Consequently, Ibn Shaddād combined nostalgia with a strong statement of political loyalty to Baybars, whose aggressive response to the Mongol occupation restored strong and legitimate Islamic rule to Syria.

On the subject of the sultan, Ibn Shaddād gushed:

> I pastured among his flocks from rainy season to dry season, and I swaggered in the garments of his beneficence. And I made peace with my fate, now that it smiles upon me after the period of its scowling.[23]

However, clearly Ibn Shaddād had not forgotten his previously scowling fate, as

[21]Like Ibn Shaddād, Ibn al-'Adīm fled Aleppo after the Mongol invasion and settled in Cairo. He did return once to Aleppo before his death in Cairo in 660/1262, and on that occasion he composed a poem mourning the Mongols' destruction of his hometown preserved in the as yet incompletely published *'Iqd al-Jumān* of the ninth/fifteenth-century Egyptian historian al-'Aynī. For the manuscript reference and an excerpt from the elegy, see the editor's introduction in Ibn al-'Adīm, *Zubdat al-Ḥalab min Tārīkh Ḥalab*, ed. Sāmī al-Dahhān (Damascus, 1951–68), 1:37–38. However, unlike the *A'lāq al-Khaṭīrah,* neither the *Bughyat al-Ṭalab* nor the *Zubdat al-Ḥalab* features nostalgia or the Mongol invasion in their representations of Aleppo and northern Syria. For earlier Crusader-era examples of nostalgic poetic representations of Syrian cities, see the poems cited in Emmanuel Sivan, "Réfugiés Syro-Palestiniens au temps des Croisades," *Revue des études islamiques* 35 (1967): 135–47.

[22]Usāmah ibn Munqidh, *Kitāb al-Manāzil wa-al-Diyār,* ed. Muṣṭafá Ḥijāzī (Cairo, 1992), 3–4.

[23]Ibn Shaddād (Aleppo), 2.

he continued:

> The reason for my leaving a country in which I passed my childhood and in which I had brothers and friends, a country that I will never forget, even with the passing of time, and the name of which will continue to be repeated by the mouths of inkwells and the tongues of pens, was the entry of the God-forsaken Mongols into my country and their rupturing of the union of Muslims inhabiting it.[24]

Thus, Ibn Shaddād identified Syria with childhood memories, never to be recovered, and the Mongol invasion with the disappearance of Muslim unity in Syrian territories.

After explaining that his composition of a history and topography of Syria sprang from his appreciation for the patronage of the Mamluk sultan, Ibn Shaddād switched back to a nostalgic note, adding that another motivation for his work was the love and longing he felt for his hometown of Aleppo and homeland of Syria. Anthologizing material on the subject of *al-ḥanīn ilá al-awṭān,* or ″longing for homelands,″ had been a conventional practice in the early centuries of Arabic belletristic writing.[25] Harking back to this material, Ibn Shaddād justified his decision to open the *A'lāq al-Khaṭīrah* with a volume dedicated to the topography of Aleppo by quoting 'Abd al-Malik ibn Qurayb al-Aṣma'ī, a philologist of early third/ninth-century Baghdad:

> I have heard a Bedouin say that if you want to know a man, look at the manner of his showing love for his homeland, the manner of his longing for his brothers, and the manner of his crying for what has passed of his days.[26]

Then Ibn Shaddād described his own manner of longing:

> If it were not for the beneficence of the sultan and what God Almighty has made possible for him, I would spend all my time yearning for my homeland, and my soul would have become bewildered. But there is in his benefaction that which makes the

[26]Ibn Shaddād (Aleppo), 3.

> émigré forget his homeland and that which returns one to the prime of his youth.[27]

Ibn Shaddād′s representation of Aleppo as his hometown and Syria as his homeland, a representation infused with nostalgia as well as political aspirations and hopes for the future, revealed a sense of belonging to a territorial entity at once local and increasingly translocal. Ibn Shaddād was, in effect, explaining that he was growing out of his former category of belonging, that of hometown and homeland, and growing into his new category of belonging, that of the Mamluk Empire.

Throughout the rest of the work Ibn Shaddād reinforced the dual motivations for composing the *A'lāq al-Khaṭīrah*, memorializing the losses imposed upon Syria by the Mongols and celebrating the future of Syria as part of a Mamluk state under Baybars. The volume on Aleppo is full of premonitions and portents of the city′s destruction by Mongol armies in 658/1260. In one passage a prominent Aleppan Shi'i remembers an ancient prophecy foretelling the ruin of his city:

> When the sultan al-Malik al-Nāṣir Ṣalāḥ al-Dīn Yūsuf began to rebuild the walls and towers of the city of Aleppo and to restore the two markets that had been constructed on the eastern side of Aleppo′s Great Mosque, transferring the silk merchants to one of them and the coppersmiths to the other, one of the notables, chief men, and bigwigs of Aleppo, Bahā' al-Dīn Abū Muḥammad al-Ḥasan ibn Ibrāhīm ibn Sa'īd ibn al-Khashshāb al-Ḥalabī, said to me: ″I am afraid that this prince is the one who settles in [Aleppo], renovates its walls, and restores its markets, only to have it all taken away.″ And that is exactly what happened, as predicted, in the year 658 [1259–60].[28]

Ibn Shaddād′s many descriptions of the destruction wreaked by the Mongols in Syria are often followed by accounts of Baybars′ subsequent rehabilitation of the landscape, as in the following example dealing with the citadel of Damascus:

---

[27]Ibid., 4.

[28]Ibid., 14. Although the skepticism of the Ayyubid prince of Aleppo, al-Nāṣir Yūsuf, implied by the recounting of this prophecy may have been prompted by Bahā' al-Dīn ibn al-Khashshāb′s position as a Shi'i, according to his biography in Ibn al-'Adīm′s *Bughyat al-Ṭalab* he enjoyed warm relations with al-Nāṣir Yūsuf′s grandfather, al-Ẓāhir Ghāzī, who appointed him supervisor of the Mashhad al-Ḥusayn, a Shi'i shrine dating from the Ayyubid period in Aleppo. See Ibn al-'Adīm, *Bughyat al-Ṭalab fī Tārīkh Ḥalab*, ed. Suhayl Zakkār (Beirut, n.d.), 5:2247; Morray, *An Ayyubid Notable*, 72; and Yasser Tabbaa, *Constructions of Power and Piety in Medieval Aleppo* (University Park, 1997), 112.

> When the Mongols seized the country and occupied Damascus, they destroyed its battlements, tore down its towers, and demolished a lot of it. Then when our patron Sultan al-Malik al-Ẓāhir took possession of the citadel of Damascus, he renovated it, rebuilt it, and repaired what the cursed Mongols had destroyed of it.[29]

In juxtaposing the devastation visited upon Syria, particularly upon its urban infrastructure, with the restoration and renovation for which Syrians had the Mamluk sultan Baybars to thank, Ibn Shaddād represented Syria as simultaneously lost to the Mongols and won to the Mamluk Empire.

Ibn Shaddād did not, however, associate depictions of the Mongol invasion with images of salvation and rehabilitation in his representation of the Jazīrah. By the time the *A'lāq al-Khaṭīrah* was written in the mid to late 670s/1270s, Syria had been rid of Mongol occupation for over a decade, but the lands east of the Euphrates were either under Mongol suzerainty or were deserted no-man's-lands that hosted border skirmishes between Mamluks and Mongols through the first decades of the eighth/fourteenth century. Though Ibn Shaddād's Syria, once lost, found itself rescued, his al-Jazīrah remained lost. Ibn Shaddād opened the section on the Jazīrah with the following explanation:

> In what has preceded of our book we have presented an account of Syria and the passing down of its towns from the hands of one king or prince to another. Here, we are awakening sympathy for [Syria] with an account of the Jazīrah and its first and last rulers until the time of its passing out of the hands of Muslims into the hands of the Mongols, may God deliver it from them.[30]

Ibn Shaddād's representation of the Jazīrah in the *A'lāq al-Khaṭīrah,* therefore, was intended as an admonition, a cautionary tale meant to inspire continued vigilance along Syria's eastern borders. Consequently, he portrayed the Jazīrah as a corridor that had been effectively closed off for northern Syria, forcing Aleppo and its surroundings to look elsewhere—namely to the rest of Syria, Egypt, and the Mamluk Sultanate—for sustenance.

HISTORICAL TOPOGRAPHY

In emphasizing the rehabilitation of the Syrian landscape and redemption of the

---

[29]Ibn Shaddād (Damascus), 40.

[30]Ibn Shaddād (al-Jazīrah), 1:3–4.

Syrian people by the Mamluk sultans, Ibn Shaddād produced what may be the first fully integrated historical topography of Syria—in other words, the first detailed physical description of Syria blended with a political and institutional history. The structure and organization of the *A'lāq al-Khaṭīrah* strongly suggest that Ibn Shaddād considered the way Syria ″looked″ a function of its recent history, particularly the history of the architectural patronage of its rulers.[31] A comparison with Ibn 'Asākir′s *Tārīkh Madīnat Dimashq* and Ibn al-'Adīm′s *Bughyat al-Ṭalab* will clarify Ibn Shaddād′s contribution to the discourse of place in terms of historical topography. Whereas both Ibn 'Asākir and Ibn al-'Adīm followed their topographical descriptions of Damascus and Aleppo with voluminous biographical dictionaries of the religious scholars and notables of each city, Ibn Shaddād embedded prosopography and a paean to each city′s scholarly tradition in the topographical description itself through his innovative madrasah chapters; and whereas Ibn al-'Adīm dedicated a separate work, the *Zubdat al-Ḥalab min Tārīkh Ḥalab,* to the recent political history of northern Syria and Ibn 'Asākir satisfied his historiographical impulse with a lengthy chronicle of the early Islamic history of Syria in his introductory volume, Ibn Shaddād combined historiography and topography by explicitly tying political patronage to transformations of the urban and rural landscapes. Furthermore, though neither section survives, evidence from the extant manuscripts of the *A'lāq al-Khaṭīrah* indicates that Ibn Shaddād appended or intended to append lists of the Islamic rulers of Damascus and Aleppo to their topographies.[32] Thus, as the full title of the work, *Al-A'lāq al-Khaṭīrah fī Dhikr Umarā' al-Shām wa-al-Jazīrah,* implies, Ibn Shaddād saw places and princes as inextricably linked.

Ibn Shaddād′s volumes on the cities of Damascus and Aleppo make explicit their large debt to the earlier works by Ibn 'Asākir and Ibn al-'Adīm, thus reinforcing the importance of intertextual authority in producing and reproducing a discourse of place in and about Syria, but reflect an increased attention to the architectural patronage of each city′s elites during Ibn Shaddād′s lifetime, particularly the last Ayyubids and the first Mamluks. Ibn Shaddād opened these volumes with short chapters on the etymology of the toponyms ″Dimashq″ and ″Ḥalab,″ précis of the ancient settlement of the sites, quick enumerations of their gates, and short descriptions of the construction and significance of their citadels. The citadel of Aleppo, commanding such a central position in that city′s topography and playing such an important role as both military fortification and royal habitation,

[32]See Ibn Shaddād, *Description*, xiv–xv; idem (Damascus), 10.

understandably received a longer treatment than that of Damascus.[33] In this treatment, Ibn Shaddād demonstrated the close association of architectural patronage and urban topography that dominated the work as a whole, detailing the building projects initiated at the citadel complex by the Ayyubid prince of Aleppo al-Ẓāhir Ghāzī and his son al-ʿAzīz. These projects included both the renovation of military fortifications and the expansion and elaboration of the palace complex within the citadel, in addition to repairs and improvements made after a fire in 609/1212, until the Mongols′ destruction of the citadel in 658/1260.[34]

From the citadel sections, both topographies move immediately to accounts of the Great Mosques of Aleppo and Damascus and then enumerations of all the other mosques both inside and outside the walls of the two cities. The volume on Damascus reproduces Ibn ʿAsākir′s famous history of the construction of the Umayyad Mosque, as well as his inventories of the other mosques of Damascus, to which Ibn Shaddād simply appended brief enumerations of the mosques constructed since Ibn ʿAsākir′s time.[35] Ibn Shaddād′s main addition to this information was a chapter on the renovations and other building projects sponsored by the Ayyubid princes of Damascus and then by Baybars, including the *awqāf* established by the Mamluk sultan to support scholarly and socioeconomic activities in and around the Umayyad Mosque.[36] He also described four new Friday mosques constructed in the immediate suburbs of the city during the Ayyubid period, testifying to the urban sprawl associated with the influx of immigrants and refugees to Damascus during this period.[37] The chapter on the Great Mosque of Aleppo cobbles together similar information, relying mostly on material supplied by Ibn al-ʿAdīm.[38] However, as the *Bughyat al-Ṭalab* provides no comprehensive list of Aleppo′s mosques in the manner of the *Tārīkh Madīnat Dimashq*, Ibn Shaddād′s mosque list for Aleppo, which consists merely of the name of each mosque, was probably based on his personal familiarity with the city.[39]

The centerpieces of Ibn Shaddād′s urban topographies, however, are without a doubt their chapters on the madrasahs. These chapters, which may have been the first of their kind in the discourse of place, divide the madrasahs of Aleppo and

Damascus by school of law and then provide for each entry the name of the founder and the chief ulama active in the madrasah from the date of its foundation up to and, especially for Damascus, beyond the Mongol invasion of Syria in 658/1259–60.[40] In the *Tārīkh Madīnat Dimashq,* Ibn ʻAsākir mentioned those madrasahs housed in or connected to one of the mosques he inventoried, but furnished no other detail about their foundation or function. The three Madrasah al-Nūrīyahs that made it into Ibn ʻAsākir′s mosque inventory, however, substantiate the conclusion reached in recent secondary scholarship that the reign of Nūr al-Dīn in Damascus marked the start of an efflorescence of the madrasah in Syrian cities.[41] Ibn Shaddād′s lists reinforce this conclusion and capture the subsequent development of the madrasah system in Syria′s two major cities.

Out of some ninety madrasahs Ibn Shaddād listed for Damascus, only a handful date from before Nūr al-Dīn′s reign,[42] and only one of the approximately fifty listed for Aleppo predate the Zangid prince.[43] The vast majority of the madrasahs Ibn Shaddād described in both cities carried endowments established during the Ayyubid period, and, unlike his other topographical chapters, the madrasah chapters feature no building projects either carrying a new endowment or expanding an older one that date from the Mamluk period. Thus, these chapters celebrate the architectural legacy of the Ayyubid era, both the princely patronage of madrasahs and the increasing frequency of private patronage of such structures among both cities′ civilian elites.[44] In fact, the nearly equal numbers of Shafiʻi and Hanafi madrasahs—and a significant number of Hanbali madrasahs in Damascus—endowed between the reign of Saladin and that of al-Nāṣir Yūsuf testify to the varied sources of such patronage in this period.

Ibn Shaddād did not order the madrasahs he listed for Aleppo and Damascus

in terms of their physical layout in the city, and consequently the role the lists played in the representation of the two cities rested much more on their inscription of a scholarly tradition into an urban landscape than on their ordering of that landscape. Similarly, despite his interest in architectural detail manifested in frequent descriptions of recent building projects sponsored by, in particular, the last major Syrian Ayyubid al-Nāṣir Yūsuf and the Mamluk Baybars, Ibn Shaddād′s chapters on the madrasahs include very few descriptions of the structures themselves, apart from mentioning mausoleums, gardens, or other physical additions to their endowments.[45] The text under each entry in Ibn Shaddād′s lists, rather, was devoted almost completely to the ulama assigned to teach in the madrasahs. Some entries furnished detailed biographical information about these scholars, including birthplace, education, travels, accomplishments, relationship to the founder, and teaching posts occupied earlier or concurrently.

Thus, these lists functioned in much the same way, though on a smaller scale, as did the biographical volumes of the *Tārīkh Madīnat Dimashq* and the *Bughyat al-Ṭalab,* representing the city through its human heritage of Islamic scholarship. What was different about the *A'lāq al-Khaṭīrah,* however, was that it embedded this human heritage in the urban topography, rather than appending it to an introductory topography. Ibn Shaddād′s madrasah lists represented Damascus and Aleppo by plotting their scholarly elites directly onto a prose map of the city. Furthermore, the distinctive features of these prose maps, particularly the madrasahs, reflected the very recent past, specifically the Ayyubid period, rather than any perceived former apex of Islamic learning or civilization, such as that suggested by the attention Ibn 'Asākir lavished on the construction of the Umayyad Mosque. Ibn Shaddād′s madrasah chapters, therefore, exemplified his approach to representing cities by integrating recent history, biography, and topography and highlighting the human role, particularly the elite role, in defining place through architectural patronage and religious scholarship.

As mentioned above, however, Ibn Shaddād did not reduce his representation of Syria to its two urban centers and their immediate hinterlands. The *A'lāq al-Khaṭīrah* also represented the towns, villages, and, to a certain extent, the rural landscape of Syria in volumes that divided the region by *jund* and furnished micro-historical topographies for each site mentioned. In these sections, Ibn Shaddād devoted more space to the social, economic, and political status of the towns and villages that made up Syria than to basic topography.[46] In the cases of the sizable towns, however, the building projects endowed by a succession of princes remained

---

[46]For an exception, see his chapter on the mountains of the *jund* of Damascus: Ibn Shaddād (southern Syria), 35–38.

chief components of Ibn Shaddād's representations of localities, representations that, as we have seen, married architectural and political history.[47]

Ibn Shaddād's treatment of northern Syria took the topographical information supplied by the introduction to Ibn al-ʻAdīm's *Bughyat al-Ṭalab* and some of the historical material from his *Zubdat al-Ḥalab* and brought it up to date, recording military and political events of note for the sites listed in each *jund* through the reign of Sultan Baybars.[48] The chapter on the Thughūr, while starting like the previous chapter on the *jund* of Qinnasrīn with a site-by-site inventory, ends with a chronicle of the military campaigns conducted by the armies of Islamic regimes in the district as a whole, starting with the conquest period and listing the campaigns by year, and then vaulting forward in history through the Hamdanid period and beyond. These later sections convey the gradual loss of territory in the region and a waning zeal for confrontations along this frontier.[49] The length of this chronicle testifies to Ibn Shaddād's emphasis on historiography within a topographical framework and suggests his preoccupation with the contested status of the land of Syria, an undisputable reality as well as a touchstone for the collective memory of Syrians during his lifetime.

One of the discursive innovations of the *Aʻlāq al-Khaṭīrah* was not simply that Ibn Shaddād subjected Syria's towns, villages, and rural areas to both historical and topographical study, but that in presenting a systematic geography of southern Syria at all he was undertaking a relatively new enterprise, as, to my knowledge, no one had performed for southern Syria what Ibn al-ʻAdīm had for northern Syria since the time of the third/ninth- and fourth/tenth-century geographers.[50] Ibn Shaddād's volume on southern Syria reflected an even more recent historical perspective than did that on northern Syria, presumably because Ibn Shaddād was active in Baybars' retinue in southern Syria throughout the 670s/1270s. While he carried the histories of most of the northern Syrian localities up through 674/1275, he recorded events for most of the southern Syrian localities through 678/1279. It was in these chapters that Ibn Shaddād displayed his abiding interest in the building and renovation projects sponsored by Baybars in the aftermath of Mongol

---

[47]See Rabbat, "Perception of Architecture," 168–70.

[48]Another new feature of these chapters is his inclusion of information on the revenues of certain towns and districts, starting with Aleppo, information to which he had access as a financial inspector for the Ayyubid al-Nāṣir Yūsuf. See, for instance, Ibn Shaddād (Aleppo), 150–53; idem (northern Syria), 26–28, 470–71.

[49]Ibn Shaddād (northern Syria), 196–349.

[50]The inventory of pilgrimage sites for southern Syria presented in ʻAlī al-Harawī's early seventh/thirteenth-century *Kitāb al-Ishārāt ilá Maʻrifat al-Ziyārāt* could be seen as a specialized exception.

depredations in Palestine and Jordan.[51] Ibn Shaddād also paid particular attention in these chapters to the citadels and urban fortifications of southern Syria and their role in the conflicts of the era, including their destruction and refortification by successive rulers.[52] As in the volume on northern Syria, Ibn Shaddād, like Ibn al-ʻAdīm before him, included towns and areas not under Muslim control in his topographical inventory; however, unlike Ibn al-ʻAdīm, Ibn Shaddād provided detailed information on and histories of these localities despite their having yet to reenter the Muslim fold.[53] The representation of these localities suggests Ibn Shaddād's optimistic outlook, a confidence in the Mamluk Empire as the reigning power in Syria, if not quite yet in all of its constituent parts.

MAKING SYRIA MAMLUK

In a recent article, Yehoshuʻa Frenkel examines evidence from epigraphical, documentary, and literary sources to argue that Baybars vigorously endowed *awqāf* to construct shrines, mosques, and Sufi lodges throughout the Syrian countryside, associating new territories with Islam in general and with Mamluk rule and patronage in particular.[54] In so doing, Baybars was not only "Islamizing" the Syrian landscape by superimposing Islamic institutions and memorials on existing sites commemorating pre-Islamic figures but also integrating rural areas into the newly consolidated Syrian provinces of the Mamluk Empire through construction projects that had been confined in earlier periods primarily to urban areas. Though Frenkel uses the *Aʻlāq al-Khaṭīrah* in his study, the literary sources upon which he relies most heavily are two biographies of Baybars, one of which was written by Ibn Shaddād, the other by an Egyptian contemporary of his, Ibn ʻAbd al-Ẓāhir.[55] These works take Baybars himself as the object of representation and his architectural patronage in Syria as one aspect of that representation. The *Aʻlāq al-Khaṭīrah,* on the other hand, takes Syria as the object of its representation and the architectural

---

[51]For one example, see Ibn Shaddād (southern Syria), 237.

[52]For examples, see ibid., 53–54 (Baalbek), 55–64 (citadel of Ṣarkhad), 69–81 (al-Karak and al-Shawbak), 83–91 (al-Ṣalt and ʻAjlūn), 115–20 (Ḥiṣn al-Akrād "Crac des Chevaliers"), and 146–51 (Ṣafad).

[53]See, for instance, ibid., 113–20. While Ibn al-ʻAdīm indicated when and how various northern Syrian towns or strongholds fell into the hands of the Crusaders or Armenians, he did so in an almost perfunctory manner and then proceeded to describe the sites using material dating from before the non-Muslim occupation, as if to gloss over the reality of that occupation.

[54]Yehoshuʻa Frenkel, "Baybars and the Sacred Geography of *Bilād al-Shām:* A Chapter in the Islamization of Syria's Landscape," *Jerusalem Studies in Arabic and Islam* 25 (2002): 153–70.

[55]Ibn Shaddād, *Tārīkh al-Malik al-Ẓāhir,* ed. Aḥmad Ḥuṭayṭ (Wiesbaden, 1983); Muḥyī al-Dīn ibn ʻAbd al-Ẓāhir (d. 691/1292), *Al-Rawḍ al-Ẓāhir fī Sīrat al-Malik al-Ẓāhir,* ed. ʻAbd al-ʻAzīz al-Khuwayṭir (Riyadh, 1976).

patronage of its rulers as one aspect, albeit a central one, of that representation.

Thus, Frenkel has amassed considerable evidence of an ″Islamization″ of the Syrian countryside that was intended to legitimize Baybars′ rule in the provinces—in a political and physical sense, to make Syria Mamluk. Ibn Shaddād′s *Al-A'lāq al-Khaṭīrah* can be seen as the discursive corollary to this political and physical campaign. Drawing on a centuries-old discourse of place, Ibn Shaddād constructed a historical topography that integrated recent political history and architectural patronage with site-by-site inventories of Syrian cities and countryside. He self-consciously relied on his predecessors in the discourse of place, notably Ibn 'Asākir and Ibn al-'Adīm, to fill out his representations of Damascus, Aleppo, and northern Syria, but furnished new information throughout the work, though especially on southern Syria, to bring his representation up to date, reflecting the most recent transformations of the Syrian landscape initiated by Mamluk sultans.

Though its timing, explicit dedication to Baybars, and details of Mamluk-sponsored construction projects in Syria rendered the *A'lāq al-Khaṭīrah* a discursive corollary to what Frenkel describes as Baybars′ ″Islamization″ of Syria, the strong presence of Ayyubid patronage in the work suggests significant continuities between the Ayyubid and Mamluk period in terms of Ibn Shaddād′s aforementioned association of princes and place. Particularly in the chapters dealing with northern Syria and those on the madrasahs of Damascus and Aleppo, Ayyubids appear as often as—if not more often than—Mamluks as founders, endowers, and patrons of the built environment. Though it was composed after the Ayyubid period had all but drawn to a close, the relationship between the Ayyubid princes and Syrian topography is much more explicit in the *A'lāq al-Khaṭīrah* than it is even in the introduction to Ibn al-'Adīm′s *Bughyat al-Ṭalab,* a product of Ayyubid-era Aleppo. Nonetheless, it was Baybars who was, in Ibn Shaddād′s frequent formulation, ″Ṣāḥib al-Diyār al-Miṣrīyah wa-al-Shāmīyah″ (Lord of the Egyptian and Syrian Districts), uniting Egypt and Syria as separate but equal—and equally Mamluk—territorial entities. And it is the presence of Baybars throughout the *A'lāq al-Khaṭīrah* that evokes its dominant category of belonging: that of the Mamluk Empire.

Fiscal Administration in Syria during the Reign of Sultan al-Nāṣir Muḥammad

As Claude Cahen has suggested in his well-known article on the taxation system in Syria,[1] very few sources remain for the fiscal administration of this province during the medieval period, while we find relatively ample sources on the subject for Egypt. Cahen's article examines some unique information on the *kharāj* tax in Syria provided by Shihāb al-Dīn Aḥmad al-Nuwayrī (d. 733/1333) in his *Nihāyat al-Arab fī Funūn al-Adab.*[2] The article is quite useful for understanding the economic and fiscal circumstances in Mamluk Syria, but the content is far too general, and the French translation of the text suffers from several omissions and careless mistakes. Then there is the work of Mounira Chapoutot-Remadi, which gives a general description of agriculture in Egypt and Syria during the Mamluk period based on the *Nihāyat al-Arab,* but emphasizes likewise the situation in Egypt.[3] Yehoshua Frenkel's recent article,[4] although discussing the *iqṭā'* and agrarian taxation systems in Syria during the Mamluk period, curiously does not refer to al-Nuwayrī. When I was studying agricultural production and rural life in Egypt from the twelfth to the fourteenth century,[5] I also found a comparison with Syria difficult due to the scarcity of Syrian sources on the subject.

Consequently, the present article first takes up al-Nuwayrī's *Nihāyat al-Arab,* translating the original text into English and annotating the terms related to Syrian agriculture and its taxation system during the early Mamluk period. An attempt is then made to describe innovations in the agrarian taxation system by examining the results of cadastral surveys (*rawk*s) in Syria carried out during the third reign

of Sultan al-Nāṣir Muḥammad (709–741/1310–41).[6]

THE TAXATION SYSTEM IN SYRIA AS DESCRIBED BY AL-NUWAYRĪ

Since he held the post of *nāẓir al-jaysh* in the Syrian coastal town of Tripoli during the years 710–12/1311–13, al-Nuwayrī should have had ample knowledge of the agrarian taxation system in Syria during the early Mamluk period. He began to write the *Nihāyat al-Arab,* his main treatise, just after he returned to Cairo from Tripoli in 712/1313.[7] In one chapter of volume eight, he attempts to explain the *kharāj* tax in Syria as follows:

> [THE AGRICULTURAL PRODUCTION OF *AL-WASMĪ*][8]
> Concerning the *kharāj* tax in Syria and the duties of officials *(mubāshir).* The fiscal tradition *(qānūn)* in Syria has been formed according to the natural condition of rainfall, the beginning of the rainy season, and the season requiring rainfall. The *wasmī* rain means literally ″spring rain,″ but it is actually rain that falls in the autumn. As soon as it begins to rain, fields are plowed and sown. The seed is then covered with soil to prevent birds from eating it. When the second rain comes [pp. 255/256], the seed sprouts, and buds appear on the ground. The sprouts are called ″dark green″ *(aḥwā).* They continue to be irrigated by rain until it turns the ground into a rapid stream. When the last rains *(al-maṭar al-fāṭim)* come—mostly during the month of Nisan [April]—it bears fruit and comes to an end according to the cultivation cycle. This is the mode of production called ″*al-wasmī*.″

Al-ʻUmarī (701–49/1301–49) also relates that in Syria most of the crops are cultivated in accordance with a regimen determined by seasonal rainfall, while fields irrigated by rivers are few.[9] It is interesting to find that the annual cycle of

Aziz S. Atiya edited the Arabic text of the decree by Sultan al-Nāṣir for the cadastral survey in 715/1315 (″A Mamlūk ′Magna Carta,′″ in *Arab Civilization: Challenges and Responses: Studies in Honor of Constantine K. Zurayk,* ed. George N. Atiyeh and Ibrahim M. Oweiss [Albany, 1988], 128–39).

[7]Amīnah Muḥammad Jamāl al-Dīn, *Al-Nuwayrī wa-Kitābuhu Nihāyat al-Arab fī Funūn al-Adab* (Cairo, 1984), 64–72.

[8][ ] indicates a heading to the quotation added by the present author.

[9]Al-ʻUmarī, *Masālik al-Abṣār fī Mamālik al-Amṣār,* ed. Ayman Fu'ād Sayyid (Cairo, 1985), 25.

agricultural production is closely related also with the weaning rain of April. However, as the next paragraph shows, the peasants in Syria did not enjoy the *wasmī* rain every year, which forced them to cultivate only half of their fields on a rotating basis.

> [THE TWO-FIELD SYSTEM]
> Within Syria there are some districts where the *wasmī* rain is delayed and people have to sow dry fields. That is to say, they have to plant before the rain comes and then wait anxiously for its arrival. When they seed in this way and it does not rain, the seed remains ungerminated in the earth until the next year. Disappointed, people resorted to planting on the half of their field left fallow the year before. . . . The whole area of Syria follows the custom of every peasant *(fallāḥ)*[10] dividing his arable land in half and cultivating one half only. The fallow part is plowed to receive sunshine, but planted the next year. The cultivated field this year is to be left fallow the next year. This is the custom in Syria, which is different from Egypt, where all arable land is cultivated every year.[11] . . . Even in Syria, when it does rain, both fields are cultivated and produce double yields, but it is extremely rare [pp. 256/257].

According to this citation, most Syrian peasants cultivated their land on the basis of a ″two field system″ in order to maintain fertility. Al-Nuwayrī points out the difference from Egypt, where arable land was cultivated every year thanks to the annual inundation from the Nile for winter crops and a highly developed irrigation system for summer crops.[12]

> [WINTER CROPS AND SUMMER CROPS]
> In Syria there are some fields irrigated by rivers[13] and springs,

[10]Al-Nuwayrī calls the Syrian peasant *″fallāḥ,″* except for *muzāriʿ dhimmī* (*dhimmī* cultivator) (*Nihāyat al-Arab,* 8:256, 259), while calling the Egyptian peasant both *fallāḥ* and *muzāriʿ* (*Nihāyat al-Arab,* 8:245, 246, 251).

[11]On Egyptian agriculture during the medieval ages, see Gladys Frantz-Murphy, *The Agrarian Administration of Egypt from the Arabs to the Ottomans* (Cairo, 1986); Hassanein Rabie, ″Some Technical Aspects of Agriculture in Medieval Egypt,″ in *The Islamic Middle East, 700–1900,* ed. Abraham C. Udovitch (Princeton, 1981), 59–90; Sato, *State and Rural Society,* 177–233.

[12]On the irrigation system in Ayyubid and Mamluk Egypt, see Hassanein Rabie, ″Some Technical Aspects,″ 59–90; Sato, *State and Rural Society,* 220–33.

[13]In Syria water wheels powered by rivers were called *nāʿūrah* (pl. *nawāʿīr*), while in Egypt water wheels driven by oxen were called *maḥāl* (al-Nuwayrī, *Nihāyat al-Arab,* 8:254; Chapoutot-Remadi,

> where the rate of the sharecrop *(muqāsamah)* and the price of privately-held land *(qīmat al-amlāk)* are higher than those of arable land irrigated by rainfall. This is common in lowlands *(al-arāḍī al-mustafilah)*. Allah knows best.
>
> The collectors of the kharāj tax *(mubāshir al-kharāj)* have the following duties: they first order the village heads *(ra'īs al-balad)*[14] to classify their fields into cultivated *(zirā'ah)* and fallow *(kirāb),* for which they use the terms "red" *(aḥmar)* and "green" *(akhḍar)*. In the case of both winter crops *(shatawī)* and summer crops *(ṣayfī),* red means a fallow field and green a cultivated one. Winter crops are wheat *(qamḥ),* barley *(sha'īr),* oats *(shūfān),* broad beans *(fūl),* chick-peas *(ḥimmiṣ),* lentils *('adas),* vetches *(kirsinnah),*[15] grass peas *(julubbān)*[16] and another kind of pea *(bistīlīyah)*.[17] The last one is called *bisillī* in Egypt and *ḥālbah* in the coastal region of Tripoli.[18] Summer crops are sorghum *(dhurah),* pearl millet *(dukhn),* sesame *(simsim),* rice *(aruzz),* black sorghum *(ḥabbah sawdā'),* coriander *(kusbarah),* cucumbers *(maqāthī'),* indigo *(wasmah),* saffron *(qirṭam),*[19] cotton *(quṭn),* and hemp *(qinnab).*

Ibn Mammātī (d. 606/1209), a clerk from a well-known Coptic family, cites other winter crops in Egypt in addition to the ones described above: flax *(kattān),* trefoil *(qurṭ),* onions *(baṣal),* garlic *(thūm),* and lupine *(turmus)*.[20] Winter crops not cited by Ibn Mammātī are vetch and the "other kind of pea." As for summer crops, Ibn Mammātī cites other Egyptian crops as cumin *(kammūn),* caraway *(karawyā),* turnips *(saljam),* melons *(baṭṭīkh),* green beans *(lūbiyā),* sugar cane *(qaṣab al-sukkar),* taro *(qulqās),* eggplant *(bādhinjān),* Nile sesame *(simsim nīlī),* lettuce *(khaṣṣ),* cabbage *(kurunb),* and onions *(baṣal)*. Summer crops not cited by Ibn Mammātī are sorghum, pearl millet, black sorghum, coriander, cucumbers, saffron,

---

"L'agriculture," 25; Rabie, "Some Technological Aspects," 71).

[14]In Syria, as well as in Egypt, *balad* was often used to mean an administrative village, a unit for calculating the annual revenue, while *qaryah* usually indicated a village formed naturally. See Sato, *State and Rural Society,* 179. Accordingly, *ra'īs al-balad* should be translated as "village head," although Cahen explains it as "notables du pays," ("Aperçu," 236).

[15]Cahen mistransliterates it as *"kirsīnah."* ("Aperçu," 236).

[16]This term is omitted in Cahen's translation (ibid.).

[17]This term is omitted in Cahen's translation (ibid.).

[18]This passage reflects al-Nuwayrī's experience living in Tripoli for about two years.

[20]Ibn Mammātī, *Kitāb Qawānīn al-Dawāwīn,* ed. A. S. Atiya (Cairo, 1943), 258–64. See Sato, *State and Rural Society,* 198.

and hemp. According to al-ʻUmarī, Syrian summer crop vegetables include yellow and green melons *(baṭṭīkh aṣfar wa-akhḍar),* cucumbers *(khiyār, qiththāʼ),* squash *(yaqṭīn),* turnips *(lift),* carrots *(jazar),* cauliflower *(qunnabīṭ),* asparagus *(hilyawn),* eggplant *(bādhinjān),* Jew's mallow *(mulūkhīyah),* Yemenite herbs *(baqlah yamanīyah),* purslane *(rijlah),* etc.[21] As we will discuss later, sugar cane was also cultivated in the southern coastal region of Syria on a smaller scale than in Egypt.

> [*MUQĀSAMAH*]
> Then, *mubāshir*s write notices *(mashārīḥ)* to the village heads[22] directing them not to allow peasants to let their lands lie fallow, for if they do, fines will be levied on them for their negligence. When the fields are cultivated, the crops are progressing satisfactorily, and broad beans begin to be harvested, agents *(wakīl)*[23] go to the fields to protect the crops against damage and direct the peasants to harvest and carry the crops to the threshing floors *(baydar).* At this time, orders are given to secure the crops carried to the threshing floors. When the peasants finish threshing the crops, the threshing floors are cleaned and nothing is left except the chaff *(midhran)*.… The winnowing is done as follows. Agents order the awns to be separated from the chaff, leaving clean awns on the threshing floors. Agents *(wālī al-ʻamal)* and *mubāshir*s come and divide the crops on the threshing floors according to the local taxation systems, and the tradition of sharecropping *(muqāsamah),* the government's share being determined at the following rates: 1/2 in the case of the irrigated fields, 1/3 or 1/4 in most of the districts, 1/5 or 1/6 for fields where there are no tenant farmers *(mustakrin)* to cultivate them, 1/7 and 1/8 in the coastal lands and the regions adjacent to hostile countries.

Frenkel explains[24] that the *kharāj* tax was also called *muqāsamah* in Mamluk Syria. The above citation shows precisely how *muqāsamah* was levied on the threshing floors and how the government's share was determined, depending on the various conditions of the cultivated fields. Cahen relates that the government's

---

[21]Al-ʻUmarī, *Masālik al-Abṣār,* 25.

[22]Cahen translates this passage as follows: "Et on leur (aux paysans) écrit les états détaillés *masharih*" ("Aperçu," 236). However, "leur" probably indicates "village heads" rather than "peasants" (paysans).

[23]The term *wakīl* probably indicates the agents of the *mubāshir*.

[24]Frenkel, "Agriculture, Land-tenure and Peasants," 203.

share varied from 1/2 to 1/8 according to field conditions;[25] however, it should be emphasized that the *kharāj* rates of 1/3 and 1/4 were levied ″in most districts″ during the Mamluk period. In Upper Egypt under the Mamluks, the *kharāj* was levied in kind, either 2 or 3 *ardabb*s per feddan, the former for wheat and the latter for barley. Estimating the average yield per feddan as 10 *ardabb*s of wheat, 2–3 *ardabb*s implies rates of 2/10–3/10,[26] which are similar to those applied in Syria.

> [The Peasants′ Share and the ʻ*Ushr*]
> After the harvest, the *mubāshir*s take the share proper for the government (*dīwān*). Then crops *(ghallah),* awns *(qaṣal),* straw remains, and chaff are approximated. The government′s share is to be divided according to the *muqāsamah,* while the peasants *(fallāḥ)* are granted their portion according to each local taxation system. In some districts the portion is half of the crops *(muwāsaṭah),* which is set aside for them. After miscellaneous taxes *(rusūm)* are deducted from the peasants′ share *(ḥāṣil al-fallāḥ),* the tithe *(ʻushr)* is levied on the remainder. However, this is not uniformly practiced in every district, because the *ʻushr* is not levied on *waqf* or land allocated as charity *(birr),* except the fields on which levying tax is legal. In the districts of the sultan′s domains *(khāṣṣah)* and the *iqṭā*ʻs, one part in ten[27] is levied on the peasant′s share, the assessed amount of which deceases or increases. Furthermore, in some districts *ʻushr* is not levied on *dhimmī* cultivators *(al-muzāriʻūn al-dhimmīyah).*[28] As for the *iqṭā*ʻs and privately owned land *(milk)* where *ʻushr* is levied for the government, in some districts the estimated rate of tax is levied every year regardless of whether the harvest is abundant or poor, while in other districts trusted persons visit to estimate the amount of produce and the amount of *ʻushr*. The estimate is done prior to threshing, while the crops are still standing in the fields or during harvesting. After that, the peasants [pp. 259/260] pay back the amount of their seed *(taqāwī)* and other loans *(qurḍ)*. This payment is set aside to be used for seed the following year.

[25]Cahen, ″Aperçu,″ 238.

[26]Sato, *State and Rural Society,* 148–49, 198.

[27]The reason why this is not called *ʻushr* escapes me.

[28]Cahen translates *al-muzāriʻūn al-dhimmīyah* as only *dhimmī* (″Aperçu,″ 237) for some reason.

The above text tells us that peasants were given their portion, which was half of the crops in some districts, after the *mubāshir*s took the government′s share; then miscellaneous taxes were first deducted from that portion and the *ʿushr* was levied on the remainder in some districts. As for *taqāwī* in Mamluk Egypt, al-Nuwayrī also relates, ″the *mubāshir* registers the total amount of revenue in cash and crops, and adds to it the *taqāwī,* loan *(qurḍ),* tithe *(ʿushr),* and surcharge for every peasant′s name.″[29] He adds, ″In some districts, one takes one hundred and eleven for every hundred lent. Recently such a usurious *taqāwī* has become widespread.″[30] However, al-Nuwayrī does not make clear whether or not the Syrian *taqāwī* was to be returned with the *ʿushr* and surcharge.

> [LEDGER (*MAKHZŪMAH*)]
> Then every kind of crop is estimated in *kayl,*[31] the unit of measure common to each district. A ledger *(makhzūmah)* is customarily made to record peasant names, the rates of *muqāsamah,* miscellaneous taxes, the *ʿushr,* and the *taqāwī* and *qurḍ* to be repaid. The districts *(nāḥiyah)* are classified in each administrative province *(ʿamal),* and on each ledger the income *(mutaḥaṣṣil)* from every kind of crop is recorded, which will be explained later. These are the duties to be performed by the *mubāshir*s.

Cahen understands the *makhzūmah* in Egypt to be a ledger that certifies the taxes to be paid by peasants.[32] The *mutaḥaṣṣil* implies the gross amount of village or *iqṭāʿ* income in cash *(ʿayn)* and kind *(ghallah)*. It formed the basis for calculating the *ʿibrah,* or the annual revenue of a village, town, or *iqṭāʿ,* estimated in cash by the government in medieval Egypt and Syria.[33]

> [NUT TREES AND OTHER CROPS]
> Carob *(kharrūb),* olives *(zaytūn),* cotton *(quṭn),* sumac *(summāq),* pistachios *(fustuq),* walnuts *(jawz),* almonds *(lawz),* and rice *(aruzz)* are managed by agents *(wakīl)* until the harvest season, and estimated into *mutaḥaṣṣil* after they are taxed. . . . In some districts of Syria, the work is entrusted to their owners separately *(mafṣūlan)*. At

---

[29]Al-Nuwayrī, *Nihāyat al-Arab,* 8:252. See Sato, *State and Rural Society,* 204.

[30]Al-Nuwayrī, *Nihāyat al-Arab,* 8:252.

[31]In Damascus 1 *kayl* was equal to about 22 liters and in Aleppo 6.56 liters (Walther Hinz, *Islamische Masse und Gewichte* [Leiden, 1955], 40).

[32]Claude Cahen, *Makhzūmiyyāt* (Leiden, 1977), 50.

[33]Sato, *State and Rural Society,* 245, 253.

> harvest time, the tax is levied in ways other than collection by a *wakīl (tawkīl),* or sharecropping *(muqāsamah).* This is equivalent to the rent system *(muta'ajjirāt)* [pp. 260/261] in Egypt. Incidentally, the term *faṣal* in Syria originates from a Frankish term [vassal]. *Faṣal* has been practiced customarily in the coastal regions recovered from the Franks.

The crops cited above are various nut trees and specific summer crops, like carob, cotton, and rice. Sumac, pistachio, walnut, and almond trees are peculiar to the mountainous region of Syria and are not found on the Egyptian plain. Al-'Umarī provides us with further information on Syrian plants bearing figs *(tīn),* grapes *('inab),* pomegranates *(rummān),* quince *(safarjal),* apples *(tuffāḥ),* pears *(kummithrā, ijjāṣ),* plums *(qarāṣiyā),* mulberries *(tūt),* mulberry trees *(qirṣād),*[34] apricots *(mishmish),* medlar *(zu'rūr),* and plums *(khawkh).*[35] As for the *tawkīl* (tax collection by agent), Cahen seems to mistake it for ″measurer,″[36] which he considers to originate probably from measure *(kayl)*. However, the Arabic text does not read *kayl,* but rather *tawkīl*. Also, al-Nuwayrī′s final comment on *faṣal* seems to refer to his previous expression, *″mafṣūlan″* (separately).

FISCAL INNOVATION THROUGH CADASTRAL SURVEYS

The excerpt above entitled [The Peasants′ Share and the *'Ushr*] reflects the variety of legal land categories in Syria under Mamluk rule. These included land managed by the government *(dīwān)* and *waqf,* the sultan′s domain *(khāṣṣah), iqṭā',* and privately owned land *(milk)*. Among these land holdings, *iqṭā'* assignments granted by sultans to *mamlūk* and *ḥalqah* (free born) cavalrymen[37] were crucial in the formation of the state order in Egypt and Syria during the twelfth to fifteenth centuries. The amirs and soldiers who were granted *iqṭā'*s were obliged to provide military service to the sultan and were granted authority to levy taxes on peasants and local townspeople.[38] Thus, they were always eager to acquire better *iqṭā'*s,

---

[34]The term *qirṣād* is unknown. *Qirṣād* should be read as *firṣād* (mulberry-tree). See al-'Umarī, *Masālik al-Abṣār,* 17.

[35]Ibid., 25.

[36]Cahen, ″Aperçu,″ 238.

[37]During the Ayyubid and Mamluk periods, *″ḥalqah″* denoted a free-born cavalryman, like a Kurd, an Arab, or a son of a mamluk *(awlād al-nās)*. On the *ḥalqah* cavalry, see David Ayalon, ″Studies on the Structure of the Mamluk Army, II,″ *Bulletin of the School of Oriental and African Studies* 15 (1953): 449–76; Ulrich Haarmann, ″The Sons of Mamluks as Fief-Holders in Late Medieval Egypt,″ in *Land Tenure and Social Transformation in the Middle East,* ed. T. Khalidi (Beirut, 1984), 141–68.

[38]On the *iqṭā'* system, see Claude Cahen, ″L′évolution de l′iqṭā' du IXe au XIIIe siècle,″ *Annales,*

and consequently, in the course of time, the *iqṭāʿ* also came to be called *khubz* (bread), in reference to the necessity it represented in a cavalryman′s everyday life.[39]

In order to adjust the taxes to be levied, the rulers in Egypt had conducted intermittent cadastral surveys *(rawk)* since the early Islamic period.[40] The Mamluk sultans also carried out cadastres, like *al-Rawk al-Ḥusāmī* in Egypt under Ḥusām al-Dīn Lājīn (reign 696–98/1296–99) in 697/1298 and *al-Rawk al-Nāṣirī* in Egypt and Syria by al-Nāṣir Muḥammad (693–694/1293–94, 698–708/1299–1309, 709–741/1310–41) in 713/1313 (Syria), 715/1315 (Egypt), 717/1317 (Tripoli) and 725/1325 (Aleppo).[41] The Syrian cadastre covered the regions of Damascus, Hims, Baalbek, Gaza, Ṣafad, and Sidon, but excluded the regions of Tripoli and Aleppo.[42] Here I would like to take up the three cadastres of Syria, Tripoli, and Aleppo and discuss the innovation that was made in the agrarian taxation system there as a result. Following al-Nuwayrī,[43] they are known as *Rawk al-Iqṭāʿāt bi-al-Shām* (Syria), *Rawk al-Mamlakah al-Ṭarābulusīyah* (Tripoli), and *Rawk al-Iqṭāʿāt bi-al-Mamlakah al-Ḥalabīyah* (Aleppo).

Rawk al-Iqṭāʿāt bi-al-Shām in 713/1313: Syria

The person who proposed to Sultan al-Nāṣir that *rawk*s should be conducted in Egypt and Syria was a Coptic convert to Islam *(Muslimānī al-Qibṭ)* by the name of Asʿad al-Shaqī (d. 716/1316), who had inherited the position of *nāẓir al-dawlah* (superintendent of the central administration) from Tāj al-Ṭawīl (d. 711/1312), another ex-Coptic Christian Muslim who proposed the *al-Rawk al-Ḥusāmī* in

Lambton, ″Reflections on the IQṬĀʿ,″ in *Arabic and Islamic Studies in Honor of Hamilton A. R. Gibb,* ed. George Makdisi (Leiden, 1965), 358–76; Sayyid al-Bāz al-ʿArīnī, *Al-Iqṭāʿ al-Ḥarbī bi-Miṣr Zaman Salāṭīn al-Mamālīk* (Cairo, 1966); ʿAbd al-ʿAzīz al-Dūrī, ″The Origins of Iqṭāʿ in Islam,″ *Al-Abḥāth* 22 (1969): 3–22; Rabie, *The Financial System,* 26–72; Robert Irwin, ″Iqṭāʿ and the End of the Crusader States,″ in *The Eastern Mediterranean Lands in the Period of the Crusades,* ed. Peter M. Holt (Warminster, 1977), 62–77; Sato, *State and Rural Society.*

[39]Sato, *State and Rural Society,* 46, 85, 93–94, 101, 132, 147. Michael Chamberlain states that *mansab*s (stipendiary posts) became objects of a social struggle among the *aʿyān* in the same manner as *iqṭāʿ* became prizes of competition among amirs *(Knowledge and Social Practice in Medieval Damascus, 1190–1350* [Cambridge, 1994], 24–25).

[40]Rabie, *The Financial System,* 49–56, suggests that the *rawk* was an established Egyptian custom, possibly dating back to the days of the Pharaohs.

[41]Sato, *State and Rural Society,* 124–61.

[42]Ibid., 136.

[43]Al-Nuwayrī, *Nihāyat al-Arab,* 32:205–6, 255–60; 33:182–83.

Egypt.[44] The Syrian *rawk* was conducted from around the beginning of 713/mid-1313 until Ramaḍān 713/January 1314.[45] Sultan al-Nāṣir himself went to Damascus on the way back from a Meccan pilgrimage in Muḥarram 713/May 1313 and appointed the amir ʻAlam al-Dīn Sanjar al-Jāwalī, *nāʼib* of Gaza, to head the cadastre.[46] Sanjar al-Jāwalī then mobilized the officials in the departments of military affairs *(mubāshirū dīwān al-juyūsh)* of Egypt and Syria and all the troops stationed in Damascus and Gaza to carry it out.[47] Since the survey documents *(awrāq al-rawk)* have apparently not survived to the present day, it is extremely difficult to know their actual content; but many Mamluk historians mention it, and al-Maqrīzī gives the most detailed account:

> [Sanjar] al-Jāwalī went to Damascus and remained there with Amir Tankiz, *nāʼib [al-Shām],* until documents were drawn up for every village, detailing the total annual revenue in cash *(ʻibrah),* gross income in cash and kind *(mutaḥaṣṣil),* as well as revenue from *iqṭāʻ, waqf,* and privately owned land *(milk).* When the work was finished in the month of Dhū al-Ḥijjah [713], the *kharāj* year was changed from 712 to 713,[48] and the documents *(awrāq)* were presented to the sultan [in Cairo].[49]

[48]This adjustment was called in Arabic *"taḥwīl," "izdilāf,"* or *"izdilāq."* See al-Qalqashandī, *Ṣubḥ al-Aʻshá fī Ṣināʻat al-Inshāʼ* (Cairo, 1963), 2:398; al-Maqrīzī, *Kitāb al-Mawāʻiẓ wa-al-Iʻtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Būlāq, 1270 H.; repr. Baghdad, 1970), 1:273. In order to correct the discrepancy between the solar *(kharājī)* and lunar *(hilālī* or *hijrī)* calendars, it was customary to advance the solar calendar one year every 33 years of the hijrah calendar. See also S. H. Taqizade, "Various Eras and Calendars Used in the Countries of Islam," *Bulletin of the School of Oriental and African Studies* 9 (1937–39), 10 (1940–42); Sato, *State and Rural Society,* 60 n. 2, 62.

[49]Al-Maqrīzī, *Kitāb al-Sulūk,* 2:127.

To repeat, *'ibrah* indicates the annual income of a village or *iqṭā'* estimated in cash based on the *mutaḥaṣṣil,* which was the gross income in cash and kind. The cadastre apparently involved ascertaining the annual revenue within village units, after which separate investigations were made into the *iqṭā', waqf,* and *milk* within each village. The survey documents drawn up in Syria were sent to Cairo, where Sultan al-Nāṣir issued new authorizations for *iqṭā'* grants *(mithāl)* based on them. Qāḍī Quṭb al-Dīn Ibn Shaykh, who was appointed head of Syrian military affairs *(nāẓir jaysh al-Shām),* carried these authorization documents to Damascus, assigning them to each cavalryman in Dhū al-Ḥijjah 713/April 1314.[50] According to *Tārīkh Bayrūt,* written by Ṣāliḥ Ibn Yaḥyá (ninth/fifteenth century), as a result of the *rawk* of 713/1313, apart from *milk, waqf,* and *al-mawārīth al-ḥashrīyah* (property without heirs), Syrian territory was distributed as *iqṭā' darbastah,*[51] or "complete *iqṭā'*s," the holders of which had the right to all tax revenue from them, including the poll tax, tribute goods *(ḍiyāfah),* and other levies.[52]

One innovation that was introduced into the Syrian taxation system involved the abolition of miscellaneous taxes for the Syrian people in Muḥarram 714/April 1314, about which al-Maqrīzī relates:

> The order *(mithāl)* to exempt the amount in arrears *(bāqī)*[53] was sent to Damascus and read from the minbar of the Umayyad Mosque on Muḥarram 10. Then another order followed abolishing such miscellaneous duties as the tax imposed on prisoners *(muqarrar 'alá al-sujūn),* corvée on peasants *(sukhrah),* the sugar cane tax *(muqarrar al-aqṣāb),* the bow-making tax *(muqarrar ḍamān al-qawwāsīn),* and taxes levied by the officials and governors *(rusūm al-shādd wa-al-wilāyah).* These taxes were to be abolished totally in all Syrian provinces.[54]

---

[50]Al-Nuwayrī, *Nihāyat al-Arab,* 32:206. As to Amir Sanjar, who headed the Syrian cadastre, he was arrested in 720/1320 for allegedly abusing his authority in granting favorable *iqṭā'*s to his mamluks and himself at the time of the cadastre (Sato, *State and Rural Society,* 136).

[51]Ṣāliḥ Ibn Yaḥyá, *Tārīkh Bayrūt*, ed. Francis Hours and Kamal Suleiman al-Salibi (Beirut, 1969), 87.

[52]Sato, *State and Rural Society,* 49, 69, 157–58. Al-Qalqashandī defines the term *karbastā* (probably *darbastah*) as the right to levy all taxes, not excluding any levies from the granted villages (*Ṣubḥ,* 13:156).

[53]At this time the unpaid amount from the beginning of the year 698 to the end of the year 713 was exempted for the people of Syria as a benevolent gesture by Sultan al-Nāṣir. See al-Maqrīzī, *Kitāb al-Sulūk,* 2:136, 153; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963–72), 9:49.

[54]Al-Maqrīzī, *Kitāb al-Sulūk,* 2:136–37.

It is noteworthy that after the re-assignment of new *iqṭā*ʿs, the taxes based on *ḍiyāfat al-rawk* were abolished together with the above-mentioned miscellaneous taxes.[55] The *ḍiyāfah* in Egypt during the Mamluk period signified tribute goods to be presented to the *iqṭā*ʿ holders *(muqṭaʿ)* by their peasants, like grain, fowl, goats, clover, dough, cakes, etc.;[56] and the *ḍiyāfah* in Mamluk Syria was probably the same. However, *ḍiyāfat al-rawk* literally means the *ḍiyāfah* levied based on a cadastral survey, but its real meaning will become clear by examining the results of other Syrian *rawk*s.

Rawk al-Mamlakah al-Ṭarābulusīyah in 717/1317: Tripoli

After the Egyptian *rawk* of 715/1315,[57] the *rawk* of Tripoli was conducted in 717/1317. For that purpose, Sultan al-Nāṣir appointed Qāḍī Sharaf al-Dīn Yaʿqūb al-Ḥamawī, chief of the military department of Aleppo *(nāẓir al-mamlakah al-ḥalabīyah),* to head the cadastre.[58] Sharaf al-Dīn went to Tripoli and surveyed the region of al-Mamlakah al-Ṭarābulusīyah, the surrounding areas *(aʿmāl),* strongholds *(qalʿah, ḥiṣn),* and the frontier zones *(thughūr)*.[59] When the cadastre was concluded, Sharaf al-Dīn went to Cairo with the documentation *(awrāq al-rawk),* which again became the basis on which to allocate *iqṭā*ʿs. As a result of this *rawk, iqṭā*ʿs were allotted to six amirs of forty *(amīr ṭablkhānah),* three amirs of ten *(amīr ʿasharah),* as well as fifty Bahri mamluks and *ḥalqah* cavalrymen.[60] With the conclusion of the *rawk* in Ramaḍān 717/November 1317, the *kharāj* year was changed from 716 to 717 and miscellaneous taxes amounting to an annual sum of 110,000 dirhams were abolished. The sultan's decree regarding this tax exemption is cited by al-Nuwayrī as follows:[61]

> Sultan al-Malik al-Nāṣir ordered that the following miscellaneous taxes *(muʿāmalah)*[62] be abolished in the region of Tripoli.

[60]Al-Maqrīzī, *Kitāb al-Sulūk,* 2:177; idem, *Khiṭaṭ,* 2:171; al-Nuwayrī, *Nihāyat al-Arab,* 32:255.

[61]Al-Nuwayrī, *Nihāyat al-Arab,* 32:260–61. See also al-Qalqashandī, *Ṣubḥ,* 13:33–34. The numbers have been added for the sake of convenience.

[62]The term *muʿāmalāt* usually means "transactions," but here it indicates "miscellaneous taxes."

1) The tax on celebrations *(afrāḥ*[63] *maḥdhūrah)* held in newly conquered territory requiring security. This does not pertain, however, to the tax on celebrations in areas not requiring the provision of security *(ḍamān al-faraḥ al-khayr)*. The amount is 70,000 dirhams.

2) The prisoner tax *(sujūn)* in al-Mamlakah al-Ṭarābulusīyah, except that in Tripoli, which was abolished by a previous order. The amount is 10,000 dirhams.

3) The peasants in the district of Tripoli were exempted from forced labor (corvée) in the sugar cane fields belonging to the government. Instead, a tax in kind equal to 2,000 dirhams was levied on them.

4) Tax on the sugar cane of amirs *(aqṣāb al-umarā')*. Some amirs who managed districts where sugar cane was cultivated had extracted labor from their peasants in lieu of taxes or had imposed a labor rent *(ujrat al-'amal)* tax, the amount of which is 3,000 dirhams.

5) The governor's tax *('ifāyat al-niyābah)* in the regions of Tripoli, Anafa and al-Batharūn.[64] The governors (*nā'ib*s) used to reside at administrative centers on the coast, and when those centers were filled with victorious soldiers *(al-'asākir al-manṣūrah),* six dirhams would be levied on each resident. The total amount is 10,000 dirhams.

6) The government tax *(ḥaqq al-dīwān)* levied on persons engaged in the tax evaluation *(ḥāṣī)*[65] in the districts of Ṣahyūn and Balāṭunus.[66] The amount of revenue is 3,000 dirhams.

7) Tax on the threshing floor *(hibat al-bayādir)* in the regions of Kahf.[67] This was a new tax of three dirhams per feddan. The total amount of revenue is 1,000 dirhams.

---

[63]Previously I have translated *afrāḥ* (pl. of *faraḥ*) as fowl (Sato, *State and Rural Society,* 170), but in that case it was read as *"afrākh."* According to the decree of Sultan al-Nāṣir in 715/1315, *faraḥ* in Egypt means the celebration of weddings, engagements, or circumcisions (Atiya, "A Mamlūk 'Magna Carta,'" 133–34, 138).

[64]Anafa was a small town on the Syrian coast (Yāqūt, *Mu'jam al-Buldān* [Beirut, 1955–57], 1:271), and Batharūn was a citadel between Jubayl and Anafah on the Syrian coast (ibid., 338).

[65]*Ḥāṣī* seems to be used synonymously with *iḥṣā'* (tax evaluation).

[66]Ṣahyūn was located east of Latakia, and Balāṭunus was a fortress facing Latakia (Yāqūt, *Mu'jam al-Buldān,* 1:478; 3:436).

[67]Kahf was a citadel located near Maṣyāf (Guy Le Strange, *Palestine under the Moslems* [London, 1890; repr. Beirut, 1965], 507).

> 8) Tax on the harvest *(ḍamān al-mustaghall)* in Tripoli that was at first for the *dīwān al-niyābah,* then for the principal *dīwān (al-dīwān al-ma'mūr)* during the months of 716. The amount is 4,000 dirhams.
>
> 9) The arbitrary taxes levied anew on peasants in several amirs′ *iqṭā'*s, consisting of grass *(ḥashīsh),* salt *(milḥ),* and tribute goods *(ḍiyāfah).* The value is 6,000 dirhams.
>
> All of the above are to be abolished in the course of time by the Day of Resurrection, neither demanded, nor claimed, in order not to bring the Devil into our midst. This decree is to be read from the pulpits in order to disseminate it and to procure good wishes for us as a gracious gift from God.

The total exemption for the nine items listed comes to 109,000 dirhams annually, approximating the 110,000 dirhams al-Nuwayrī mentioned elsewhere.[68] Here I would like to discuss items 3), 4), and 9).

Items 3) and 4) are closely related to sugar cane cultivation around Tripoli during the early fourteenth century. According to Andrew M. Watson,[69] sugar cane was introduced to southern Iraq from southwestern Iran and spread further to the Jordan valley and the Syrian coast during the tenth century. Arab geographers like al-Muqaddasī (fourth/tenth century), al-Idrīsī (d. 560/1165), Yāqūt (d. 626/1229), and al-'Umarī (d. 749/1349) relate that sugar cane was cultivated in such areas as Filasṭīn, Ṭabarīyah, Jabal Lubnān, Ghawr (Jordan valley), Bayrūt, Ṣūr, Ṭarābulus, Marqab, and Bāniyās.[70] According to Yāqūt,[71] most of the crop grown in Baysān in the Ghawr area, in particular, was sugar cane. However, while the above geographers give only sketchy accounts of sugar cane cultivation in Syria, items 3) and 4) indicate clearly that in Tripoli the imposition of a corvée had provided the labor necessary to produce sugar cane *(sukhrat al-aqṣāb),* both

in the fields managed by the government and those of the amirs, until this practice was abolished by Sultan al-Nāṣir′s decree in 717/1317.

Regarding item 9), consisting of recent levies demanding grasses, salt, and tribute goods *(ḍiyāfah)* on several amirs′ *iqṭā*ʻs, this *ḍiyāfah* is clearly different from the *ḍiyāfat al-rawk* (tribute goods temporarily levied at the *rawk*) based on the Syrian cadastre of 713/1313. It is *ḍiyāfah* that may possibly lead us to a better understanding of the innovative taxation system that was introduced into Syria by the cadastral surveys.

Rawk al-Iqṭāʻāt bi-al-Mamlakah al-Ḥalabīyah in 725/1325: Aleppo

The Aleppo cadastre in northern Syria was undertaken in Jumādá II 725/June 1325. Aḥmad ibn Muḥammad al-Muqri' al-Fayyūmī (d. after 770/1368) has this to say about it:

> In this year the *iqṭā*ʻs in the region of Aleppo were surveyed. The sultan [al-Nāṣir] ordered the *rawk* of al-Mamlakah al-Ḥalabīyah because there remained no region except Aleppo unsurveyed. On 20 Jumādá II 725/4 June 1325, Amir Jamāl al-Dīn Mughulṭāy al-Jamālī al-Nāṣirī, an official of the state *(mudīr al-mamlakah),* left [Cairo] to conduct the survey with Makīn al-Dīn Ibrāhīm ibn Qarawīnah, a chief financial official *(mustawfī al-ṣuḥbah)*. He returned on Tuesday, 16 Ramaḍān/27 August, after which the survey documents were released in order to assign *iqṭā*ʻs to a group of *al-mamālīk al-sulṭānīyah* and *ḥalqah* cavalrymen.[72]

According to this account, the cadastre was concluded in the span of about eighty days, and as a result, *iqṭā*ʻs were assigned to a group of the royal mamluks and the *ḥalqah* cavalry.[73] No further details are known about the content of the work, but Ibn Iyās (d. ca. 930/1524), a later Mamluk historian, provides us with the following important information:

> One amir of ten[74] went with a group of officials *(mubāshir)* to conduct the survey. They went from Cairo to Aleppo and carried out the *rawk* there by the same method as in Syria. Consequently,

[72]Al-Fayyūmī, ″Nathr al-Jumān,″ 3: fol. 190r; al-Maqrīzī, *Kitāb al-Sulūk,* 2:264.

[73]See also Sato, *State and Rural Society,* 144–45.

[74]This amir is the above-mentioned Mughulṭāy al-Jamālī, who held the offices of *ustādār* and vizier at the time of the cadastre (Sato, *State and Rural Society,* 145).

> all the provinces of Egypt, Syria, and Aleppo are now included in *al-Rawk al-Nāṣirī.*[75]

From this account, we may assume that the same methods were used for all four Syrian and Egyptian surveys, and it is this uniformity that constitutes the major fiscal innovation brought about by the *rawk*s.

To begin with, the *rawk* of 713/1313 in Syria resulted in the distribution of "complete *iqṭā*'s" *(iqṭā' darbastah)* to amirs and soldiers. Concerning the Egyptian *rawk* of 715/1315, al-Nuwayrī states:

> Sultan [al-Nāṣir] sat down in order to issue the authorizations *(mithāl)* placed before him. He assigned to each amir a fixed number of villages, and added to the allotment all the items in those villages, like royal soldiers *(al-juyūsh al-sulṭānīyah),* the poll tax *(jawālī),* and so on. As a result of this assignment, the *muqṭa*'s gained control over their villages completely *(darbastan)*.[76]

However, al-Nuwayrī's account is baffling, since he does not explain what "all the items in those villages like royal soldiers" means. Concerning the same assignment, al-Maqrīzī is more explicit:

> The sultan ordered his officials to write documents *(waraqah)* for the sultan's domains *(al-khāṣṣ al-sulṭānī)* and amirs' *iqṭā*'s. At this time he added to the *'ibrah* of each village the tribute goods *(ḍiyāfah)* for which the peasants *(fallāḥūn)* were assessed and the poll tax *(jawālī)* of each village. Previously, before the *rawk,* an independent *dīwān,* attached to the sultan, had been set up for the *jawālī*. But at this time, the *jawālī* of each village was added to its *kharāj* (land tax) revenue.[77]

The *'ibrah* indicates the annual revenue of a village estimated in cash (*dīnār* or *dīnār jayshī*[78]). According to al-Maqrīzī, to this *'ibrah,* which had hitherto been

---

[75]Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr*, ed. Muḥammad Muṣṭafá (Wiesbaden, 1960–75), 1:164.

[76]Al-Nuwayrī, *Nihāyat al-Arab,* 32:226.

[77]Al-Maqrīzī, *Kitāb al-Sulūk,* 2:150. See also idem, *Khiṭaṭ,* 1:88; Ibn Taghrībirdī, *Al-Nujūm,* 9:50.

[78]The term *dīnār jayshī* was a unit expressing the amount of *iqṭā'* revenue in the Mamluk period, while during the Ayyubid period it was called *dīnār jundī.* The dirham exchange rate differed

calculated on the basis of the *kharāj,* were now added the *ḍiyāfah* and *jawālī,* suggesting a completely new method for calculating the *'ibrah* under the *iqṭā'* system.[79] In his *Khiṭaṭ,* al-Maqrīzī suggests that the sultan gave authorizations for *iqṭā'*s to his soldiers on this principle *(ḥukm).*[80] This is what I refer to as "the survey method common to the *rawk*s in Egypt and Syria." In other words, the new *iqṭā'*s reassigned after the conclusion of the cadastres were called *iqṭā' darbastah,* in which its holder (*muqṭa'*) had the right to all tax revenues, including the *ḍiyāfah, jawālī,* and other taxes.

However, there is another problem to be solved. Although new *iqṭā'*s were assigned to amirs and soldiers as *"iqṭā' darbastah"* after the cadastres in Egypt and Syria, Sultan al-Nāṣir then issued decrees abolishing *ḍiyāfah* both in the Egyptian *rawk* of 715/1315 and the Syrian *rawk* of 717/1317. These decrees read as follows:

1) The Egyptian *rawk* of 715/1315

In the year of the blessed *rawk,* we hereby exempt from a group of peasants *(jamā'at al-fallāḥīn)* the *ḍiyāfah* to be paid on the occasion of the transfer of an *iqṭā' (intiqālāt al-iqṭā'āt).*[81]

2) The Syrian *rawk* of 717/1317

Sultan al-Nāṣir abolished the following miscellaneous taxes in the region of Tripoli: the unscheduled taxes levied anew on peasants in several amirs' *iqṭā'*s, consisting of grass *(ḥashīsh),* salt *(milḥ),* and tribute goods *(ḍiyāfah).*[82]

However, in both cases we should note the fact that the orders abolishing miscellaneous taxes were given after the introduction of the new method of calculating the *'ibrah,* to which *ḍiyāfah* and *jawālī* had already been added to the main *kharāj* tax. Therefore, ordinary *ḍiyāfah* continued to be levied on peasants, not in kind but in cash.

---

according to the type of cavalryman; that is, higher ranking cavalrymen were granted *iqṭā'*s on the basis of higher exchange rates (Sato, *State and Rural Society,* 152–55, 243).

[79]Sato, *State and Rural Society,* 142.

[80]Al-Maqrīzī, *Khiṭaṭ,* 1:88.

[81]Atiya, "A Mamlūk 'Magna Carta,'" 134–35. In this article, Atiya explains the sentence as follows: "Farmers should be relieved from billeting or forced hospitality imposed on them by itinerant functionaries in this year of land surveying *(rūk)*" (ibid., 138). However, *intiqālāt al-iqṭā'āt* means not the itinerary between *iqṭā'*s by functionaries, but the transfer of *iqṭā'*s by order of the sultan. See Sato, *State and Rural Society,* 159.

[82]Al-Nuwayrī, *Nihāyat al-Arab,* 32:261.

Historically, the fiscal innovation created through these cadastres and the reallocation of *iqṭā'*s resulted in the establishment of a system that persisted up to the founding of the Burji Mamluk dynasty. As to the effect of *al-Rawk al-Nāṣirī* in Egypt and Syria, al-Qalqashandī (d. 821/1418) concludes, "*Al-Rawk al-Nāṣirī* helped establish the basis of an empire *(qā'idat al-mamlakah)* that continued up until the end of the dynasty of Sultan Ashraf Sha'bān (764–78/1363–77)."[83]

The Qalāwūnid dynasty came to an end when al-Ashraf Sha'bān was deposed by al-Malik al-Ẓāhir Barqūq (784–91/1382–89, 792–801/1390–99) in 784/1382. As al-Maqrīzī (d. 845/1442) relates:

> The new system brought into being by Sultan al-Malik al-Nāṣir through this *rawk* persisted until the end of the rule of the house of Qalāwūn with the enthronement of Sultan al-Malik al-Ẓāhir Barqūq in Ramaḍān 784/November 1382. And even thereafter, this system continued until the many changes made to it in the wake of the occurrences *(ḥadīth)* and disasters *(miḥnah)* of 806/1404–5.[84]

On the other hand, Ibn Khalīl al-Asadī (d. 854/1450), a Syrian scholar, writes:

> When al-Malik al-Manṣūr Lājīn (696–98/1296–99) took power, there appeared a deficiency within local provinces, a decrease in revenues *(irtifā')* and an interruption in administration for prosperity *('imārah)*. . . . Since pious and acute people petitioned him to conduct a *rawk* in order to attain the welfare *(maṣlaḥah)* of worshippers, Lājīn ordered the *rawk*s of Egypt, Syria, and other provinces.[85] The order was implemented, but not completed. When al-Malik al-Nāṣir Muḥammad returned to the throne, he ordered that *rawk*s be conducted as Lājīn had directed. . . . The *'ibrah* of the Syrian province was found to be equal to that of the Egyptian province in the *al-Rawk al-Nāṣirī,* and the number of cavalrymen

---

[83] Al-Qalqashandī, *Ṣubḥ,* 4:14.

[84] Al-Maqrīzī, *Khiṭaṭ,* 1:91. According to al-Maqrīzī, in 806/1403 the rise of the Nile ceased and conditions deteriorated. Prices increased to the extent that one *ardabb* of wheat cost 400 dirhams. This was applied to everything purchased: food, drink, and clothing (*Ighāthat al-Ummah bi-Kashf al-Ghummah,* ed. Muḥammad Muṣṭafá Ziyādah and Jamāl al-Dīn Muḥammad Shayyāl [Cairo, 1940], 42).

[85] This cadastre was called *al-Rawk al-Ḥusāmī,* which was conducted in Egypt in 698/1298 for the purpose of assessing the actual situation regarding tax revenue. However, soon after its conclusion, Sultan Lājīn and his deputy Mankūtamur were assassinated by amirs who were discontented with the resulting *iqṭā'* assignments (Sato, *State and Rural Society,* 124–34).

> in each province amounted to 24,000.[86]

I have my doubts about the *rawk*s resulting in the *'ibrah* of the Syrian province becoming equal to that of the Egyptian province; however, Ibn Khalīl gives another interesting account that *al-Rawk al-Nāṣirī* brought about much welfare *(maṣlaḥah jammah)* and prosperity in the rural areas *('imārat al-bilād)*.[87] What we may conclude from these accounts is that *al-Rawk al-Nāṣirī* helped establish the basis of an empire based on the *iqṭā'* system, which led to prosperity in the rural societies of Egypt and Syria for an extended period of time.

Public Projection of Power in Mamluk Bilād al-Shām

The institutions and courtly protocols that supported the Mamluk sultan and legitimized and projected his power have been investigated in previous scholarship.[1] Such work emphasizes the formalities of relations between the sultan and his amirs and with society at large. Royal etiquette guided the sultan′s manners while he was at court[2] as well as during travel,[3] and was designed to distance him from his peers. According to the protocols of the day, for example, only the highest ranking amirs were allowed to enter the central hall *(dihlīz)*.[4] Upon approaching the sultan they were instructed to prostrate themselves in front of him *(kharr)*.[5] Social distance was maintained not only in physical terms but also in the realm of political prerogatives. Mamluk political philosophy recognized three domains in which the sultan′s name was publicly proclaimed: his title *(laqab sulṭānī),* being mentioned by name at Friday noon prayer *(khuṭbah),* and minting coins *(sikkah)*.[6]

When the sultan nominated viceroys, the royal chancellery issued letters of appointment that were accompanied by symbolic gifts, which articulated the relationship between the ruler and his appointee.[7] The sultan customarily awarded

the viceroys a robe of honor *(khilʿah),* a horse-blanket *(kanbash)* made of silk embroidered with gold and silver *(zarkash),* saddles *(surūj),* and furs.[8] Additionally, the sultan and his viceroys exchanged presents and governors bestowed riding animals, linens *(qumāsh),* garments *(thiyāb),* and other textiles, in addition to cash.[9]

However, to consolidate his position, the sultan had to address a wider circle than his military intimates. Syrian sources of the period attest to the energy and resources sultans devoted to propaganda and projecting their royal persona among the civil population. Considerable sums were dedicated to public relations.[10] Poets, musicians, and preachers were paid to cultivate and promote the sultan′s public image.[11]

Yet, the interaction between the Mamluk sultans and their subjects was not restricted to verbal exchanges. Literary and archeological sources demonstrate the considerable resources the sultan and ruling elite allocated for the construction of public and private buildings.[12] By these projects they hoped to promote several agendas: 1) to make their presence known; 2) to fashion an environment that would reflect their desired images; 3) to establish communication with their subjects. Needless to say, this policy demanded heavy taxation. The willingness of the Mamluk administrators to risk public backlash against harsh levies demonstrates

the importance they assigned to construction projects.[13] In the following my aim is to broadly outline the Mamluk policy for shaping the public sphere in Syria by focusing on documented examples from Damascus and other Syrian cities, relying on a broad range of local sources of the period.

CREATING PUBLIC SPACE IN BILĀD AL-SHĀM

The Mamluk elite constructed numerous and varied public structures in Syria: mosques,[14] tombs,[15] schools,[16] Sufi lodges,[17] hospitals,[18] caravanserais,[19] gates,[20] canals,[21] public fountains,[22] bridges,[23] and walls.[24] Moreover, the Mamluk patrons did not limit their investments to new edifices;[25] they also devoted considerable

efforts to refurbishing citadels[26] and sacred shrines,[27] including renovations of the Great Mosque of Damascus. Since Mamluk governors were fully aware of the role such structures played in public image-making, it is not surprising to come across reports of orders to demolish standing structures,[28] an act that was aimed at obliterating the memory of their adversaries and reshaping the environment to their own benefit.[29]

The sheer volume of references in Syrian sources to urban projects strongly supports the view that the Mamluks focused their building initiatives in the cities. Three criteria set urban centers apart from rural communities, dictating appropriate types of investment by the state and its officials:

1) Urban communities were complex societies composed of a range of occupations and economic-cultural strata.

2) Cities were economic hubs. In order to house merchants and artisans, commercial and handicrafts complexes *(wakālah; qaysārīyah),* as well as markets, were built.[30]

3) Urban residents paid taxes on private properties, and their urban plots were not classified as *iqṭā‘* land, although they kept gardens.

In addition to these economic, legal, and social criteria, architectural features distinguished the Mamluk cities. As in Egypt, communal buildings, such as cathedral mosques *(jāmi‘),*[31] hospitals, and schools, influenced the layout of neighborhoods and streets in Syrian cities. From time to time the Mamluks made efforts to enforce ″Islamic″ values and norms on the city dwellers. The inspector of the markets was instructed to impose bans on alcohol, prostitution, and other forbidden activities. These policies were often aimed at women.[32]

As administrative centers, cities also served as residences of amirs and civilian officials, and where amirs met regularly with bureaucrats and religious dignitaries.

The ruling elite strove to construct an urban environment that would be commensurate with their status and image and would facilitate their daily activities.[33] The Green Hippodrome *(al-Maydān al-Akhḍar)* in Damascus, built to serve the ruling Mamluk army, and the construction of a small market *(suwayqah)* nearby, are only a couple of examples of this concern for image and utility.[34]

The inauguration of new projects was lavishly celebrated.[35] Food was served in great quantities; gifts and awards were bestowed on officials and builders *(mi'mārīyah)*.[36] At the completion of a canal in Aleppo in 731/1330–31, the viceroy called for a pubic celebration. The Syrian historian al-Birzālī (1267–1339) described the gathering of army commanders, notables, and commoners, stressing that the puritanical governor banned musicians *(muṭribūn)* from participating in the event.[37] The following panegyric by Badr al-Dīn al-Ḥasan ibn ʻAlī al-Kātib captures one part of public reaction to Mamluk construction activity:

> We prostrate ourselves and kiss the ground. Our master′s realm is the best *(ghurrah)* amongst the nations, almighty God made it shine. . . . Our sultan′s generosity directed him to construct mosques and places of prayer, to build mausolea and shrines. Roads were paved to help travelers arriving and departing. After falling into disrepair, canals were renovated. The great mosque of Damascus was refurbished and regained its splendor, its decorations and marbles restored. The candelabra were multiplied. Many places acquired new looks, and the worshipers′ hearts became full of joy.[38]

Yet, it should be emphasized that Mamluk amirs did not refrain from building mosques in the countryside, where the vast majority of the sultanate′s subjects dwelled and labored on the *iqṭāʻ* lands. Mamluk mosques are still visible in Syrian villages today.[39]

The policy of construction promoted by the Mamluks also aimed at strengthening the hold of Islam on a territory believed to be under constant threat. While illusory threats of imminent invasions by Franks and Mongols haunted the Muslim

population, the building initiative provided society with a sense of security and stability. Sultans and governors invested considerable resources in developing Muslim shrines and other holy sites that attracted large numbers of visitors. These edifices amplified the ruler′s image and defined the structure and borders of Mamluk sacred topography. Tombs of biblical prophets such as Noah,[40] Moses,[41] and Abraham[42] were renovated or enlarged, as were the tombs of the Prophet Muḥammad′s close companions. Baybars started this policy by erecting a sanctuary east of the Jordan River, said to be the burial ground *(mazār)* of Abū ʻUbaydah.[43] In southern Palestine a Roman structure was identified as Abū Ḥurayrah′s tomb.[44] Not far away from this location is the shrine *(mashhad)* of Salmān al-Fārisī.[45] In central Syria the shrine of Khālid ibn al-Walīd was renovated.[46] In Aleppo builders constructed the shrine of Saʻd ibn Ayyūb al-Anṣārī.[47] Another area of investment was the renewal of Latin (Crusader) and Ayyubid fortifications, which delineated the Mamluks′ political domain. Inscriptions from Shawbak in southwestern Jordan to Ḥiṣn al-Akrād (Krak des Chevaliers) in central Syria attest to this initiative.[48]

Conspicuously sacred and military structures as these often bore inscriptions appropriate to Syria′s role as imperial frontier and holy land. As ″public text″ they name the founder and announce his self-asserted achievements and titles.[49] Baybars′

name, for example, is accompanied by a long list of royal titles: ″our sultan, the victorious king, judicious, righteous, warrior, master of kings and sultans, ruler of the two *qiblah*s [Mecca and Jerusalem], servant of the holy places, partner of the caliph, the commander of the faithful, Alexander of our days.″[50] Qalāwūn′s titulature included additional titles, such as: ″the greatest sultan, king of kings *(shāhanshāh al-mu'aẓẓam),* the monarch who holds the nations by their necks, the king supported by heaven *(mu'ayyad)*.″[51] In addition to insignia and regalia,[52] inscriptions are informative about financial investments and assert the role of religious endowment *(waqf)* in building or maintaining a specific institution.[53] In other instances architectural inscriptions were believed to have a protective quality, shielding property from mismanagement or seizure.[54] In addition, inscriptions occasionally document the abolition of taxes and limitations on tariffs.[55]

The development of the public sphere was not restricted to stone and marble. To capture the viewers′ attention the governing elite shaped the urban space by staging events.[56] Cities were decorated to celebrate military victories, investitures of sultans, proclamations of royal births, recovery of the sultan′s health, or the accession of a new governor.[57] In a manner resembling an outdoor performance,[58]

the rulers staged parades, public ceremonies, and festivities.[59] Cavalry and infantry marched, drums were beaten, jugglers preformed,[60] and emblems of state were put on display.[61] Streets and squares were also decorated with textiles, colors, and lights.[62] On the occasion of the sultan's recovery from illness, the people of Damascus were ordered to decorate the streets with ornaments and pieces of brocade embroidered with gold and silver. The drums played loudly in the citadel and palaces, and the viceroy put on the royal robe of honor in a public ceremony.[63] When Altunbughā al-Jubānī reentered Damascus and took up his post as viceroy, candles were lit and the imam of the Great Mosque invoked blessings for the sultan.[64]

The decoration and lighting of the streets was only one element in the staging of these political performances. With lights came sounds.[65] Bands of drummers *(ṭablkhānah)* played to publicly announce important events.[66] The rhythm of drums on these occasions differed from the music played by tambourines or the beating of the drums during fighting.[67] The account of the victorious return of Sultan Barqūq to the throne in 792/1390 preserves the joyful scene at the welcoming reception:

> At dawn al-Malik al-Ẓāhir Sayf al-Islām Abū Sa'īd Barqūq arrived at Raydānīyah. A mission from Cairo proceeded to meet him: the descendants of the Prophet, the Sufis carrying banners *(sanājiq),* army battalions dressed for combat and armed with weapons, Jews carrying candelabra and the Torah, Christians holding candles and

> Bibles, and the masses. They chanted blessings, and the women trilled.[68]

The decorated streets and buildings were intended by the ruling Mamluk elite as a backdrop to their striking costumes and to gain the admiration of the viewing public *(washshaḥa al-madīnah ba'da an zuyyinat)*.[69] Official parades and ceremonies marked particularly important events in great splendor *(fī ubbahah 'aẓīmah)*.[70] On the arrival of al-Malik al-Sa'īd ibn Baybars to Damascus in 677/1279 the city was decorated. Domed pavilions *(qibāb)* were erected, and people packed the streets. On the day of the Great Feast *('Īd al-Nahr)* they prayed together at the hippodrome with the sultan. This mass gathering was followed by a more modest event inside the citadel, where a welcoming reception took place.[71] On another occasion, in 741/1341, an ailing sultan ordered the release of all prisoners. In reaction to this gratifying news people came out carrying burning candles, beating drums, and holding Bibles (Jews) and Gospels (Christians) in their hands.[72]

Victory parades were staged to arouse hopes for stability and peace, in addition to demonstrating authority and strength.[73] Riding in front of their troops army commanders entered the cities′ gates and led processions along crowded streets.[74] Returning victorious from a battle against the Mongols, Qalāwūn ceremoniously crossed Damascus with his soldiers and twelve wagons full of prisoners of war.[75] Several days after Qalāwūn′s defeat of the Franks and his capture of Tripoli, a carrier pigeon landed in the Damascus citadel and brought the news. The garrison force played drums, and the streets were decorated.[76]

A similar event was staged following the conquest of Acre by al-Ashraf Khalīl

in 1291. Damascus was elaborately adorned *(wa-zuyyinat ajmal zīnah)*. Riding ahead of his cavalry, the sultan resembled ″the full moon surrounded by shining stars″ *(ka-al-badr bayna kawkabihi)*.[77] Comparable was the reaction to al-Ashraf Khalīl′s victory over the Armenians and the capture of Qal'at al-Rūm. Damascus was decorated, the citadel, streets, and palaces festooned. Leading his soldiers, the victorious sultan rode through the city′s streets. In the course of the military parade Armenian captives were exhibited. The chronicles report on the joyful audience crowding the squares.[78]

Other occasions for public celebration included the inauguration of a new sultan or viceroy.[79] For these events the audience cheered and blessed the new leader,[80] as was the case for the coronation of al-Malik al-Afḍal, the ruler of al-Ḥamāh.[81] Upon the investiture of the minor prince al-Malik al-Naṣr Faraj ibn Barqūq in 801/1399, a long black cloak *(franjīyah)* embroidered with gold thread was draped over the child′s shoulders and a golden turban *('imāmah)* placed on his head. The royal procession in Cairo crossed the city and ascended to the citadel, where the new sultan sat on the throne *(dast)*.[82] Similar performances marked political insurgencies in the provinces. During the revolt of al-Malik al-Kāmil al-Ashqar Sanqar against Qalāwūn, the rebel declared the severing of contact between Damascus and Cairo. This declaration was echoed by a parade joined by cavalry, men of religion, and notables. Leading his forces, Sanqar descended from the citadel and rode towards Damascus′ hippodrome. There he inspected the forces and honored their commander with robes of honor.[83]

These events provided an entertaining spectacle for the public. Many accounts of celebrations *(yawm mashhūr)* depict large crowds flooding the streets carrying candles and joining the procession, as if they were actors in a play.[84] On one occasion the merchants of Damascus were ordered to stand outside the city wall when al-Ashraf Khalīl was entering the city. Joining them were artisans led by their master *('arīf);* all were holding candles. As the sultan′s convoy drew closer

to the gate they lit their candles. The majestic entourage advanced along an illuminated route from Bāb al-Naṣr to al-Qadam mosque.[85] On another occasion, as the troops fighting Minṭāsh advanced towards Damascus, many Damascenes came out of the city holding candles and listening to singers accompanied by tambourines.[86]

When Sultan Barqūq entered Damascus in 793/1391, the official ceremony was said to be "according to the fashion of the kings." The governor Yālbughā al-Nāṣirī bore the royal parasol *(al-qubbah wa-al-ṭayr)* over his head, candles were lit, and girls sang. The people spread pieces of cloth along the streets that the sultan passed on his way to the citadel. Men called out blessings to the sultan, and women gave shrill cries. The citadel's commander had rebuilt, whitewashed, and furnished most of the citadel's structures. Sitting high on his horse Barqūq reviewed the dismounted cavalry. This gesture reflected the distance between royal authority and subordinates. The ceremony ended with the sultan bestowing robes of honor on the amirs "as was the custom of the kings."[87] These were not low-cost events, and the local population was occasionally asked to bear the financial burden of hosting them.[88] No wonder, then, that public reaction was sometimes hostile.[89]

Parades were used by the authorities to display *(ashhara)* those who were declared enemies of the public order. In order to humiliate them, they were exhibited to the public, occasionally tied back-to-back on a beast of burden, sometimes fastened with nails to a board *(tasmīr)*. In one instance the sultan ordered rebellious soldiers to be put on display. As the camels were led along the streets, the soldiers' wives, their faces unveiled and exposed, dashed around them.[90] A similar situation was reported in Damascus in 792/1390. The guards beat drums as Ibn Hanash was brought to the city. Soldiers with drawn swords in their hands marched at the column's head, while the prisoners, tied to the backs of beasts of burden, were shown to the public.[91] For three days the heads of two executed amirs were hung in Cairo, first at the citadel gate, then at the town gate. During these days the

military bands continuously beat small drums.[92]

Dār al-Sa'ādah palace in Damascus served as a place of assembly where the influential men *(ahl al-ḥall wa-al-'aqd)* congregated to pay homage *(bay'ah)* to the new viceroy nominated by the sultan. The first stage in the formal procedure was the reading of the letter of appointment by the light of candles. This was accompanied with the bestowal of a robe of honor. From Dār al-Sa'ādah the incoming viceroy proceeded to the citadel, where the second stage of the ceremony took place. Arriving there the viceroy bowed and kissed the gate's doorstep *('atabah)* and entered the hall. With this he commenced his term of office.[93] Other ceremonies marked the end of service and the departure of officials. They also included the exchange of gifts.[94]

Outside of political functions, the streets of Mamluk cities were also used for religious ceremonies. All strata of society celebrated communal feasts together and participated in mass gatherings. The chronicles report on the departure and return of the hajj caravan and on religious festivals to commemorate Muslim holidays. Worshipers commemorated other occasions, such as the completion of the recital of the entire Quran *(khatmah)* or the end of a yearly cycle of hadith recitation.[95] The nomination of Ibn Khallikān, the well-known jurist and historian, to a teaching position at the Ẓāhirīyah madrasah in Damascus in 677/1278 was celebrated by a gathering of political and religious dignitaries.[96] On his visit to Damascus in 696/1296, Sultan Kitbughā followed the pilgrims' steps. He paid a visit to the Umayyad Mosque and inspected a precious manuscript said to be the Quran of 'Uthmān. He then proceeded to the mosque's southern wall and prayed at the tomb of Nabī Hūd. At Friday prayer he invited members of the congregation to write him and personally collected their petitions *(qiṣṣah)*.[97]

Public ceremonies and rituals did not always take place outdoors. Some were held within the walls of religious or governmental buildings. Mosques and shrines served as common loci for public encounters with the rulers. During Friday noon prayers the preacher blessed the sultan, a transparently political gesture. When Barqūq succeeded in taking control of Damascus, a celebratory ritual took place

in the Umayyad Mosque. Candles were lit, and the preacher, standing on the top step of the pulpit, invoked blessings for the sultan, who stood on a lower step.[98] Following the recovery of Badr al-Dīn Baydarah from an illness, a communal gathering took place in Damascus′ Grand Mosque. Candles illuminated the building, as was the practice on mid-Shaʿbān nights. Readers recited short chapters from the Quran, and Baydarah distributed considerable sums of alms *(ṣadaqah)*.[99] After the dismissal of Tankiz, the powerful viceroy of Damascus, in 741/1340, the new governor prayed at the rulers′ stall *(maqṣūrah)* in the Grand Mosque. In order to denigrate his predecessor, the new governor listed Tankiz′s faults and promised to introduce reforms in taxation and administration.[100]

The audiences at these events were not passive spectators. They participated in, and reacted to, the public displays and performances. They crowded the streets, their rising voices heard from every corner of the city. Occasionally they carried candles and even copies of the Quran.[101] At least during one occasion of alms distribution, in ʿĀshūrāʾ 912/1506, several people were crushed as the crowd forced its way toward the sultan, who was throwing coins to the poor from horseback.[102] Crowded conditions are plainly illustrated by a report from Damascus. When a procession with an elephant reached a bridge, the poor animal became so terrified that he tumbled over the side of the bridge and died.[103]

It is appropriate to mention here that streets and squares were not used only for prayers and parades. Sultans and commanders used such public spaces for their private rites of passage and invited rich and poor to participate. During ceremonies such as weddings *(zaffah)* and circumcisions *(khitān)* participants dined, listened to bands and poets, and exchanged gifts,[104] as was the case in Damascus for an event sponsored by the local governor in 801/1399. To accommodate the numerous guests, tents were erected, and eleven bowls of sugar were cooked. The governor′s son was seated on a horse and accompanied by guests and musicians to the palace where his circumcision took place.[105] At a party given by the sultan in 837/1434, forty boys were circumcised alongside the royal prince. He was presented

[105]Ibn Qāḍī Shuhbah, *Tārīkh,* 4:28–29.

with gifts, jewelry, and sweets. Food and drinks were served to all.[106]

Funerals were another opportunity for public relations. An inscription on the wall of the Ẓāhirīyah madrasah in Damascus reads: ″our master Sultan Muḥammad Berke ordered the construction of this blessed mausoleum and the two schools. He had built it to inter his father and himself; one day he will join him. Hence this tomb will contain two mighty kings, al-Malik al-Ẓāhir and al-Malik al-Saʿīd.″[107] The coffin of Ibrāhīm ibn Aybak was transferred in 645/1247–48 from Cairo to the tomb that he had built for himself in Damascus.[108] Citizens were summoned from the minarets to take part in funeral processions that traversed the city. Shops were closed, and women exposed their hair as a sign of mourning.[109] In 730/1330 the body of Sayf al-Dīn Bahdar was taken first to the Great Mosque in Damascus. From there the funeral procession *(janāzah)* proceeded to the cemetery. Notables, heads of local government, and the religious establishment participated in the ceremony. All the mourners walked on foot; not a single person was seen on horseback.[110] In the services commemorating the end of the first year after the death of Qalāwūn, a customary meal *(simāṭ)* was served in Cairo and Damascus. The population of Damascus gathered at the Green Hippodrome, north of the old city. Its gates were unlocked. From midday until midnight Quranic verses were recited, and preachers *(wuʿʿāẓ)* related stories from the sultan′s life.[111]

The manipulation of the urban topography of the city and its public spaces for official image-making by the Mamluks was as true for Damascus, and cities of Bilād al-Shām, as it was for Cairo. Building projects, the inscriptions that covered those buildings, and the public performances staged inside and outside their walls combined to fortify and to disseminate the image of Mamluk sultans and viceroys as unquestioned rulers. Various actors participated in those performances, engaging both representatives of the state and the civilian urban population. It was in these urban, public spaces that sultans, commanders, jurists, Sufis, civil servants, merchants, and the masses *(ʿāmmah)* encountered one another and participated together in the construction of official imagery. Occasionally during these events gifts and awards were bestowed. The exchange of gifts, the distribution of alms,

The Use of Fortification as a Political Instrument by the Ayyubids and the Mamluks in Bilād al-Shām and in Egypt (Twelfth-Thirteenth Centuries)

Introduction

Fortification played a major role in the management of conflicts between Franks and Muslims in Bilād al-Shām at the time of the Crusades. In addition to protecting the borders, fortifications preserved the local *iqṭāʻ*-based economy. Between the end of the twelfth and the end of the thirteenth centuries, Ayyubid and Mamluk rulers used fortification to consolidate their power in Muslim and former Frankish territory. This political use of Islamic fortification knew three distinct stages of development between the late twelfth and thirteenth centuries, parallel with the technical evolution of Islamic military architecture and contemporary with political changes in Bilād al-Shām and Egypt (fig. 1).

Stage One: The Defensive Policy of Ṣalāḥ al-Dīn at the End of the Twelfth Century

Beginning in 1170/1171, Ṣalāḥ al-Dīn built fortifications as the Fatimid vizier of Egypt. His considerations were primarily defensive in this period, following the Frankish campaign of 1168 that led to the siege of Cairo, and the Frankish-Byzantine naval expedition against Damietta in 1169. Thus, Ṣalāḥ al-Dīn ordered the restoration of the Fatimid walls of Cairo, conquered the castle of Ayla on the Red Sea, and made improvements to the fortifications of Alexandria.[1]

The launch of the fortification program of Cairo in 1176 by Ṣalāḥ al-Dīn not only symbolized his will to affirm his independence from the dying Nurid power in the Bilād al-Shām, but also to put an end to the Fatimid power in Egypt. This defensive program represented the first step toward the political and military supremacy of Ṣalāḥ al-Dīn at the end of the twelfth century. Until that time, Cairo had been the capital of the Fatimid Caliphate, founded in 969 to the north of the city of al-Fusṭāṭ. Thus, the city had been subject to careful works of fortification,

[1] J. M. Mouton and Sami ʻAbd al-Malik, "La forteresse de l'île de Graye (Qal'at Ayla) à l'époque de Salah al-Din: Etude épigraphique et historique," *Annales Islamologiques* 29 (1995): 85; Nasser O. Rabbat, *The Citadel of Cairo*: *A New Interpretation of Royal Mamluk Architecture* (Leiden, 1995), 6–7.

comprising two defensive walls. The first was built from brick in 971, and the second from stone masonry in front of it between the years 1088 and 1092.[2]

Ṣalāḥ al-Dīn entrusted the amir Qarāqūsh with the supervision of a fortification program unequalled in the former Fatimid capital. This program led to the construction of a citadel at the top of a hill to the southeast of Cairo (fig. 2), and a twenty-kilometer-long wall surrounding the whole city (fig. 3).[3] Used both as the residence of the new sovereign and as a law court, the citadel symbolized the political preeminence of Ṣalāḥ al-Dīn and of the Ayyubids over the Fatimid city. It became, moreover, the physical base of Ṣalāḥ al-Dīn's power in Egypt: it was above all a fortified complex in which Ṣalāḥ al-Dīn, his relatives, and his mamluk troops could take refuge in case of an invasion of Cairo by the Franks or a revolt in the city against the new sovereign. The construction of the citadel was part of a larger building program aimed at creating a Muslim counterpoint to Crusader Jerusalem. The Ayyubid capital would thus be able to compete with the Frankish capital by virtue of its defensive system. It validated the political transition between the Fatimids and the Ayyubids, which did not represent a total rejection of the pre-existing fortifications, as the defensive walls built around Cairo by the Fatimids were preserved and surrounded by the Ayyubid ramparts.[4] Therefore, the defensive pragmatism extolled by Ṣalāḥ al-Dīn came with the political transition. The extension of the defensive policy to the rest of Egypt, with fortification programs applied to the main coastal positions and on the primary communication routes of the Sinai, symbolized the extension of Ṣalāḥ al-Dīn's power to the entire former Fatimid province and the emergence of a competitive Muslim territory in the turmoil of the Crusades.

Nonetheless, in Bilād al-Shām, Ṣalāḥ al-Dīn did not undertake a fortification policy similar to the one developed in Egypt, mainly due to a difference in the management of power. After having unified almost all of the former Nurid provinces in Bilād al-Shām with the taking of Aleppo in 1183, Ṣalāḥ al-Dīn delegated his authority to his most faithful amirs and to his family members. He entrusted former Saljuq and Frankish territories to them as *iqṭā‘* and also delegated to them, as *muqṭa*‘s (*iqṭā‘* holders), the responsibility for the defence of these lands. Thus, delegation of power was accompanied by a delegation of defensive decision-making in which Ṣalāḥ al-Dīn, who was occupied primarily with the military expeditions

[3] ‘Imād al-Dīn al-Iṣfahānī, *Kitāb al-Fayḥ al-Qussī fī al-Fatḥ al-Qudsī (583/1187–589/1193),* ed. M. Maḥmūd Ṣabāḥ (Cairo, 1975), 209.

[4] Rabbat, *The Citadel of Cairo,* 6–7.

he led against the Franks in the region, only rarely interfered.[5]

Therefore, as for Ṣalāḥ al-Dīn in Egypt a decade earlier, the fortifications erected by the *muqṭa*ʿs in Bilād al-Shām served to affirm their authority and power over a territory recently subjugated and provided the key to semi-autonomy from the Egyptian central power; indeed, the castles became the residence of the *muqṭaʿ,* received the taxes in coin or in kind, and could shelter the locals in case of threats. A good example of this provincial policy is the *iqṭāʿ* of the Mengüverish amirs, located on the northern Syrian coast. The amirs, who were granted a vast territory by Ṣalāḥ al-Dīn in 1188, reigned for more than eighty years in semi-autonomy and launched private fortification programs through the main castles that protected the borders of their *iqṭā*ʿs, i.e., Ṣahyūn, capital of the *iqṭāʿ ,* Balāṭunus, and Burzayh.[6]

One observes at the end of the twelfth century two facets of Ṣalāḥ al-Dīn′s power bound closely to two defensive policies. In Egypt, the Ayyubid conquest of the Fatimid state was followed by a large fortification program in Cairo and in the main strategic zones supervised largely by Ṣalāḥ al-Dīn. In Bilād al-Shām, the system of *iqṭāʿ* applied on a large scale to the territories taken from the Franks and the Nurids generated private and individual fortification programs led by the *muqṭa*ʿs, who sought military and financial autonomy.

Stage Two: The Crucial Role of Fortification in the Internal Struggles between the Successors of Ṣalāḥ al-Dīn during the First Half of the Thirteenth Century

This period saw tensions between Ṣalāḥ al-Dīn′s successors for their supremacy as leaders of the vast Ayyubid empire. Two main centers emerged and remained rivals during the first half of the thirteenth century: the principality of Aleppo, controlled by al-Ẓāhir Ghāzī, and the principality of Damascus/Cairo, under the authority of al-ʿĀdil.[7]

The war against the Franks was relegated to the background during this period because of numerous truces and peace treaties; the attention of the two main Ayyubid sovereigns was therefore focused on the development of their own territories within the Ayyubid empire. In this regard, they led policies of centralization of the *iqṭā*ʿs granted at the time of Ṣalāḥ al-Dīn that aimed to territorially and politically unify these two main poles of the empire, in order to limit their dissensions and their defensive weaknesses.

Fortification played a major role in these centralization policies of the two

[6]Ibid., 266–67.

[7]Ibid., 235.

main Ayyubid princes, insofar as control of the *iqṭā*ʻs was generally symbolized on the ground by the implementation of fortification programs ″sponsored″ by Aleppo, Damascus, or Cairo. These aimed at improving the defensive system of a region, developing the defensive network of the principality, and affirming the sovereign′s power in even the most distant provinces of their territories.

Thus, this empire-wide defensive system appeared mainly as the competition between the two princes of Aleppo and Damascus/Cairo to outdo their respective rival in the quality of a regional defensive system that had to be sufficiently effective in preventing any attack from a neighboring family member. Political and military rivalries generated this defensive emulation, a defensive race internal to the Ayyubid world that encouraged the development of Islamic fortification during this period.

The sites affected by these fortification policies were numerous in Bilād al-Shām: one can mention Aleppo (fig. 4), Ḥārim, Qalʻat Najm, Qalʻat Jaʻbar, al-Shughr-Bakās, Apamea, and Shayzar (fig. 5) for the principality of Aleppo and Damascus, and Bosra, Ṣalkhad, ʻAjlūn, Shawbak, Karak, and Cairo for the principalities of Damascus/Cairo. The Ayyubid princes were quite careful in the execution of these fortification projects, sometimes personally inspecting the progress of work. The supervision of these fortification programs by the princes led to the emergence of standardized characteristics for this maturing practice of Islamic fortification. The sovereigns in particular turned their attention to the main towns of their principalities, Aleppo, Damascus, and Cairo, whose citadels became their place of residence. There they coupled the fortification works with palatial architectural works intended to change these defensive sites into fortified palaces reflecting both their military and political might.

The castle of al-Shughr-Bakās, located in northeast coastal Syria (fig. 6), experienced the ″princely″ defensive policies of this period.[8] Conquered by Ṣalāḥ al-Dīn from the Franks in 1188 and granted as an *iqṭā*ʻ to an amir, the site was recovered by the prince of Aleppo, al-Zāhir Ghāzī, shortly after the sultan′s death and after the rebellion of the sons of the amir in 1194. The prince of Aleppo ordered immediately the execution of a major fortification program on the site: from the defensive point of view, the upgrading of the castle by the prince of Aleppo ensured direct control of one of the main roads linking the Ayyubid principality of Aleppo to the Crusader principality of Antioch. From the political point of view, the fortification program increased the power of the prince of Aleppo in the region. Indeed, the improved castle symbolized the authority of the

prince in a region which had been semi-autonomous since its conquest by Ṣalāḥ al-Dīn in 1188.

Some Ayyubid *iqṭā*ʻs and principalities remained in the margins of the policies of the main successors during the first half of the thirteenth century and developed their own defensive programs to strengthen their local power. This was the case in the principalities of Hims and Ḥamāh, in the territory of the Ismaʻilis and in the *iqṭā*ʻ of the Mengüverish amirs on the northern Syrian coast around Ṣahyūn castle. This castle, located around thirty kilometers to the north-east of Latakia, was transformed by the amirs into a scaled-down imitation of the citadel of Aleppo, notably with the building of a palace similar to that built in the citadel of Aleppo by the prince al-Zāhir Ghāzī at the beginning of the thirteenth century (fig. 7).[9]

Stage Three: Mamluk Fortification as the Reflection of Military Supremacy at the End of the Thirteenth Century

The advent of the Mamluks in the second half of the thirteenth century represented the last main turning point of the Crusades with the emergence of a power that took responsibility for subduing the Latin States on the shores of Bilād al-Shām. Following the example of their Ayyubid predecessors, the Mamluks used fortification as a means to establish their power in the provinces of Bilād al-Shām that remained faithful to Ṣalāḥ al-Dīn's successors and in the regions progressively conquered at the expense of the Crusaders.

In the former Ayyubid territories of Bilād al-Shām and Egypt, the Mamluks sought to recover the former *iqṭā*ʻs and principalities, and gradually replace the *muqṭa*ʻ at his death with a governor, as was the case with the *iqṭā*ʻ of the Mengüverish amirs. Other *iqṭā*ʻs, such as those of the amir of Karak and the Shawbak castles of Jordan, were recovered after military expeditions. This system was also applied to the last Frankish territories and castles conquered during this period, such as Krak des Chevaliers.

The castles served as residences for the Mamluk governors and centralized the political, economic, and military life of the region, as in the Ayyubid period, but the Mamluk sultans were not able to launch fortification programs similar in extent to those of their predecessors. One notable exception was Cairo, where the citadel was re-fortified at the end of the thirteenth century. The main reason for this situation was that the Mamluks generally recovered castles and citadels in good condition, since they tried to conquer them while inflicting as little damage as possible. Dismantling these Ayyubid and Frankish defensive works and eventually replacing them in face of the threat of a Crusader counteroffensive would have

---

[9]Yasser Tabbaa, *Constructions of Power and Piety in Medieval Aleppo* (University Park, PA, 1997), 89–91.

required a heavy investment of time and money. Therefore, the sultans could not symbolize their new authority by building numerous towers and palaces *ex nihilo,* but had to adapt their works to the pre-existing fortifications.

The Mamluks, thus did restore and make defensive improvements to these castles, both to strengthen the sites against a potential threat and to symbolize to the locals the fall of the Ayyubids and the beginning of their own rule. These works were characterized by monumentality and ostentation; they built towers and curtain-walls surpassing the size and defensive efficienty of pre-existing towers, such as in Krak des Chevaliers, Aleppo, and Marqab (fig. 8).

Finally, they demonstrated their political and military superiority by displaying in an ostentatious way the progressive transformation of these castles into palatial residences that had been initiated during Ayyubid times: epigraphical registers with floral and animal-shaped patterns were used liberally on castle walls, in addition to decorative designs around such defensive devices as loopholes and box machicolations (ex. Cairo, Krak des Chevaliers, Marqab) (figs. 9 and 10).[10]

In conclusion, one can observe, between the end of the twelfth and the end of the thirteenth centuries, a significant evolution in the role of fortification as a major political instrument used by the Ayyubids and the Mamluks. Ṣalāḥ al-Dīn used fortification as a precious tool in the affirmation of his power in Egypt. In Bilād al-Shām, it allowed him to rely, politically and militarily, on his faithful amirs and relatives while he was occupied with the struggle against the Franks. During the first half of the thirteenth century, fortification was used as a chessboard in a game played between the two main poles of the Ayyubid empire for their own supremacy over Bilād al-Shām and Egypt: every castle or citadel put under the control of a prince was a pawn in this game and, thanks to the improvement of their defensive systems at that time, could be useful both for the protection of the ″king″ and for the acquisition of territory. Finally, for the first Mamluks of the second half of the thirteenth century, fortification was essentially used in support of defensive ingenuity at its apogee and of an artistic expression that went beyond the mere military functionality of the castles. They became strong symbols of a military and political power that spread in progressive and inexorable ways over the whole Bilād al-Shām and Egypt at the end of the Crusades.

Practice and Reform in Fourteenth-Century Damascene Madrasahs

Prior to the Mamluk period, Damascus suffered a series of political and economic crises which underscored its already diminished status. It had been an object of contention between the Fatimids in Cairo and the Abbasids in Baghdad, each seeing the city as an advance post against the other. The insertion of the Saljuq Turks and the Crusaders into this equation did not make matters any easier for Damascus and its inhabitants. Relative stability and prosperity, however, were slowly regained with the arrival of Nūr al-Dīn Zangī who made Damascus the capital of his realm in 1154. And despite minor setbacks during the following century, when the Ayyubids ruled Egypt and Syria, Damascus continued to grow in importance in the cultural life of the region, especially after the fall of Baghdad (1258), as a center for Sunni (and Sufi) education with its ever expanding number of madrasahs and *khānqāh*s. This role was further enhanced during the Mamluk period as these sultans relied on an Arabic-speaking bureaucracy. During the Mamluk period, Damascus became the capital of the province, and as the most important city in Syria, it played a crucial role in the formulation of post-Abbasid culture.[1]

Although by no means the only venue to transmit knowledge, the madrasah became an important cultural institution whose role went beyond that of a place for higher education. Recent literature suggests different social and political roles and raises further questions that need to be answered in an effort to fully comprehend the role the madrasah played during the medieval period.[2] While preparing an edition of *Tārīkh al-Jazarī* comprised of all available fragments,[3] I came upon,

[1]This is one of a series of pieces that I will undertake based on *Tārīkh al-Jazarī*. I am grateful to the National Endowment for the Humanities and the ARCE for the fellowship that allowed me to do this research during 2004/5. For the importance of the Mamluks to Arabic and Arab culture, see Linda Northrup, "The Bahri Mamluk Sultanate, 1250–1390," in *The Cambridge History of Egypt,* vol. 1, *Islamic Egypt 640–1517,* ed. Carl F. Petry (Cambridge, 1998), 254 f.

[2]For a critical assessment of the role of the madrasah in Damascus, see Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (Cambridge, 1994). See also Jonathan Berkey, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education* (Princeton, 1992). A history of the institution may be found in George Makdisi, *The Rise of Colleges: Institutions of Learning in Islam and the West* (Edinburgh, 1981).

[3]Shams al-Dīn Muḥammad ibn Ibrāhīm al-Jazarī, *Ḥawādith al-Zamān wa-Anbā'ihi wa-Wafāyāt al-Akābir wa-al-A'yān min Abnā'ihi.* I am working with five fragments of the manuscript: Gotha

among other things, continuous reference in the narrative of events and in the obituaries of some noteworthy individuals to madrasahs in Damascus, their teachers, when they were appointed or were transferred, and who replaced whom, among other relevant information that might shed further light on the institution, at least during the years covered by the remaining fragments. At this time, only selected reports will be highlighted that refer to practices related to the madrasah institution and mention attempts to reform some abuses that were associated with it.

New Institutions

While Pouzet could count 94 madrasahs in Damascus by 1300,[4] more were built after that. What remains of al-Jazarī´s manuscript unfortunately does not cover the first twenty-five years of the fourteenth century but only the years from 1325 to 1338 (725–38 A.H.). Al-Jazarī tells of the dedication of several madrasahs and mausolea. One madrasah was a modest establishment and the others more grand. Inaugurated on 14 Dhū al-Qaʻdah 726, the Madrasah Ḥimṣīyah, not to be confused with the venerable Dār al-Ḥadīth al-Ḥimṣīyah, was a small one. It was located opposite the Shāmīyah Juwwānīyah and came into being barely four months after the death of the person who endowed it. One teacher, Muḥyī al-Dīn, known as Qāḍī ʻAkkār, began teaching there.[5]

The founder of Dār al-Qur'ān al-Sinjārīyah, the well-to-do merchant ʻAlā' al-Dīn ʻAlī al-Sinjārī, died suddenly on Thursday, 13 Jumādá II 735, while in Cairo. He had earlier established the Madrasah Sinjārīyah in Damascus, opposite the Bāb al-Naṭṭāfīn, one of the northern gates of the Umayyad Mosque. The endowment provided for a group of Quran reciters and students as well as for the teaching of hadith.[6]

Another madrasah is Dār al-Qur'ān wa-al-Ḥadīth, established, built, and endowed by *(ansha'ahā wa-ʻammarahā wa-waqafahā)* Shams al-Dīn Muḥammad ibn Aḥmad al-Harrānī, known as Ibn al-Ṣabbāb. He was a wealthy traveling merchant *(tājir saffār)*. This madrasah was sufficiently endowed to have a hadith

[6]Al-Jazarī, *Ḥawādith al-Zamān*, 3:804.

scholar and students *(shaykh li-samā' al-ḥadīth wa-mustami'ūn)*. The five prayers as well as the special *tarāwīḥ* prayers were to be performed there. It was located opposite the Madrasah 'Ādilīyah al-Kabīrah and its inauguration was on Tuesday, 1 Ramaḍān 738.[7]

The mausoleum *(turbah)* had developed, as an institution supported by *waqf,* during the Mamluk period and referred to a complex structure that housed the tomb and included a mosque and facilities for the staff. Some included a Sufi convent. Often, a *turbah* could also include a madrasah. The size and facilities attached to the *turbah* depended on the station of the benefactor and the size and purpose of the endowment. Thus, a *turbah,* in its manifold manifestations, was among the various types of institutions where knowledge was exchanged. The following reports found in al-Jazarī illustrate the construction of some mausolea in Damascus.

A mausoleum was built by the merchant Amīn al-Dīn 'Uthmān ibn 'Umar, known also as al-Buṣṣ, who died on 7 Dhū al-Ḥijjah 731. The mausoleum was outside the Jābiyah Gate on the site of an older mosque that was knocked down and rebuilt with a minaret and a burial room next to it. Attached to the walls of the mosque, he built upper chambers and shops *('alālī wa-ḥawānīt)* and made their income *waqf* for the mosque. He also endowed a chair for the teaching of hadith. Amīn al-Dīn 'Uthmān also built a *khān* (or inn) in al-Muzayrib (a village in the Ḥawrān, south of Damascus) with a mosque and a minaret. A prayer leader and a caretaker, among others, were to take care of the place and the travelers who stayed there for the night. They were to light ten candles for each boarder. The total cost of Amīn al-Dīn's endowment was about 250,000 dirhams.[8]

Another mausoleum was built for the Mamluk amir Sayf al-Dīn Balabān, also known as Ṭurnā. He died on 21 Rabī' I 734 and left a great deal of money, of which 30,000 dirhams were set aside for the building of the *turbah* and the attached mosque and to buy whatever was needed for them. The imam of the mosque was to receive 30 dirhams, the muezzin 30 dirhams, and the caretaker 30 dirhams. The mausoleum and the mosque each had windows made of iron that opened to the street and were inside the city walls, near the Umayyad Mosque. They were adjacent to his former residence.[9]

A friend and a neighbor of al-Jazarī when he lived near Bāb al-Khawwāṣīn, Najm al-Dīn 'Abd al-Raḥīm al-Raḥbī was a very wealthy merchant. He died on Wednesday, 27 Jumādá II 735. He built a mausoleum and a mosque in the area of Mazzah, where his endowment supported a group of residents and caretakers. One

third of his wealth (50,000 dirhams) went to buy property whose income was designated for charity.[10]

MEDICINE AND THE PHYSICAL SCIENCES

It is thought that the madrasah institution was specifically established for the teaching of religious sciences, and especially *fiqh* (law). While that might be true of some institutions, in others subjects such as medicine were taught alongside the religious sciences, often by the same individuals. Also, just as in the teaching of religious sciences, the approach to the teaching of physical sciences was similarly varied to include the formal and the informal types of education practiced at the time. Al-Jazarī provides the following reports which illustrate this complexity. ʻImād al-Dīn Abū Bakr ʻUthmān al-Ḥanafī, known as ʻImād al-Ḥayawān, was a physician at the Bīmāristān al-Ṣāliḥīyah as well as the Bīmāristān al-Nūrī. He also taught Hanafi law in the Hanafi schools.[11] ʻIzz al-Dīn Abū ʻAlī ibn Zufar, from Irbil, was a physician by training and experience who studied and worked in Baghdad, Tabriz, and other cities in the east. He came to Damascus in 692 and became a Sufi. He must have passed certain requirements for he was recommended to the authorities and he was finally given permission to practice medicine *(thumma innahu zukkiya wa-udhina lahu fī mubasharat al-ṭibb)*. He, however, was in a quandary and could not take off his Sufi garb and decided to forsake his profession.[12] Najm al-Dīn ʻAbd al-Raḥīm ibn al-Raḥmān, known as Ibn al-Shaḥḥām, passed away in the Madrasah Jārūkhīyah[13] on Tuesday, Rabīʻ II 730. This Shafiʻi scholar, originally from Mosul, left his home town as a youth and traveled around before he settled in Baghdad in pursuit of knowledge *(wa-aqāma bi-Baghdād yashtaghilu bi-al-ʻilm).* He then ″stayed awhile″ in the Sarāy Madrasah of Uzbek Khan. Najm al-Dīn came to Damascus in 724. He must have been well known by then for he was immediately given the *tadrīs* (teaching assignment) in the Madrasah Ẓāhirīyah, which is outside the city wall. The *mashyakhah* of the Palace Khānqāh and the *tadrīs* in the Madrasah Jārūkhīyah were added later to his duties.[14] Najm al-Dīn′s obituary indicates that he was an expert in law and medicine, in keeping with the traditions of the school. This madrasah was built for Abū al-Qāsim Maḥmūd ibn al-Mubārak, known as al-Mujīr al-Wāsiṭī al-Baghdādī, who studied *fiqh* at the Niẓāmīyah of Baghdad with Abū Manṣūr ibn al-Razzāz. He was also the *muʻīd* (teaching assistant) for al-Imām Abū al-Najīb al-Suhrawardī. Where or with whom

[12] Ibid., 146.

[13] Al-Nuʻaymī, *Tārīkh al-Madāris,* 2:169.

[14] Al-Jazarī, *Ḥawādith al-Zamān,* 2:414.

he studied medicine, al-Jazarī does not say, but after Abū al-Qāsim came to Damascus and took over the Jārūkhīyah, he seems to have taught medicine in the school *(wa-nashara bihā al-ṭibb)*. Medicine, in addition, was also taught at the Madrasah Dunaysirīyah, right next to the Bīmāristān al-Nūrī (the main Damascene hospital), at the Labbūdīyah Nijmīyah, and at the Madrasah Dakhwārīyah whose founder was the teacher of such medical experts as Ibn Abī Uṣaybiʿah and Ibn al-Nafīs.[15]

The teaching of hard sciences or professional training related to medical practice was not always done in a madrasah. It was done also by apprenticeship. Badr al-Dīn Abū ʿAlī al-Kaḥḥāl came from a family of oculists. His father and grandfather were both oculists *(kaḥḥāl)*. Badr al-Dīn, who passed away on Friday, 3 Dhū al-Ḥijjah 726, also had knowledge of surgery. Naturally enough, when Badr al-Dīn grew old (he lived to be a hundred) and his hand became unsteady, his son Muḥammad began to practice the profession under the supervision of his father *(fa-kāna waladuhu Muḥammad yukaḥḥil wa-yudāwī al-jarḥá wa-al-marḍá bi-ḥuḍūrihi wa-ishāratihi)*. It would be natural to assume that Muḥammad also read medical books with his father. Other students, al-Jazarī says, ″read and apprenticed″ with Badr al-Dīn, among them *(mimman qaraʾa ʿalayhi wa-ishtaghala ʿindahu)* Shihāb al-Dīn Aḥmad, the head oculist and surgeon *(raʾīs al-kaḥḥālīn wa-al-jarāʾihīyah)*. His son, Jamāl al-Dīn, was then the chief of physicians *(raʾīs al-aṭṭibbāʾ)* in Damascus.[16]

Another near-contemporary oculist passed away four years later on Saturday, 15 Dhū al-Ḥijjah 730. Zayn al-Dīn Ayyūb ibn Niʿmah al-Nābulsī resided, presumably as a student, in the Madrasah Shāmīyah that was outside the city walls *(al-Barrānīyah)*, where he ″memorized *Kitāb al-Luqṭah fī al-Tanbih*″ and audited *(samiʿa) Kitāb al-Adab* of al-Bayhaqī. But when he saw his neighbor, Ismāʿīl ibn al-ʿAbbādī al-Kaḥḥāl, practicing his profession, Zayn al-Dīn liked what he saw and decided to become a *kaḥḥāl* himself. So he studied with yet another oculist, Muḥyī al-Dīn Ṭāhir al-Kaḥḥāl, among others, for a ″short period″ before he started his own practice. He seems to have done well and grew rich as a result. But when Ghāzān Khān attacked Damascus in 700, he fled, with many others including al-Jazarī himself, to Cairo, where he stayed for twenty-two years. His fame and fortune increased there due to the demand for his profession *(wa-nafaqa sūquhu wa-ḥaṣala lahu ḥaẓẓ fī ṣināʿatihi)*. He served the sultan and accompanied him on the hunt. When he returned to Damascus his reputation had already been enhanced and the students flocked to study with him *(wa-qaṣadahu al-ṭalabah*

[15]Al-Nuʿaymī, *Tārīkh al-Madāris,* 2:100–8.

[16]Al-Jazarī, *Ḥawādith al-Zamān,* 2:167–68.

wa-akhadhū ʻanhu).[17]

Al-Jazarī provides the following reports regarding the teaching of other sciences. ʻAlā' al-Dīn ʻAlī ibn ʻUthmān, known as al-Ṭuyūrī al-Ḥāsib, was a professional witness specializing in assessing property values *(yashhadu fī qiyam al-amlāk)* who started out teaching in a *maktab* but eventually had a study circle *(ḥalqah)* in the Umayyad Mosque. A group of students benefited from ʻAlā' al-Dīn's extensive knowledge *(al-yad al-ṭūlá)* in calculus, algebra, *muqābalah* (collating, equations), and geometry *(wa-ishtaghala ʻalayhi jamāʻah fī al-ḥisāb wa-al-jabr wa-al-muqābalah wa-al-handasah, wa-kāna lahu maktab fī awwal amrihi wa-baʻdu ṣāra lahu ḥalqah bi-jāmiʻ Dimashq).*[18] Quṭb al-Dīn Muḥammad ibn ʻAlī, the muezzin and *muwaqqit* (time-keeper) in Karīm mosque in the Qubaybāt, was an expert astrologer, astronomer, and maker of astrolabes. He studied astronomy with Zayn al-Dīn ibn al-Muraḥḥil (a deputy Shafiʻi judge, see below). In turn, Quṭb al-Dīn taught many students these same subjects.[19]

Movement

It is not unusual to read in the obituaries that someone died while a resident in a madrasah. Al-Nuwayrī (d. 732), author of *Nihāyat al-Arab,* for example, reports that his father was born in one madrasah and died in another. He passed away while in the Maliki lecture hall of the Najmīyah Madrasah in Cairo. But although some positions seem to be assigned for life, there was also a considerable movement of scholars from one madrasah to another. And it is worthwhile to notice that the authorities responsible for these appointments took special care not to leave a post vacant in case of death or transfer. Al-Jazarī usually says *wa-aʻṭū* (they gave, or they assigned), yet he does not make clear who "they" refers to. (However, the authorities in this instance would usually consist of officials who administer the endowments, each of the chief judges or their deputies, and other relevant government officials.) Some of these appointments could be considered lateral moves, others seem to be promotions.

When al-Jazarī died on Friday, 7 Jumādá II 729, in his residence at the Madrasah Badrā'īyah, he was replaced by Shihāb al-Dīn Abū al-ʻAbbās Ibn Jahbal, who inaugurated his own lectures there a week later on Monday, 15 Jumādá II. Ibn Jahbal, a scion of a family of learning, vacated his post at the Madrasah Ẓāhirīyah. Shams al-Dīn Muḥammad ibn al-Dhahabī took his place there and inaugurated his own lectures two days later, on Wednesday, 17 Jumādá II. This lecture was attended by the chief Shafiʻi judge of Damascus, ʻAlā' al-Dīn al-Qūnawī,

---

[17]Ibid., 444–45.

[18]Ibid., 156.

[19]Ibid., 370.

and a group of hadith and law scholars. Shams al-Dīn ibn al-Dhahabī (a Shafiʻi himself) had been a preacher *(khaṭīb)* in the mosque of Kafar Baṭná for nearly twenty-six years, having been appointed there in Ṣafar 703. To take over his duties in Kafar Baṭná, Jamāl al-Dīn ibn al-Masallātī, a Maliki, was appointed. He assumed his duties on Friday, 19 Jumādá II, in the presence of a group of judges and other notables who attended his inaugural sermon. A division of duties was agreed upon in this instance where the sons of Ibn al-Dhahabī occupied the post of leading the prayer *(imāmah)* while Ibn al-Masallātī assumed the duty of preaching only.[20] Ibn al-Masallātī was soon after appointed shaykh of the Khānqāh al-Shihābīyah when the previous shaykh died and the post became vacant.

The chief Shafiʻi judge al-Qūnawī passed away on 14 Dhū al-Qaʻdah 729. One of his posts, that of *mashyakhat al-shuyūkh,* was assigned to Sharaf al-Dīn al-Hamdanī, who assumed his post at the Khānqāh al-Sumaysaṭīyah. However, the new chief judge, ʻAlam al-Dīn Muḥammad al-Ikhnāʼī, was transferred from Alexandria. He journeyed to Damascus and assumed his new post in less than two months, on Friday, 1 Ṣafar 730. Two days later, al-Ikhnāʼī inaugurated his lectures at two locations, at the Madrasah Ghazālīyah and the Madrasah ʻĀdilīyah. As usual in such cases, deputies or substitutes were appointed. One was Zayn al-Dīn Ibn al-Muraḥḥil, known also as Ibn Wakīl Bayt al-Māl; he had been at the Madrasah ʻAdhrāwīyah ever since 6 Shaʻbān 725, when he came from Cairo to replace the departing Ibn al-Zamalkānī who had been promoted to chief Shafiʻi judge of Aleppo and thus had to leave several posts behind. Another of his posts at the Madrasah Masrūrīyah was filled by Jamāl al-Dīn ibn al-Sharīshī. To take Ibn al-Sharīshī's place at the Ribāṭ al-Nāṣirī, Ḥusām al-Dīn Ḥasan was transferred from Tripoli.[21]

Another deputy appointed by al-Ikhnāʼī was Jamāl al-Dīn Abū al-ʻAbbās Aḥmad al-ʻUthmānī. He, however, died very soon afterward. Muḥyī al-Dīn Ibn Jahbal, nephew of the above-mentioned Shihāb al-Dīn ibn Jahbal, was then appointed deputy and assumed his duties on Wednesday, 29 Jumādá I 730.[22] Chief Judge al-Ikhnāʼī was soon to assume a teaching post at another school. When two of the teachers at the Madrasah Ṣārimīyah, Najm al-Dīn Hāshim al-Tanūkhī al-Baʻlbakī and Najm al-Dīn Hāshim al-Taʻlīlī, died, the one in Jumādá II and the other in Rajab, al-Ikhnāʼī took over their duties as a supervisor and a teacher, respectively.[23]

Jamāl al-Dīn Ibn Jumlah was appointed chief Shafiʻi judge in Rabīʻ I 733 and

---

[20]Ibid., 325.

[21]Ibid., 75, 78.

[22]Ibid., 378 f.

[23]Ibid., 464, 493.

the letter of appointment arrived fifteen days later. On the following Sunday, it was read in the governor's residence in the presence of other judges. Everyone then went to the Madrasah ʻĀdilīyah, where the letter of appointment was read again *(quriʻa taqlīduhu thānī marratan)*. As part of the duties of the chief Shafiʻi judge, Ibn Jumlah taught at the Madrasah ʻĀdilīyah and the Madrasah Ghazālīyah. His post as *muʻīd* (teaching assistant) at the Madrasah Qaymarīyah (or Qaymāzīyah) was taken over by his nephew Maḥmūd. Ibn Jumlah appointed (or confirmed) Muḥyī al-Dīn ibn Jahbal as his deputy *(nā'ib al-ḥukm)* which meant that he taught at the Madrasah Atabakīyah. But within six months Muḥyī al-Dīn was promoted and sent to Tripoli to become its chief Shafiʻi judge. Ibn Jumlah took over the teaching duties at the Atabakīyah, presumably until the new deputy, Shams al-Dīn Muḥammad ibn Kāmil al-Tadmurī, arrived from Hebron where he had had the duties of preaching and leading the prayers.[24] Ibn Jumlah remained in his post for nearly a year and a half when he became embroiled in a bribery scandal, after which he was stripped of his position and imprisoned in the Madrasah ʻAdhrāwīyah (Shawwāl 734; more on this incident below). His duties as chief judge and teacher at the ʻĀdilīyah, Ghazālīyah, and Atabakīyah were assigned to Shihāb al-Dīn ibn ʻAbd Allāh, who retained his own teaching post at the Madrasah Iqbālīyah because it was his place of original residence. Accordingly, the new Shafiʻi chief judge had teaching posts at four schools. In the meanwhile, Ibn Jumlah was transferred to the Citadel, where he remained in prison until 13 Ṣafar 736. When Ibn Jumlah was released, he joined his family, which had been residing all the while at the Madrasah Masrūrīyah.[25]

There are other examples of this movement from one madrasah to another. ʻImād al-Dīn ibn al-Ṭarsūsī began teaching at the Madrasah Muqaddamīyah on Sunday, 23 Rabīʻ I 738. He vacated his post at the Madrasah Qaymāzīyah, which was filled by ʻAlā' al-Dīn ibn al-ʻIzz al-Ḥanafī, who had been the preacher at the Afram Mosque. ʻAlā' al-Dīn was also previously a teacher at the Madrasah Qillījīyah, a post which he left to be filled by another ʻAlā' al-Dīn al-Qūnawī, a Hanafi, Sufi shaykh (not to be confused with the deceased chief judge). All this movement took place within three days.[26]

Death and transfer were not the only causes of replacement. Quick appointments to the vacant posts were made here also. When the celebrated Hanbali scholar Taqī al-Dīn Ibn Taymīyah was arrested, his teaching post at the Madrasah Ḥanbalīyah was assigned to Burhān al-Dīn Ibrāhīm ibn Aḥmad, known as Ibn al-Jābī. He is said to have acquitted himself well in his inaugural lecture, which

[24]Ibid., 3:592, 600, 602–3.

[25]Ibid., 591, 674, 855.

[26]Ibid., 1016, 1017.

was attended by a number of qadis and notables.[27] In another instance, Fakhr al-Dīn al-Miṣrī had been in Aleppo when he was recalled due to his name being associated with a financial scandal. He arrived back on Thursday, 10 Jumādá I 738, and the very next day he was arrested, stripped of his posts at the Madrasah ʻĀdilīyah and the Dawlaʻīyah. He was accused of participating in a shady sugar deal that became known after the head of the chancery *(kātib al-sirr),* ʻAlam al-Dīn Muḥammad Ibn al-Quṭb, was arrested on accusations of embezzlement. It was rumored that the sugar could be found in the residence of Fakhr al-Dīn at the Madrasah ʻĀdilīyah. Thereupon, his residence was searched *(wa-kabasū baytahu)* but the sugar did not turn up. Unlike in the case of Ibn Jumlah′s family, the authorities ordered Fakhr al-Dīn′s family out of the residence, sealed it, and sealed all of his other properties. With Ibn al-Quṭb in prison and Fakhr al-Dīn in disgrace, a third individual was sought. Al-Amīn al-Sukkārī admitted that they had bought *qand* for the amount of 12 thousand dirhams and they processed it into sugar *(ishtarayna qand bi-ithnay ʻasharah alf dirham, wa-ʻamilnāhu sukkar)*. He further stated that one third was to go to him, one third to Ibn al-Quṭb, and one third to Fakhr al-Dīn. At that, Ibn al-Quṭb was beaten and jailed in the Citadel, while Fakhr al-Dīn was imprisoned in the Madrasah ʻAdhrāwīyah, where other ″scholars″ had been held prisoner at the same time. Fakhr al-Dīn′s post at the ʻĀdilīyah was assigned to Ibn al-Naqīb, while the post at the Dawlaʻīyah was assigned to the rehabilitated Ibn Jumlah. Fakhr al-Dīn was finally released after 100 days of confinement and only after an order for his release came from the sultan in Cairo. There is no word that he recovered his posts. We are told, however, that he lived in a house that was loaned to him *(aʻārahu iyyāhu)* by a teacher at the Madrasah Nāṣirīyah.[28]

The movement from one post to another did not stop here. Ibn Jumlah, who was assigned to the Madrasah Dawlaʻīyah after his rehabilitation, was soon transferred to the Madrasah Shāmīyah Barrānīyah (outside the city walls). The imam of Dār al-Ḥadīth al-Ashrafīyah, Shams al-Dīn al-Yamanī was appointed in Ibn Jumlah′s place at the Dawlaʻīyah. Zayn al-Dīn ibn al-Muraḥḥil, whose death necessitated the transfer of Ibn Jumlah in the first place, left a young son who was presumed to take over the teaching duties at yet another school, the Madrasah ʻAdhrāwīyah. As the boy was too young and unqualified for the post, Nūr al-Dīn al-Ardabīlī was appointed to the post until the boy grew up and acquired the qualifications necessary for teaching *(ilá ḥaythu yakbar wa-yata'ahhal lil-tadrīs)*.[29]

While the son of Ibn al-Muraḥḥil inherited only one of his father′s assigned

[29]Ibid., 1018–20, 1026, 1032.

posts, sometimes several posts, as well as the governmental appointments that originated the entitlement, were kept in the family. Just as the position of chief Shafiʻi judge entitled the position holder to teach at the Madrasah ʻĀdilīyah and the Madrasah Ghazālīyah, it seems that other positions had their associated posts as well. Jamāl al-Dīn Aḥmad ibn Sharaf al-Dīn Muḥammad, scion of the Damascene Ibn al-Qalānisī family, came from a long line of Shafiʻi notables. He studied hadith, together with our author al-Jazarī, under Ibn al-Bukhārī, among other scholars of the day. He also studied *fiqh* with Tāj al-Dīn al-Farkah and grammar with his own brother Sharaf al-Dīn. He was employed in the chancery for a time. Later, he was appointed treasurer *(wakīl bayt al-māl)* of Damascus as well as *qāḍī askar,* a dual post usually held simultaneously by a Shafiʻi and a Hanafi scholar. Jamāl al-Dīn ibn al-Qalānisī taught at the Madrasah Asadīyah, the Madrasah Ẓāhirīyah, the Madrasah Amīnīyah, and the Madrasah ʻAsrūnīyah.[30] Jamāl al-Dīn passed away on Monday, 28 Dhū al-Qaʻdah 731. Within a month, a *marsūm* (an official letter of appointment) arrived with the post on Tuesday, 26 Dhū al-Ḥijjah 731, appointing ʻAlā' al-Dīn ibn al-Qalānisī, brother of the deceased, to all of his vacated official as well as teaching posts *(jamīʻ manāsib akhīhi Jamāl al-Dīn . . . wikālat bayt al-māl, wa-qaḍā' al ʻasākir al-manṣūrah, wa-tadrīs al-madrasah al-Amīnīyah, wa-al-Ẓāhirīyah wa-al-madrasah al-ʻAsrūnīyah, wa-ghayrihā).* This same ʻAlā' al-Dīn ibn al-Qalānisī had been appointed to several positions a few months earlier, such as the supervision of the Bīmāristān al-Nūrī. Thus, by the end of the year ʻAlā' al-Dīn came to hold several sensitive official and associated teaching posts. The continuity of the Ibn al-Qalānisī line in government and madrasah positions is secured not only by having a family *waqf,* but also by incorporating younger members of the family into this structure. As an example, ʻAlā' al-Dīn declined at least two posts in favor of his nephew: teaching at the Madrasah ʻAṣrūnīyah and the management of the wealth of the sons al-Ẓāhir Baybars *(nazala li-ibn akhīhi al-ṣadr Amīn al-Dīn ibn Jamāl al-Dīn ʻan tadrīs al-madrasah al-ʻAsrūnīyah wa-ʻan naẓar tirkat awlād al-Sulṭān al-Mālik al-Ẓāhir).* Amīn al-Dīn inaugurated his own lectures *(dhakara al-dars)* at the Madrasah ʻAṣrūnīyah on Wednesday, 6 Muḥarram 732.[31]

Reform Initiatives

By the eighth/fourteenth century, the institution of the madrasah had seen over three hundred years of growth and development. An enormous amount of energy and resources were dedicated to its maintenance and also to insure that the benefits continued to reach society. As we have seen, by the middle of the fourteenth

---

[30]Ibid., 507, 508.

[31]Ibid., 2:457, 472, 507, 515.

century there were nearly a hundred madrasahs in Damascus, large and small. Al-Nuʿaymī (d. 978/1570) lists 152 madrasahs in Damascus, other than the 500 or so mosques and the numerous *ribāṭ*s and *khānqāh*s, where instruction, usually of a Sufi orientation, also took place. The greater majority of these institutions were founded in the thirteenth and fourteenth centuries. That the institution had become so ubiquitous in the Islamic world is indicated by al-Maqrīzī (d. 845/1442), who lists 73 madrasahs on the Cairo street known as Bayn al-Qaṣrayn, the site of the old Fatimid palace.[32] Abuses were bound to crop up due to the large number of institutions, personnel, and amount of money dedicated to this institution. We have seen how the position could be abused as in the cases of Ibn Jumlah and Fakhr al-Dīn al-Miṣrī. George Makdisi reports on several practices such as divisibility of posts and multiplicity of posts. Makdisi refers to Ibn Taymīyah who criticized these practices in the form of *fatwá*s. Makdisi also sites Abū Shāmah (d. 665/1268), who wrote a long poem denouncing some of the abuses that had become prevalent even earlier in his day.[33] The following cases related by al-Jazarī shed further light on this issue and explain some of the steps taken to correct these abuses.

Sayf al-Dīn Tankiz al-Nāṣirī, the governor of Damascus *(nā'ib al-sulṭān),* was visiting the Madrasah Qillījīyah, which was next to his residence, during the early days of Rabīʿ I 729 when he saw iron locks on several rooms (*buyūt,* lit. houses). He asked the supervisors of the madrasah if such rooms belonged to the teachers of law *(fuqahā')* at the school itself. One replied that the rooms belonged to Fakhr al-Dīn ibn Shihāb al-Dīn al-Ḥanafī. He continued by saying that they stored in them cloth *(qimāsh)* and other wares *(ḥawā'ij)*. Fakhr al-Dīn was summoned and was criticized for his actions as they were taking away rooms from the *fuqahā'* of the school, given that he owned other places around the city for storage *(wa-ankara ʿalayhi li-kawn lahum qāʿah wa-mawāḍiʿ).* It turned out that Fakhr al-Dīn was not alone. The governor then issued an order to the inspector of endowments *(mushidd al-awqāf)* to demand rent from everyone who had a (store) room in a madrasah in which he was not a *faqīh.* Rent was to be assessed from the day each room was occupied. Honorable and highly-regarded assessors *(ʿudūl al-qīmah)* were assembled to estimate the value and on Wednesday, 26 Rabīʿ I 729 it was decreed *(rasamū)* that the following should pay what the assessors had determined: Shams al-Dīn ibn Ḥumayd, who was the colleague of Fakhr al-Dīn in the Dīwān al-Jaysh, 600 dirhams; Shihāb al-Dīn Aḥmad ibn al-Muhadhdhib, 630 dirhams; the sons of ʿAfīf al-Dīn al-Ḥanafī, 400 dirhams; Nāṣir al-Dīn ibn al-Qaṣṣāʿ, 400 dirhams; al-Khallāṭī, 400 dirhams. All of these individuals were found in the Madrasah

---

[32]Al-Nuʿaymī, *Tārīkh al-Madāris,* index.

ʻAzīzīyah. Unfortunately, al-Jazarī does not mention what happened to Fakhr al-Dīn and his colleagues at the Qillījīyah. However, he says that some rooms and adjacent structures were knocked down to create a long covered and carpeted walkway *(dihlīz)* from the madrasah to the Umayyad Mosque. It is not clear how this would help prevent the abuse from recurring, except maybe in creating a large and continuous space instead of compartments: students could come and go unhindered. The authorities followed up with others in similar circumstances *(tatabbaʻū bāqī al-nās alladhīna hum sukkān al-madāris).* Although the effort seemed extensive, al-Jazarī mentions one more name in particular, Muḥammad al-Khashshāb, known also as al-Bahlawān, who had to pay 100 dirhams.[34]

Another reform came in response to an order from the sultan al-Nāṣir Muḥammad himself. A *marsūm* arrived in Damascus in early Dhū al-Ḥijjah 727. Shortly thereafter, on Friday, 6 Dhū al-Ḥijjah, the governor assembled the four chief judges, other teachers, and Sufis, and had the sultan′s letter read to the gathering. The letter asked that the deed document *(waqfīyah)* of each madrasah, inside and outside of the Damascus city walls, must be examined to make sure that the madrasah functioned exactly as stipulated in the document. Anyone who did not meet the qualifications *(shurūṭ)* stipulated by the benefactor must be dismissed. Only those who met the stipulations, including those who held non-teaching positions, could be retained. A ″committee″ made up of the four chief judges, the treasurer *(wakīl bayt al-māl),* the supervisor and the inspector of the endowments *(nāẓir al-awqāf wa-mushidduhā),* the accounts controller *(mustawfī),* and a group of *fuqahā'* and teachers began a systematic reading of all the *waqfīyah*s, an activity that took place everyday between the noon prayer and the afternoon prayer until the month of Ṣafar the following year (nearly the two months of Dhū al-Ḥijjah and Muḥarram).

The first madrasah that was examined was al-ʻĀdilīyah and then al-Ghazālīyah (the madrasahs of the Shafiʻi chief judge), but nothing untoward was found there. The deed document of the Madrasah Shāmīyah Juwwānīyah stipulated that the law professor must board in the school *(sharṭuhā al-mabīt)* and the condition was made that all the teachers must sleep in the school if they were to remain employed. The deed document of the Shāmīyah Juwwānīyah stipulated the employment of 20 professors, in addition to other teaching posts, such as teaching assistants, and non-teaching functions such as prayer leader and the one who calls to prayer. The committee found 190 *faqīh*s and thus had to dismiss a total of 130. Leaving 60 behind did not comply with the conditions of the *waqfīyah,* but it must have been a difficult compromise because there was a great deal of commotion and unhappiness as a result of this action.

---

[34]Al-Jazarī, *Ḥawādith al-Zamān,* 2:320–21.

Three of the Hanafi schools that were examined also stipulated boarding. These were the Madrasah Khātūnīyah Barrānīyah, the Madrasah Muqadamīyah inside the Farādīs Gate, and the Madrasah Khātūnīyah which is inside the city walls. In addition to boarding, the deeds stipulated that additional prayers must be performed on top of the five ordinary prayers. Al-Jazarī says that as a result of this examination many teachers were dismissed. Only 30 professors remained in these madrasahs where once they had 200, or 150, etc.[35]

Local self-initiated reform attempts were also reported by al-Jazarī. On Wednesday, 22 Jumādá II 725 the chief Shafi'i judge, Jalāl al-Dīn al-Qazwīnī, presided over a committee made up of the *nāẓir al-awqāf* (Shams al-Dīn al-Harrānī), the *mushidd al-awqāf* (Nāṣir al-Dīn Bakr), and the *mustawfī*. Apparently, there have been several complaints from the unhappy trustees of the madrasahs because the *waqf* income was insufficient, due to low prices and presumably meager profits. Some even expressed their complaints by writing to the sultan in Cairo and to the governor in Damascus. Perhaps to forestall government interference, al-Jazarī says that the Shafi'is surveyed the schools and inspected them *(arākūhā [rawk] wa-kashafū 'alayhim)*. They found lecturers with thirteen posts, others with twelve, eleven, or ten, and more or less *(wa-qalīl wa-kathīr)*. The committee called all the Shafi'is who had been assigned residence in the various madrasahs *(wa-ḥaḍara fuqahā' al-shāfi'īyah al-munazzalūna fī al-madāris)*. They gathered nearly 600 individuals. The decision was taken to reduce the number of posts held by an individual to three or four posts and to base the salary on the total of stipends gathered from each *(wa-yakūn bi-al-mablūm alladhī yatanāwalahu fī al-majmū')*. Al-Jazarī says that what was said and discussed at this unhappy occasion was too much to explain *(wa-jāra fuṣūl yaṭūl sharḥuhā)* and no one was happy with the outcome *(wa-infaṣala al-jamī' wa-kulluhum ghayr rāḍin)*.[36]

There were other instances when lecturers were dismissed from their posts based on local initiative as indicated by the following account, although this time it seems that the dismissal was unilateral and the implication is that the action was unjust. Al-Jazarī, furthermore, does not report the circumstances or why the lecturers were dismissed. The chief Shafi'i judge Jamāl al-Dīn ibn Jumlah was appointed to his post in Ṣafar 733, as we have seen earlier. By the middle of Shawwāl 734, nearly a year and a half later, Ibn Jumlah was dismissed due to complaints that he exceeded the law and that he lied under oath when accusations of bribery against him surfaced. These charges involved him and others, such as Ẓāhir al-Dīn al-Rūmī, Rukn al-Dīn al-Ṣūfī, and Nāṣir al-Dīn al-Duwaydār. A person by the name of Abū Riyāḥ testified in the presence of the governor Tankiz, with the Maliki chief

---

[35]Ibid., 197–98.

[36]Ibid., 73–74.

judge presiding over a council made up of the other two chief judges, amongst others, that Ibn Jumlah exceeded the law. The Maliki chief judge then ordered his imprisonment in the Madrasah ʿAdhrāwīyah. Confirmation of the finding and the judgment finally came from Cairo on Saturday, 23 Shawwāl. To replace the disgraced Ibn Jumlah, the sultan sent an order to appoint, as mentioned earlier, Shihāb al-Dīn Muḥammad ibn Majd al-Dīn ʿAbd Allāh. The letter was read in the presence of an assembly by none other than ʿAlam al-Dīn al-Birzālī, al-Jazarī's mentor and teacher and the source of much of the information for the latter parts of the *Tārīkh*. Shihāb al-Dīn, it will be recalled, took over the posts at the two madrasahs of the chief qadi (al-Ghazālīyah and al-ʿĀdilīyah) and at the Atabakīyah, in addition to his own post at the Madrasah Iqbālīyah. Most people expressed satisfaction at this turn of events and felt that Ibn Jumlah got what he deserved, especially for stirring up the earlier case against Ibn Taymīyah. But what is important here is that Shihāb al-Dīn immediately took a reverse course from that of his predecessor. He showed a great deal of generosity in distributing charity, giving twenty to thirty dirhams (and no less than ten) to all those in need. In addition, he hired back all the lecturers that had been dismissed during the last year and a half by Ibn Jumlah. These were about fifty, some of whom had become nearly destitute. He also restored the stipends *(jāmikīyah)* to what they had been before Ibn Jumlah had reduced them.[37]

Conclusion

These reports, culled as they were from one source only, in no way provide a full picture of the madrasah institution. But to the extent that they allow us any conclusion, they give us a glimpse at the institution as it functioned in its dual role: as a place of residence and as a center for education. The Madrasah ʿAdhrāwīyah has the added distinction of being some sort of jail, or a half-way house, to punish those who were guilty of serious transgressions. Aḥmad Fikrī, in his study of Cairo's madrasahs and mosques during the Ayyubid period, says that it was then that the madrasah finally began to perform its main function as a place of residence for the *fuqahā'*.[38] This much could be seen in various reports, especially in the cases of the 600 Shafiʿis (and no doubt others like them) who were *munazzalūn* (given residence) in the various madrasahs. But the madrasah was not simply a *manzil* where one resides; it was also an educational institution, although these reports do not specifically describe a formal curriculum. The often-repeated phrase is *wa-dhakara al-dars*. As we have seen also, transfer from one madrasah to another did not necessarily entail relocation of residence, and having posts at

[37]Ibid., 3:674–76, 679–81.

[38]Aḥmad Fikrī, *Masājid al-Qāhirah wa-Madārisuhā* (Cairo, 1969), 2:160.

several madrasahs did not entail multiple residences. The urgency to fill the vacancies must be seen in the importance of the function of *dhikr al-dars* (giving the lesson), as the madrasahs became a more pervasive and regulated institution where imparting of knowledge of various fields took place. And in imparting knowledge, in this knowledge industry, the physical sciences were no different from the religious sciences in that they were equally taught formally and informally. ″Quality control″ could be exercised, on the one hand, by manuals of *ḥisbah* and other professional checks, and on the other by the assignment/reassignment of these *fuqahā'*/*mudarrisūn* who constituted the pool of candidates for promotion to higher posts. Other conclusions could be drawn from these reports, especially when seen in their wider context. Also, it would be interesting to speculate about the relationship of the state to the judiciary when the movement of teachers in one city is charted, and when the transfer of judges (and other related positions) from one city to another is mapped out.

Ellen Kenney

A Mamluk Monument "Restored": The *Dār al-Qur'ān wa-al-Ḥadīth* of Tankiz al-Nāṣirī in Damascus

Introduction

Sayf al-Dīn Tankiz al-Nāṣirī governed the province of Syria and played a central role in the polity of al-Nāṣir Muḥammad Ibn Qalāwūn throughout most of the sultan's lengthy third reign.[1] Installed as *nā'ib al-shām* in 712/1312–13, Tankiz remained in this post until his deposition in 741/1340. An active architectural patron, Tankiz initiated numerous restoration projects, infrastructural endeavors, and new buildings throughout the Syrian province.[2] The pattern of his patronage has shown him to be not only a prolific builder, but also a sophisticated planner whose individual projects were predicated on long-range urban development schemes. This building program constituted one of the primary tools in the construction of the patron's public image. Moreover, Tankiz's patronage played a significant role in the development of Mamluk urban and architectural design. However, the corpus of Tankiz al-Nāṣirī's architectural work is represented today by only a few, geographically dispersed fragments in varying states of preservation. Some of his commissions survived into the last century and were documented—at least in part—by photographs or drawings. Others are known only through inscriptions or references in geographical texts, historical chronicles, or biographical compilations. In some instances, the only physical remnants of his commissions consist of *ex situ* fragments, sometimes re-used in later architecture. In a few cases, the patron's buildings still stand, although altered over time. This article will deal with one such case: a *dār al-qur'ān wa-al-ḥadīth* erected by Tankiz in Damascus, between 728/1327–28 and 739/1338–39. It will investigate the extent to which the original building can be reconstructed hypothetically, situate the

(Wiesbaden, 1962–), 10:420 ff; Aḥmad ibn 'Alī al-Maqrīzī, *Kitāb al-Sulūk li-Ma'rifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah et al. (Cairo, 1934–72), 2:509 ff. Summaries of his career are found in S. Conermann, "Tankiz," *The Encyclopaedia of Islam,* 2nd ed., 10:185b; L. A. Mayer, *Saracenic Heraldry* (Oxford, 1953), 218–19; Michael H. Burgoyne, *Mamluk Jerusalem, an Architectural Study* (London, 1987), 223; Ḥayāt N. Ḥajjī, "Al-Amīr Tankiz al-Ḥusāmī Nā'ib al-Shām fī al-Fatrah 712–741 H/1312–1340M," in *Dirāsāt fī Tārīkh Salṭanat al-Mamālīk fī Miṣr wa-al-Shām* (Kuwait, 1986), 199–283.

[2]On the subject of Tankiz's architectural and urban patronage, see Ellen Kenney, "Power and Patronage in Mamluk Syria: The Architecture and Urban Works of Tankiz al-Nasiri, 1312–1340" (Ph.D. diss., New York University, 2004).

reconstructed building in the corpus of Mamluk architecture, and explore aspects of the foundation′s social and political context.

Not surprisingly, of all the cities in the province, it was Damascus—the seat of the *niyābah*—to which Tankiz devoted the most attention over the longest period of time. His civil engineering and infrastructure projects included extensive repairs to the city′s canalization system and revitalization of the agricultural zone to its south-east; reconstruction of sections of the city wall and at least one of its gates; numerous street widening and clearing campaigns, both inside and outside the city walls; and the rebuilding of at least one of the city′s bridges.[3] Among the commercial projects Tankiz commissioned in Damascus are the construction of two *qaysārīyah* buildings and a *khān,* as well as the renovation of Khān al-Ẓāhir.[4] He carried out major restoration projects at the Umayyad Mosque, and also renovated other historic mosques in the city.[5] His new monumental commissions include a congregational mosque and mausoleum, a bath, at least one new palace, a mausoleum for his wife, and the *dār al-qur' ān wa-al-ḥadīth* under discussion here.[6] However, the priority that Tankiz gave to developing Damascus is not reflected in the city′s

extant architecture. His works either have disappeared altogether or survive in poor or fragmentary condition.

In the following pages, I will outline the history of this *dār al-qur'ān wa-al-ḥadīth,* review its modern historiography, situate the building in its urban framework, and describe its architectural characteristics based on a preliminary survey conducted in 1997.[7] In the next section, I will synthesize this information to re-assess the preservation status of the building, to evaluate its role in the patronage program of Tankiz, and to analyze its place in the wider context of Mamluk architectural history.

Architectural History

Ibn Kathīr first mentions Tankiz's *dār al-qur'ān wa-al-ḥadīth* in his entry for the year 728/1327–28. That year, the *nā'ib* made one of his almost annual visits to Cairo to visit al-Nāṣir Muḥammad, who lavished him with gifts and honors. While in Cairo, Tankiz purchased some real estate in Damascus, including a house known as Dār al-Fulūs near Sūq al-Buzūrīyīn—a market located south of the Umayyad Mosque in a quarter sometimes referred to as al-Khaḍrā'. After reporting Tankiz's transformation of the old house into a new palace called Dār al-Dhahab, Ibn Kathīr continues: "and he demolished Ḥammām al-Suwayd near it [i.e., Dār al-Dhahab] and he made it into a *dār al-qur'ān wa-al-ḥadīth* of the utmost beauty. He provided it with endowments and organized its shaykhs and students as will be described."[8] Later in his chronicle, under the entry for the year 739/1338–39, he states:

> Among the events of this year was the completion of Dār al-Ḥadīth "al-Sukarīyah."[9] Shaykh al-Imām al-Ḥāfiẓ Mu'arrikh al-Islām Muḥammad ibn Shams al-Dīn Muḥammad ibn Aḥmad al-Dhahabī took over as shaykh of hadith in it. Thirty were appointed as traditionists *(muḥaddith),* each of whom were provided rations *(jirāyah)* and pay *(jāmiqīyah)* every month of seven dirhams and half a *raṭl* of bread. For the shaykh, thirty dirhams and one *raṭl* of bread were assigned. Thirty persons were assigned to read the Quran, with one shaykh for every ten [of them]. For every one of the readers there was a counterpart among the traditionists. A prayer

[8]Ibn Kathīr, *Al-Bidāyah,* 14:133.

[9]Akram al-'Ulabī considers this term a scribal error for "Tankizīyah" (*Khiṭaṭ Dimashq* [Damascus, 1989], 61).

> leader *(imām),* a hadith reciter, and substitutes *(nawāb)* were appointed, and twenty dirhams and eight *awāq* of bread were provided for the hadith reciter. It turned out to be very beautiful in its appearance and construction. It is located in the direction of Dār al-Dhahab, which was commissioned by the founder, amir Tankiz. He endowed upon it many places, among them Sūq al-Qashāshīn in Bāb al-Faraj. Its length was twenty *dhirā‘* from east to west. He registered it in the *waqf* document, along with Bandar Zaydīn and the old *ḥammām* in Hims. He also endowed on it shares from other villages. However, he struggled with everything other than al-Qashāshīn and Bandar Zaydīn and Ḥammām Ḥimṣ.″ [10]

Ibn Kathīr′s organization of this information suggests that the project began in 728/1327–28 at the same time as the start of the Dār al-Dhahab rebuilding. Ibn Qāḍī Shuhbah, in his obituary for Tankiz, is more explicit in dating the construction to that year: ″in the year 28, he built Dār al-Dhahab and opposite it he built a *dār al-qur'ān wa-al-ḥadīth.″* [11] It appears, however, that construction was not carried out promptly, but took nearly eleven years to finish. To extrapolate from Ibn Kathīr′s remarks, the bath property, which served as the site for the new building, may have been acquired at the same time as the palace property, during the patron′s visit to Cairo. However, no specifics are provided: did Tankiz purchase this property, did he receive it as a gift, or was it obtained through a confiscation? Who was its former owner? About the exact dimensions and boundaries of the property nothing is mentioned, nor is there any indication whether the bath was operational or defunct, and what its physical condition was at the time of acquisition. An earlier topography of the city counts Ḥammām al-Suwayd among the baths of Damascus, but only says that it was located next to the house of a certain Ibn Munẓū.[12]

Several years later, in 739/1338–39, the construction of the new *dār al-qur'ān wa-al-ḥadīth* was finished. This completion date, chronicled by Ibn Kathīr, is corroborated in the inscription on the lintel of its entrance (fig. 6):

> In the name of God the Merciful, the Compassionate. This blessed school *(madrasah)* was founded and endowed for the mendicants *(fuqarā')* occupied with the Glorious Quran and the scholars *(fuqahā')* and the listeners *(masma‘īn)* of the Prophetic Traditions,

> by His Most Noble Excellency Sayf al-Dīn Tankiz al-Nāṣirī, Guardian of the Noble Provinces of Syria, the Well-Protected, in the year 739, at the behest of *(bi-mubāsharah)* the poor slave Aydamur al-Mu'īnī.[13]

From the mid-fourteenth century until the mid-nineteenth century, the only explicit references in literary sources to the Tankizīyah that I have found refer to personnel at the institution, rather than physical changes to its structure.[14] Undoubtedly, during this long period the building underwent alterations. It is unlikely that it would have remained unscathed throughout the chronology of destructive events in the subsequent history of Damascus, including the revolts of the late fourteenth century, Timur's invasion of 803/1400, and a series of natural disasters, notably the earthquake of 1173/1759.[15] The latter was responsible for the collapse of the domes on an adjacent building, the Khān Asad Bāshā. In the normal course of events, the building would have been subjected to periods of poor upkeep, subsequent restorations, and possibly the depredations of later architectural patrons, who were known to have quarried old buildings for valuable materials.[16]

As late as 1129/1717, the institution was still running.[17] By 1271/1855, however, Tankiz's *dār al-qur'ān wa-al-ḥadīth* was being used as a private residence.[18] 'Abd al-Qādir Badrān, writing around 1330/1912, blames this shift to residential use on mismanagement of the foundation over time, which led to the gradual decline of the institution.[19] He also includes a narrative about an intervention that prevented the owners from tearing down the portal, and ultimately resulted in the re-

establishment of a school in the building. Badrān reports that under the superintendency of Shaykh Muḥammad al-Ḥalawānī, the interior was ″improved.″ More extensive renovation took place under al-Ḥalawānī′s successor, Shaykh Kāmil al-Qaṣāb in 1329/1911, as is commemorated in a second inscription on the portal.[20] Shaykh Kāmil restored the building and installed ″upper and lower structures″ in it, according to Badrān. The precise nature of these structures is not entirely clear. No early photographs of any portion of the building other than the portal have come to light. Along with alterations to the building′s physical structure came changes to its moniker: still called the Tankizīyah in the early eighteenth century, it became known as the Osmanīyah in the nineteenth century, and as the Kāmilīyah in the early twentieth century. The *dār al-qur'ān wa-al-ḥadīth* was registered as a historic monument in 1367/1948.

Modern Sources

Although the Tankizīyah has never been the subject of a detailed monographic analysis, it is mentioned in a number of publications cataloging the architectural and urban history of Damascus. In his mid-nineteenth century topographical survey of Damascus, A. von Kremer includes a very short notice on the building.[21] He identifies it as a former madrasah, which in his day was being used as a private residence, and remarks on its beautiful stalactite portal and fine ashlar masonry. However, his incomplete reading of the foundation inscription led him to misattribute and misdate the building.[22] In 1330/1912, Badrān published a survey correctly identifying the *dār al-qur'ān wa-al-ḥadīth* and providing some detail about its recent history.[23] On the subject of its architecture, he praises its portal and claims that the walls of the building retain some of their original construction. Badrān also reports that the building had undergone two phases of reconstruction in the period since von Kremer′s publication.

Subsequent references to the *dār al-qur'ān wa-al-ḥadīth* tend to take more minimalist views of its preservation. The building is mentioned briefly in the topographical study on the city published by Wulzinger and Watzinger in 1924.

[20] Ibn ʻAbd al-Hādī, *Thimār al-Maqāṣid fī Dhikr al-Masājid,* ed. M. A. Ṭalas (Beirut, 1943), 215; al-ʻUlabī, *Khiṭaṭ Dimashq,* 61; Muḥammad A. Duhmān, *Wulāt Dimashq fī ʻAhd al-Mamālīk* (Damascus, 1981), 172.

[21] *Topographie,* 7.

[22] His transcription differs substantially from that published by Wiet. It leaves off after the term ″*al-nabawī*″ and resumes with ″*bi-mubāsharah*″—thereby omitting the name and title of Tankiz and the date of the foundation. As a consequence, von Kremer erroneously attributes the foundation to ″Aidemir-el-Muini,″ whom he identifies as a figure who died in the year 667/1268 (*Topographie,* 2:7, n. 2).

[23] *Munādamat,* 64–68.

They provide the dates of its construction and of the later restoration, and then continue: ″Inneres ganz verändert, Portalnische mit Stalaktiten.″[24] The equally telegraphic entry in Jean Sauvaget′s concise guide to the historical monuments of Damascus published roughly a decade later simply states: ″Ecole de tradition prophétique bâti en 1338–39 par Tingiz. Beau *portail* à stalactities; intérieur remanié.″[25] Muḥammad Ṭalas, in the appendix to his 1336/1943 edition of Ibn ʻAbd al-Hādī′s *Thimār al-Maqāṣid fī Dhikr al-Masājid,* includes a note on this building saying that it has a façade and decorated portal. He mentions the renovation of its upper level, and praises the building′s masonry, ornamentation, and beautiful mihrab—but does not speculate about the dates for these elements.[26] An unnamed inspector from the Department of Antiquities leans toward the interpretation of Wulzinger and Watzinger and Sauvaget in his 1952 report, which claims that the façade and portal were all that remained of the original building.[27] Muḥammad Duhmān′s 1963 study of Damascus in the Mamluk period states vaguely that the school still exists and retains much of its design.[28] Dorothée Sack′s 1989 publication on the urban structure and development of Damascus mentions the building and echoes the Wulzinger-Watzinger/Sauvaget view: ″teilweise abgetragen; Teile der Aussenwände und Portal erhalten.″[29] Akram al-ʻUlabī′s topographical history of the city, published in the same year, reports that in his day the building was functioning as a children′s school and retained its beautiful façade.[30] Michael Meinecke also treats the building very summarily in his catalog of Mamluk architecture, although he includes the portal and façade in a wider discussion related to architectural style.[31]

As this review of modern literature on Tankiz′s *dār al-qur'ān wa-al-ḥadīth* reveals, it is generally accepted that the remains of the Mamluk building consist of a portal and façade, the rest of the present structure belonging to a series of later reconstructions. On the basis of these studies, the initial goal of my field research at the Tankizīyah was to examine and photograph the façade of the building. Presumably, the interior would be of interest only insofar as it might

represent a sampling of turn-of-the-century architectural remodeling in Damascus. However, the site inspection suggested that the building′s stratigraphy was not as straightforward as the literature indicated, and that its analysis would require a close reading not only of the façade, but also of the other external wall and of the building′s interior. What follows is a description of the building based on this survey.

DESCRIPTION

The Tankizīyah is located inside the city walls in the area south of the Umayyad mosque (fig. 1). It is situated on a block outlined by Sūq al-Buzūrīyīn to the west, Darb Ibn Matrud to the north, Darb al-Rayhān to the east, and Zuqāq al-Durr to the south (fig. 2). This block is immediately south of the former location of Dār al-Dhahab, the patron′s new palace, at the present site of the Qaṣr al-ʻAẓam. To the south lies the long commercial street, known in the Mamluk period as Sūq al-Kabīr, which runs east-west through the walled city. According to Ibn Kathīr, the *dār al-qur'ān wa-al-ḥadīth* replaced a pre-existing bath building known as Ḥammām al-Suwayd, which the patron apparently purchased and then demolished.[32] The property occupies the north-east corner of the block. The north-west corner of the block houses another bath building, which predated Tankiz′s construction: the large Ḥammām of Nūr al-Dīn (567/1171–72).[33] There appears to have been a narrow plot between the back of Ḥammām al-Nūrī and the east boundary of the *dār al-qur'ān wa-al-ḥadīth* site, which is filled today by a building. Whether this plot was built-up or unoccupied at the time of Tankiz′s construction is uncertain. Al-ʻIlmawī′s information, which locates the Tankizīyah ″to the east of Ḥammām Nūr al-Dīn al-Shahīd, below Dār al-Dhahab, behind Sūq al-Buzūrīyīn″ could either suggest that there was no other building between it and Ḥammām al-Nūrī, or that what did exist there was unimportant, compared with these landmark buildings.[34] It is also possible that this plot formerly belonged to the property of one or the other of these two buildings, from which it was alienated subsequently. The plot south of the Tankizīyah is currently occupied by the Khān Asad Bāshā, constructed in 1166/1753. The sources are silent about this site in Tankiz′s day, but reportedly two caravanserais, as well as several houses and shops were demolished to make way for the Ottoman *khān*.[35]

The north façade of the Tankizīyah consists of the portal, situated at the west

end of the building, and a wall of finely dressed stone, stretching eastward (fig. 4). To the east of the portal, two windows pierce the wall at the street level. Two projecting stories, constructed of plastered brick and timber, surmount the lower masonry wall. Around the corner, along the east façade, the same arrangement is found: a lower wall of stone surmounted by two projecting stories. A molding of carved stone forms a rectangular frame surrounding the finely dressed masonry of the monumental portal, although now the molding is lost in its lower segments. The portal consists of a deeply recessed rectangular niche, at the back of which opens the entrance to the building′s interior (fig. 5). A flat arch, inscribed with a cartouche bearing the foundation inscription, surmounts the entrance (fig. 6). Above the inscription, a band of joggled *ablaq* revetment spans across and flanks the portal recess. Slightly above this band is an oculus, surrounded by a radial arrangement of joggled *ablaq* voussoirs, which together are outlined by a molding of deeply carved stone. The stone course at the base of this oculus bears the inscription commemorating the nineteenth-century renovations referred to above. Three courses of *muqarnas* form the transition zone from the rectangular niche to the semi-dome of the portal hood. The carvings of the hood represent a conch outlined by a zigzag pattern. Inscribed in the finely dressed masonry above the semi-dome and below the top of the molding frame is a long, recessed cartouche. It is unadorned, but may have been intended to receive an inscription.

East of the portal, another rectangular frame of stone encloses a pair of large rectangular windows. The masonry inside the frame, surrounding the windows, is finely dressed, like that of the portal. Both windows have been partially filled-in with cement, but their lower limits can be discerned one masonry-course above the bottom part of the frame. Flat lintels with relieving arches surmount the windows. Behind modern screens that have been installed in the remaining window portions, there are iron grills. Below the window frames, two and a half courses of unfinished masonry can be seen. In the area east of the window frame, five courses of masonry are visible, above which the wall is thickly plastered. While this masonry differs in quality from that inside the frames of the windows and the portal, it courses through precisely with the more finely dressed masonry. This suggests that all of the elements on the north façade of the building—the portal, the pair of windows, and the east extension of the wall—are contemporary with each other.

Around the corner, on the east side of the building, the same division of the elevation is found (fig. 7). Two tall upper stories project from the lower wall. The lower wall consists of six courses of exposed stone construction, surmounted by a thickly plastered wall. At the south end of the wall, fallen plaster reveals three additional courses of stone. About two-thirds of the way down the wall to the south is another large rectangular window surrounded by a rectangular frame of

stone molding (fig. 8). As on the north façade, the masonry within the molding is finely dressed. Here, too, the window is partially filled-in with cement. To the north of this window is another small opening, in the plastered section of the wall. Unlike the other windows, this one does not appear to have once been any larger than it is today. There is no evidence of in-fill in the masonry courses below it, nor is there any indication of the finely dressed masonry and molding frame that surrounds the large window to the south. The continuity of masonry courses between the north and east façades and the similarities in the treatment of the framed window compositions between the two sides indicate that the east façade is contemporaneous with the north.

Inside, the entrance leads into a vestibule space, which opens up into an *īwān.* The floor plan of the present building consists of four *īwān*s arranged around a central court with corner rooms in three of the four corners (fig. 3). The entrance vestibule occupies the northwest corner of the building in place of a corner room. On the west side of this vestibule rises a narrow wooden staircase. It is enclosed behind a plastered wall above its first several steps, which are built of stone. The vestibule leads into the west *īwān,* the back of which contains a built-in wooden cupboard constructed beneath part of the staircase and a tall rectangular recess in the wall. The west *īwān* opens onto the central court, which is uncovered. The walls of the interior are covered entirely with plaster which is coated with paint in the lower section. The *īwāns* on the east and west of the court are considerably shallower than those on the north and south. All four *īwān*s are covered with flat ceilings of timber.

The *qiblah* wall of the south *īwān* contains a large mihrab niche, also heavily coated with plaster and paint (fig. 9). Two engaged octagonal colonnettes flank the niche. Their square bases are chamfered at the upper corners to create a transition to the octagonal shafts. The capitals also correspond to the octagonal shafts, each face decorated with a shield-shaped *muqarnas* unit upon which is carved in relief a smaller *muqarnas* form and a tear-drop shape. The unity of the three elements—capital, shaft and base—suggests that they may have been conceived together. In the east and west walls of the *qiblah īwān,* doors lead into the south-east and south-west corner rooms, respectively.

The back wall of the north *īwān* is pierced by the two large windows on the north façade (fig. 10). On its east wall, a door leads into the north-east room. Corresponding to this door on the west wall of the north *īwān* is a recessed wall niche. In the east *īwān,* a broad staircase of stone construction lines the south side (fig. 11). It leads to a landing from which it continues in reinforced concrete to the upper story. Along the back wall of the east *īwān,* a row of faucets and a drainage basin have been installed. The large window on the east façade opens onto the east *īwān,* but it is partly blocked by the staircase.

The pavement of the *īwān*s is level with the court, rather than raised. There is no fountain or basin in the courtyard, nor are there channels for the collection and drainage of rainwater. The pavement is composed of a striking combination of black and creamy-colored stone. In the central court, the bi-chromatic stones are arranged in a striped pattern, while in the north and south *īwān*s, black stones create a rectangular outline of the space. In the west *īwān,* a similar outline of black stone traces around the staircase. The pavement of the east *īwān* is partially covered with modern tiles, and no black stones are in use there. The staircases in the east and west *īwān*s lead to a gallery in the second story of the building. This gallery runs around the central court, on the north, east, and west sides. It is lined by doors leading into rooms on all three sides. A third story of rooms surmounts this level. On the south side, the façade of the *qiblah īwān* rises up to the gallery level and the balcony does not run across it. Above the arch of the *qiblah īwān,* rooms corresponding to the third story have been erected. All of these upper story constructions are built of wood and plastered brick.

ARCHITECTURAL ANALYSIS

The similarity of the upper stories of the Tankizīyah to Damascus architecture of the nineteenth and early twentieth centuries, and their correspondence with the building history described by Badrān, support their attribution to the period of Shaykh Kāmil's rebuilding.[36] Clearly, the portal of the building dates to the original Mamluk construction. The similarity between the framing zone of this portal and that of the paired windows east of it—as well as the continuity of the stone courses along this wall—indicate that the entire north façade belongs to the same construction phase. In light of the homogeneity of masonry on both the north and east exterior walls, the east façade can be considered contemporaneous with the north façade and its portal. Therefore, it, too, can be identified as an original element of the building. Of the four windows piercing these two walls, three clearly date to the initial construction period, although they have subsequently been partially in-filled. Their iron grills also represent typical fenestration details of Mamluk architecture in Syria.[37] The date of the fourth window is more ambiguous.

The exterior of Tankiz's *dār al-qur'ān wa-al-ḥadīth* is rather austere. Its masonry

---

[36]On the characteristics of turn-of-the-century Damascus architecture, see Gérard Robine, *Palais et demeures de Damas au XVIII* (Damascus, 1990); Yves Roujon, *Le Midan: Actualité d'un Faubourg ancien de Damas* (Damascus, 1997); Brigid Keenan, *Damascus, Hidden Treasures of the Old City* (New York, 2000); Annie-Christine Daskalakis, "Damascus Eighteenth and Nineteenth Century Houses in the Ablaq-Ajami Style of Decoration: Local and International Significance" (Ph.D. diss., New York University, 2004).

[37]Numerous examples of typical Mamluk-period iron grill windows can be found in Burgoyne, *Mamluk Jerusalem;* in particular, see pp. 93–95.

is monochrome, with the exception of some details around the portal, and is articulated only by the moldings that frame the portal and windows.[38] In this respect, the *dār al-qur'ān wa-al-ḥadīth* relates to the mausoleum and *ribāṭ* structure which Tankiz erected nearby on behalf of his wife, Sutaytah, at around the same time (730/1330). Like the portal at this *turbah,* the *dār al-qur'ān wa-al-ḥadīth* portal is stylistically conservative. Absent are such distinctive features as the dramatic *ablaq* masonry that stretched along the façade of Tankiz′s congregational mosque in Damascus, or the fan motif that graces that mosque′s two portals, as well as the portal of his madrasah in Jerusalem. The façade of the Turbah al-Takrītīyah in the Ṣāliḥīyah district of Damascus (erected by 698/1299) provides a close stylistic comparison to the Tankizīyah façade, although its composition is different. There, the portal is more squat than that at the Tankizīyah, but its *muqarnas* hood is almost identical. The Takrītīyah portal is flanked on each side by a pair of windows, whereas at the Tankizīyah the arrangement is asymmetrical. An even closer analogy can be found in the façade of the mausoleum of Uljaybughā, located outside the walls of Damascus to the south-west. It has the same asymmetrical disposition of the portal with paired windows to one side and its portal bears an almost identical *muqarnas* hood. The façade of the mausoleum of Uljaybughā also has an oculus very similar to that at the Tankizīyah, composed of radial *ablaq* voussoirs surrounded by heavy molding. The main difference between these two façade compositions is the placement of the oculus: on the former it is situated over the paired windows; at the latter, it makes up part of the portal decoration. This building is undated (its patron died in 754/1353), but, on the basis of its similarity to the Tankizīyah, Meinecke posits that it may have been constructed around 740/1339–40.[39]

Regarding the interior of Tankiz′s *dār al-qur'ān wa-al-ḥadīth,* is it ″ganz verändert″? Some elements of the interior are unquestionably modern, most obviously the plumbing works and modern pavement in the east *īwān.* Regarding the staircase in the east *īwān,* the upper portion is clearly recent. Furthermore, the awkward relationship between the staircase and the original window suggests that the lower section also belongs to a later phase. As for the staircase in the entrance vestibule, its position and narrow proportions are more compatible with *comparanda* from the Mamluk period.[40] The first few steps might represent traces of an original staircase, but all of the rest—including the wooden constructions around and

---

[38]Meinecke relates the absence of *ablaq* masonry in this building, and others dating slightly earlier and later, to the absence from Damascus of the workshop specializing in the technique (*Mamlukische Architektur,* 2:87).

[39]Ibid., 182.

[40]See, for example, Burgoyne, *Mamluk Jerusalem,* 90, 161, 303, and 345–46.

below it—appear to be later. The timber ceilings of the four *īwān*s appear to be relatively new, and the balcony and all of the upper-story rooms belong to the turn-of-the-century renovations.

The general layout of the ground floor, on the other hand, is not necessarily due to one of the later renovations. The floor plan corresponds to a Syrian building type, featuring a central court flanked by *īwān*-like spaces or lateral prayer halls—a building tradition which spans over two centuries.[41] These central-court buildings vary considerably in several respects: the nature of the spaces opening up off the courts, the number and depth of their *īwān*s, the disposition of the entrance vestibules, and the superstructures of the courts. In some instances, domes or vaults covered the central courts, while in others the courts were open. While the Syrian central court plan was applied most often to madrasah architecture, its use was not restricted according to building category. Tankiz′s builders could have drawn on numerous local variations of this building type, such as the madrasah of Rabīʻah Khātūn (also called Madrasah Ṣāḥibah), ca. 643/1245, located in the Ṣāliḥīyah quarter of the city.[42] There, *īwān*s flank the central court on three sides and an axial entrance vestibule occupies the fourth. As at the Tankizīyah, corner rooms are arranged between the *īwān*s, although their disposition is a little different. Another Damascus building that shares the general design found at the Tankizīyah is the Turbah al-Ḥāfiẓīyah (also known as the Turbah of Bakhtī Khātūn), which dates to ca. 648/1250.[43] There wide *īwān*s and a lateral prayer hall open off a square central court, which was originally covered with cross-vaults. As in the later building, the entrance does not open directly into the court but rather through a lateral vestibule. However, the overall arrangement of the Ḥāfiẓīyah is considerably less symmetrical than that of the Tankizīyah. The madrasah of Afrīdūn al-ʻAjamī (744/1343–44), constructed in Damascus about five years after the completion of the Tankizīyah, presents an even closer parallel to the Tankizīyah floor plan.[44] A lateral entrance vestibule in the north-west corner of the building leads into one of four *īwān*s disposed around a central court, while small rooms occupy the other three corners.

---

[41]For broader discussions of Syrian central court buildings, see Meinecke, ″Rückschlüss auf die Form der seldschukischen Madrasa in Iran,″ *Damaszener Mitteilungen* 3 (1985): 190 ff.; idem, ″Der Hammam Mangak und die Islamische Architektur von Busra,″ *Berytus* 32 (1984): 186–90; Yasser Tabbaa, *Constructions of Power and Piety in Medieval Aleppo* (University Park, 1997), 84–93 and 129–34.

[42]Ernst Herzfeld, ″Damascus, Studies in Architecture, III,″ *Ars Islamica* 11–12 (1946): 9–15, fig. 10. See also Tabbaa, *Constructions,* fig. 111.

[43]Herzfeld, ″Damascus, Studies in Architecture, III,″ 63–64, and fig. 149; Meinecke, *Mamlukische Architektur,* 1:79–80, fig. 62.

[44]Meinecke, *Mamlukische Architektur,* 1:109 fig. 70, and 2:199 #16/15; Sauvaget, *Monuments Historiques de Damas,* 70.

Although the central court buildings of Syria sometimes feature four *īwān*s, they evolved as something quite distinct from the ″four-*īwān* madrasah″ building type that came to be prevalent in the architecture of Mamluk Cairo, such as the madrasah of al-Nāṣir Muḥammad (695 to 703/1295–96 to 1303–4) or the *khānqāh* of Baybars al-Jāshankīr (707 to 709/1307–8 to 1310).[45] The scale of the latter is generally much larger, with *īwān*s averaging almost twice the square footage of those in the Syrian examples, courtyards measuring up to four times as large, and elevations reaching considerably higher proportions. Their courtyards are usually rectangular rather than square, and their lateral *īwān*s are usually centrally placed on a long façade, flanked by rows of small chambers. However, by the second decade of the fourteenth century, the Syrian style of central court building can already be found in Cairo. In particular, two Cairo buildings—both constructed within the decade preceding Tankiz′s *dār al-qur'ān wa-al-ḥadīth*—resemble the Damascus Tankizīyah quite closely, at least with respect to their floor plans: the madrasah of Al-Malik al-Jūkandār (719/1319–20) and the madrasah of Zayn al-Dīn Yūsuf (725/1325).[46] Both relatively small-scale by Cairene standards, they feature the same broad-*īwān,* cruciform plan as the Damascus building. Similarly, the mosque of Aḥmad al-Mihmandār in Cairo, which also dates to 725/1325, shares the overall cruciform plan.[47] Thus, not only was this central court format firmly rooted in the building tradition of the Syrian province, it also had become fashionable—relatively recently—in the architecture of the capital.

As these comparisons demonstrate, the general floor plan of the *dār al-qur'ān wa-al-ḥadīth* building as it survives today fits well within the architectural vocabulary of its time and place. The main difference between it and its antecedents in Damascus is that the Tankizīyah is slightly more symmetrical than the other examples of its type. For Ayyubid Aleppo, Yasser Tabbaa argues that the regularity

---

[45]The question of the four-*īwān* madrasah type is discussed in K. A. C. Creswell, *The Origin of the Cruciform Plan of Cairene Madrasas* (Cairo, 1922); idem, *Muslim Architecture of Egypt* (Oxford, 1952–59), 2:132; L. Hautecoeur and Gaston Wiet, *Les Mosquées du Caire* (Paris, 1932), 311 ff.; Ernst Herzfeld, ″Damascus, Studies in Architecture, II,″ *Ars Islamica* 10 (1953): 13–29; Meinecke, *Mamlukische Architektur,* 1:64 f. Very useful reviews of these discussions can be found in Tabbaa, *Constructions,* 84–93 and 129–34; and Abdallah Kahil, ″The Sultan Hasan Complex in Cairo″ (Ph.D. diss., New York University, 2002), 79–85.

[46]On the madrasah of Al-Malik al-Jūkandār, see Creswell, *Muslim Architecture of Egypt,* 2:270–72, fig. 149, plates 103a–c and 114b; and Meinecke, *Mamlukische Architektur,* 2:124 and 1:64, fig. 36, plates 47b and 52b. On the madrasah of Zayn al-Dīn Yūsuf, which apparently incorporated an earlier mausoleum (ca. 697/1297–98) into its south-west corner, see Laila Ali Ibrahim, ″The Zawiya of Saih Zain ad-Din Yusuf in Cairo,″ *Mitteilungen des Deutschen Archäologischen Instituts, Abteilung Kairo* 30 (1974): 79–110; Doris Behrens-Abouseif, *Islamic Architecture in Cairo* (Leiden, 1989), 111, fig. 23 and plate 78; and Meinecke, *Mamlukische Architektur,* 2:85–86, 139.

[47]Meinecke, *Mamlukische Architektur,* 1:64, fig. 37 and 2:139.

of such building plans is a function of patronage: buildings constructed by more elevated patrons tend to be more symmetrical than those of lower level patrons.[48] This explanation applies just as aptly to Mamluk Damascus, where Tankiz had the wealth and clout to obtain a sizeable property—even in the built-up section of the intramural city. There, his architects could apply a relatively symmetrical plan without the constraints imposed by less expansive building sites. The fact that the present plan of Tankiz′s *dār al-qur'ān wa-al-ḥadīth* compares so closely with typical madrasah floor plans is consistent with what little is known about *dār al-ḥadīth* architecture in Syria. Sauvaget has demonstrated that there was little difference architecturally between the two building types.[49]

Not only does the floor plan of Tankiz′s *dār al-qur'ān wa-al-ḥadīth* conform to a local building type found in Damascus both before and after the original construction date, it also has a close parallel in the corpus of Tankiz′s own commissions: the Madrasah al-Tankizīyah in Jerusalem.[50] Its endowment deed survives in the form of a copy transcribed into an Ottoman court document, and provides additional information about the structure, including a description of sections of the upper story that no longer survive.[51] The foundation encompassed multiple functions, including a madrasah for legal studies, a *khānqāh* of Sufi devotions, a *dār al-ḥadīth* for transmission of Prophetic tradition, and—across the square in a separate building—a *ribāṭ* for women. Tankiz ordered the construction of both the Damascus building and the Jerusalem building in the same year. The Jerusalem Tankizīyah is well preserved in its lower story. It retains much of its original superstructure and some of its upper story. Its portal leads through a cross-vaulted vestibule into the north *īwān,* and then into a spacious court furnished with a central fountain and deep *īwāns* on all sides. Corner rooms occupy the spaces between the ″cross arms″ of the cruciform floor plan created by the four *īwān*s.

The fact that the Jerusalem madrasah—built almost concurrently with the *dār al-qur'ān wa-al-ḥadīth* in Damascus and commissioned by the same patron—shares so many features with the extant floor plan of the Damascus building supports the attribution of the latter to the original Mamluk construction phase, at least in its general layout. Working in the other direction, moreover, the better-preserved Jerusalem madrasah provides a model from which to hypothesize about original aspects of the Damascus building that no longer survive. For example, in the Jerusalem madrasah, as well as in other central-court buildings in Damascus and

---

[48]Tabbaa, *Constructions,* 134.

[49]*Les Monuments Ayyoubides de Damas* (Paris, 1938), 1:15–25.

[50]Burgoyne, *Mamluk Jerusalem,* 223–39.

[51]Kāmil al-'Asalī, *Wathā'iq Maqdisīyah Tārīkhīyah* (Amman, 1983), 105–24.

elsewhere, the pavement of the lateral *īwān*s or chambers is elevated in relation to the central court. However, the current pavement of the *dār al-qur'ān wa-al-ḥadīth* in Damascus is level throughout. Also, the absence in the Damascus building of any kind of basin or fountain at the center of the court distinguishes it from most other buildings of its type in the region. Presumably, there would have been ample infrastructure for such a water installation, since the site formerly housed a *ḥammām*. These inconsistencies suggest that the pavement was re-done at some point in the building′s history, eliminating original raised *īwān*-floors and perhaps a central basin or fountain also. The fact that the black flagstones of the west *īwān* form an outline around the staircase and cupboard, features that probably post-date the original building phase, supports this idea. The bi-chrome pavement itself sheds little light on the issue, since this feature had a very long currency in the region.

The question of the original superstructure poses another dilemma. While the external walls and the internal divisions of space can be attributed to the initial construction phase of the building, they provide no evidence about how the building was roofed-over. Were the *īwān*s originally vaulted, or were they covered with flat ceilings of wood? Both ceiling types are found in local *comparanda,* and both are present in the Jerusalem Tankizīyah. Was the central court originally covered, or was it open, as it is today? Either possibility is plausible. In Jerusalem, the court is covered. Interestingly, its roofing system can be considered something of a trademark of Tankiz′s buildings and represented an innovation in the architectural history of the city, newly introduced to Syria from the Anatolian region. It is a type of cross-vault in which the groins are incised, sometimes referred to as a ″folded cross-vault.″[52] The fact that this vaulting device was being employed by the patron elsewhere in Damascus contemporaneously is demonstrated by its presence in the mausoleum of Sutaytah. Might the same vaulting device have been employed at the *dār al-qur'ān wa-al-ḥadīth?* This question remains open. However, one feature of the floor plan may hold a clue. The central court forms an ″inscribed square″—that is, instead of right angles formed by the adjoining *īwān* walls protruding into the court, one finds inverted angles (except in the north-west corner). Certainly, not all cross-vaulted spaces of the period share this feature. However, in the contexts in which the inscribed-square plan is found—more often than not—there is a cross-vault, usually a folded cross-vault.[53] Such

---

[52]For a discussion of this vaulting device and its connection with Tankiz′s patronage, see Kenney, ″Power,″ 420–23. On the development of the folded-cross vault, see Hautecoeur and Wiet, *Les Mosquées du Caire,* 277; Burgoyne, *Mamluk Jerusalem,* 90; Hayat Salam-Leibich, *The Architecture of the Mamluk City of Tripoli* (Cambridge, MA, 1983), 102–6; and Meinecke, *Mamlukische Architektur,* 1:145.

[53]See, for instance, the Madrasah al-Nūrīyah in Tripoli (Salam-Leibich, *Mamluk Tripoli,* 122–23),

configurations originally may have been designed to help absorb the pressure created by the vault above.

A theory of the patronage process behind the construction of the Damascus Tankizīyah might go something like this: by 728/1327–28, Tankiz had decided to commission a number of projects, including two institutions: a *dār al-qur'ān wa-al-ḥadīth* in Damascus and a multi-purpose foundation in Jerusalem. A general plan was drawn up that would be applied to both buildings. This plan was somewhat familiar to the Damascus setting, having a number of antecedents there and in other towns of northern Syria, and had recently been adopted in Cairo. In Jerusalem, on the other hand, it was novel, and its introduction there demonstrates the complex nature of the regional transfer of architectural design in the early Mamluk period.[54] Interestingly, this floor plan—once introduced into the Jerusalem repertoire—became very popular there.[55]

In his chronicle, Ibn Kathīr explicitly praises the beauty of Tankiz's *dār al-qur'ān wa-al-ḥadīth* (see above). Presumably, the finished building would have been embellished with some kind of decorative program, but there are no remains of such features in evidence at the building today. It is tempting to imagine the *dār al-qur'ān wa-al-ḥadīth* decorated with the elements employed in many of Tankiz's other constructions: polychrome bands of marble paneling, intricate patterns of marble mosaic, gilded friezes of marble or stucco bearing scrolls or epigraphy—all of which were broadly characteristic of mural decoration in monumental architecture of the early Mamluk period. Perhaps the program also included the etched-marble medallion panels or the glass mosaic with which the patron was more specifically associated.[56] It may be that once the decoration specialists were done with Tankiz's other projects, they were available to put the finishing touches on the interior of patron's *dār al-qur'ān wa-al-ḥadīth*. Interestingly, the characteristic work of these specialists begins to appear in a series of buildings in Cairo, not immediately after its last dated use in Tankiz's other Syrian commissions but several years later—at

---

or the numerous examples in Jerusalem: the Madrasah al-Arghūnīyah (759/1358), the Madrasah al-Lu'lu'īyah (775/1373–74), the Madrasah al-Ṭashtamurīyah (784/1382–83), and the Dār al-Sitt Ṭunshuq (Burgoyne, *Mamluk Jerusalem,* 360, 425, 462–63, and 495).

[54]On this phenomenon in general, see Meinecke, "Mamluk Architecture—Regional Architectural Traditions: Evolution and Interrelations," *Damaszener Mitteilungen* 2 (1985): 163–75.

[55]Variations of this plan can be found in Jerusalem at the three madrasahs cited in note 53, as well as the Madrasah al-Baladīyah (782/1380). See Burgoyne, *Mamluk Jerusalem,* 443–55.

[56]On Tankiz's connection with these decorative elements, see Kenney, "Power," 436–53; Caroline Williams, "The Mosque of Sitt Hadaq," *Muqarnas* 11 (1994): 55–64; Finbarr Barry Flood, "Umayyad Survivals and Mamluk Revivals: Qalawunid Architecture and the Great Mosque of Damascus," *Muqarnas* 14 (1997): 57–79; Meinecke, *Mamlukische Architektur,* 1:95–99, plate 60.

around the same time that the Damascus Tankizīyah was completed.[57]

Endowment

Considering that the *waqfīyah* of the Damascus Tankizīyah has not been found, we are fortunate to have some fragmentary information about endowment for the institution from Ibn Kathīr and al-Nu'aymī.[58] Although Ibn Kathīr makes no claims to have consulted the original records on the institution, the details that he provides are so specific (albeit incomplete), that he probably did so. Al-Nu'aymī, on the other hand, explicitly cites a *waqf* record. However, it seems that his record was an amended version of the institution′s *waqfīyah,* reflecting changes in the property holdings, the positions provided, and the salaries allocated. Both authors limit their discussions about the *waqfīyah*s to the categories of endowments and staffing, whereas the original *waqfīyah* would probably have included other topics as well, such as a description of the building′s location, site, and infrastructure, a description of the building itself including materials used in its construction and decoration, specifications for the particular functions of its various spaces, allocations of funding for the necessary furnishings (such as oil, lamps, candles, and floor coverings), stipulations about the qualifications of people who could study and work there, and detailed job descriptions of the personnel.[59]

Ibn Kathīr acknowledges that the properties he enumerates represent only a few of the places Tankiz endowed for the *dār al-qur'ān wa-al-ḥadīth.* Al-Nu'aymī also lists only a few properties, but does not indicate that it is a partial account. Both historians include Sūq al-Qashāshīn at Bāb al-Faraj, the north-west gate of the city bordering the citadel and leading out to the important extramural zone known as Taḥt al-Qal'ah. Ibn Kathīr provides the dimensions of the *sūq* as being twenty *dhirā'* in length from east to west, while al-Nu'aymī describes its components: nineteen shops on the interior of the *sūq* and eighteen on the exterior. Tankiz owned a number of other shops in the vicinity of Bāb al-Faraj, the total value of which amounted to 85,000 dirhams, as reported in the inventory of the patron′s holdings that were confiscated after his arrest and execution in 741/1340.[60] The next property on Ibn Kathīr′s list is called simply ″Bandar Zaydīn.″ Al-Nu'aymī′s version clarifies this entry: ″and the *kharājī* [property subject to land

[57]Mosque of Alṭunbughā al-Māridānī, 738/1338 (Meinecke, *Mamlukische Architektur,* 2:178, #9C/373); the foundation of Aqbughā 'Abd al-Wāḥid, 740/1339–40 (ibid., 186, #9C/412); mosque of Sitt Ḥadaq, 740/1339–40 (ibid., 183, #9C/395).

[58]For Ibn Kathīr′s passage on the endowment, see above; al-Nu'aymī, *Dāris,* 1:123–26. See also Badrān, *Munādamat,* 64–65.

[59]Cf. the patron′s *waqfīyah* for his Jerusalem foundation (see note 51 above).

[60]For the confiscation inventory, see al-Ṣafadī, *Kitāb al-Wāfī,* 10:429.

tax] was a garden known as al-Bandar in Zaydīn.″ Zaydīn can be identified as a village in the Ghūṭah, a verdant agricultural district east of Damascus, where the patron owned additional property and a decade earlier had overseen an extensive public-works project and installed a pleasure garden.[61] Al-Nuʿaymī lists no other properties, while Ibn Kathīr includes a bath in the town of Hims (which he designates as the ″Old Bath″), and the proceeds from ″other villages.″ The confiscation inventory lists a number of other holdings in Hims belonging to Tankiz. It is intriguing to note Ibn Kathīr′s remark about the ″struggle″ that the patron had with the endowments other than those listed. What was the nature of the difficulty? Was the income that these properties yielded insufficient? Was their ownership disputed?

PERSONNEL

Ibn Kathīr provides a list of positions established at the Tankizīyah, but only mentions the salaries of a few of them. According to his information, Tankiz provided for thirty traditionists *(muḥaddithīn)* and thirty Quran students.[62] He established one position for a hadith shaykh and three for Quran shaykhs. Also on the staff were one prayer leader, one hadith reciter, and an unspecified number of substitutes. The shaykh′s salary was to be thirty dirhams and one *raṭl* of bread per month, the hadith reader was to earn twenty dirhams and eight *awāq* of bread per month, and the *muḥaddithīn* were paid seven dirhams and half a *raṭl* of bread per month. Ibn Kathīr mentions no staff for the maintenance of the building and its revenues. Some of the terminology employed in the foundation inscription of the Damascus Tankizīyah is at odds with that found in the accounts of Ibn Kathīr and al-Nuʿaymī. In the inscription, the institution is referred to as a madrasah rather than a *dār al-qur'ān wa-al-ḥadīth.* Interestingly, the hadith scholars are referred to as *fuqahā',* a term more commonly used for students of law at a madrasah, and *masmaʿīn.*[63]

At the *dār al-ḥadīth* established as part of Tankiz′s multi-purpose institution

---

[61]On Tankiz′s other properties in the Ghūṭah, see al-Ṣafadī, *Kitāb al-Wāfī,* 10:429; on his projects there, see Kurd ʿAlī, *Ghūṭat Dimashq,* 86, n. 1.

[62]The first individual to be appointed as shaykh of the Tankizīyah was none other than the famous scholar and prolific author Shams al-Dīn al-Dhahabī. Earlier, Tankiz had appointed him to a position at the madrasah and turbah of Umm al-Ṣāliḥ. Not long after that, the *nā'ib* promoted him to the Dār al-Ḥadīth al-Ẓāhirīyah, and then gave him an additional post at the Nafīsīyah. Al-Dhahabī retained the post at the Tankizīyah until his death in 748/1348. Interestingly, Tankiz′s patronage of al-Dhahabī did not guarantee a favorable epitaph from the scholar (Ibn Qāḍī Shuhbah, 2:155; M. Bencheneb, ″al-Dhahabī,″ *EI*^{2}*,* 2:214–16).

[63]This usage is discussed in Gary Leiser, ″The Endowment of the al-Zahiriyya in Damascus,″ *Journal of the Economic and Social History of the Orient* 2, no. 1 (1984): 47–48.

in Jerusalem, the *waqf* provided for twenty traditionists, who were given seven and a half dirhams and a half *raṭl* of bread; one hadith shaykh, paid forty dirhams and one *raṭl* of bread; one assistant whose salary seems to be omitted; and one reader, paid twenty dirhams and a half *raṭl* of bread.[64] The Jerusalem *waqfīyah* also supported several staffers. Thus, the faculty-to-student ratios and the salaries allocated at the two institutions appear to have been comparable, except for the shaykh′s salary, which was higher in Jerusalem than in Damascus. There is no indication that the Damascus foundation was meant to be residential. The *dār al-ḥadīth* component of the Jerusalem institution was not.

In the *waqfīyah* consulted by al-Nu‘aymī, the student-staff ratio had changed considerably. The faculty positions included a shaykh for recital *(mashyakhat al-iqrā’),* whose salary goes unmentioned;[65] a prayer leader (*imām*), who was to paid 120 dirhams monthly;[66] three hadith shaykhs, each of whom earned fifteen dirhams per month;[67] and one *kātib al-ghaybah,* who was paid ten dirhams monthly. This *waqfīyah* also provided for a large staff to perform a variety of duties. Forty dirhams per month were provided for a muezzin, a doorman, and an unspecified number of caretakers. A *dīwān* representative *(ṣaḥābat al-dīwān),* a supervisor *(musharrif),* and a bookkeeper *(‘āmil)* were also on the payroll, each at forty dirhams per month. The position of revenue collector *(jabāyah)* was allocated fifty dirhams monthly, while the positions of overseer of property *(shahādat al-‘imārah)* and the inspector of property *(mashadd al-‘imārah)* paid twenty-five dirhams each. The *waqf* also provided for a builder/architect′s post *(mi‘mārīyah),* to be paid fifteen dirhams monthly. Moreover, the staff included a superintendent *(nāẓir)* and a lieutenant-superintendent *(nā’ib al-nāẓir)*. As for the student body, al-Nu‘aymī mentions only twelve Quran students *(al-mushtaghalūn bi-al-qur’ān al-‘aẓīm),* each of whom would be given seven and a half dirhams per month, and five hadith ″listeners″ *(mustam‘ūn),* each of whom earned seven and a half dirhams per month. It should be noted that while the student stipend had not changed, the provision covered fewer than half the Quran students and only a quarter of the traditionists originally supported.

---

[64]Al-‘Asalī, *Wathā’iq,* 113–16.

[65]According to al-Nu‘aymī′s source, this post was designated for an individual by the name of al-Burhān al-Irbidī (*Dāris,* 1:127). I have yet to identify this figure.

[66]The version of the *Dāris* excerpted by Badrān lists a Quran shaykh (*Munādamat,* 64), but the Cairo edition does not.

[67]These posts were also designated for specific individuals: one was held by al-Burhān Ibn al-Taqī; another was assigned to the son of the shaykh; and the third was for al-Shams al-Armawī. Again, I have no firm identification yet for these individuals.

PATRONAGE AND THE PAST

As the historical sources cited above suggest, the construction of the *dār al-qur'ān wa-al-ḥadīth* appears to have extended over a prolonged period of around eleven years, beginning in 728/1327–28 and ending in 739/1338–39. This timing is interesting in light of the broad patterns of Tankiz's patronage activity.[68] It coincides with a building boom that included projects in a number of cities throughout the *niyābah,* as well as Damascus. Prior to the start-up of this *dār al-qur'ān wa-al-ḥadīth* project, Tankiz's nearest-dated monumental construction in Damascus had been his congregational mosque, finished around a decade earlier. After the completion of that project, there is a hiatus of over five years in dated building works sponsored by Tankiz. This hiatus was followed by a sudden surge in the patron's building activity. The projects he undertook in Damascus concurrent with this 728/1327–28 to 739/1338–39 time-span of the *dār al-qur'ān wa-al-ḥadīth* construction include: ongoing repairs to the waterways (727/1326–27 and 729/1328–29); intramural street widenings at Bāb al-Barīd (east of the Umayyad Mosque) and in the market area between the south-west of the Umayyad Mosque and the area of Sūq al-Buzūrīyīn (728/1327–28 to 729/1328–29); several extramural street widenings (729/1328–29 to 732/1331–32); ongoing restoration work at the Umayyad Mosque (727/1326 to 730/1329); the new palace mentioned above; the mausoleum and *ribāṭ* of the patron's wife (730/1330); repair of one of the city gates, Bāb Tūmah (734/1333); rebuilding of a bridge over the Turah River (735/1335).[69]

Outside of Damascus, the patron was equally active during this period, sponsoring a major ongoing project in Jerusalem, which included work on the city's canalization (727/1326–27 to 728/1327–28), the madrasah, *khānqāh, dār al-ḥadīth,* and *ribāṭ* foundation (729/1329), two baths, a *qaysārīyah,* and a number of restorations on behalf of the sultan at the Ḥaram al-Sharīf.[70] Tankiz also undertook restoration work at the Ḥaram al-Khalīl in Hebron (732/1332); construction and restoration in Ajlun (728/1328); alterations at the congregational mosque of Gaza (729/1330); and the rebuilding of Qal'at Ja'bar (733/1332–33 to 736/1335–36).[71] The fact that Tankiz had so many commissions underway concurrently could account for the unusually long delay in completion of the *dār al-qur'ān wa-al-ḥadīth.* The difficulties that he encountered with the institution's endowments, reported by Ibn Kathīr (see above), might also have contributed to the delay.

The significance of the physical setting for Tankiz's *dār al-qur'ān wa-al-ḥadīth* must not be overlooked. At a time when the majority of new architectural

---

[68]On these patterns, see Kenney, "Power," Chapter Six.

[69]Sources for these works are cited above.

[70]Kenney, "Power," Chapter Three. See also Burgoyne, *Mamluk Jerusalem,* 223–48 and 273–98.

[71]Kenney, "Power," 281–315 and 347–59.

commissions were situated outside the city walls, Tankiz erected his structure at the heart of the walled city. The fact that he was able to construct three of his new commissions in Damascus at such plum intramural sites demonstrates the patron′s purchasing power and political strength. An incident involving Sanjar al-Jawilī suggests the risk involved in refusing to cooperate with Tankiz′s schemes of property acquisition. According to al-Maqrīzī, Tankiz wanted to purchase a house owned by Sanjar located in the vicinity of the Jāmi‘ Tankiz. Sanjar refused to sell, so Tankiz took the matter before the sultan. Sanjar ended up in prison for eight years.[72]

The site of the *dār al-qur'ān wa-al-ḥadīth* had other characteristics to recommend it, in addition to its intramural location. Its proximity to the Umayyad Mosque to the north, Sūq al-Kabīr to the south, and important markets streets to the west, guaranteed a steady stream of pedestrian traffic in its neighborhood. Passersby would be reminded of the patron′s generosity by seeing the building and by hearing the patron′s name included in the prayers conducted there.[73] This district south-west of the Umayyad Mosque became something of a focal point for Tankiz′s *intra muros* architectural and urban patronage. It was in this zone that he erected his magnificent new palace and his wife′s mausoleum, as well as his *dār al-qur'ān wa-al-ḥadīth.* Tankiz was responsible for refashioning this area in other ways as well. Around the same time that his *dār al-qur'ān wa-al-ḥadīth* construction commenced, Tankiz began a major overhaul at the Umayyad Mosque. This renovation included the reopening of the south-west gate of the mosque, Bāb al-Ziyādah, which had long been closed.[74] Bāb al-Ziyādah led to a network of market streets south of the mosque, which Tankiz also reshaped. In 729/1328–29, he widened Sūq al-Silāḥ, a market street located on the north-south artery leading to the newly opened Bāb al-Ziyādah.[75] In the same year he ordered the clearing of encroachments and the widening of Sūq al-Nashābiyīn, the bowmakers′ market, which ran east-west linking Sūq al-Silāḥ and Sūq al-Buzūrīyīn.[76] In a zone farther

[72]*Al-Mawā‘iẓ wa-al-I‘tibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1853), 2:389.

[73]According to al-Asyūṭī′s model for the ideal *dār al-qur'ān,* lessons were to be preceded by ″supplications for divine rewards for the endower, his family, and the Muslim dead in general.″ (Donald P. Little, ″Notes on Mamluk Madrasahs,″ *Mamlūk Studies Review* 6 [2002]: 14). In the *waqfīyah* of the Jerusalem Tankizīyah, this requirement was made explicit in the curricula for the traditionists, the law students, and the Sufis, as were the locations in specific *īwān*s of the building for their instructional and devotional activities (al-‘Asalī, *Wathā'iq,* 113–16).

[74]Flood demonstrates that the new gate was installed slightly to the east of the original one (*The Great Mosque of Damascus: Studies on the Makings of an Umayyad Visual Culture* [Leiden, 2001], 142).

[75]Ibn Kathīr, *Al-Bidāyah,* 14:144 f.

[76]Ira M. Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, 1967), 262, n. 55.

to the west between the city gates, Bāb al-Naṣr and Bāb al-Jābiyah, he had shops demolished, benches removed from the streets, and even a mosque torn down and rebuilt in a different location (735/1335).[77] The following year, Tankiz ordered further clearing work in the coppersmiths′ market, located next to the Umayyad Mosque.[78] A number of the patron′s commercial properties were found in this area south of the Umayyad Mosque, as well. On the western end, at Bāb al-Jābiyah, there was one known as Khān al-ʻArāsah. At the southeast corner of the Umayyad Mosque was another, known as Sūq al-Dahshah. A third, Khān al-Bayḍ, was located on the north side of Sūq al-Kabīr.[79]

This zone south and west of the Umayyad Mosque was rich in historic associations. In Tankiz′s day, part of it was still called al-Khaḍrā', a reference to the Qaṣr al-Khaḍrā', the Umayyad palace that had once stood there.[80] It was in this zone that a cluster of monuments erected by Nūr al-Dīn was also to be found: the famous *bimāristān,* the funerary madrasah, and—on the plot next to the one Tankiz chose for his *dār al-qur'ān wa-al-ḥadīth*—the bath which supported Nūr al-Dīn′s madrasah endowment. Tankiz′s choice of building type may be related to an interest in creating associative links between himself and renowned rulers of the city′s past. Supposedly, it was Nūr al-Dīn who founded the first independent *dār al-ḥadīth* institution, which he erected in Damascus. [81] Prior to this development, hadith study had generally taken place under the aegis of other religious institutions or at the residences of the instructors. Nūr al-Dīn′s model was immediately adopted by other patrons and appears to have been particularly popular in Damascus. One of the characteristics of Tankiz as a builder was his astute manipulation of architecture, space and history—of the ″iconography of architecture″—to promote the construction of his own image.[82] By obtaining a property in this historically charged location for his new foundation, the patron was able to make his mark in history—quite literally. Just as he situated his building in physical proximity to

[81]Fuat Sezgin, ″Dār al-Ḥadīth,″ *EI*^{2}, 2:125–26.

[82]For an innovative application of Richard Krautheimer′s theory of the iconography of architecture (″Introduction to an ′Iconography of Medieval Architecture,′″ *Journal of the Warburg and Courtald Institutes* 5 [1942]: 1–33) to Mamluk references to the Umayyad past, see Flood, ″Umayyad Survivals,″ 57–79; on this theme, see also Bethany Walker, ″Commemorating the Sacred Spaces of the Past: The Mamluks and the Umayyad Mosque at Damascus,″ *Near Eastern Archaeology* 67, no. 1 (2004): 26–39.

important monuments of the past, he positioned himself relative to their illustrious founders.

Furthermore, it is interesting to note that Tankiz introduced an additional element to Nūr al-Dīn′s concept, by combining a Quran school with the *dār al-ḥadīth*. In fact, Tankiz has been credited with innovating this particular type of dual-purpose foundation.[83] However, it is not entirely certain that this was, in fact, an innovation; nor is it clear how significant such a distinction of function was at the time. Part of the problem lies with the slippery terminology, which confounds the taxonomies and chronologies of historians, both medieval and modern. For example, at the much earlier *dār al-ḥadīth* founded by Ibn Shaddād in Aleppo (618/1221), the foundation inscription specifically labels the building as a *dār al-ḥadīth*, but then goes on to state that the endowment was to provide instruction in Quran studies as well as hadith.[84] Al-Nu‘aymī′s list of *dār al-qur'ān wa-al-ḥadīth*s in Damascus puts the Tankizīyah as the earliest such institution. Yet, as pointed out above, the building′s foundation inscription contains no mention of the term *dār al-qur'ān wa-al-ḥadīth*, but rather refers to the building as a madrasah.[85] With such variability of institutional nomenclature and function, it is difficult to claim that Tankiz′s foundation represents a distinct innovation and that such an innovation would have had significance in the patron′s own time. In any case, as a dual-purpose building type, the *dār al-qur'ān wa-al-ḥadīth* does not appear to have attained the popularity among subsequent building patrons that Nūr al-Dīn′s *dār al-ḥadīth* did. Al-Nu‘aymī′s survey of institutions in Damascus lists only three *dār al-qur'ān wa-al-ḥadīth*s, as opposed to thirteen *dār al-ḥadīth*s and seven *dār al-qur'ān*s.

Conclusion

In light of the centrality of Tankiz in the political arena of his day, the impact of his building works on Mamluk architectural development, and the interest of his commissions for the study of architectural and urban patronage, it is important for the extent of his works to be understood as well as possible. In the case of the patron′s *dār al-qur'ān wa-al-ḥadīth,* the remains of the original building appear to

---

[83]Sezgin, ″Dār al-Ḥadīth,″ 126.

[84]Tabbaa, *Constructions,* 43–44.

[85]The inscription also raises another intriguing point. What exactly was the role of Aydamur al-Mu‘īnī, at whose behest the building was constructed, according to the text? I have not arrived at a satisfactory identification for this figure. He clearly is not who von Kremer supposed him to be: an individual who died in the year 667/1268. Von Kremer erroneously attributes the building to that Aydamur and dates the building according to his death date (*Topographie,* 2:7). Also intriguing is the physical composition of this part of the inscription: it is inserted in two parts outside the frame of the cartouche bearing the foundation information. Was it an afterthought, or perhaps a later addition? Or did the engravers simply run out of space within the cartouche?

be under-represented in the scholarship on the architectural history of Damascus. It seems likely that the alterations to the interior mentioned by Wulzinger and Watzinger, Sauvaget, and others are not as comprehensive as these authors suggest. The turn-of-the-century revisions undertaken by Shaykh Kāmil probably correspond primarily to the elements of wood, brick, and plaster construction—the stairways, ceilings, balconies, and upper-story rooms. The lower level, with its solid construction of large stone masonry and its classic floor plan of four *īwān*s and corner rooms surrounding a central court, could very well belong to the original building and could provide at least a general outline of its configuration. The renovations appear to have been more additive than transformative in nature. In effect, the original building, which has been reduced over the course of the centuries architecturally through a succession of alterations, has been further diminished through a process of scholarly transmission. "Restoring" what remains of the original building to the corpus of Mamluk architecture of Damascus contributes to a clearer understanding of the architectural chronology of the region and of broader issues about Mamluk architectural patronage.

Faḥl during the Early Mamluk Period: Archaeological Perspectives

The Jordan Valley in Mamluk Archaeology

The hot and fertile Jordan Rift Valley, copiously provided with water by the many springs and waterway systems it embraces, has featured prominently in the archaeology of Mamluk southern Bilād al-Shām since the mid-twentieth century (fig. 1). The information generated by a number of early surveys and excavations in the valley was interpreted as evidence for renewed prosperity from the thirteenth century, brought about by widespread resettlement and a rejuvenated rural economy based on the cultivation of sugar cane. The evidence was also seen as suggesting that this prosperity suddenly ended in the mid to late fourteenth century due to the collapse of the sugar industry, abandonment of the land, and growing nomad infiltrations. In pioneering archaeological work undertaken on the floor of the broader eastern side of the valley, site occupation datable to Mamluk times was especially easy to identify due to the distinctive glazed, industrial and hand-made painted ceramics typical of the period, while many prominent hydraulic installations were likewise effortless to detect and record.

Seminal amongst the early survey work in the valley was the comprehensive archaeological survey undertaken in two parts during early spring in 1975 and 1976 between the Yarmuk River and the Dead Sea on the east bank of the Jordan Valley.[1] A total of 224 sites were explored, of which 107 revealed evidence of ″Ayyubid/Mamluk″ occupation—that is, almost half of the sites surveyed. That impressive statistic encouraged Ibrahim, Sauer, and Yassine to remark: ″the epoch that was introduced with the Ayyubid/Mamluk witnessed a transformation of the Jordan Valley far beyond the scope of any that had occurred previously.″[2] They

Sauer, and Khair Yassine, ″The East Jordan Valley Survey, 1975 (Part One),″ *Bulletin of the American Schools of Oriental Research* 222 (1976): 41–66; Khair Yassine, James A. Sauer, and Mo‘awiyah Ibrahim, ″The East Jordan Valley Survey, 1976 (Part Two),″ in *Archaeology of Jordan: Essays and Reports,* ed. Khair Yassine (Amman, 1988), 189–207; and the publication of the Ayyubid to Ottoman ceramics from the survey in Jum‘a M. H. Kareem, *The Settlement Patterns in the Jordan Valley in the Mid- to Late Islamic Period,* BAR International Series, no. 877 (Oxford, 2000), 66–80.

[2]Yassine, Sauer, and Ibrahim, ″East Jordan Valley Survey, 1976 (Part Two),″ 203.

concluded that many new sites were founded, and sugar mills established at water sources. "Ayyubid/Mamluk" occupation was especially easy to identify in the valley through the ubiquitous presence of sugar pots.

The perceived rapid increase, near explosion, of settlement profiles in Mamluk times has been commonly associated with the agricultural development of the valley by land-owning amirs and especially the estate-style cultivation of sugar cane using servile labor.[3] While recent studies have moved towards presenting more complicated explanations for settlement development and change for all Jordan during the middle ages, there is little doubt that the Mamluk period is a significant one in the social and economic history of the rift valley.

Contributing to an understanding of settlement profiles in the Jordan Valley during Mamluk times are the results of excavations undertaken in the early 1980s at Ṭabaqat Faḥl by team members from the Sydney component of the Sydney-Wooster Excavations at Pella (fig. 1). Work on the main archaeological mound in particular exposed significant Mamluk-period settlement at the site, including a mosque, occupational levels belonging to an adjacent settlement, and a large cemetery at the eastern end of the mound. This article focuses on the results of that work, including new ceramic studies undertaken by McPhillips, and reviews the insights these excavations offer for understanding the nature of human settlement in the Jordan Valley during the Mamluk period.

Faḥl within the *Mamlakah* of Damascus

Ṭabaqat Faḥl, more simply known as Faḥl into early Ottoman times,[4] did not escape the notice of Islamic geographers in the fourteenth and fifteenth centuries. Noted in both the geographical compilation of al-Dimashqī (d. ca. 1327) and the exhaustive study of al-Qalqashandī (d. 1418), the *Iqlīm Faḥl* was one of the many districts that formed the extensive Mamlakat Dimashq in Bilād al-Shām during the Mamluk period (1250–1517).[5] In Jordan the territory of the Mamlakat Dimashq

[3]Generally on investment in sugar by Mamluk amirs, see E. Ashtor, *Levant Trade in the Later Middle Ages* (Princeton, NJ, 1983), 206–8; idem, "Levantine Sugar Industry in the Late Middle Ages: a Case of Technological Decline," in *The Islamic Middle East, 700–1900,* ed. A. L. Udovitch (Princeton, NJ, 1981), 91–112.

[4]Initially named Fiḥl in Umayyad and Abbasid times, the name transmuted into Faḥl at some point between the eleventh and fourteenth centuries, probably because the original name was meaningless in Arabic, as noted by al-Ya'qūbī (Abū al-'Abbās Aḥmad ibn Abī Ya'qūb ibn Ja'far al- Ya'qūbī, *Kitāb al-Buldān,* trans. M. J. De Goeje, Bibliotheca Geographicorum Arabicorum, vol. 7 [Leiden, 1892], 327, l. 55). The village name of Faḥl persists in the early Ottoman *daftar*s, for which see W. D. Hütteroth and K. Abdulfattah, *Historical Geography of Palestine, Trans-Jordan and South Syria in the Late 16th Century* (Erlangen, 1977), 167.

[5]Shams al-Dīn Abū 'Abd Allāh al-Dimashqī, a Syrian, died in Ṣafad in 727/1327; D. M. Dunlop,

encompassed all of the territory north of the dramatically deep gorge of Wādī Mūjib, and was partitioned into five main regions.[6] While arrangements were fluid, these regions were in general:

1) the Balqā' region, which included the towns of al-Salṭ, Amman, and al-Zarqā', all fortified under the Ayyubids;[7] also Ḥisbān, a town of sufficient importance to be the capital of the Balqā' for a period;[8]

2) the Jabal 'Awf region including the fortified town of 'Ajlūn, the castle of which was built between 1188 and 1192 and extended in 1214–15;[9]

3) the Sawād (used specifically to designate an area under cultivation), and in particular the district *(iqlīm)* of Bayt Rās and that of Faḥl;[10]

4) the upper Ghawr (properly the floor of the Jordan Valley) with its principal town of al-Quṣayr, modern North Shūnah, seemingly equipped with a small fort (as the name would suggest);

5) the middle Ghawr around the town of 'Amatah (modern Abū 'Ubaydah), the burial place of the supreme commander of the Muslim forces in Bilād al-Shām and one of the Companions of the Prophet.

Hence the boundary between the Mamlakat Dimashq and the Mamlakat al-Karak was positioned along the Wādī Mūjib/Wādī Wālah catchment, which placed the southern Ghawr in Karak. Zīzah (modern Jīzah) in the Balqā' seemingly functioned as a forward post on the Karak road, as it was equipped with a water reservoir and a solid fort.[11]

"Al-Dimashḳī," *The Encyclopaedia of Islam,* 2nd ed., 2:291; Shihāb al-Dīn Abū al-'Abbās al-Qalqashandī, an Egyptian, was an accomplished Mamluk bureaucrat who died in 821/1418; C. Edmund Bosworth, "Al-Ḳalḳashandī," *EI*^{2}, 4:509–11. Both works, while essentially authoritative, incorporated much material drawn from other sources, some early.

Within the *Iqlīm Faḥl* and giving the district its name was the settlement of Faḥl, an ancient place continuously occupied since before 6000 B.C.E. due to the presence of fertile lands and multiple springheads, the latter creating the second most powerful water source in the Jordan Valley between Lake Tiberias and the Dead Sea.[12] The middle Islamic name of Faḥl can be traced back to the ancient Semitic name ″Pahil,″[13] and the continuity of this name over four millennia is indicative of the site′s long history of settlement. The historical significance of Faḥl was partly strategic, partly resource-based. In addition to abundant water and good soils, Faḥl served as a traditional ″gateway″ location between the coastal routes of Palestine and the highland roads that traversed the Jordan highlands. Although in most of the Mamluk period the main lateral road from east to west passed north of Faḥl over the Jisr al-Mujāmiʻah, which joined Baysān with al-Quṣayr, the site retained a strategic importance as it lay between the fortified settlements of al-Quṣayr in the upper Jordan valley and ʻAjlūn, positioned high in the Jabal ʻAwf region to the south-east.

The Archaeology of Mamluk Faḥl

The occupational history of Faḥl in middle Islamic times received scant attention until the Sydney University team commenced archaeological investigations on the main *tall* of Ṭabaqat Faḥl in the 1980s.[14] While recent excavations have uncovered more Mamluk levels on the southern edge of the *tall,* as described below, the investigations are still limited to the mosque, small areas of the settlement, and part of the cemetery.

The first attention to Islamic-period occupation at Faḥl, albeit only modest, came out of a reasonably detailed survey of the site undertaken by John Richmond

---

the Medieval Hajj Route,″ 350–55.

[12]Water Resources Development Directorate—Water Quality and Pollution Control Division, *Water Quality in Jordan, Part 1: Springs* (Amman, 1979), ″Tabaqat Fahil″ with a mean discharge of 1391.32 cubic meters per hour as recorded in 1972 and 1975; Department of Water Resources Development, *Spring Flow Data in Jordan Prior to October 1985,* Technical Paper No. 51 (Amman, 1986), with a median flow of 1130 cubic meters per hour as recorded in 1972–74 and 1983–86. Peak flow was between April and September, the summer growing and autumn processing seasons.

[13]Or ″Pahila,″ transliterated to ″Pahir″ in Egyptian and first attested ca. 1800 B.C.E.; Robert H. Smith, *Pella of the Decapolis Volume 1: The 1967 Season of the College of Wooster Expedition to Pella* (Wooster, OH, 1973), 24–25.

[14]Names continue to be transformed by events at Ṭabaqat Faḥl. Today the archaeological *tall* is locally referred to as ″Bella,″ whereas Ṭabaqat Faḥl is the official name for the village on the plain to the west of the antiquities site.

in the 1930s.[15] His published description focuses on the visible tombs and architecture, noting early churches and the absence of "Crusader work."[16] Structures on the flat top of the mound are ignored, even though "Arab" ruins are labeled on the accompanying map along with the limits of a new village (fig. 2), in existence until bombed during the War of Attrition (1967–70) and still in ruins when first visited by Walmsley in 1977 (fig. 3).[17] The map also shows the clear outline of a rectangular building next to an "Arab Cemetery" on the southern edge of the mound, but only incidentally does Richmond identify this building as a mosque in a caption to a photograph (fig. 4). Further observations of Islamic medieval ceramics were made by Nelson Glueck in a 1942 visit,[18] and then in 1958 the first real indication of the extent of Middle Islamic occupation at Faḥl came about from work in one of two exploratory soundings undertaken by R. W. Funk and H. N. Richardson on the main mound at Faḥl.[19] Here they initially encountered some two meters of "Medieval and early Arab occupation," but about which very little else was said except that "the strata were not clearly defined for the most part."[20] With the 1967 excavations of Robert Smith, which focused on the West Church and tombs, a corpus of Middle Islamic pottery was recovered from tomb overburden in Area II, the tombs east of the main mound (fig. 5).[21] Tomb 2 produced ceramics of Middle Islamic date mixed with fragmentary human bone, but unlikely from a burial.[22] Tomb 7, which had collapsed into an underlying tomb (8), had significant Middle Islamic material, including sheep, goat, camel, and cattle bones (the latter

[16]Ibid., 29.

[17]This village features prominently in the photographs on the endpapers of Smith's publication of his 1967 season of excavations, and is accompanied by a vivid first-hand account of the June War and the damage that was subsequently inflicted on Ṭabaqat Faḥl and its village; Smith, *Pella of the Decapolis 1,* 21–22.

[18]Nelson Glueck, *Explorations in Eastern Palestine IV,* Annual of the American Schools of Oriental Research 25/28 (New Haven, CT, 1951), 254–57.

[19]Nine days were devoted to digging, for which forty laborers from the village were hired "including about half women and girls who proved to be excellent workers"; R. W. Funk and H. N. Richardson, "The 1958 Sounding at Pella," *Biblical Archaeologist* 21 (1958): 82.

[20]Ibid., 88–89. There is no doubt that the levels associated with the Mamluk settlement of Faḥl are archaeologically challenging, but Funk and Richardson betray their disinterest in the Islamic periods elsewhere in their account. In their brief report, they devote two pages to outlining ancient historical references to Faḥl and nearly four to its Graeco-Roman and early Christian history, but no mention is made of Islamic references to the site although these had already been made available 75 years earlier in Guy Le Strange, "Account of a Short Journey East of the Jordan," *PEQ* 16 (1885): 157–80.

[21]Smith, *Pella of the Decapolis 1,* 168–95.

[22]Ibid., 177.

suggesting sedentary life) either dumped or washed in, or both.[23] The ceramics ranged from glazed wares, mostly local slipped-glazed but also blue-black underglazed frit ware and glazed relief ware, to the ubiquitous Hand-Made Geometric Painted wares (HMGPW), sugar pots and basins, and coarse cooking wares.[24]

Accordingly with the commencement of the University of Sydney′s excavations in 1979 on the main mound, some knowledge of Middle Islamic settlement at Faḥl had already been retrieved from earlier work, but none of this gave useful details about the nature of that settlement or its geographical and chronological extent. The first encounter was with an extensive cemetery in the south-eastern corner of the mound, located over an area of Byzantine-Umayyad housing destroyed in the earthquake of 749 C.E. (fig. 5, Area IV).[25] Attention was subsequently directed towards the mosque (Area XVII), the outline of which was still clearly visible on the top of the mound next to the cemetery of the modern village, the burial ground still being in use at the time (fig. 6).[26] In an at times harsh winter of 1982, Ghazi Bisheh as the Departmental Representative supervised the excavation of the mosque, uncovering a rectangular building made of reused stone blocks. A third area of Mamluk occupation on the mound at Faḥl was uncovered with the opening of two rectangular excavation units to the east and west of the reopened Square 1 of Funk and Richardson, where significant Hellenistic deposits had been found in the 1958 sounding and more were hoped for (fig. 5, Area XXIII).[27] Little architecture of Mamluk date was uncovered in this area; rather, thin interweaved courtyard levels were encountered instead. The complexities of the strata called for meticulous excavation, yet were rich with discarded material culture. More recently further Middle Islamic material was uncovered through the excavations of S. Bourke in Area XXXII, located immediately south of the mosque. In spite of

its limitations, the material from these four discrete areas provide a more detailed insight into the settlement of Faḥl in Mamluk times, including its place in the cultural and economic life of the Jordan Valley.

The Mosque at Faḥl

The Faḥl mosque was built on open land towards the southern edge of the main mound, with the settlement located to its north and west (fig. 2, ″Arab″ ruins). Given its open location there was no restriction on the mosque′s plan, which conformed to the shape of a plain rectangle measuring some 19 by 9.5 meters (fig. 7). A niche (mihrab) projecting some 1.8 meters was placed mid-point in the long south (qiblah) wall, and emphasized internally by the incorporation of two short columns on either side of the niche. To its right (west) the remains of three stone steps were uncovered, which clearly belonged to a minbar (fig. 8). The only doorway into the building was placed axially opposite the mihrab in the north wall of the mosque, either side of which were three evenly-spaced vertical windows, making six in total. The northern wall faced part of the settlement, and to separate the mosque from the cemetery to the east a wall extended out northwards from the north-east corner of the hall. No evidence for a porch was found in front of the entrance wall.

Internally, the hall of the mosque, measuring ca. 7.25 by 14.5 meters, was divided into three lateral aisles by two rows of four low-set columns positioned some 4.25 meters apart. The columns once carried six high-pointed arches, the voussoirs of which were found between the columns in a tumbled but orderly line upon the earth floor. At either end of the rows the columns were buttressed by a small wall against the short east and west walls, surely to carry the outward thrust of the colonnades. The remains of thin walls between the end columns suggest that all six recesses formed by the buttresses were made into benches and/or screened off from the body of the hall, more than likely with drapes. As the floor area of the hall measured ca. 105 square meters, it could have supported a congregation of up to 85–100 persons, and the presence of a minbar indicates a resident imam at some time in the mosque′s history.

Construction of the mosque was of stone throughout, except probably for the roof. Much of the building stone came from reused material, especially the columns, one of which was of Troad grey granite, and the well-squared overlapping blocks at the wall corners. All the walls were built in 0.35 meter-deep foundation trenches with the exception of the qiblah wall, where it was built almost directly on the ground surface. The columns inside the hall were sunk from a half to three-quarters of a meter below the floor surface. The floor as found was essentially compacted earth, although remnants of a plaster surface were found in front of the mihrab. Mats made out of reeds, once copious in the Wādī Jirm, were probably used to

cover the floor. The roof was almost certainly flat, built from a traditional construct of wood beams, cane, and matting sealed over with earth.[28]

Architectural Context of the Mosque

The Faḥl mosque is not a unique structure in the architectural heritage of Mamluk Jordan. Since its unearthing a number of other Mamluk-period mosques have been located, and some excavated, in the region, many of which conform to the style of the Faḥl mosque.[29]

Two prominent mosques clearly belong to the same architectural tradition as the example at Faḥl. The first and perhaps earlier of the two is the small mosque in the Ayyubid-period fort at Azraq. This building, the result of a major reconstruction of an earlier Roman-period fort, is dated to 1236–37 by an inscription over the entrance doorway, and attributes its construction to ʻIzz al-Dīn Aybak, Lord of Ṣalkhad. The mosque, probably part of ʻIzz al-Dīn's building program, is a free-standing structure of basalt placed in the center of the fort's courtyard. In plan the mosque is essentially rectangular, with its long axis running parallel to the qiblah wall. The hall features a double, laterally-oriented line of high-pointed arches that spring from deeply buried columns (fig. 9). The roof is flat and of stone, although rebuilt. However, the Azraq mosque is not as wide as the example at Faḥl, with two instead of three arches per row, while the arches terminate on pilasters, not engaged pillars. Also different is the location of the doorway, which is in the short east wall, as is the inclusion of only two windows, one either side of the mihrab high up in the qiblah wall.

The second mosque stands in front of the Cave of the Sleepers (al-Kahf wa-al-Raqīm), located south-east of Amman. Tradition holds this is the cave mentioned in the Quran in which a group of youths hide with their dog Qiṭmīr, sleeping, for 300 or 309 years to preserve their faith (Quran 18:9–26, "al-Kahf"). In later times the site was venerated by the construction of two mosques; one above the cave, perhaps Umayyad, and a second in front of the cave, either later Ayyubid or Mamluk. This latter mosque had a doorway in the short west wall,

---

[28]After excavation the partially collapsed south wall was restored. Subsequently, the mosque walls were partially and sympathetically rebuilt in a traditional style by the Ministry of Religious Affairs.

[29]Editor's note: In addition to the structures described below, a contemporary mosque of nearly identical scale, construction, and plan was recently surveyed in the village of Ḥubrāṣ, roughly 22 kilometers northeast of Faḥl (Bethany J. Walker, "The Northern Jordan Survey 2003—Agriculture in Late Islamic Malka and Hubras Villages: A Preliminary Report on the First Season," *Bulletin of the American Schools of Oriental Research* 339 [2005]: 76–77). It is currently being excavated and restored by Grand Valley State University, with the collaboration of the Jordanian Department of Antiquities and the Ministry of Religious Endowments.

which led to an irregular courtyard positioned between the qiblah wall of the mosque and the cut rock face containing the tomb entrance. A second, blocked doorway in the west wall might suggest the mosque was an adaptation of an earlier building, maybe a church. From the court, entry to the mosque was through three broad openings in the north wall each ca. 2.37 meters wide, probably originally arched and left permanently open. In the center of the south wall a two-meter deep mihrab was located and, to the right (west), a minbar built of stone blocks with four steps remaining. Given the considerable thickness of the walls, the al-Kahf mosque may have been roofed with a stone vault.

Community mosques of a similar style were also built in other towns and villages in Jordan as part of a general program of cultural and political restructuring to counteract Shiʿite-Fatimid and Crusader influence in the region. The village of Sūf, northwest of Jarash, was equipped with a mosque of rectangular shape with lateral colonnades, while a number of long-room mosques each with a deep, horseshoe-shaped mihrab have been identified in the ʿAjlūn area, some of which have been excavated in recent years.[30]

The Cemetery

An extensive cemetery belonging to the Mamluk settlement has been identified on the south-eastern quadrant of the main mound, probably starting to the east of the mosque where a modern cemetery, no longer in use but protected, is located. The excavation of the eastern sector of the Mamluk cemetery was coincidental to the principal intention of the work in Area IV, which was to investigate the Hellenistic, Roman, and Byzantine settlement of Pella over an extended area.[31] Between 1979 and 1982, over 250 individuals were disinterred, consisting of 110 adults and 142 children and adolescents. All were buried in ovoid pits measuring 1.5 to 1.75 meters in length and about 0.5 meters wide. Each body was laid in a pit on its right side, extended, with the head pointing east and the face turned to the south

(the qiblah). In some instances rough field stones were laid along the pit flanking the body. Grave goods were scarce, mostly personal jewelry such as finger rings, earrings, and bracelets in glass and copper.[32]

As a result of a study of the skeletal material by Stephen Bourke,[33] it was concluded that the average life span of the Mamluk population was 30 to 35 years, perhaps a little lower than in earlier periods but nevertheless close to a standard pre-industrial life expectancy. The absence of any trauma to the bones would suggest that the principal cause of death was acute infection. Female lifespan was slightly less than males, probably due to the hazards of childbirth. Bourke noted that small changes in the morphology of the Mamluk population could be observed when compared to the earlier Roman-period population at Faḥl, which were suggestive of the introduction of Negroid and Asiatic (Turkic?) groups into the local population. Overall, however, this shift was only minor; rather, the evidence was for ″significant biological continuity from Roman through to Mamluk times.″[34] In other words, the Mamluk population of Faḥl was genetically little separated from their Roman-Byzantine predecessors, indicating Mamluk Faḥl was inhabited by people drawn from the local population, and not predominantly by outsiders such as imported labor.

A pathological study of the Mamluk skeletal material by C. D. Browne has identified compelling evidence for degenerative spinal disease and osteoarthritis of peripheral joints in the population of Faḥl.[35] These are degenerative joint diseases caused by hard work. While infant mortality levels were high, as common in pre-industrial societies, the stature of the population, bone mineralization, dental features, and the absence of skeletal deformities was suggestive of generally good levels of nutrition.

The Mamluk Settlement

The Mamluk-period settlement of Faḥl was in two sections, located to the north and east of the mosque. A rough outline of ruins corresponding to the settlement is given on Richmond′s fold-out plan,[36] and in the 1980s could still be easily

traced by a spread of truncated stone walls and pottery scatter. The remains were visible in two parts: over an area of approximately 110 by 80 meters north of the mosque on the summit of the mound and a smaller area of 35 by 20 meters to the west of the mosque, in total about one hectare. The descriptions provided in the first European travelers´ accounts, especially that of G. Schumacher,[37] record that the collapsed house walls of the settlement still stood to considerable height in the nineteenth century, but by the time of Richmond´s visit in 1933 he could observe that ″no walls remain above ground level.″[38] The walls had, it seems, been removed in the first decades of the twentieth century to build the village of Ṭabaqat Faḥl, just as the West Church was being quarried for its stone by the villagers at the time of Richmond´s visit.[39] Nevertheless, surviving surface remains in the 1980s indicated that each domestic unit of the Mamluk settlement consisted of rooms facing out onto an open courtyard and surrounded by an enclosure wall.

Modest excavations during the 1988 season either side of Funk and Richardson´s 1950s´ sounding in the center of the mound (designated Area XXIII) exposed finely stratified layers belonging to a courtyard, consisting of a complex sequence of accumulated deposits consisting of interleaved black ash and yellow clay lenses.[40] Although conducted on a small scale, the excavations succeeded in producing an excellent sequence of ceramics from the early Mamluk period, firmly dated by coins, and forms part of McPhillips´ study that follows.

Mamluk Pottery from Faḥl

Ceramics from Faḥl broadly datable to the Mamluk period represent a distinct corpus of wares that can be clearly differentiated from the early and pre-Islamic material culture of the site. The following report focuses on a representative selection of ceramic material recovered by the University of Sydney team in 1988 from two excavation plots, each of which measured five by ten meters, located in the center of the main archaeological tell of Khirbat Faḥl to the west (plot XXIIID) and east (plot XXIIIE) of Funk and Richardson´s original 1958 sounding.[41] These excavations revealed evidence of courtyard residential compounds constructed in stone and mud brick walls and beaten earth floors.[42] The structures were associated

[38]Richmond, ″Khirbet Fahil,″ 30

[39]Ibid., 26.

[40]First reported in Walmsley, ″The Islamic Period: the Later Islamic Periods,″ 192–93.

[41]Ibid., 192.

[42]In 1999, excavations directed by Stephen Bourke brought to light more Middle Islamic material, in association with courtyard housing units divided by what is probably a street (pers. comm., Stephen Bourke). This material has been studied by McPhillips and will be included in the final

with at least nine Mamluk-period stratigraphic sequences of occupation and other deposits, while eleven copper alloy coins minted between 1341 and the final decade of the fourteenth century have been identified from Area XXIII, providing some elements for the creation of a relative chronology for the accompanying pottery corpus.[43]

The Mamluk sequences represent a single period of Middle Islamic occupation and are superposed directly over Byzantine and early Islamic occupation, recognized by a sharp break in the material culture: there is no evidence available to suggest occupation in this zone in the intervening Islamic centuries or later than the fifteenth century.[44] This interim report is not intended to be definitive, nor does it include the full range of comparative published data, but rather it brings up to date the current state of knowledge of the ceramics from the site based on a study of the Area XXIII pottery undertaken by McPhillips in the spring of 2000.[45] A total of 1726 vessel fragments from the 1988 Area XXIII excavations have been assigned to twelve categories of ware and to a more detailed typology according to form.[46] The following discussion presents an overview of this material with an indication of its importance relative to the rest of the assemblage. The catalogue number of the featured specimens is given in parentheses.

HAND-MADE WARES

HAND-MADE GEOMETRIC PAINTED WARE (324, FIG. 10)

Often referred to by the acronym HMGPW,[47] this ware is constantly present in

---

publication on Mamluk Faḥl.

[43]Alan Walmsley, ″Islamic Coins,″ in *Pella in Jordan 1979–1990: The Coins,* ed. Kenneth A. Sheedy, Robert Carson, and Alan Walmsley, Adapa Monograph Series, v. 1 (Sydney, 2001), 63–66, 152–53.

[44]The uppermost deposits in this area of the tell did see major perturbation after 1967, yet diagnostic Ottoman or later wares are not seen in surface or other deposits.

[45]Mamluk pottery has been published previously from Faḥl as follows: from Tomb 2 and Tomb 7 in Smith, *Pella of the Decapolis 1,* 236–43, pls. 70–77, 86, and 93–94; and a preliminary publication of the Area XXIII material in Walmsley, ″The Islamic Period: the Later Islamic Periods,″ 193–98, pls 125–27; and idem, ″Settled Life in Mamluk Jordan,″ 138–41, figs. 9–10. The present author has also presented a concise description with photographs in Stephen McPhillips, ″Ceramics from Middle Islamic Fahl,″ in *Australians Uncovering Ancient Jordan: Fifty Years of Middle Eastern Archaeology,* ed. Alan Walmsley (Sydney/Amman, 2001), 271–78.

[46]A much larger quantity of non-diagnostic pottery was examined by the current author, but this has not been added to the quantification given here as its value is affected by the discard of body sherds of unspecified wares at the time of excavation.

[47]See Jeremy Johns, ″The Rise of Middle Islamic Hand-Made Geometrically-Painted Ware in Bilad al-Sham (11th–13th Centuries A.D.),″ in *Colloque international d′archéologie islamique,* ed. Roland-Pierre Gayraud, IFAO, Textes arabes et études islamiques, vol. 36 (Cairo, 1998), 65–93.

non-elite sites in Bilād al-Shām from the twelfth century on through to the twentieth century.[48] At Faḥl it is the second most represented category of Mamluk pottery, and consists primarily of jars, bowls, and basins. Geometric decoration in black, brown, purple, or red paint is usually applied to the greater part of the surface over a thick coat of white slip. Several of the larger open forms in this ware also have applied bands with finger impressions on the exterior surface. The finished surface is often highly burnished, which contrasts with the often thickly and irregularly made character of this ware, which was produced in village bonfire kilns. There is considerable variation in the fabrics within the Faḥl assemblage, but they are always coarse and gritty, with abundant vegetal inclusions. A number of the examples possess textile impressions on the interior surface, indicating the use of a simple mold manufacturing technique.[49] Taken in combination with the two subsequent wares below, 31.2% of the assemblage consists of hand-made material.

Red Painted Hand-made Ware

Six pieces of a burnished ware with a thinly applied red painted exterior decoration occur in this assemblage. A similar ware has elsewhere been suggested as a possible precursor to the more common HMGPW in Jordan.[50]

Hand-made Coarse Ware (209, Fig. 11)

This sizeable group of pottery consists of jars with large horizontal loop handles, jugs, and bowls in a thick walled ware containing abundant coarse crystalline and other inclusions. The exterior surface of this type is frequently slipped and burnished. These were clearly used as cooking pots, for there is evidence of burning on the interior or exterior surfaces of some of the Faḥl examples. This class of ceramic is common throughout Middle Islamic Bilād al-Shām in the Mamluk period.[51]

---

[48]At the Damascus Citadel excavations this ware is notable by its near absence; see Stephen McPhillips, "Twelfth Century Pottery from the Citadel of Damascus," in "Études et travaux à la citadelle de Damas 2000–2001: un premier bilan," *Bulletin d'Études Orientales* 53–54, Supplément: Citadelle de Damas, ed. Sophie Berthier and Edmond Al-Ajji (2001–2): 139–55.

[49]For examples excavated at Faḥl, see Smith, *Pella of the Decapolis 1,* pl. 86.

Sequence from Southern Transjordan: Crusader and Ayyubid Occupation at Al-Wu'eira," *ADAJ* 31 (1987): 284; idem, "Late Islamic Ceramic Production and Distribution in the Southern Levant: A Socio-Economic and Political Interpretation" (Ph.D. diss., State University of New York, 1992), 245–46.

[51]For discussion of distribution, see Brown, "Late Islamic Ceramic Production and Distribution in the Southern Levant," 256–59. Similar jars are published from Jerusalem: G. J. Wightman, *The Damascus Gate, Jerusalem: Excavations by Crystal-M. Bennett and Basil Hennessy at the Damascus*

WHEEL-MADE UNGLAZED WARES

SUGAR POT WARE (186, FIG. 12)

More than ten percent of the Mamluk pottery from the Faḥl assemblage belongs to this ware, which consists solely of large ribbed jars and straight-sided bowls in a uniformly soft yellow fabric with some fine inclusions.[52] Although not connected directly to the sugar manufacturing process, these jars have been identified as containers for the finished product at a number of other sugar producing sites.[53] It is likely that sugar cane cultivation and production took place in the Wādī Jirm immediately south of Khirbat Faḥl, explaining perhaps the presence of such a quantity of this ware in domestic contexts on the tell. Nineteenth century visitors to Ṭabaqat Faḥl refer to recently abandoned mills in the Wādī Jirm,[54] and water mills are mentioned in the vicinity of Faḥl in the Ottoman *daftar*s of the sixteenth century.[55] The Jordan Valley was a major sugar cane growing and refining area in the Mamluk period.[56]

PLAIN UNGLAZED WARE (95, FIG. 13)

This group consists of bowls, jars, and jugs. The closed forms have looped handles

---

Gate, Jerusalem, 1964–66, BAR International Series no. 519 (1989), pl. 61:8, and have recently been published from Rāfiqah (Raqqah) in northern Syria; Marcus Milwright, ″Ceramics from the Recent Excavations near the Eastern Wall of Rafiqa (Raqqa), Syria,″ *Levant* 37 (2005): 197–219. Fine walled wheel-made cooking wares with interior glazing are absent from the Faḥl assemblage.

[52]Sugar pots from Tombs 2 and 7 at Faḥl had been initially dated to the Abbasid period: Smith, *Pella of the Decapolis 1,* 237. This group has also been referred to as ″Plain Ware″ at Faḥl: Walmsley, ″The Islamic Period: the Later Islamic Periods,″ 193–94.

[53]Tell Abū Sạrbūṭ and Dhra' al-Khān both provide local comparative material in the Jordan Valley: Kareem, *Settlement Patterns in the Jordan Valley,* 66–80; Margreet Steiner, ″The Excavations at Tell Abu Sarbut, A Mamluk Village in the Jordan Valley,″ *ARAM* 9–10 (1998): 145–51; H. E. LaGro, ″Sugar Pots: A Preliminary Study of Technological Aspects of a Class of Medieval Industrial Pottery from Tell Abu Sarbut, Jordan,″ *Newsletter of the Department of Pottery Technology, University of Leiden* 7/8 (1989–90): 7–20; H. LaGro and H. de Haas, ″Announcing a Study of Islamic Pottery from Tell Abu Sarbut,″ *Newsletter of the Department of Pottery Technology* 6 (1988): 89–96, and idem, ″Syrup Jars and Sugar Pots: A Preliminary Study of a Class of Medieval Industrial Pottery from Tell Abu Sarbut, Jordan, Part II,″ *Newsletter of the Department of Pottery Technology* 9–10 (1991–1992): 55–68; H. J. Franken and J. Kalsbeek, *Potters of a Medieval Village in the Jordan Valley: Excavations at Tell Deir 'Alla: A Medieval Tell, Tell Abu Gourdan, Jordan* (Amsterdam/Oxford, 1975), 143–54.

[54]Schumacher, *Pella,* 33–34, 51.

[55]Hütteroth and Abdulfattah, *Historical Geography of Palestine, Jordan and Southern Syria in the Late 16th Century,* 167. However, there is no mention of sugar production in this period.

[56]Ashtor, ″Levantine Sugar Production in the Late Middle Ages,″ 92–93; J. H. Galloway, *The Sugar Cane Industry, An Historical Geography from its Origins to 1914* (Cambridge, 1989), 31–35, 43.

and a few examples show elongated and thickened cylindrical necks with internal filters. They are close in fabric to the "thin painted ware," although the only secondary surface treatment is an occasional whitish slip. Parallels are provided by several regional sites, the most extensively published being those from Tall Qaymūn (Tall Yoqne'am).[57] In the south of Jordan similar "cream wares" have been excavated in both urban and rural contexts and are well represented at sites such as Khirbat Fāris.[58]

RED WARE (113, FIG. 14)

This is a hard dense ceramic which is pale or dark reddish to gray in color and is thrown in a well-levigated siliceous clay. The main forms are medium to large bowls and jars with thickened rounded rims and comparatively thin walls. Published parallels exist from Jerusalem and Tall Qaymūn.[59]

THIN PAINTED WARE (49, FIG. 15)

This is a fine ware fired reddish yellow to pink with reddish brown or black painted decoration sometimes over a white or yellowish slip. The most common shapes are jars and jugs with vertical loop handles. In both its decorative technique and its fabric, it is reminiscent of earlier Islamic pottery from the site.[60]

WHEEL-MADE GLAZED WARES

MONOCHROME GLAZED WARE (541, FIG. 16)

Monochrome glazed wares are the most frequently occurring Mamluk ceramic from the Faḥl excavations.[61] Forms represented are overwhelmingly footed bowls with incurving or everted rims. The uniformly thick lead glaze is green, yellow, or sometimes brown in color and always applied over a thick white slip, often spilling over onto the exterior surface. The fabric is hard yellowish red to pale

[57]Miriam Avissar, "The Medieval Pottery," in *Yoqne'am I, The Late Periods,* ed. A. Ben-Tor, M. Avissar, and Y. Portugali, Qedem Reports, vol. 3 (Jerusalem, 1996), 151–55, 167–68.

[58]Mads Sarley Pontin, "The Pottery," in A. M. McQuitty, M. Sarley Pontin, M. Khoury, M. P. Charles, and C. F. Hoppe, "Mamluk Khirbat Faris," *ARAM* 9–10 (1997–98): 189.

[59]A. D. Tushingham, *Excavations in Jerusalem 1961–1967* (Toronto, 1985), 1:142–51, pls. 34–43; Avissar, "Medieval Pottery," 128–29, 151–53. Very close forms in a similar ware dating to the Mamluk period have been catalogued in the Damascus Citadel excavations (pers. comm., Véronique François).

[60]Alan Walmsley, "Tradition, Innovation, and Imitation in the Material Culture of Islamic Jordan," *Studies in the History and Archaeology of Jordan* (Amman, 1995), 5:661 (Walmsley's Ware 8). See comments in Walmsley, "The Islamic Period: the Later Islamic Periods," 194 (Type 2).

[61]It is probable that the presence of glazed wares in the assemblage has been somewhat exaggerated due to their high visibility during excavation.

yellow, and is well-levigated with small quantities of fine inclusions. There are a few fragments from closed forms from the site, and only one lamp. This prominence of monochrome glazed wares is not unusual at a site in the Jordan Valley,[62] but at Faḥl it represents a larger proportion of the pottery repertoire than at other village sites in Northern Jordan, resembling more the situation at rural Palestinian sites, to which it was more accessible in this period.[63]

Slip Painted Ware (79, Fig. 17)

Underglaze slip painted ware is the second most frequent glazed pottery in the assemblage. In fabric it is fine and a consistent brittle red with few visible inclusions. The principal form at Faḥl is a carinated bowl with an incurving thickened rim. This is a ware well known at many sites in Bilād al-Shām, but generally occurs less frequently in Jordan than in Syria and Palestine.[64] The carinated form is dated at Burj al-Aḥmar to after 1265.[65] A single sherd from the Faḥl group is green glazed.

Glazed Incised Ware (43, Fig. 18)

Lead glazed wares with decoration incised into the underlying white slip are represented at Faḥl, but owing to the highly fragmentary and somewhat limited

---

[62]Brown, ″Late Islamic Ceramic Production and Distribution in the Southern Levant,″ 456.

[63]As is the case at Ḥisbān, for example, Bethany J. Walker and Øystein S. LaBianca, ″The Islamic Qusur of Tall Hisban: Preliminary Report on the 1998 and 2001 Seasons,″ *ADAJ* 47 (2003): 443–71. A recent survey in northern Jordan has revealed a situation closer to that at Faḥl, with high proportions of monochrome glazed bowls: Bethany J. Walker, ″The Northern Jordan Survey 2003,″ 79. Palestinian sites that include abundant material include Belmont Castle: Richard P. Harper and Denys Pringle, *Belmont Castle: The Excavation of a Crusader Stronghold in the Kingdom of Jerusalem,* British Academy Monographs in Archaeology no. 10 (London, 2000), esp. the sections by Anthony Grey, ″The Unglazed Pottery,″ 87–100, and Katherine Knowles, ″The Glazed Pottery,″ 101–16; Tall Qaymūn (Tel Yoqne‘am), Avissar, ″The Medieval Pottery,″ 96ff.; and Za‘rin, Anthony Grey, ″The Pottery of the Late Periods from Tel Jezreel: an Interim Report,″ *Levant* 26 (1994): 60.

[64]Marcus Milwright, ″Trade and Patronage in Middle Islamic Jordan: the Ceramics from Karak Castle″ (D.Phil. diss., University of Oxford, 1999), 170. Comparanda are too numerous to list here; this ware is well attested in Bilād al-Shām and further afield from the twelfth century, continuing at many sites well into the Mamluk period. In the Damascus Citadel excavations there is a locally distinctive development of this ware from the twelfth century through the Mamluk period: Stephen McPhillips, ″Pottery of the Ninth to Thirteenth Centuries from the Citadel of Damascus″ (Ph.D. diss., University of Sydney, 2004), 241–42, 251–52; Véronique François, pers. comm.

[65]Denys Pringle, *The Red Tower (al-Burj al-Ahmar): Settlement in the Plain of Sharon at the Time of the Crusaders and Mamluks, A.D. 1099–1516* (London, 1986), 149–50, fig. 50.

nature of the material, it has not been possible to divide this group into more detailed categories present at sites where it is more common.[66] The majority of this group possess simple geometric patterns incised into a white slip under a green or yellow glaze,[67] with a smaller number having much broader incised lines (gouged ware) or large areas without slip at all (reserve slipped ware). A few sherds exhibit more than one glaze color, and may be considered as part of the ″splashed glazed″ family. Incised ware fabrics are not readily distinguishable from those of the slipped glazed group, and indeed it is probable that incised vessels have been registered with the monochrome group as large parts of incised ware bowls were left undecorated.

STONEPASTE WARES (48, FIG. 19)

Stonepaste or fritware pottery is characterized by a siliceous white or off-white pottery body with a make-up of ten parts quartz, one part glass frit or glass fragments, and one part fine white clay.[68] It occurs infrequently within the Area XXIII assemblage and consists entirely of fine bowls and a small number of small jars. The white body is covered by a transparent alkaline glaze, colored by mineral additions, such as copper for turquoise in the case of the pottery of this group from Faḥl, which otherwise have a colorless glaze. A slip was not required as a base for applying painted decoration, as the stonepaste body itself fulfilled this function and reflected light through the glaze to highlight its color and any underglaze decoration. The Faḥl stonepaste pottery is highly fragmentary, but geometric or

---

[66]At Za'rin (Tall Jezreel), a site of similar size to Faḥl in the Marj ibn ʻĀmir (Jezreel Valley), a range of incised wares are represented: Grey, ″Pottery of the Late Periods from Tel Jezreel,″ 57–59. It is interesting to note that the author observes a relatively limited presence of glazed incised material in relation to monochrome glazed pottery at Tall Qaymūn (Tel Yoqne'am) during the Mamluk reoccupation of the site from the beginning of the fourteenth century; Avissar, ″Medieval Pottery,″ 96.

[67]In the Damascus Citadel excavations, this material is typical of the Mamluk period; twelfth-century and earlier incised lead glazed wares are both finer walled and possess a more lightly applied incised decoration; McPhillips, ″Pottery of the Ninth to Thirteenth Centuries from the Citadel of Damascus,″ 251–52; Véronique François, pers. comm. Tushingham has suggested a similar distinction at the Armenian Garden in Jerusalem; Tushingham, *Excavations in Jerusalem,* 143.

[68]See James Allan, ″Abu 'l-Qasim′s Treatise on Ceramics,″ *Iran* 11 (1973): 113–14. James Allan, L. R. Llewellyn, and F. Schweizer, ″The History of So-called Egyptian Faience in Islamic Persia: Investigations into Abu 'l-Qasim′s Treatise,″ *Archaeometry* 15, no. 2 (1973): 165–73; Alan Caiger-Smith, *Lustre Pottery: Technique, Tradition, and Innovation in Islam and the Western World* (London, 1985), 199; Robert Mason and Michael Tite, ″The Beginnings of Islamic Stonepaste Technology,″ *Archaeometry* 36 (1994): 77–78. The treatise of Abū al-Qāsim, written in Iran at the beginning of the fourteenth century, is of interest owing to its descriptions of the manufacture of fritwares and techniques of underglaze painting.

vegetal painted decoration is discernible in several combinations of color: black, cobalt blue or turquoise under a colorless glaze, and black or cobalt blue under a turquoise glaze. The fabric is consistently granular and off-white in color. The sherds of this ware are often considerably degraded or very small due to their fragile nature. There are good parallels for this material, particularly at urban sites in Bilād al-Shām, with production probably occurring at Damascus and in central and northern Syria. The range of stonepaste exhibited in the Faḥl group is consistent with Syrian wares of the Mamluk period.[69]

MOLDED WARES

RELIEF MOLDED GLAZED WARE (FIG. 20)

Five sherds of this ware were catalogued, all from bowls with pronounced incurving rims and epigraphic relief molded decoration on the exterior surface. The glazes are glassy, thick, and generally made to a higher standard than those of other lead-glazed ceramics above. In color they are yellow, green, and brown, while in section they are pale red and fine. This ware is likely to have been produced at Jerusalem,[70] and is relatively prominent at certain urban sites in southern Bilād al-Shām such as Karak and Tell Ḥisbān,[71] but is rarer elsewhere.

CONCLUSION ON THE CERAMICS

The range of pottery excavated in Area XXIII at Faḥl offers a reflection of the socioeconomic realities at an agricultural settlement in the Jordan Valley that also served as a local hub and transit point in the early Mamluk period. At a time when the Jordan Valley had become a highly developed area of large-scale agriculture, Faḥl—with its abundant water resources, fertile soils and strategic location—was well positioned to play a role in the massively expanded economic activity of the area during the thirteenth and fourteenth centuries. The association of a significant

---

[69]Archaeological evidence for the dating of these families of stonepaste wares to within the Mamluk period is provided by the Damascus Citadel excavations (pers. comm., Véronique François) and by work in northern Syria, such as at Qal'at Ja'bar: Cristina Tonghini, *Qal'at Ja'bar Pottery: A Study of a Syrian Fortified Site of the Late 11th–14th Centuries,* British Academy Monographs in Archaeology, vol. 11 (London, 1998), 52–55. Similar material to that from Faḥl can be found from a range of published Mamluk contexts in the southern Bilād al-Shām, such as at Tall Qaymūn (Tel Yoqne'am): Avissar "The Medieval Pottery," 113–16, and at al-Burj al-Aḥmar: Pringle, *The Red Tower,* 150–53. For a thorough survey of the distribution of Mamluk stonepaste wares, see Tonghini, *Qal'at Ja'bar Pottery,* 52–55 (fritware 3).

[70]Avissar, "Medieval Pottery," 102; Nahman Avigad, *Discovering Jerusalem* (Jerusalem, 1980), 255, fig. 302.

[71]Milwright, "Trade and Patronage in Middle Islamic Jordan," 184; Walker and LaBianca, "Islamic Qusur of Tall Hisban," 464–66.

proportion of the pottery with the manufacture of sugar has been remarked on above.[72] Furthermore, the range of ceramics in the corpus can be paralleled to those of other rural sites in Palestine and northern Jordan, but less so to rural sites further to the south.[73] The presence of a considerable proportion of glazed wares that are well-documented in the wider region also underlines the full integration of Faḥl into the economy of the region. Unglazed wheel-made wares and monochrome lead glazed pottery, along with the slip painted and incised sub-groups, are well known at Palestinian and larger Jordanian sites, to which Faḥl was readily accessible owing to its location near the intersection of two valleys, the Jordan and the Marj ibn ʻĀmir (Jezreel), at a point where coastal and highland routes met. The stonepaste and relief glazed wares found at Faḥl are likely to have been imported from Damascus and Jerusalem respectively, and are a reminder of the position of the village close to the road between these two cities where it crossed the Jordan river. The hand-made wares from Faḥl are similarly well-represented at other rural sites in Bilād al-Shām, but are more likely to have been manufactured in closer proximity to the site. It is interesting to note that all ceramic cooking vessels belong to this group. Studies of the Ottoman *daftar*s, although from the sixteenth century, provide some parallel indicators of the nature of the local economy and population in the immediate proximity of Faḥl.[74]

---

[72]Mamluk or Middle Islamic sites have been identified in the vicinity of Ṭabaqat Faḥl, particularly the sugar production sites in the Jordan Valley such as Khirbat al-Maḥrūqāt at the base of the Wādī al-Yābis: Jonathan Mabry and Gaetano Palumbo, "Survey in the Wadi el-Yabis (Irbid District, Jordan), 1987," *Syria* 65 (1988): 425–27; idem, "The 1987 Wadi el Yabis Survey," *ADAJ* 32 (1988): 296–302; and a large number of other sites on the valley floor: Kareem, *The Settlement Patterns in the Jordan Valley,* 181–204; Cherie Lenzen, Jumʻa M. H. Kareem, and S. Thorpe, "Jisr Sheikh Hussain Regional Survey," in *The Archaeology of Jordan II.1,* ed. Denyse Homès-Fredericq and Basil Hennessy (Leuven, 1989), 66–67; Ibrahim, Sauer, and Yassine, "East Jordan Valley Survey, 1975 (Part One)," 41–66; Yassine, Sauer, and Ibrahim, "East Jordan Valley Survey, 1976 (Part Two)." Further Middle Islamic sites have been identified higher up the eastern side of the Jordan Valley from Faḥl: S. Mittmann, *Beiträge zur Siedlungs- und Territorialgeschichte des Nördlichen Ostjordanlandes* (Wiesbaden, 1970), 39–94, as well as the better known Baysān: G. M. Fitzgerald, *The Beth Shan Excavations, 1921–23, The Arab and Byzantine Levels* (Philadelphia, 1931) and al-Himmeh: Adrian Boas, "Late Ceramic Typology," in *The Roman Baths of Hammat Gader,* ed. Yizhar Hirschfeld (Jerusalem, 1997), 382–95.

[73]Hand-made wares, including HMGPW, represented the majority of the wares collected in the rural settlements of the Arḍ al-Karak (the agricultural lands around Karak) of the thirteenth and fifteenth centuries, which contrasts strikingly with the situation inside the castle itself; Brown, "Late Islamic Ceramic Production and Distribution in the Southern Levant," 240–41.

[74]Taxes were levied on wheat, barley, sesame, goats, honey, and watermills; nine heads of family (or bachelors) are recorded as residing here at this later era: Hütteroth and Abdulfattah, *Historical Geography of Palestine, Jordan and Southern Syria in the Late 16th Century,* 167. The *Faḥl al-Taḥta* referred to in the *daftars* may correspond either to Ṭabaqat Faḥl or to another settlement

There is no firm evidence in this corpus for pottery from periods immediately prior or posterior to the Mamluk centuries, except the possible late twelfth- to early thirteenth-century (Ayyubid) Red Painted Hand-made Ware, represented by only a few sherds in the corpus. Otherwise, both the dates of the excavated coins, even taking into account fluctuating supply levels over the period, and the range of wares represented within this group of pottery indicate that it is consistent with an interpretation of a date from around the middle part of the thirteenth century to the first part of the fifteenth century. The absence of Ottoman material is in line with Schumacher's observation that there was no permanent settlement on the tell in the late Ottoman period, with the pre-1967 village being built no earlier than the start of the twentieth century.[75]

AL-DIMASHQĪ, AL-QALQASHANDĪ, AND ARCHAEOLOGY

The social and economic reconstruction of Jordan, resolutely pursued by the Ayyubid and especially Bahri Mamluk elites following the Crusader interregnum, included an active program of mosque and shrine building among other activities, especially at sites of particular religious significance such as Mu'tah, Māzar, al-Kahf, ʻAmatah (Abū ʻUbaydah), and Jabal Hārūn. Faḥl, surely remembered for the decisive Battle of Fiḥl that drove a wedge between Jerusalem and Damascus in 635, may have been a beneficiary of this policy, bringing advantages in addition to its administrative role in the Mamluk province of Dimashq. The archaeological evidence points to the existence of a settlement of some note during Mamluk times, and a community honored by the erection of a mosque equipped with a minbar. As the ceramics also indicate, the presence of glazed wares in some numbers, including Relief Molded Glazed Ware from Jerusalem and stonepaste wares from Damascus or further north, suggest Faḥl was something more than an isolated agricultural settlement in early Mamluk times, with contacts that extended outside the immediate area. Likewise, the coins show Faḥl's involvement in a broader monetary economy, and together the finds could be taken to suggest that Faḥl was one of the more important sites in the Jordan Valley during early Mamluk times. It may have functioned as a focal point for the local community and served as a way station on east-west routes from the valley into the Jordanian mountains, especially the ʻAjlūn road.

Can these discoveries assist in understanding al-Dimashqī as a source, even in

---

at the base of the valley, perhaps in the vicinity of modern al-Masharia‘: Walmsley, "Settled Life in Mamluk Jordan," 142.

[75]In the early nineteenth century two British naval commanders visited "Tabathat Fahkil" during a journey through the region, and described the ruins of a village on the tell, clearly corresponding to Khirbat Faḥl: C. L. Irby and J. Mangles, *Travels in Egypt and Nubia, Syria and Asia Minor; During the Years 1817 and 1818* (London, 1823), 304; see also Schumacher, *Pella,* 51.

the smallest way? Generally, al-Dimashqī has been judged as a less than critical scholar who incorporated earlier material in his work without exercising any rigorous editorial control.[76] The contradictions found in his geographical work would seem to confirm this, for instance by placing Amman, al-Salṭ, al-Zarqā', and the Balqā' in both Karak and Dimashq provinces. However, the extensive archaeological evidence from Mamluk Faḥl would indicate that al-Dimashqī's sources were rooted in an historical reality, and that the inclusion of Fiḥl as an *iqlīm* in Dimashq was not an historical relic of much earlier times, but reflected a current, or near-contemporary, situation.[77] Hence archaeology may serve to confirm the usefulness of al-Dimashqī as a source on the geography of early Mamluk Bilād al-Shām.

---

[76]Dunlop, "Al-Dimashḳī."

[77]If this reasoning is correct Bayt Rās, also listed by al-Dimashqī as another *iqlīm* of Dimashq, should reveal evidence for significant Mamluk-period occupation, including a mosque.

APPENDIX: INVENTORY OF CERAMICS: FIGURES 10 TO 20

Figure 10. Hand-Made Geometric Painted Ware

1. Jar, Cat. No. 16903, Area XXIIIE 7.8; core 7.5YR 5/1, surface 10YR 6/1; brown paint 2.5YR 4/2; gray fabric with infrequent fine red, white, and gray grits and organic temper
2. Bowl, Cat. No. 16910, Area XXIIIE 8.2; slipped and burnished interior surface; core 7.5YR 7/6, surface 7.5YR 8/2 and 7.5YR 8/4; dark brown paint 5YR 3/2; reddish yellow fabric with abundant coarse white grits and organic tempering, some finer red and gray inclusions
3. Bowl, Cat. No. 16628, Area XXIIID 1.4; burnished interior and exterior surface; core 7.5YR 7/4, int. surface 2.5YR 7/8, ext. 2.5YR 6/6 and 5YR 7/4; dark red paint 7.5R 4/3; pink fabric with infrequent gray, red, and white grits and some organic temper

Figure 11. Hand-Made Coarse Ware

1. Lid, Cat. No. 16672, Area XXIIID 1.14; core 10YR 7/3, surface 10YR 8/2; pale brown fabric with gray, red, and white grits
2. Bowl, Cat. No. 16658, Area XXIIID 1.8; self-slipped; core 10YR 8/3, surface 10YR 8/2, 10YR 8/4 and 5YR 7/4; pale brown fabric with white and gray grits and organic temper
3. Cooking Jar, Cat. No. 16645, Area XXIIID 1.5; self-slipped with traces of burnishing exterior; core 10YR 4/1, surface 10YR 6/2 and 10YR 8/2; pale brown fabric with abundant mineral inclusions (quartz?) and organic temper

Figure 12. Sugar Pot Ware

1. Jar, Cat. No. 16775, Area XXIIID 6.46; core 2.5YR 6/8, ext. surface 2.5YR 6/6 and 10YR 8/3, int. surface 2.5YR 6/6 and 5YR 6/8; dense light red fabric with gray and white grits and abundant chaff
2. Jar, Cat. No. 16841, Area XXIIIE 3.4; core 10YR 7/4, ext. surface 5YR 8/4 and 7.5YR 8/4, int. surface 5YR 6/3 and 7.5YR 8/4; pale brown soft lightweight fabric with gray grits and organic tempering

Figure 13. Plain Unglazed Ware

1. Jug or jar with neck filter, Cat. No. 16403, Area XXIIIE 3.9; core 5YR 7/6, ext. surface 2.5Y 8/3 and 10YR 8/3, int. surface 7.5YR 8/4; light red fabric with very fine gray, white, and red grits
2. Jar, Cat. No. 16604, Area XXIIID 1.3; core 10YR 8/4, surface 7.5YR 8/4; porous pale brown fabric with prominent white grits
3. Jar, Cat. No.16632, Area XXIIID 1.4; core 7.5YR 5/1, ext. surface 10YR 8/3,

int. surface 5YR 6/4; porous pale brown fabric with reddish brown, gray, and white grits
4. Bowl, Cat. No. 16431, Area XXIIIE 3.11; core 10YR 5/1, margins and surface 7.5YR 8/4; fabric as Fig. 13.3

Figure 14. Red Ware
1. Jug, Cat. No. 16967, Area XXIIIE 1.9; core 2.5YR 5/6, surface 5YR 5/4; dense red fabric with infrequent fine grits
2. Jar, Cat. No. 16972, Area XXIIID 6.46; core 2.5YR 5/6, surface 5YR 5/4; fabric as Fig. 14.1
3. Basin, Cat. No. 16948, Area XXIIID 6.20; core 10YR 7/2, surface 10YR 6/1; fabric as Fig. 14.1, although pale gray in color

Figure 15. Thin Painted Ware
1. Closed form, Cat. No. 16457, Area XXIIID 6.26; core 10YR 7/4, surface 2.5YR 8/3; parallel diagonal lines of black paint exterior (7.5YR 5/1); fine pale brown fabric with frequent fine gray and white grits
2. Jar, Cat. No. 16425, Area XXIIID 100.2; core 10YR 5/1, surface 7.5YR 8/4; dribbles of black paint exterior (7.5YR 5/1); fine porous light gray fabric with reddish brown, gray, and white grits
3. Jar, Cat. No. 16419, Area XXIIID 7.13; core 2.5YR 6/6, surface 2.5YR 8/4 and 10YR 8/2; dribbles of black and dark red paint exterior (7.5YR 5/1); fine light gray fabric with gray and white grits

Figure 16. Monochrome Glazed Ware
1. Bowl, Cat. No. 16704, Area XXIIID 1.34; creamy white slip interior and to ca. 40mm below exterior lip, dark green glaze interior and dribbles exterior, dark brown in color where it has dripped over unslipped surface; core 5YR 6/6, surface 2.5YR 4/4; fine reddish yellow fabric with occasional mineral grits
2. Bowl, Cat. No. 16570, Area XXIIID 5.28; pale yellow slip over interior surface and to ca. 27mm below exterior rim, covered by thick mustard glaze; glaze drips exterior; core 10YR 7/4, ext. surface 2.5Y 8/2 and 7.5YR 7/3; hard pale brown fabric with frequent rounded black, gray, and white grits
3. Bowl, Cat. No. 16815, Area XXIIIE 1.10; yellow glaze with black speckling on exterior foot, spots of very pale brown slip exterior and some glaze drips interior foot; core 7.5YR 8/4, ext. surface 7.5YR 6/4 and 10YR 8/3; fabric as Fig. 16.2

Figure 17. Slip Painted Ware
1. Bowl, Cat. No. 16819, Area XXIIIE 2.1; pale yellow glaze exterior, appears

pale yellow over slip and light red on remaining surface; core 2.5YR 4/4, surface 2.5YR 4/4; fine light red fabric with occasional mineral grits

2. Bowl, Cat. No. 16627, Area XXIIID 1.4; green glaze over a white slip producing crosshatched motif; core 2.5YR 6/6, surface 2.5YR 7/6; fabric as Fig. 17.1

Figure 18. Glazed Incised Ware

1. Bowl, Cat. No. 16920, Area XXIIIE 101.3; pale yellow glaze to rim, green glaze splashed on rim and interior, horizontal incised bands and areas in reserve incised into cream slip on interior surface; core 2.5YR 6/6, surface 2.5Y 8/3; fine light red fabric with occasional mineral grits
2. Bowl, Cat. No. 16935, Area XXIIIE 100.2; green glaze and white slip interior and dripped on lower exterior surface, incised floral motif interior; core and surface: 7.5YR 7/2; fine pinkish gray fabric with occasional white and red grits
3. Bowl, Cat. No. 16829, Area XXIIIE 2.2; yellow glaze with splashes of pea green glaze and white slip interior, unslipped (reserve) zones appear reddish brown; core and surface: 2.5YR 6/8; fine light red fabric with occasional white and red grits

Figure 19. Stonepaste Ceramics

1. Ledge rimmed bowl, Cat. No. 16727, Area XXIIID 5.16; turquoise glaze entire surface over black underglaze painted geometric motif interior and pairs of parallel stripes exterior; core 10YR 8/2; friable off white stonepaste fabric
2. Ledge rimmed bowl, Cat. No. 16882, Area XXIIIE 4.10 and 6.3; colorless glaze entire surface over black underglaze painted geometric motif interior and pairs of parallel stripes and band at rim exterior; core 10YR 8/2; friable off white stonepaste fabric
3. Small bowl, Cat. No. 16682, Area XXIIID 1.24; colorless glaze entire surface over black and cobalt blue underglaze painted geometric motif interior and cross-hatched black bands exterior; core 10YR 8/2; friable off-white stonepaste fabric
4. Jar, Cat. No. 16696, Area XXIIID 1.32; thick turquoise glaze exterior, dripped to foot, colorless glaze interior surface; core 10YR 8/2; friable off white stonepaste fabric

Figure 20. Relief Molded Glazed Ware

1. Bowl, Cat. No. 16925, Area XXIIIE 102.8; thick dark green glaze entire surface, relief molded vegetal motif exterior; core 5Y 7/1; soft light gray fabric with very fine white and black grits
2. Bowl, Cat. No. 16928, Area XXIIID 100.2; thick dark green glaze exterior

surface, yellow interior; sharp molded fluting exterior; core 7.5YR 8/6; soft reddish yellow fabric with very fine white and black grits

Thanks to Judith Sellers for original pencil drawings of the hand-made and glazed vessels with surface decoration.

ALISON MCQUITTY

Khirbat Fāris:
Vernacular Architecture on the Karak Plateau, Jordan

For periods when historical documentation is available, it is tempting to ignore the contribution that archaeology can make to a more rounded picture of the past. In addition, the results of archaeological excavation can often raise issues that are absent from the historical record. This is particularly true of marginal subjects in marginal areas. Such a subject is rural vernacular architecture.

During the Early and Middle Islamic periods, written sources indicate a prosperous rural economy on the Karak Plateau supporting a network of villages lasting through to the sixteenth century. This was punctuated by episodes rather than centuries of disruption.[1] One such village was probably Khirbat Fāris, although its earlier name of Tadun does not appear in the histories and geographies of this period.[2] Nor does it appear in the sixteenth-century Ottoman cadastral records, *daftar-i mufaṣṣal,* when the site was possibly recorded as a *mazrāʻah*.[3] The term *mazrāʻah* is usually translated as an agricultural area with no settlement that was dependent on a permanently occupied village. However, several authors have suggested that the term should be interpreted as defining the type of agricultural

This article is based on the results of excavations carried out at Khirbat Fāris 1988–94 under the direction of the author and Dr. Jeremy Johns. I would like to thank Dr. Bethany Walker for her encouragement in submitting this contribution and also Dr. Marcus Milwright, who provided invaluable bibliographic assistance and an unpublished manuscript of his research on Karak and environs in the Middle Islamic period.

[1]For a full discussion of the historical accounts of this period and earlier see Jeremy Johns, "The *Longue Durée:* State and Settlement Strategies in Southern Transjordan Across the Islamic Centuries," in *Village, Steppe and State: The Social Origins of Modern Jordan,* ed. Eugene L. Rogan and Tariq Tell (London, 1994), 1–31.

[2]The name is recent: in 1987 when the excavation directors were prospecting for a site to excavate they met several of the landowners from the family of Fāris Majālī, who was buried on the site at the end of the nineteenth century. In response to the question "what is this site called?" the landowners replied "Khirbat Fāris." The name that appears on maps is Khirbat Tadun. Thus archaeology gives legitimacy to land-ownership!

[3]These surveys are generally accepted as based on the earlier Mamluk fiscal landscape and are used extensively by archaeologists as well as historians for providing social and economic information relevant to the Middle Islamic period. The edition used here is Wolf-Dieter Hütteroth and Kamal Abdulfattah, *Historical Geography of Palestine, Transjordan and Southern Syria in the Late 16th Century* (Erlangen, 1977).

produce, that is grain, rather than the type of occupation.[4] As the description below reveals, this fits well with the evidence from Khirbat Fāris: the architectural remains for the thirteenth to sixteenth centuries are considerable and show parallels to historically testified village settlement.

Historians and geographers of the Mamluk and earlier periods refer to architecture in general and even detail construction methods.[5] However, their primary interest, and that of their audience, did not lie in detailing provincial domestic housing. The same is true of Mamluk *waqfīyāt,* which, while being a rich source of information about agriculture, climate, and crops, are not concerned with the physicality of the village houses and farmsteads. Such things did not produce revenue.[6] In the absence of historical records, the evidence from Khirbat Fāris offers an opportunity to examine trends and changes in Middle Islamic rural life. In the following discussion considerable use is made of ethnographic analogy. Although such houses have been noted archaeologically, there is little in the available historical and archaeological literature describing these types in detail. This is despite the wealth of ethnographic information regarding their construction and use—at least in the late nineteenth/early twentieth centuries.

Khirbat Fāris is located just west of the King′s Highway approximately seventeen kilometers north of the Crusader, Mamluk, and later stronghold of Karak, the Mamluk administrative center of the province[7] (fig. 1). The site is situated on the northern edge of the Wādī Ibn Ḥammād where the plateau falls steeply away to the wadi below. As an agricultural settlement it was in a favorable position: the vast arable expanses of the plateau still support harvests of wheat, barley, and pulses while the wadi flanks are cultivated with more labor-intensive crops:

nowadays tomatoes and in the past, according to al-Muqaddasī, almonds, fruit trees, and grapes .[8] The botanical remains from the excavation show a preponderance of grain, both wheat and barley, and also pulses, figs, olives, and grapes. From the thirteenth century onwards a few exotic crops such as cotton, sorghum, watermelon, pistachio, and citrus fruits start to appear. These required irrigation and were probably grown in the Jordan Valley although there is also evidence for more local irrigation.[9] This landscape is currently shared with semi-nomads and Bedouin who practise animal husbandry. Animal husbandry is also a very important part of the mixed farming economy of village communities. The excavated faunal remains reflect this with an overwhelming majority coming from sheep and goat with a significant amount of cattle bones in later periods.[10] In order to gain subsistence or even surplus from a marginal area such as the Karak Plateau, this would undoubtedly have been the case in the past.[11] Indeed, some of the buildings at Khirbat Fāris, e.g., the nineteenth century ″barns,″ are interpreted as the structures of semi-nomadic communities rather than settled village communities. Other settlements of similar appearance, namely scattered, ruined stone structures, and surface pottery scatters of the distinctive thirteenth/fourteenth-century hand-made pottery (fig. 2) share the same location and one can talk of a pattern of these settlements at five-kilometer intervals fringing the western edge of the Karak Plateau.

The excavations have shown that the site has been occupied for over 4,000 years, and it may indeed have an earlier origin. However, the main research concentration has been on the post-first century settlement while this article focuses particularly on the twelfth–sixteenth-century architectural and material remains. Calendar dates are chosen over historical terminology: vernacular architecture and functional artifacts are inherently conservative, and distinctions in their typology do not fall conveniently into dynastic divisions.[12] Before excavation started two

nineteenth-century barns (fig. 3), previously termed Mamluk farmsteads,[13] a first to sixth-century vaulted structure, and Fāris′ tomb were visible (fig. 4).

Fāris Majālī′s grave seems to have been placed on top of an earlier Muslim shrine. In 1851 the French traveller de Saulcy stopped at Khirbat Fāris/Tadun and recorded a structure sounding remarkably akin to the remains surviving on the site.[14] He described a square building with walls standing two meters high and approached by steps. He noted a massive lintel into which the formula *bismillāh* was scratched; this lintel still survives. The building was obviously already ruined but it does not sound as if the small ″tower″ associated today with Fāris Majālī′s grave had been erected on these ruins. De Saulcy suggests that while at first it was probably a pagan temple it was converted to a Christian church and then to a mosque. Here it is suggested that the structure was in fact the domed shrine of a *walī* or local holy man. Often such shrines became the focus for cemeteries. The obviously visible graves at Khirbat Fāris are those of the descendants of Fāris Majālī around whose tomb they congregate but there are also traces of earlier examples. There was no folk-memory of an earlier shrine and, if so, for whom it had been built. Equally, without excavation it is impossible to give a date to the structure. However, as part of the push to recover the Islamic character of the region following the Crusader interregnum, there was a burgeoning of shrine construction in the thirteenth and fourteenth centuries, which may be the construction date for this shrine.[15]

Excavations revealed several houses of various forms. A nucleus of barrel-vaulted rooms surrounding a central courtyard and connected to the settlement beyond by winding alleys was uncovered at the western edge of the site (fig. 5). The date of this complex appears to be thirteenth–sixteenth centuries based on coin, ceramic, and stratigraphic evidence. It is very likely that the complex continued to be used into the seventeenth century.[16] In addition, several early twentieth-century examples of such buildings were recorded at Ḥumūd, a village thirteen kilometers east of Khirbat Fāris; their construction informs the following discussion. The houses in Ḥumūd were built by people from Karak rather than the ″villagers″

[16]Given the lack of historical records referring specifically to Khirbat Fāris and a continuing lack of knowledge concerning seventeenth-century village ceramics on the Karak Plateau, it is hard to be more precise.

themselves. In fact these houses were used as part of the cycle of permanent resettlement of the land by Christian tribes in the nineteenth century. One was originally used as a *maḍāfah* (guest-house) for the tribe when they came from Karak with their flocks on a seasonal basis, in spring and late summer. The flocks were stabled in nearby caves. In the spring grain was planted and the flocks grazed on the spring growth while in late summer the same grain was harvested and the flocks grazed on the stubble. Ultimately the seasonal settlement became a permanent settlement in the early twentieth century.[17]

The individual buildings at Khirbat Fāris and Ḥumūd are characterized by their relatively small dimensions (average: internal measurements 4.00x3.00 meters and height 2.00 meters) and massive side-walls (average: 1.00 meter thick) which either re-use earlier walls or are constructed from two skins of stones with an in-fill of rubble and mud mortar. The ground plan is often trapezoidal with the wider end being at the entrance. The entrance-wall was not bonded to the vault itself, and in the Ḥumūd examples a rectangular antechamber roofed with reeds and branches marked the entrance. The wall stones are roughly shaped and squared although those for the vault itself are singularly shaped, almost like (European!) loaves of bread. These show no signs of working. Huge amounts of mortar were used to secure the vault which was built over a form of sacks that were later removed. The end walls, being non-weight-bearing, are less substantial. One example from Khirbat Fāris featured an end wall that was merely slapped-up against a pre-existing earth ″wall.″ The roof was flat and consisted of substantial layers of earth and brushwood nearly a meter thick, sealed by a final layer of mud-plaster. In short, the construction seems to have been haphazard. Traces of a much larger and longer barrel-vaulted building were detected on the surface just to the east of the excavated area. A cistern was excavated nearby and its contents of a fine fourteenth-century marvered glass bowl (fig. 6), and several wheel-made water jugs or *ibrīq,* are interpreted as being associated with this larger barrel-vault.[18]

Parallels to this type of architecture are mainly confined to Jordan. At Ḥisbān a residential complex of similar-sized barrel-vaulted structures including a *ḥammām* and *īwān* surrounding a central courtyard has been dated to the fourteenth century.[19] This complex is located on the summit of the citadel of Ḥisbān. Adjacent to this suite of rooms is a long barrel-vaulted structure that is interpreted as being the

storeroom of the governor′s residence.[20] In the fourteenth century Ḥisbān had been made administrative capital of the Balqā'.[21] The Ḥisbān examples offer extremely close parallels to Khirbat Fāris in terms of construction details. In earlier excavation reports there are references to ″many low-ceilinged vaults″ and a vaulted room with plastered *masṭabah* and window; this is mirrored at Khirbat Fāris[22] (fig. 7). The nature of the material found in the storeroom associated with this complex is remarkable, including ″serving vessels monumental in size and bearing lengthy dedicatory inscriptions to unnamed amirs″ and lamps, including fragments of a fine glass mosque lamp. This and the similarities of the plan to that of al-Nāṣir Muḥammad′s palace inside Karak castle have led the excavators to conclude that the barrel-vaulted complex was the residence of the governor of the Balqā'.[23] The architecture is strikingly similar to Khirbat Fāris; the difference lies in the location of the complex within the site, the nature of the associated material, and the general historical background.

Parallels for the smaller barrel-vaulted buildings also come from further afield. A thirteenth-fourteenth–century example from Horvat Berechot in the Hebron hills has been excavated.[24] Many of the houses surrounding the better-known town and churches of Umm al-Raṣaṣ on the Mādabah Plains are of this type but are not arranged around courtyards. These are probably nineteenth century in date. A nearly complete barrel-vaulted structure containing late Ottoman artifacts was uncovered at Ra's al-Qabub in northern Jordan.[25] Such barrel-vaulted houses were a common sight in Jordanian and Palestinian villages of the recent past, when they were used as animal stables or oven-houses.[26] At the present state of knowledge it would appear that such barrel-vaulted houses fall within the late thirteenth–mid-twentieth-century date-range and are distributed throughout Jordan and the hills of Palestine. Needless to say, this distribution probably has more to do with our state of knowledge than past reality.

At Khirbat Fāris, this architecture is totally different from that of the preceding periods. At the beginning of the twelfth century new houses were built using but modifying the surviving structures of the sixth century. Where the stone roof-rafters

were missing, wooden beams were used to support the flat roof. However, these houses differed in detail from their antecedents. Here the newly-built arches spring from arch-walls, effectively acting as buttresses, or from the base of the house-wall rather than being bonded *into* the house-wall. The space between the arch-walls is used for *rawīyāt*/grain-bins[27] for storing the household′s harvest. The *rawīyah* was filled through a hole in the roof and taken out through a hole at the base. Apart from the grain-bins there are generally few built-in features, mainly various shaped niches recessed into the thick walls. The entrance is almost always parallel to the arches. This, the so-called ″Transverse-Arch House,″ was also the most common rural house throughout Jordan during the nineteenth and early twentieth century[28] (fig. 9).

As pointed out in the introduction, during the periods under discussion, twelfth–sixteenth centuries, the Karak Plateau was known as a fertile and arable land scattered with villages. The area was also well-known for its livestock, including sheep, goats, cattle, camels, and horses, that were raised by the Bedouin tribes and sold to the governments of the time for use by their armies. In particular, the Mamluk state prized the horses of the *bādiyah* tribes.[29] Within the time-frame under consideration there was a noticeable change in the type of architecture seen in one of these villages, Khirbat Fāris. What was the impetus behind these startlingly different types of construction? It is the direct interest of the Mamluk state that seems to coincide with the observed change in architecture.[30]

One possible effect of this that can be seen in the architecture is the changing provision for storage of agricultural produce.[31] In the earlier twelfth-century ″Transverse-Arch House,″ agricultural storage seems to have been carried out at the household level within each dwelling-unit. By contrast, the later barrel-vaulted houses at Khirbat Fāris exhibited no provision for agricultural storage and were used simply for residence. Storage of crops may have occurred off-site in caves and cisterns as has been suggested for earlier periods and occurred later when produce was hidden from Ottoman tax-collectors.[32] Storage may have been centralized on a community level and have taken place in large barrel-vaulted

structures like the one still buried at Khirbat Fāris or excavated as the ″governor′s storeroom″ at Ḥisbān. Alternatively taxation was direct and was taken in kind at the threshing-floor: there was little need for large-scale storage.

Various reasons for this architectural change can be suggested. It is tempting to assume that as in the case of early twentieth-century Ḥumūd, these barrel-vaulted houses represent the process of sedentarization. More state investment was put into agriculture in the atmosphere of increased security that the Mamluks offered after the turmoil of the Crusader interregnum. Communities were encouraged ″to settle down″ in villages. However, as both historical records and archaeology have shown, there were rural settlements on the Karak Plateau in the centuries immediately before the Mamluks stamped their authority on the region. A more nuanced interpretation may be that a change in the agricultural administration of the landscape resulted in a change in the control of the surplus produce. What had once been for the family and tribe was now for the state.

Sowing the Seeds of Rural Decline?: Agriculture as an Economic Barometer for Late Mamluk Jordan

The 1995 publication of Amalia Levanoni′s *A Turning Point in Mamluk History* challenged historians of the Mamluk period to define and account for the political, social, and economic shifts that accompanied the Bahri-Burji transition. The ten years since have produced a growing corpus of studies on what has come to be known as ″Mamluk decline″; this scholarship has been wide-ranging, making use of a variety of written (chronicles and, recently, *waqfīyāt*) and art historical (minor objects and archaeology) sources. The recent interest in rural endowments *(waqf)* illustrates well the new and exciting directions research on this topic has taken. An analysis of rural properties and proprietorship has revealed nuanced developments in social relations, in addition to political structure and economics, and suggests that more complex processes were at work than a model of ″decline″ can describe. Land was the basis of political, economic, and social relations in the Middle Ages. Significant shifts, then, in the way land was controlled, whether through usufruct or full ownership on one level, or dictating cropping strategies on another, resulted in what we now consider ″transformations″ of Egyptian society, a more neutral assessment of the fifteenth century than was possible ten years ago.

Such is the perspective of the state. What is missing, however, from such debates are the voices of the peasants themselves. What impact did these transformations have on the countryside, on village life, on rural markets, and on the peasantry that did not directly participate in political decision-making? Considering the political, economic, and social shifts of the period from the vantage point of the non-Egyptian provinces has the benefits of some degree of political distance; analysis of different, but complementary, sources of data; and demographic and economic diversity that one does not get from a reading of Egyptian written sources alone.

Today′s Jordan, which the Mamluks administered as the Province of Karak and the southernmost districts of Damascus Province, provides us with a unique opportunity to analyze state-peasant relations and reassess the developments of the late fourteenth and fifteenth centuries. An intense and broad-based investment by Cairo in Jordanian agriculture through most of the fourteenth century suggests a concern for long-term objectives. Jordan was, for Cairo, the physical

communications corridor to Syria, a mediator in political relations with the Syrian amirs, and a ″cash cow,″ so to speak, through exploitation of its agricultural markets.[1] Its decline in the late fourteenth and fifteenth centuries, however, is discernible on many levels: villages are abandoned, agricultural production is reduced, particular industries collapse (such as sugar production), and there are marked demographic losses. Traditionally, historians and archaeologists (who have been gradually coordinating their research efforts) have identified the factors behind these developments as local amiral rebellions;[2] natural and demographic disasters, such as drought, earthquakes, and plague;[3] overt withdrawal of state monies;[4] and climatic change.[5] Such factors alone betray a provincial viewpoint and differ in emphasis from Egyptian-based scholarship, which emphasizes political and economic developments in the capital and is largely the result of different historiographies. Significantly, concurrent with these events were the large-scale purchase of rural lands from the Bayt al-Māl and their endowment as *waqf* by sultans, phenomena documented a good fifty years earlier than in Egypt that will be discussed in detail below.

This article explores the transformations of the Jordanian countryside in the fifteenth century in terms of these rural *awqāf,* settlement and demographic shifts, and traditional and state-sponsored planting strategies, and considers them in relation to the larger political and economic challenges of the late Mamluk period. In addition, the long-term environmental impact of Jordanian and Mamluk land management practices will also be considered. The agricultural regime of Jordan

is, thus, used as a barometer for transformations of late Mamluk society in southern Bilād al-Shām.

REVIEW OF SOURCES

Jordanian historiography for the late Mamluk period relies on a set of sources not generally consulted by other Mamluk scholars. Because the Ottomans continued Mamluk administrative practices here until the mid-sixteenth century, when the first large-scale censuses were taken in the region, early Ottoman tax registers (*defter*s) are an excellent, and widely used, source for late Mamluk economics, agriculture, land use, and demographics in Jordan.[6] While these registers are far from complete, they do present a wide range of data that includes population estimates (numbers of Muslim and non-Muslim households/*khāneh* and ″bachelors″/*mufrad*); status of rural property defined by degree of permanent settlement and cultivation (permanently settled village/*qaryah,* cultivated plot isolated from a settlement/*mazrā'ah,* untaxed ruins/*kharāb,* small plot of cultivated land/*qiṭ'ah*); ownership or usufruct status (private estate of the sultan or provincial amir/*khāṣṣ,* amir as tax recipient/*timār* or *zi'āmat,* charitable or family endowment/*waqf*); estimated annual revenues, in *akche*s (the Ottomans′ smallest silver coin), with taxes on each crop, livestock, and industry type specified; and, occasionally, incidental information, such as how the estate was acquired and access to water. *Awqāf* figure prominently in these registers, and many of them are Mamluk in date. For this reason, scholarship on late Mamluk Jordan has long been steeped in *waqf* studies.

The Ottomans levied the *'ushr* tax on *awqāf,* itemizing them individually as sources of revenue, along with crops, livestock, and industries. All endowed properties, including those supporting most mosques and madrasahs, were subject to taxation, with the exception of properties financing al-Ḥaramayn al-Sharafayn, the Khalīl al-Raḥmān mosque in Hebron, and the Dome of the Rock in Jerusalem.[7] The Ottoman state, moreover, generally maintained the integrity of the largest of

[7]Muḥammad 'Adnān al-Bakhīt, ″Awqaf During the Late Mamluk Period and the Early Ottoman Times in Palestine and Jordan,″ in *Urbanism in Islam*, ed. Editorial Committee of the Research Project ″Urbanism in Islam, a Comparative Study,″ 1994 (Tokyo, 1990), 188.

the Mamluk *awqāf,* keeping former sultanic endowments together as a unit and assigning their *'ushr* revenue to the governor *(mīr)* of Liwā' 'Ajlūn or as *khāṣṣ shāhī* for the sultan himself.[8] Such estates may have represented a financially stable institution for the Ottoman state and, thus, a reliable source of revenue. The longevity of some of these private, rural estates suggests that the Mamluks had achieved some degree of financial success in at least one area of their agricultural investments.

The results of archaeological fieldwork in Jordan the last fifteen years have produced an extensive database on patterns of settlement, including the emergence of new administrative centers and the abandonment of once thriving villages; the location of industrial and marketing centers and trade routes; and corpuses of small finds with economic significance (coins, imported pottery and glass, textiles).[9] Analyses of such fieldwork's historical value has been previously published and do not need to be discussed in detail here.[10] In recent years archaeological research has employed environmentally-focused data collection, such as soil and water analysis.[11] The implications of such scientific work, combined with the more traditional research on administrative documents described above, are significant and allow us to make preliminary statements about developments in the Jordanian agricultural regime and how they relate to the larger issue of Mamluk "decline."

Outside of the Ottoman *defter*s and archaeological reports, however, there have been precious few other sources of information on rural life in Mamluk Jordan. Contemporary written sources, including chronicles and administrative manuals, give only a spotty picture of the Jordanian agricultural regime. Many Jordanian towns and villages become visible in the Arabic sources only in the fourteenth century. Three villages, for example, in which I have been doing intensive fieldwork—Ḥisbān, Malkā, and Ḥubrāṣ—attract local historians' attention at this

[11]Lucke et al., "The Abandonment of the Decapolis Region."

point, perhaps because of their political or economic importance during al-Nāṣir Muḥammad′s third reign. Although settled as a village on and off since the Iron Age, Ḥisbān in central Jordan was made the administrative capital of the Balqā' district around 710/1310.[12] According to the results of recent archaeological investigations, it was also a redistribution point, at this time, for refined cane sugar, grown and processed in the Jordan River Valley, and housed a small garrison of a half dozen soldiers.[13] Isolated references in the early thirteenth century aside, it is not mentioned regularly by either Syrian or Egyptian historians until early in the fourteenth century.[14] The same is true for two contemporary villages in northern Jordan: Ḥubrāṣ and Malkā. Ḥubrāṣ, occupied since the Byzantine period, may have had two mosques in the thirteenth century; by the sixteenth century it was one of the largest villages in the region.[15] The farmers of Malkā were productive enough in 796/1393 for Sultan Barqūq to endow the village for his madrasah-mausoleum complex in Cairo; Malkā′s population doubled over the course of the sixteenth century.[16] All three villages were, moreover, known for their marketplaces and their residents for their level of education: the *nisbah*s al-Ḥisbānī, al-Ḥubrāṣī, and al-Malkāwī were prominent in biographical dictionaries of Syrian scholars.[17] The majority, by far, of historical references to these villages are fourteenth-century in date.

The absence of such villages from earlier Mamluk sources, however, may merely reflect the problems of Syrian historiography. Several key Syrian sources simply do not cover the chronological transition from the thirteenth to fourteenth centuries. Published and edited excerpts from al-Yūnīnī′s chronicle, *Dhayl Mir'āt al-Zamān,* do not extend beyond 701/1301–2. Likewise, entries for the years

711–39/1311–38 in al-Jazarī's *Ḥawādith al-Zamān* are no longer extant.[18] While the Egyptian historian al-ʻAynī, in his *ʻIqd al-Jumān fī Tārīkh Ahl al-Zamān,* does preserve some of the sections missing from these two sources, his chronicle after 701/1301 is only available in manuscript form.[19] Ibn Qāḍī Shuhbah, who is a rich, albeit inconsistent, source of information regarding agriculture and village life in southern Bilād al-Shām, begins his chronicle only in 741/1340.[20] Mamluk officials serving in the region, such as the amir Baybars al-Manṣūrī who was governor of Karak in 680–85/1281–86, show little interest in rural events and the state of local agriculture in their written narratives.[21]

Nothing illustrates these trends more clearly than the coverage of al-Nāṣir Muḥammad's cadastral survey *(rawk)* of southern Bilād al-Shām in 713/1313 by both Syrian and Egyptian sources. There is no equivalent for Syria of Ibn al-Jīʻān's *Kitāb al-Tuḥfah al-Sanīyah bi-Asmā' al-Bilād al-Miṣrīyah* or Ibn Duqmāq's *Kitāb al-Intiṣār li-Wāṣiṭat ʻIqd al-Amṣār,* which summarize the results of al-Nāṣir Muḥammad's subsequent survey of Egyptian land in 715/1315.[22] The historian of Mamluk Egypt can mine a wealth of information from Ibn al-Jīʻān's account, including a catalogue of village names and their location, the amount of cultivatable land attached to each village (recorded in feddans), the annual estimated fiscal yield (cash equivalent in dinars), in whose name the land was and now is registered, the status of that registration (as *iqṭāʻ, mulk, waqf,* etc.), soil types and access to water, and suitability for food and cash crops.[23] The surveys of southern Syria (that is Damascus Province, Hims, Baalbek, Ṣafad, and Gaza), Egypt, Tripoli (in 717/1317), and Aleppo (in 725/1325) are briefly described by al-Nuwayrī and al-Maqrīzī. Like al-Maqrīzī, whose narrative is the more detailed of the two, al-Nuwayrī, in his *Nihāyat al-Arab fī Funūn al-Adab,* is more concerned with personnel and procedure than the results of the surveys. The only comment he makes about the local reception of the 715/1315 survey was that "upon the distribution of the *iqṭāʻ* documents there were disagreements and conflicts" (*wa-*

[23]Sharaf al-Dīn Yaḥyá Ibn al-Jīʻān, *Kitāb al-Tuḥfah al-Sanīyah bi-Asmā' al-Bilād al-Miṣrīyah* (Cairo, 1898).

ḥaṣala fī tafrīqihā [al-amthilah] ikhtilāf wa-iḍṭirāb).[24] A contemporary in Ḥamāh, Abū al-Fidā', surprisingly makes no mention of any of the three cadastral surveys in Syria carried out by al-Nāṣir Muḥammad. He does, however, make reference to the Nāṣirī revolt in Tripoli that al-Nuwayrī, by combining his description of the two events in the same narrative, implicitly ties to the survey of that city in 717/1317.[25] Likewise, Ibn al-Dawādārī, an important source for events in Syria in the first half of the fourteenth century, makes no reference at all to any of the Syrian surveys, only the Egyptian one (described as the *rawk mubārak*), which he suggests was one of the most important events of the year 715/1315, along with the campaign in Malta.[26] This is all the more surprising since he describes the passing of his father, an amir, in 713/1313, while on a tour of Syrian fortresses (perhaps in connection with the 713/1313 survey), and since throughout his chronicle Ibn al-Dawādārī expresses concern for the condition of Syrian *iqṭā'*s.[27] An event that should have had a real impact on the Syrian countryside is not worth mentioning by some of the local sources of the period. The implications of the 713/1313 survey for rural developments in Jordan will be considered shortly.

While copies of the 713/1313 survey are no longer extant, we do have important economic documents related to Jordanian agriculture in this period at our disposal, though finding them is the proverbial "looking for a needle in the haystack." Moreover, one has to be intimately familiar with the local geography and topography to recognize them for what they are. The Dār al-Wathā'iq and Wizārat al-Awqāf in Cairo and the archives of St. Catherine's Monastery in the Sinai preserve copies, in various forms, of *waqfīyāt* recording the endowment of Jordanian farmland for charitable purposes during the late fourteenth century. One has been published and analyzed in part: the endowment of the village of 'Adar, near Karak, in 777/1375 by Sultan Sha'bān.[28] A second has been analyzed in a couple of recent publications and will be published shortly: the endowment of the village of Malkā in northern Jordan by Sultan Barqūq in 796/1393 for his madrasah-mausoleum

complex on the Bayn al-Qaṣrayn in Cairo.[29] In addition to these are references in unpublished, contemporary *waqfīyāt* to a village on the outskirts of Karak (its name is not preserved in the fragmentary manuscript),[30] for the same complex in Cairo, and other rural land in the vicinity of Karak for Sultan Ḥasan′s monumental madrasah complex in Cairo (endowed in 762/1360–1).[31]

All other references to large, endowed estates in Jordan are either summarized in the early Ottoman *defter*s[32] or contemporary chronicles. These Ottoman documents describe landed estates in terms of their physical extent, local topography and water sources, roads, quality of the land, agricultural installations of various sorts, neighboring villages, previously endowed properties within the village, and buildings or plots of land that have been abandoned or otherwise fallen out of use. They are coming under renewed scrutiny for their potential contribution to settlement cycles and agricultural and environmental history.[33]

For documentation for the late Mamluk period we are more fortunate. Biographical dictionaries (Ibn al-Jīʻān′s *Al-Qawl al-Mustaẓraf,* Ibn Ṭūlūn′s *Mufākahāt al-Khillān fī Ḥawādith al-Zamān,* and Ibn Iyās′ *Badāʼiʻ al-Zuhūr fī Waqāʼiʻ al-Duhūr*), biographies of Burji Mamluk sultans (Ibn Ṣaṣrā′s *Kitāb al-Durrah al-Muḍīʻah fī al-Dawlah al-Ẓāhirīyah*), and the products of contemporary, local historians (ʻAbd al-Bāsiṭ′s *Nayl al-Amal fī Dhayl al-Duwal*) are available, largely in manuscript form, for research on fourteenth- and fifteenth-century Jordan and the region. They have been used, with much success, by Shawkat Ramaḍān Ḥujjah, in his recent monograph on Burji Mamluk Jordan.[34] However, provincial capitals (such as Karak) and the largest administrative centers, towns, and villages (ʻAjlūn, for example) are the most visible in these sources, making research on less politically important villages and their hinterland very difficult.

While my research on agriculture in Mamluk Jordan is ongoing, and I have not yet examined the manuscripts of the sources described above other than *waqfīyāt,* I believe—on the basis of the Ottoman *defter*s; Mamluk-period *waqfīyāt*; a variety of published, primarily Syrian, sources; and archaeological and geological data—that some trends are emerging which suggest the following:

1. The Mamluk state, from the beginning, was actively investing in the infrastructure of southern Bilād al-Shām. While much of this investment was initially security-driven, it certainly benefited regional agricultural markets, through the construction of roads, storage facilities, and caravanserais and *wikālah*s.

2. During the third quarter of the fourteenth century, Mamluk sultans were purchasing entire villages in Jordan from the Bayt al-Māl and were already endowing them as *waqf* for institutions, primarily madrasahs, located outside Jordan. Most of this rural property was located in the Jordan River Valley, the rich agricultural regions of the Yarmouk River riparian, and the Karak Plateau, on which there had already developed an extensive system of land ownership by local families, both Muslim and Christian.[35] Much of the land around Karak was, moreover, already tied up in earlier endowments for Sufi shrines and Christian monasteries.[36]

3. The fifteenth century witnessed what initially appears to be a withdrawal of state monies from Jordan: garrisons are abandoned, there are no new public building projects, the local tribesmen no longer receive ″security monies.″ The effects of this process, however it is defined, were made worse by drought and the insecurity of the main transport routes for agricultural surplus. As a result, some, but far from all, sectors of the local agrarian regime went into decline, particularly labor-intensive projects such as sugar cane production and processing. Villages in particular regions of Jordan were abandoned, with a general resettlement in the well-watered highlands.

4. On the eve of the Ottoman conquest, two different pictures of rural Jordan emerge. On the one hand, villages have resorted to traditional patterns of land tenure, agricultural production, and marketing—namely communally-owned lands, largely cultivated on a subsistence basis, with limited specialized production for local markets and traditional trading partners. This pattern remained in place through the Ottoman period and was adapted to the requirements of the Tanzimat in the nineteenth century. On the other hand, the largest *waqf* estates remained intact through at least the sixteenth century and maintained their prosperity well into the Ottoman period. The Ottomans exploited both categories of land to create a broad and diverse tax base that contrasted with the seemingly specialized agricultural markets of the Mamluk period.

5. Mamluk-period land management in Jordan, while opening up new markets temporarily, did lead, in the long run, to environmental degradation, particularly in terms of soil exhaustion and exacerbating the process of deforestation begun in earlier periods.

We will examine each of these points in turn.

Transformation of the Jordanian Agricultural Regime

At the beginning of the Mamluk period Transjordan represented a security concern; Ayyubid princes still maintained castles there, and the principle hajj route from Damascus to Mecca ran through the middle of the region. Sultan Baybars initiated an ambitious defensive project that involved reinforcing the citadel walls and towers at former Ayyubid castles, such as Karak and Shobak, and building new fortifications at what would become rural capitals, such as Ḥisbān and Salṭ.[37] He also built and leveled roads and reorganized the *barīd* system that would, by the eighth/fourteenth century, blossom into a comprehensive communications network of postal centers *(marākiz),* pigeon and fire towers, and caravan and pilgrim stops. Several of the stops on the hajj route—ʻAjlūn, Zarqā, Salṭ, and ʻAqabah were among the largest—maintained seasonal markets *(aswāq mawsimīyah)* that catered to pilgrims.[38] Amirs and sultans from the thirteenth through the sixteenth century invested in these markets, providing endowments for caravanserais and building new markets within these towns.[39] By combining the hajj route with state-sponsored market institutions, the Mamluks merely formalized a relationship between pilgrimage and business that had been part of Islam from the time of the Prophet.[40] Such investments indirectly benefited the local agricultural sector. While the initial objectives of infrastructure development were defensive, the networks and facilities that grew out of it facilitated the transport of agricultural goods from fields to markets and on to ports.[41]

The state′s overarching concern for defense (against both foreign and domestic enemies) also impacted the structure of administration in the region. Mamluk administration of southern Bilād al-Shām was particularly fluid, with periodic shifts in administrative borders and district *(ṣafaqah)* capitals (*niyābah*s or *wilāyah*s) and the combination or division of districts.[42] The promotion of a previously undistinguished village to a district capital, for example, served to solidify relations

between the sultan and the powerful local tribes of Transjordan in the power struggles among the Mamluk elite throughout the fourteenth and fifteenth centuries. Two examples from the Balqā' district of central Jordan illustrate this well. As noted earlier, the small village of Ḥisbān came to prominence in the fourteenth century when al-Nāṣir Muḥammad made it the capital of the Balqā' *(Wilāyat Balqā'),* as a reward, the written sources lead us to believe, for the loyalty of its local tribes during his periods of exile in Karak.[43] After an earthquake destroyed the Ḥisbān citadel in mid-century, the capital of the Balqā' was then moved to Amman, a move that, according to Ibn Qāḍī Shuḥbah, served the financial interests of Mamluk amirs who had investments there.[44] In a similar vein, the previously independent Province of Karak was merged, first with the districts of 'Ajlūn and Salṭ in the third quarter of the eighth/fifteenth century, and then with the Province of Damascus in the early tenth/sixteenth century. Contemporary sources attribute this change to an attempt by the state to eliminate the independence of the Karak governors and quell the amiral rebellions there that rocked Jordan in the late Mamluk period.[45] Such administrative shifts had an important impact on local society. Money followed the movement of centers of political power. For some fifty years Ḥisbān served as a district capital with a governor *(wālī);* a small garrison of perhaps a half dozen mamluks; and a large storage facility and redistribution point for processed cane sugar, an industry monopolized by the Mamluk elite.[46] When the capital was moved to Amman in 1356, the judiciary, governorship, and most of the district markets were transferred from Ḥisbān.[47] There is little archaeological evidence for the sugar industry in Ḥisbān after this, and the village was gradually abandoned.[48] By the late sixteenth century there was no permanent settlement at the site, although local Bedouin continued to pay a tax to the Ottoman government for seasonal cultivation of small plots of land there.[49] Similarly, there is significant archaeological evidence for the abandonment of the central Karak Plateau for the isolated southwest rim at the time of the amiral

revolts and administrative changes of the late Mamluk period.[50]

A third factor that had an effect on the agricultural regime of Jordan was al-Nāṣir Muḥammad′s cadastral survey of southern Bilād al-Shām in 713/1313. This was the first of four surveys ordered by al-Nāṣir Muḥammad, which collectively laid the economic foundations for Mamluk society by reallocating *iqṭā*ʻs among the sultan, amirs, and members of the *ḥalqah*. Most of the scholarly studies of these surveys have focused on the Egyptian one of 715/1315 and its political and economic ramifications.[51] It is more difficult to do the same for Syria. There are no records, either in original or summary form, of any of the three Syrian surveys, and, as discussed earlier, there are very few references to them by Syrian historians. The surveys, thus, do not appear to attract the notice or interest of contemporaries. Nonetheless, a few suggestions may be made about the possible structural impact of the 713/1313 *rawk* on agricultural production, land tenure, and markets in Jordan.

The immediate results of the survey were to fragment land, assigning smaller, non-contiguous, and often widely dispersed, shares to the *muqṭā*ʻs, and to give more control over land to the sultan himself. How this affected agricultural production and village life in general would have depended on several factors: the types of crops traditionally grown there, the nature of traditional crop rotation, how water was distributed, and how and when taxes were paid and collected. Describing these factors first requires an understanding of how the *iqṭā*ʻ system functioned economically and socially, that is what the relationships were between *muqṭā*ʻs and *fallāḥūn*. In the absence of written sources dealing directly with southern Syria on such matters, we have to depend on Egyptian sources, taking into account that Egyptian and Syrian societies were organized differently, that there were differences in access to and sharing of water, and a different history of land proprietorship. Hassanein Rabie and Sato Tsugitaka′s monographs on rural Egypt are suggestive in this regard. Relying largely on the accounts of the management and planting cycles of Egyptian agricultural land by al-Makhzūmī, Ibn Mammātī, al-Nābulsī, and al-Nuwayrī, they conclude the following:

---

[50]Robin Brown, ″Late Islamic Ceramic Production and Distribution in the Southern Levant: A Socio-Economic and Political Interpretation″ (Ph.D. diss., State University of New York at Binghamton, 1992), 440–41.

[51]Sato Tsugitaka, *State and Rural Society in Medieval Islam: Sultans, Muqta*ʻ*s, and Fallahun* (Leiden, 1997), 138–43; Carl F. Petry, ″Fractionalized Estates in a Centralized Regime: The Holdings of al-Ashraf Qāytbāy and Qānṣūh al-Ghawrī According to their Waqf Deeds,″ *Journal of the Social and Economic History of the Orient* 41, no. 1 (1998): 96–117. A single article by Sato in the 1980s is one notable exception (Sato Tsugitaka, ″Historical Character of *al-Rawk al-Nāṣirī* in Mamluk Syria,″ in *Proceedings of the First International Conference on Bilād al-Shām,* ed. University of Jordan [Amman, 1984], 223–25).

1. The *muqṭā‘* was responsible for digging canals, building dams, and maintaining both. He relied on peasants for most of these activities but could use corvée labor and his own soldiers when needed. By and large he did not reside on his *iqṭā‘;* he generally relied on his own agents (*wakīl*s) to estimate local taxes and collect them on his behalf.[52] Because the *iqṭā‘āt* were fractured, one *muqṭā‘* could hire as many as four or five *wakīl*s for these purposes.[53]

2. *Muqṭā‘*s rarely interfered in the internal operations of the planting and harvests. It was the *fallāḥūn* themselves who decided what to plant, on what schedule to rotate crops, and how to share water. In other words, local custom generally prevailed in matters of cropping, harvest, and processing. One notable exception is sugar production, which was more closely monitored by the *muqṭā‘*, who in Jordan tended to be the sultan himself. On ″sugar estates″ the cropping of the sugar plant took precedence over other crops and customary water sharing agreements, interrupting crop rotation and the planting of summer crops.[54]

3. Taxes on grains *(kharāj al-zirā‘ah)* were generally paid in kind in Egypt.[55] The presence of grain storage facilities throughout Jordan by the fourteenth century suggests that grain was stored on the *iqṭā‘āt* that produced the grain and at transport depots on main roads. Grain surplus could be used for times of need, which was often exploited by the state through forced purchases *(ṭarḥ),* or to provide provisions for agricultural laborers who supplemented the labor on sugar estates.[56]

While Jordanian agriculture was broad-based and produced a variety of grains, fruits, and vegetables for the region, the staple here, as in Egypt, was wheat. Wheat is a winter crop that requires adequate rainfall during the growing season (200–300 centimeters per year in Jordan) and dry storage. It is grown in all of the country, but the largest fields are on the open plains of central and southern Jordan. Because Jordan′s *wādī*s run with water only seasonally and are not generally navigable, local farmers had no major river, like the Nile, on which to rely for transport of grains to major storage facilities. Therefore, much transport from threshing floors to granaries *(shuwan)* must have been done overland, on the extensive road system developed in the early Mamluk period. The granaries took two forms: formally built *shūnah*s, which is a common enough place name in the Jordan Valley, and reused cisterns, which are ubiquitous in the country′s soft

---

[52]Sugar tax is one notable exception: *muqṭā‘*s, who were generally the sultans themselves, often personally supervised the collection of tax on sugar.

[53]Hassanein Rabie, *The Financial System of Egypt: A.H. 564–741/A.D. 1169–1341* (London, 1972), 65.

limestone beds and can preserve grains for up to two years.[57] Both facilities required regular maintenance through cleaning and plastering. Because of Jordan's special hydrological conditions and infrastructure, its grain industry was highly vulnerable to drought and the security of the road system. As for cropping patterns, the *fallāḥūn* of Jordan traditionally practiced a two-crop rotation on most cultivated land, including the Jordan Valley. Land tenure, where there was private ownership, has historically been communal, with a division of revenues among villagers after the harvest according to shares, known today as *mushā'* and very similar to the pattern of shares adopted by the *muqṭā*'s.[58]

Given these factors, but in the unfortunate absence of written sources for verification, one can cautiously propose that the *rawk* of 713/1313 impacted Jordanian agriculture in multiple ways. To begin with, the fragmentation of *iqṭā'āt* may have produced a more complex system of tax collection and transportation, particularly of grains, under the supervision of the agents of multiple *muqṭā*'s. It is not clear at this point whether there was any coordination of efforts on the part of these agents or if tax revenues (in kind or in cash) were simply divided by the *muqṭā*'s shares of the revenues after the harvest or sale and conversion of crops to currency. Regardless, the multiplication of *muqṭā*'s meant heavier traffic on the road system and made more vital than ever the security of these transportation corridors for the purposes of tax collection.

On a second note, the concentration of *iqṭā'āt* in the hands of the sultan led to the development of large estates based on the production of specialized cash crops, such as sugar cane and olive oil, for export markets. These "plantations" transformed traditional cropping, water sharing, and labor organization. The sugar plantations in the Jordan Valley and on the tributaries of the Jordan River best illustrate these patterns. Cane sugar production requires a soft, well-drained soil, high temperatures, extensive irrigation, and a large labor force.[59] In addition to

---

[57]J. M. H. Kareem, *The Settlement Patterns in the Jordan Valley in the Mid- to Late Islamic Period* (Oxford, 2000), 10; Carol Palmer, "'Following the Plow': the Agricultural Environment of Northern Jordan," *Levant* 30 (1998): 155.

[58]Communal land ownership was the pattern in the nineteenth and twentieth centuries and is also suggested by early Ottoman tax registers. It remains to be documented with certainty that this was the traditional pattern in the Mamluk period, however. In her historical-anthropological analysis of late Ottoman *mushā'*, Carol Palmer suggests ways to identify communal land tenure in historical periods archaeologically (Carol Palmer, "Whose Land Is It Anyway? An Historical Examination of Land Tenure and Agriculture in Northern Jordan," in *The Prehistory of Food: Appetites for Change,* ed. Chris Gosden and Jon Hather (London, 1999), 300–2. The private ownership of land by individual families is documented for the Karak region (see note 34), but so far this pattern seems to be unique for Jordan as a whole.

[59]Sato, *State and Rural Society,* 216; Kareem, *Settlement Patterns,* 13.

resident *fallāḥūn,* seasonal, migrant workers assisted in some of the heaviest labor tasks associated with sugar processing, and there is some evidence for the use of slaves, as well.[60] The soil requirements, the long period of cultivation (ten months), and the labor intensive activities associated with pre-sowing land preparation and maintenance make it impossible to grow other summer crops, namely vegetables, that tend to bring in large revenues, or to maintain the traditional two-crop rotation.[61] Moreover, growing sugar cane requires the diversion of irrigation water from other crops.[62]

The concentration of land in the hands of a single *muqṭā',* as in the case of the sultanic sugar estates, was certainly conducive to plantation-style production. What impact, however, the fragmentation of the largely grain-producing plains had on annual yields and tax revenues in general has yet to be determined. The nineteenth-century grain boom of Palestine and Transjordan would not have been possible without the development of large landed estates after the implementation of the Ottomans′ 1858 Land Law. There was a significant shift at that time from subsistence farming and limited production for local markets to surplus production for export to Europe.[63] Ottoman tax registers, as well, indicate that large estates brought in more tax revenue for the state than family or village-owned farms, explaining their conversion to taxable units by Ottoman authorities. In the absence of a comparison of grain yields between the pre- and post-*rawk* periods, which is not yet possible, such patterns do suggest that fragmentation of grain lands is more expensive, in the end, to administer.

In summary, all of these developments required more from the *muqṭā*'s, in terms of maintenance of irrigation canals and storage facilities, than before al-Nāṣir Muḥammad′s survey, diverted Jordanian agriculture from a diversified to a specialized and export regime, and was profit-driven. It altered labor organization, local market, and traditional cropping and water distribution practices. Such a transformation of the local regime was certainly profitable, as the Ottoman *defter*s demonstrate; however, it required a strong state and demanded safe transport and storage. Security was a particular concern for grain production, which was concentrated on the open plains and was particularly susceptible to disruption during times of political unrest. As the linchpin of the Mamluk economy, problems in the grain sector had serious ramifications to the state′s economy as a whole.

WAQFĪYĀT AND LAND MANAGEMENT

The sultanic estates of Mamluk Jordan were, in part, the result of the gradual transformation of *iqṭāʿāt* into *khāṣṣ,* or crown lands, by purchase from the Bayt al-Māl, as is verified in the original *waqf* documents. They were then endowed as *waqf* for charitable institutions, the majority of which were sultanic madrasah complexes in Cairo. The alienation of state land has been recently examined for fifteenth-century Egypt, where the process is documented with sales and purchase writs and deeds from the late Mamluk and early Ottoman period.[64] Petry has described the process as an investment strategy for later Mamluk sultans.[65] According to his estimates, some 1000 *waqfīyāt* of the pre-Ottoman period are extant in Cairo′s archives, most of these are Mamluk in date, and 30% of these date to the reign of Sultan al-Ghawrī.[66] Most of the land in these endowments was acquired piecemeal, through shares of rural land or villages, the kind of fragmentation produced by al-Nāṣir Muḥammad′s cadastral surveys.[67] In the case of al-Ghawrī′s endowments, Petry has demonstrated that revenues from rural estates far exceeded the expenses required to maintain the endowment proper, in some cases resulting in a 90% surplus, a large revenue not accounted for by any documented expenditure.[68] Petry suggests in his studies that these were, thus, a form of ″clandestine investment″ that, on one hand, resulted in the erosion of the *iqṭāʿ* system, but on the other created significant asset-building in the form of private property.[69]

Abū Ghāzī′s recent monograph on land tenure in late Mamluk Egypt has received much attention for its statistical analysis of the same phenomenon.[70] His data largely supports the conclusions of Petry in the 1990s: 1) 95.79% of all documented land sales from the Bayt al-Māl in the pre-Ottoman period date to the Burji Mamluk period;[71] 2) most of these purchases were of former *iqṭāʿāt;*[72] and 3) the majority of these purchases took place during the reigns of Īnāl, Khushqadam,

Qāytbāy, and al-Ghawrī (the highest at 64.5%).[73] He further suggests that by the time of the Ottoman conquest one half of former state land was now in private hands;[74] that the Bayt al-Māl was, for all intents and purposes, empty;[75] and that some 88.89% of Egypt's agricultural land was tied up in *waqf*.[76] Of the three social groups that purchased state lands (the Mamluk elite, amirs' families and retainers, and Egyptian civilians), the largest land owners were the Mamluk elite (sultans and amirs), at 43.1% of all documented purchases from the Bayt al-Māl.[77] Abū Ghāzī states, furthermore, that in some cases entire villages were, indeed, purchased as complete units,[78] an observation that would not have been possible without reading the available Ottoman land sales files.

Abū Ghāzī's conclusions are justifiably conservative: that we cannot know for certain what the real objectives were for this rush to purchase and endow former state lands at the end of the Mamluk period. He dismisses the point of view of Arab contemporaries, who cite financial and security (that is military) crises for which liquidation of public lands was necessary. Certainly, the process led to the creation, for better or worse, of newly-propertied classes, who now could dispose of land as they saw fit. This is, of course, another way of describing social transformations that cannot be said to be purely "decline" or "development." Perhaps the most intriguing of his conclusions was that by broadening the base of private ownership, the agricultural base of the Mamluk economy could be revived.[79] By his own admission, the author has no evidence for such a claim, but offers it only as a final thought in his study.

As for Jordan, the same process occurred here, but there were some important differences. The largest documented sultanic endowments date to the reign of Barqūq and were concentrated in the Jordan Valley and the Sawād of the northern hill country (some of the richest farmland in the region); the earliest recorded endowments consisted of entire villages, not merely shares. The documented examples are few:

1. Sultan Baybars—two shares of the village Bayt Rāmah in the Jordan Valley, for his madrasah complex in Cairo, no date given.[80]

2. Sultan Sha'bān—the village of 'Adar near Karak, in its entirety, for an

[80]Al-Bakhīt and Ḥammūd, *Tapu Defteri No. 185,* 32.

unnamed recipient, in 777/1375.[81]

3. Sultan Barqūq—the Jordan Valley villages of Nimrīn, Kafrīn, and Zarā'ah, in their entirety, for his madrasah-mausoleum complex in Cairo, no date given;[82] the village of Malkā in the Sawād, in its entirety, for the same complex, in 796/1393.[83]

4. Sultan Khushqadam—three shares each of the Sawād villages of Marw and Harhār, for his madrasah complex in Cairo, no date given;[84] twelve shares of an unnamed *mazrā'ah* (isolated farm) in the Jordan Valley for the same complex, no date given.[85]

The lands described are located in the most fertile regions of Jordan and fall into three categories: grain fields of the plains, sugar plantations of the Jordan Valley, and the orchards of the Sawād (which produced high quality olive oil, as they do today). Wheat, sugar, and olive oil—these were the staples of the average man's diet in this period, and were, thus, excellent commodities to control by enterprising entrepreneurs. The revenues collected from these estates, which remained intact through the sixteenth century, are recorded in the Ottoman *defter*s. However, to give an idea about the scale of production and the possible revenues to the *mawqūf* at the time of endowment, I will rely on recent archaeological data that continues to supplement the archival work for this study.

CASE STUDY: FINANCIAL RETURNS FROM ḤISBĀN SUGAR AND MALKĀ OLIVE OIL

Ḥisbān was an administrative center, and there is no evidence that any of its land was made *waqf* during the Mamluk period. However, its role in the transport and redistribution of processed cane sugar has been documented by recent archaeological investigations, which also indicate the scale of the sugar produced in the region. During the 1998, 2001, and 2004 field seasons, the southern end of a domestic complex, identified as the residence of the *wālī al-Balqā',* was excavated.[86] A long and narrow, barrel-vaulted storeroom, approximately 8 meters long and 2 meters wide, defined this space. On the basis of pottery and coins recovered from floor levels, it has been dated to the fourteenth century. The storeroom was full of mendable ceramic vessels, including sugar jars, which were hour-glass in shape

and built for overland transport. The sugar jars were originally placed directly on the floor, along both sides of the room, while other vessels were stored on wooden shelves along the walls. The destruction of this complex by earthquake and fire in mid-century preserved much of its contents.

A rough estimate of the carrying capacity of this storeroom is 94 store jars, each holding some 6750 cubic cm of raw sugar. Using modern calculations for the density of processed cane sugar, the weight of the contents of each jar would have been 6.075 kg, or a total of 571 kg for all the jars in storeroom, if filled to capacity. To determine the market value of the sugar stored here in fourteenth-century currency, I adopt the price scheme developed by Ashtor, which he bases on Italian price lists recorded by weight of product in Damascus *qinṭār*s.[87] The Ḥisbān storeroom would, thus, at full capacity have held some 3.1 *qanāṭīr* of processed cane sugar, which, if the end product was raw sugar, would have been worth 3875 dirhams or 194 dinars by the third quarter of the fourteenth century.[88] While this seems a modest amount, it alone would have contributed 10% of a cargo of sugar carried on a Venetian galley in the fourteenth century.[89]

Archaeological surveys in the *wādī*s surrounding Tall Ḥisbān have identified many water mills, but their date and function are still uncertain. If the sugar stored at Ḥisbān was not a local product (and this has still not been established), it may have been transported there from the Jordan Valley, 15 kilometers to the west, where there is written and archaeological evidence for extensive sugar production at this time. Ḥisbān, like other administrative centers in Palestine and Transjordan, served double-duty as a storage and transport depot for agricultural products en route to regional markets and ports. In short, if the Ḥisbān sugar was grown and processed locally, it was en route to Mediterranean ports for export to Europe; if a product of the Jordan Valley, it may have been on its way to Egypt or local markets.

Malkā is today one of the largest and most prosperous villages in northern

[87]Eliyahu Ashtor, "Levantine Sugar Industry in the Later Middle Ages—An Example of Technological Decline," *Israel Oriental Studies* 7 (1977): 252. Considerations of vacillating exchange rates of the dinar and its relation to the dirham, while currently debated in Mamluk scholarship, are well beyond the scope of this article. Prices are presented merely to suggest scale of production.

[88]The carrying capacity of the storeroom is based on my own field notes and a published floor plan (Walker and LaBianca, "The Islamic *Quṣūr*," Fig. 5) and my own ceramic profile drawings and one published photo (Walker, "Mamluk Investment in Southern Bilād al-Shām," 255, Fig. 3). Price estimates are based on Ashtor, "Levantine Sugar Industry," 252, Table 252 (price entry for Nov. 1379 C.E.) and Sato, *State and Rural Society,* 243. I have relied on an internet source for current calculations on the density of processed sugar, which is 900 kg per each cubic meter: www.sugartech.co.za/density/index.php.

[89]Ashtor, "Levantine Sugar Industry," 236.

Jordan, known for its high-quality olive oil. It must have given the Mamluk state considerable income, as well, in the late fourteenth century, because, as we have already discussed, Sultan Barqūq endowed the entire village, among other rural and urban properties in Egypt and Syria, in financial support of his madrasah complex on the Bayn al-Qaṣrayn. According to the original *waqfīyah,* now housed at the Dār al-Wathā'iq in Cairo, olive orchards and presses *(ma'āṣīr)* are listed as important parts of the estate.[90]

An archaeological survey in 2003 revealed evidence of the olive oil industry that is described in this document. It is possible to cautiously estimate production of this single factory, while keeping in mind that other presses were in operation at the same time, elsewhere in the medieval village. The group of presses surveyed was located in a cave (Cave 12) that had been used for olive oil production since the Byzantine period. It contained a half dozen shafts cut into the natural cave walls to hold press arms, as well as two ceiling holes for screw-and-weight presses. In addition, the remnants of a basalt grinding stone were left in the cave interior. According to calculations made for similar weighted lever plants at Hellenistic Maresha, and assuming that all six presses were in use in this period and operating simultaneously, six hectares of olive groves would have supported this single plant at Malkā and could have produced 13,000–27,000 liters of olive oil annually. Of this amount, over 10,000 liters were surplus, exceeding the needs of local consumption, and were thus available for sale in local markets or export.[91]

As for the value of such surplus in fourteenth-century currency, we once again rely on Ashtor. Today a liter of olive oil weighs 9/10 of a kilogram; the 10,000 liters surplus from this single plant at Malkā would have weighed a total of 9000

[91]Nahum Sagiv and Amos Kloner, "Maresha Underground Olive Oil Production in the Hellenistic Period," in *Olive Oil in Antiquity: Israel and Neighbouring Countries from the Neolithic to the Early Arab Period,* ed. D. Eitam and M. Heltzer (Padova, 1996), 276–77. This is based on a conservative population estimate of 150 people, arrived at by using figures from an Ottoman land register *(Tapu Tahrir Defterleri)* of 1596–97. The census records 27 families *(khāneh)* and 15 bachelors *(mufrad)* (al-Bakhīt, *Nāḥiyat Banī Kinānah,* 22, Table I). A peasant family, for the purposes of Ottoman tax registers, consisted of a nuclear family (mother, father, and children) (Halil Inalcik, *The Ottoman Empire: The Classical Age 1300–1600* [London, 1994, reprint], 144). Our modest estimate is deliberately low at a five-member household. (Such numbers should be used with caution, however. For criticisms of calculating population size on the basis of Ottoman tax surveys, see Bekir Kemal Ataman, "Ottoman Demographic History (14th–17th Centuries): Some Considerations," *Journal of the Economic and Social History of the Orient* 35 (1992): 187–98, and Heath W. Lowry, "The Ottoman *Tahrir Defterleri* as a Source for Social and Economic History: Pitfalls and Limitations," in idem, *Studies in Defterology: Ottoman Society in the Fifteenth and Sixteenth Centuries* (Istanbul, 1992), 3–18.

kg, which was the equivalent of 482 Syrian *qinṭār*s.[92] Ashtor, citing Ibn Kathīr, records an export price in the year 1347 of 4.5 dirhams per Damascus *raṭl* of oil, which was 9 dinars per Syrian *qinṭār*.[93] In the mid-fourteenth century, then, this plant could have produced a profit of 440 dinars annually. This is, of course, assuming the same end product, which was soap. If the oil was of a higher quality and sold as table oil, it would have been worth considerably more. Regardless, this was no negligible profit: it would have represented, for example, over 30% of the cost of a shipment of 2790 jars of Spanish olive oil to Alexandria in 1405.[94]

Clearly, profit could be made from such specialized production, even when the scale of production at a single site was modest. But was profit the primary rationale for land purchases from the Bayt al-Māl, as we presume these to be, and for their subsequent endowment during the late fourteenth and throughout the fifteenth centuries? Contemporaries commented on and lamented the abuses of rural land by Mamluk amirs but, apparently, had nothing to say about the alienation of state lands in Jordan. Nonetheless, the Ottoman tax registers describe the development of these estates in the sixteenth century and are rather instructive about the financial longevity of the endowments. I will summarize the contents of these registers as regards the villages described above:

1. ʿAdar—The village was no longer settled on a permanent basis by 945/1538 and had devolved into a *mazrāʿah* (isolated farm), administered, and perhaps cultivated, by Karak town.[95] ʿAdar produced an annual revenue of 100 *akche*s,[96] which belonged to the sultan's *khāṣṣ*.[97] Barqūq's endowment had, apparently, been dissolved.

2. Nimrīn—In the years following the Ottoman invasion this village had dwindled in size but rebounded by the close of the century. In 945/1538 it was a very small village of five households that controlled only 5 feddans of cultivated land, which produced wheat, barley, sorghum, cotton, and sesame;[98] sugar cane

[92]My estimates for modern weight and volume calculations were retrieved on-line at: www.olivebusiness.com/oliveHandbook/GrowingOlives/oliv e_balance_sheet.htm.

[93]Eliyahu Ashtor, *Histoire des prix et des salaries dans l'orient médiéval* (Paris, 1969), 407.

[94]Notarial records in the Vatican record a shipment of olive oil from Seville to Alexandria in 1405, when the Mamluk state was now importing large quantities of oil from Europe; the shipment was worth 1400 dinars at the time (Eliyahu Ashtor, *Levant Trade in the Later Middle Ages* [Princeton, 1983], 214). While there is a fifty-year difference between this shipment and the price estimate used above, and we are not certain from the data provided about the quality of the oils and how they compare, the comparison in profits is, nonetheless, informative for the scale.

[95]Al-Bakhīt and Ḥammūd, *Tapu Defteri No. 970,* 152.

was not grown any more. The tax registers make reference to Barqūq's original endowment but suggest that part of the revenues from this village once earmarked for his madrasah in Cairo were now being used, along with the villages of Kafrīn and Zarā'ah, to support the Mūsá shrine (arguably a local shrine in Wādī Mūsá). Annual taxable revenues totaled 3659 *akche*s. By 1005/1596 there were six households, still small for a village of the time in the Jordan Valley, controlling 20 feddans of cultivated land. Annual revenues from this land came to 3470 *akche*s.[99] Of this, 695 *achke*s were set aside for the Mūsá *zāwiyah* and 2756 *akche*s for Barqūq's Cairo complex; the *'ushr* tax on both of these endowments belonged to the sultan as his private fisc *(khāṣṣ)*.[100]

3. Kafrīn—The fate of Kafrīn mirrored that of nearby Nimrīn. In 945/1538 the village had an imam and consisted of 37 households, which cultivated 10 feddans of land. Taxable crops included wheat, barley, sorghum, cotton, and sesame and brought 6900 *akche*s in taxable revenues a year, which were divided among two endowments (those of Nabī Mūsá *zāwiyah* and Barqūq's Cairo complex) and the sultan's *khāṣṣ*. According to the register for 1005/1596 the population had grown to 43 households (the largest in the Jordan Valley at the time) and cultivated land had doubled, producing some of the highest yields in the province.[101] Both endowments were retained, that of Barqūq receiving 12665 *akche*s/year (17921/year with Nimrīn and Zarā'ah combined) and Mūsá shrine a modest 665 *akche*s/year.[102] As with the Nimrīn, there is no mention of sugar production in the register entries.

4. Zarā'ah—Likewise, in 945/1538 Zarā'ah constituted 11 households, one imam, and cultivated 10 feddans, which produced some 7150 *akche*s in annual revenue.[103] It produced the same crops as Nimrīn and Kafrīn. At this point, however, it seems that the village was separated from Barqūq's original estate and specifically earmarked as a *timār* for one Maḥmūd Jawūsh.[104] By 1005/1596 the population grew to 17 households that controlled less land (6 feddans), shared water from Wādī Zarqā, and paid taxes on presses *(ma'āṣir)*, presumably olive presses.

5. Malkā—This village experienced notable growth throughout the sixteenth century. By mid-century it had its own mosque, and by 1005/1596–97 its population had doubled.[105] Its annual revenues in summer crops and olives were among the

[105]Hütteroth and Abdulfattah, *Historical Geography,* 202.

highest in the region by the century′s close.[106]

6. Marw and Harhār—The agricultural production of these villages has long been focused on wheat. By 941/1534 Harhār was the largest wheat-producer in northern Jordan. Khushqadam′s endowment continued to be recognized by the Ottoman state, although it was now taxed. All tax revenue now went to the provincial governor as his private estate *(khāṣṣ)*.[107]

7. Bayt Rāmah—By 1005/1595–96, when the registers were compiled in a final form, this village had been abandoned *(khālī)*. It did, nonetheless, pay 2400 *akche*s annually in taxes to a sultanic endowment.[108] The farmland of Bayt Rāmah was probably cultivated by the residents of a nearby village.

These former sultanic endowments in the sixteenth century follow the general pattern of growth (in terms of population and revenues) and agricultural diversification that characterizes early Ottoman Jordan. The largest of the pre-Ottoman endowments were, by and large, retained, and taxed at 10%; those tax revenues then became the *khāṣṣ* of the Ottoman sultan or provincial governor. On the other hand, agricultural land that was not endowed seems to have fragmented even further into small hamlets or communally-held land, cultivated and tax-paying but, in many cases, no longer permanently settled. Much of central Jordan falls into this category, including Ḥisbān, the former capital of the Balqā', which was fully abandoned by the end of the century and paying only a pastoral tax, presumably by semi-nomadic tribes that camped there on a seasonal basis.[109] The regional pattern of growth and decline that emerges for late Mamluk and early Ottoman Jordan suggests, perhaps, that endowment was the key to preserving the financial solvency of agricultural estates, particularly in times of political turmoil.

Local Perspectives on the State′s Rural Policies

Contemporaries, of course, had their own ideas about the economic health of the Mamluk state in the fifteenth century. Al-Maqrīzī was one of the most vocal critics of fiscal practices. His *Ighāthat al-Ummah bi-Kashf al-Ghummah* is a well-structured critique of what he believed to be the worst of these practices and describes the damage they have done to the Egyptian economy: inflated prices and forced purchases *(ṭarḥ)*, bribery (particularly damaging when financial offices are purchased in this manner), high taxes, and an unstable and inflated currency. According to al-Maqrīzī, one natural factor lay behind such practices: drought,

---

[106]Ibid.; al-Bakhīt, *Nāḥiyat Banī Kinānah,* 88 and 162.

[107]Al-Bakhīt, *Nāḥiyat Banī Kinānah,* 45.

which ultimately led to grain shortages.[110]

The point of view of Syrian historians was comparable, in that they identified drought as the single most important factor behind the financial and political decline of Bilād al-Shām and the regional political struggles that flowed from it. Ibn Qāḍī Shuhbah, who often commented on agricultural conditions throughout Syria, discussed the problems of Jordanian agriculture in his obituary of Iyās al-Jarkashī, who was the Supervisor of the Jordan Valley *(Mushadd al-Aghwār)* during Barqūq's reign and died in prison in 799/1396. Contemporaries condemned Iyās for causing the economic collapse of the Jordan Valley in this period by diverting shared water to his own plantations, forcing sales of his own sugar on local residents at inflated prices *(ṭarḥ),* and terrorizing peasants by cutting the hands off accused thieves.[111] After receiving complaints from local peasants and administrators alike for his abuses, Sultan Barqūq had Iyās arrested and executed that year. Ibn Ṣaṣrā records the events that followed: the former viceroy in Damascus was named to replace Iyās as *Mushadd al-Aghwār*. Once he took up his new post, he began buying up wheat from the markets in the Jordan Valley at low prices, hoarding them, and reselling at inflated ones during the height of a famine.[112]

Throughout the events of this year, contemporaries recognized the sultan's active role in addressing rural grievances and responding to drought and famine. Al-Maqrīzī, in his *Ighāthat al-Ummah,* mentions the grain shortages of 796/1393–94 as illustrating a rare instance when the government acted responsibly to avoid famine. For al-Maqrīzī, there was no famine that year, in spite of drought and grain shortages, because Barqūq invested so much money in charitable endowments.[113] This intriguing statement suggests that, in the eyes of contemporaries, the endowment of rural lands, even while creating vast private estates for the elite, resulted in good things for the people. Moreover, it was a response to natural crises, such as drought, grain shortages, and famine—all the result of rainfall of insufficient levels to support an adequate grain harvest.

Jordanian agriculture is particularly susceptible to drought. Many regions of the country receive just enough rainfall to support the cropping of grains without irrigation; even today, the wheat crop fails one out of every five years from insufficient rainfall.[114] Historical, palynological, sedimentological, and

[114]Palmer, "Following the Plow," 132. Here is where Jordan ecologically differs the most from Egypt: unlike the Nile (before the building of the Aswan Dam), the Jordan River has no annual

dendrochronological analyses have all indicated that the late fourteenth and fifteenth centuries witnessed several cycles of drought in the region and a general trend towards desertification: higher temperatures, reduced rainfall, and abandonment of once cultivated fields.[115] Such processes coincided with cycles of settlement abatement (and in many cases whole-scale abandonment of villages), which are documented by archaeological surveys. So, too, are the local soils vulnerable, particularly to mismanagement of the land. Sugar cultivation is especially hard on soil, depleting it of mineral resources and water; sugar cane must be planted on land that has been left fallow for at least four years.[116] After two years′ of harvest, the land must once again be left fallow or crops other than sugar should be planted. According to Ibn Mammātī, land on which sugar was planted was taxed at a lower rate after the first year, thus losing value over time.[117] Sugar processing is, moreover, ecologically demanding, in terms of fuels and minerals.[118] Deforestation is, thus, a potential correlate of sugar production, leading to further environmental challenges. With the gradual removal of forested areas, soil cover erodes and what remains is depleted of its constituent minerals; recent soil analyses have identified such patterns for the historical periods in Jordan.[119] Written sources and soil science

---

flood. In other words, Egyptian agriculture traditionally relied on flood-basin irrigation, whereas Jordanian farmers depended on regular rainfall for their largely dry-farming grains regimen. Thus, ″drought″ for Egyptian historians meant that the Nile did not reach plenitude a given year, resulting in lower grain yields, whereas for the Syrian historian local drought meant rainfall too low to support the minimum grain yield on which the local population depended for survival. (For a recent analysis of drought from an Egyptian perspective, see Stuart J. Borsch, *The Black Death in Egypt and England: A Comparative Study* (Austin, 2005): 34–39.)

There is

analyses suggest, then, that reduced rainfall and cash crop farming together may have contributed, in the long term, to environmental degradation and crop failures.

The abandonment of villages and fields also contributes to desertification, as long-term fallow land is vulnerable to erosion.[120] While in the long run climatic shifts may account for this abandonment, the immediate causes in the late fourteenth and early fifteenth centuries in Jordan, according to contemporary sources, were the armed conflicts among amirs posted there and their poor (short-sighted) administration of the lands under their supervision. These rebellions seem to have peaked during Faraj′s reign and were worst in the region around Karak.[121] There are, thus, dialectical and complex relations among political turmoil, settlement decline, and environmental decline.

Agricultural History from a Soil Science Perspective

Archaeological surveys verify the general decline of Jordan during the fifteenth century, which is characterized ″on the ground″ by marked demographic decline. It is a striking characteristic of the period from an archaeological perspective that the rapid growth of villages and intensive water use during the fourteenth century (on a scale unparalleled since the Byzantine period) is followed in the fifteenth by abandonment of villages in some parts of the country and a marked reduction in population in those villages that continued to be occupied through the sixteenth century.

The Northern Jordan Project, one of two archaeological projects I direct in the country, was launched in 2003 to identify the human and climatic factors behind the demographic fluctuations of the period.[122] The project began a research collaboration last summer with soil specialists and palaeobotanists from Germany, Jordan, and the U.K. with the goal of measuring soil development (and specifically

---

still no archaeological or soil scientist consensus on the factors behind deforestation in Jordan. It may have been the combined result of overexploitation of timber for fuel and industrial activities (most notable in the Iron Age and Roman periods) and possible clearance of forests to create olive orchards and grain fields, along with climate change and irregular rainfall, which militated against regeneration of forests. For discussions on the relationships between olive cultivation and deciduous forests, see U. Baruch, ″The Late Holocene Vegetational History of Lake Kinneret (Sea of Galilee), Israel,″ *Paléorient* 12, no. 2 (1986): 37–47, and Reinder Neef, ″Introduction, Development and Environmental Implications of Olive Culture: The Evidence from Jordan,″ in *Man′s Role in the Shaping of the Eastern Mediterranean Landscape,* ed. erosion), in combination with archival research (primarily *waqfīyāt*) and archaeological survey and excavation, to identify changes in crops grown and climatic conditions and their relationship, if any, with the political circumstances of the day.[123] Preliminary results of these seasons suggest that the combined effect of drought and political instability damaged the agricultural sector in the geographically exposed lowlands and plateaus and that demographic decline was far from universal for the region.

CONCLUSIONS—DECLINE OR TRANSFORMATION?

"Decline" is in the eye of the beholder. From the vantage point of Jordan, what characterizes the fifteenth century is not urban violence, high taxes on industry, changing trade routes, and confiscation of property—the conditions traditionally cited for Egypt—but climatic and political conditions that made it difficult to farm and to maintain traditional village life. Drought and civil unrest, caused by the amiral conflicts in Karak, seem to have the greatest negative impact on village life and the economy in general in southern Bilād al-Shām. The endowment of the most productive estates in the region during this period may have staved off the worst consequences of both, by allowing for centralized control (and a consistent land management policy), creating security (political, military, and economic), and providing a venue for financial investment in the region (in irrigation canals and dams, roads, storage facilities, etc.) While such endowments did rob the Bayt al-Māl of important tax revenues, it also funneled them into what may have been more effective financial channels. That these were successful enterprises is indicated by their administration in the early Ottoman period: it was more lucrative for the Ottoman state to keep these estates intact than to break them into much smaller *timār*s or *zi'āmet*s. While the evidence is thus far meager, what sources we do have at our disposal suggest that the process of creating rural *awqāf* from former state lands may have been a form of land development, sponsored by the state to respond to and recover from agricultural crises, such as drought, famines, and plague. Seen in this light, the fifteenth century was more a period of rural transformations than decline of the state.

Book Reviews

The Dīwān of Ibn al-Fāriḍ: Readings of its Text Throughout History, edited by Giuseppe Scattolin (Cairo: Institut Français d´Archéologie Orientale, 2004). Pp. 276.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

After years of painstaking research Dr. Giuseppe Scattolin has at last published his critical edition of Ibn al-Fāriḍ´s *Dīwān*. While Ibn al-Fāriḍ lived during the Ayyubid period, his verse was a dominant influence on later Arabic poetry composed under the Mamluks. Moreover, his verse and mystical ideas were, at times, sources of contention among factions of ulama during Mamluk rule, while Mamluk amirs endowed the grave and shrine of this poet whom they venerated as a saint.[1]

Prior to Scattolin, many editions of Ibn al-Fāriḍ´s *Dīwān* were published during the twentieth century, yet all, excepting the edition by A. J. Arberry, lacked careful editing or were flawed in some way. As for Arberry´s edition, it was based on the Chester Beatty manuscript that was independent of the main line of transmission from Ibn al-Fāriḍ´s grandson, ʻAlī, and so it lacked ʻAlī´s hagiographical introduction and appendix of additional, probably spurious verse, ascribed to Ibn al-Fāriḍ.[2] Now, Scattolin has joined these separate lines of transmission in his meticulous edition of the *Dīwān*.

Adding to this work´s importance is Scattolin´s re-discovery during his research of several old manuscripts of the *Dīwān,* including one in Konya dating from between 1242 and 1274, making it the oldest known manuscript. Similar to the Chester Beatty manuscript, it is independent of ʻAlī´s transmission and contains the same fifteen major poems, in addition to a few quatrains and riddles. Scattolin used the Konya manuscript as his primary text to which he then added material from other manuscripts, including those representing ʻAlī´s line of transmission. In his introduction, Scattolin enumerates and describes the eight manuscripts and thirteen earlier printed editions whose readings and variants appear in the notes to the poems. Scattolin then carefully walks the reader through the critical apparatus of his own edition, which is followed by a ″basic bibliography,″ and illustrations of some of the most important manuscripts (pp. 12–28).

Scattolin precedes this important textual information with some brief

[1]See Th. Emil Homerin, *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, His Verse, and His Shrine*, 2nd rev. ed. (New York, 2001).

[2]A. J. Arberry, *The Mystical Poems of Ibn al-Fāriḍ* (Dublin, 1952, 1956).

speculations on the stages of Ibn al-Fāriḍ's life (pp. 1–4). He states that during his last years in Cairo, Ibn al-Fāriḍ chose "to live in seclusion," though we have no evidence to support this. Given that Ibn al-Fāriḍ was married, had at least three children, and a number of students, this seems unlikely. Further, when discussing Ibn al-Fāriḍ's shrine, Scattolin claims that it was "in time enlarged and embellished by many sultans" (p. 3). In fact, to my knowledge, the shrine was never formally endowed by a Mamluk or Ottoman sultan, though they may have attended activities there and given donations. For the most part, the shrine was supported by a *waqf* established by two Mamluk amirs, Tīmūr al-Ibrāhīmī and his protégé Barqūq al-Nāṣirī (d. 877/1472).[3]

As in his previous studies of Ibn al-Fāriḍ, Scattolin reads the poet's verse, particularly the *Al-Tā'īyah al-Kubrá,* as an autobiographical account of the poet's mystical experience, in this case of "separation" *(farq)* from God, "absolute unity" *(al-ittiḥad)* with God, and "universal, all-comprehensive union . . . the synthesis of the One and the Many" *(al-jam')* (pp. 5–6). Scattolin then notes the importance of love to Ibn al-Fāriḍ as a catalyst to his mystical transformation to the "Perfect Man." Despite Scattolin's use of Ibn al-'Arabī's terminology to describe this mystical apotheosis, he is careful to distinguish between some of the ideas of these two contemporaries (pp. 7–11). Scattolin ends this section by offering a partitioning of the *Al-Tā'īyah al-Kubrá* into ten sections "to help the reader to better understand Ibn al-Fāriḍ's mystical experience expressed in his great mystical poem" (pp. 11–12).

Throughout his introduction, Scattolin makes scarcely any mention of the classical Arabic poetic tradition of which Ibn al-Fāriḍ is a part. Addressing this slightly is the preface by a French translator of Ibn al-Fāriḍ, Jean-Yves L'Hôpital (pp. ix–xx). There L'Hôpital touches upon the difficult and, at times, obscure poetic language of Ibn al-Fāriḍ, his use of alliteration for its musical qualities, and the appearance of place names and pilgrimage stops in his verse. L'Hôpital also draws attention to Ibn al-Fāriḍ's use of the "fawn" or "gazelle" to represent his beloved, whom the poet also identifies by the name Laylá and the names of other famous Arab beauties. Like Scattolin, L'Hôpital ends with a short discussion of Ibn al-Fāriḍ's monistic ideas and experience. While both discussions of Ibn al-Fāriḍ's verse and mystical life are limited, Scattolin's critical Arabic edition of the *Dīwān of Ibn al-Fāriḍ* is of immense value, and he is to be commended for his substantive contribution to the study of Sufism and Arabic literature.

STUART J. BORSCH, *The Black Death in Egypt and England: A Comparative Study* (Austin: University of Texas Press, 2005). Pp. 195.

REVIEWED BY RALPH S. HATTOX, Hampden-Sydney College

The potential reader of this comparison of the effects of the fourteenth-century visitation of the Plague in Egypt with those in England should know from the beginning that this is by no means a comprehensive examination of all aspects—social, intellectual, psychological, institutional—of that calamity. It compares, rather, the dramatically different economic consequences of the Black Death on the two areas.

Borsch points out for the potential generalist that the sources for the economic history of Mamluk Egypt are by no means as vast or as accessible as those available for late-medieval Western Europe. He mines the usual archival and literary sources: *waqfīyāt,* chronicles, administrative handbooks, and the like. For his raw economic data for pre- and post-Plague Egypt, he relies on a land survey of 1315 and an Ottoman survey from the end of the sixteenth century. In order to exploit the former effectively and to extrapolate from it data which could be compared to the later survey, he had to establish the value of the *dīnār jayshī,* used in the 1315 survey. He devotes an entire chapter to this discussion of establishing meaningful currency equivalents.

Borsch is aware of the methodological questions that are raised by comparing two such seemingly disparate regions as England and Egypt, and, if he doesn′t manage to eliminate all potential objections, he does make a good case for his approach. He points out the similarities of the two: relatively equivalent populations, similarities in the decentralized relationship of the ″nobility″ and the sovereign, the relative insularity of both, and their similar agriculturally-based economies. He is perhaps a bit too quick to summarily dismiss as an ″Orientalist trap″ consideration of non-economic cultural factors, and their inherent differences, as having some economic impact. Still, by the end of Borsch′s discussion the reader is willing to allow that England and Egypt, if not identical, were near-analogues in their respective regions.

Why, then, were the economic consequences of the calamity so different for the two lands? In England there was the well-known economic benefit for those who survived: wages rose, rents fell, as did the prices of foodstuffs. In Egypt, by contrast, Borsch′s comparison from his pre-and post-Plague data sets demonstrates that wages dropped, rents and prices of foodstuffs rose.

The answer Borsch provides is multifaceted, and based on institutional and social factors. There is first and foremost the dramatic difference in patterns of landholding. While both states treated land and the revenues derived from

agricultural activity as the source of support for a warrior aristocracy, the relationship of each aristocracy to the land and its tenants diverged radically. In Egypt the members of the Mamluk institution were supported by *iqṭā*ʻs, uninheritable and alienable grants of land, supplying revenue for an individual Mamluk or amir, which were administered by civil servants. Since tenure in any particular holding might be short, there was great incentive to milk them for all possible short-term gains, and little incentive to make long-term improvements. The beneficiaries neither lived on their estates, nor did they have more than minimal familiarity with their holdings or tenants; actual physical visits to one′s holdings, if they occurred at all, were limited to participation in expeditions to deal with revolts, Bedouin incursions, or other sources of peril. In these expeditions Mamluks reflected an understanding that, their constant infighting and jockeying for power notwithstanding, they had a common interest in keeping the countryside in line.

This solidarity is cited by Borsch as one of the chief factors in the economic collapse that followed the Plague. When faced with a post-Plague economic crisis in which market forces would have tended to drive up wages and drive down rents and revenues, he sees the Mamluk landholders as making common cause, presenting ″a united front in the face of rural labor demands,″ by not breaking ranks; they profited as well from state decrees which regularly raised the ceiling on rents that could be charged. While in England there were similar acts by the Crown and Parliament to mitigate the economic ″hardships″ of landholders as a result of the dramatic shrinkage of the supply of labor, in the end these failed, and market forces prevailed. Here each member of the landholding aristocracy was in effect competing in the marketplace with all the others for the services of labor. The long term results saw a rise in wages and a decrease in rents.

For the Egyptian peasant and for the economy of Egypt as a whole, the calamity was compounded by the dramatic deterioration of the complex irrigation system by which the annual cycles of the Nile were put to productive use. It took not only manpower but money to do the yearly maintenance chores required to keep the system functioning, and both were in short supply. Not only were there smaller revenues coming in from agricultural lands, but civil administrators, working in the interest of their individual Mamluk clients, diverted monies that would have gone to irrigation maintenance to meet the continuing revenue needs of the urban elite. More land became uncultivable, with the consequent effect on the price of foodstuffs. As their situation became dire, peasants with increasing frequency sought the perceived security of urban life; their lands, at the same time, more and more were claimed by Bedouin, a process that further exacerbated the economic collapse.

One might at first be tempted to criticize Borsch′s work as in one sense uneven: rather than being a full and detailed original study of both the Egyptian

and English economies, it is more a study of the Egyptian economy, and how his findings compare with those of earlier historians concerning England; his use of primary sources is limited entirely to the Egyptian side of the equation. This is hardly a serious flaw, since it would take an almost impossibly versatile historian to be able to pursue both lines with equal skill. In weaving together material extracted from a variety of sources and shedding light on how, starting from a roughly equivalent point, the economic fate of two societies could so dramatically diverge owing to such factors as land tenure and institutional structures, Stuart Borsch has taken us one step closer to an understanding of how the modern world, starting from one near-universal Eurasian calamity, emerged as it did. As he points out, such studies as his, focusing on other societies, could profitably be taken up. The work at hand provides a solid, if not flawless, paradigm.

AḤMAD ṢUBḤĪ MANṢŪR, *Al-'Aqā'id al-Dīnīyah fī Miṣr al-Mamlūkīyah bayna al-Islām wa-al-Taṣawwuf* (Cairo: al-Hay'ah al-Miṣrīyah al-'Āmmah lil-Kitāb, 2000). Pp. 404.

REVIEWED BY RICHARD MCGREGOR, Vanderbilt University

This book aims to set things straight regarding the nature of Sufism. Under a thin veneer of historiographical terminology, at base the author′s position is that Sufism is un-Islamic. In short, the author holds that Sufism arose as a deviant practice among Muslims, while in contrast Islam (as reducible to the author′s Quranic quotations) is unchanging, and thus pure, ahistorical, and monolithic. The book is not concerned with the medieval debates over various Sufi concepts or practices, but is rather a long lesson for the reader in how Mamluk era Sufism is not compatible with the author′s own (unexamined) understanding of Islamic religion. The methodological flaws run deep. The point is even made that one of the duties of the historian is to identify and warn contemporary readers against ″mistakes″ like Sufism. It does not seem to bother the author that this methodology is utterly untenable when it turns to material outside the researcher′s own cultural sphere. Coptic religious history, or say that in China under the Ming dynasty, are thus beyond the horizon of this historian.

The first part of the introduction provides a discussion of the nature and goals of Sufism, followed by sections on its origins and relation to asceticism *(zuhd)*. The reader is told that a detailed treatment of Sufi terminology is impossible here because Sufis are inconsistent and utterly subjective in their use of terminology

(pp. 15, 41). The impossibility of a religious tradition sustaining itself while its participants cannot communicate with one another, or those who come after them, does not arise. In reality, there is plenty to say about the evolution of Sufi terminology (or, for example, theological or legal terms), but the fact that vocabulary shifts in meaning over time is surely not proof that it is subjective. The author builds on this ″subjectivity,″ tying the Sufi idea of *dhawq* (tasting) to the Quranic idea of *hawā*' (desire, selfish passion). The aim here is to conflate mystical epistemology with the Quranic condemnation of ″him who takes his own passion as a god. . . .″ (Quran 25:43). The origin of Sufism is predictably Christian and Jewish, although no historical evidence is provided. Instead, a Quranic quotation to the effect that it itself is the perfection of religion is taken as proof that Sufism could thus have nothing to add or be of any use (p. 22). The entire premise that any religious inspiration *(waḥy)* could occur after the revelation of the Quran is rejected (p. 23). The ascetics are superior to the Sufis because they are diligent in their prescribed prayers, but asceticism is finally also rejected as fundamentally superfluous (pp. 26–28).

The second part of the introduction asserts that Sufism was behind an intellectual decline among the ulama of the Mamluk period. Evidence for this decline is the proliferation of commentaries and epitomes, although no details are provided. This correlation between intellectual decline and the production of commentaries is adopted without question. The only heroes fighting this decadence were the *mujtahid*s, like Ibn Taymīyah. The introduction ends with a concise summary of the author′s approach and ultimate conclusion, one that denies any historicity to Islam, reducing it to an abstract theological statement that takes it out of the realm of human history. We are told that, ″. . . in the end Sufism is simply the sum of the opinions of those who follow it . . . and what disgraces Sufis disgraces Sufism; but Islam is different, it is the rule of God over humanity. It is unaffected by the faults of Muslims″ (p. 41). Logically, what is said here about Sufism would also apply to the elaboration of *kalām* or Islamic law, but that goes unsaid.

The body of the study takes up figures such as al-Ghazālī, Ibn ʻArabī, and Ibn Taymīyah. Critics of Ibn ʻArabī such as al-Baqāʻī are touched upon, as is his defender al-Shaʻrānī. A few lesser but more colorful Sufis of the period are singled out as examples of the poison fruit of Sufism. These include al-Bājirbaqī, Ibn Baqaqī, and Ibn Labbān, each of whom held beliefs accepted only by his followers. A long description is then provided of the figure of the *walī,* his veneration by his followers, and the un-Islamic nature of it all. There is no analysis, historical or otherwise, in this treatment.

The author picks from the historical chronicles familiar to all historians of Mamluk Egypt. However, the bibliography does provide brief annotations to eighty-eight manuscripts (most of them hagiographical documents) found in the Egyptian

National Library. The concluding section restates the assertion that this study ″makes clear the gap between the religion of Islam and the beliefs of many Muslims in the Mamluk period″ (p. 359). Sufism has been a mistaken path taken by many. The author deduces from this the root of an intellectual decline in the Islamic world, one that would later open the door to European invasion and domination (p. 373). The author asserts finally that Sufism, like Wahhabism, is an extreme best avoided.

This book offers young academics in Egypt and elsewhere a poor model for critical or stimulating research. Viewing history as a soapbox from which to expound one′s own religious beliefs has no place in a multi-religious global village. Perhaps even worse, this approach tempts the researcher with short cuts out of difficult historical complexities, be they methodological or fact-based. Tendentiousness, religious or otherwise, smooths over the difficulties that writing history should embrace, and even seek out.

ANNE-MARIE EDDÉ, *La principauté Ayyoubide d′Alep (579/1183–658/1260)* Freiburger Islamstudien, vol. 21 (Stuttgart: Franz Steiner Verlag, 1999). Pp. 727.

REVIEWED BY BETHANY J. WALKER, Grand Valley State University

Anne-Marie Eddé′s *opus magnum,* a seven-hundred page tome on the Ayyubid Principality of Aleppo, is based on her doctoral dissertation, written under the supervision of Dominique Sourdel and submitted to the Sorbonne in 1995. The author, who is now Director of the Institut de Recherche et d′Histoire des Textes at the Centre National de la Recherche Scientifique in Paris, worked closely with the leading French and German scholars of the Ayyubid and Crusader Levant, including Jean-Claude Garcin, Jean Richard, Heinz Halm, and Hans Mayer, and the author′s debt to these scholars is duly acknowledged throughout the volume. This formidable monograph is the most synthetic, detailed, and exhaustive textual study of Ayyubid Aleppo now available. Much more than another analysis of the Ayyubid city, Eddé′s work is a finely-tuned analysis of the principality and the role of the city within it during a brief eighty-year period.[1] Building on the textual

[1]Previous works on Ayyubid Aleppo include: Muḥammad Rāghib al-Ṭabbākh, *I'lām al-Nubalā' bi-Tārīkh Ḥalab al-Shahbā'* (Aleppo, 1923–26); J. Sauvaget, *Alep, essai sur le développement d′une grande ville syrienne, des origines au milieu du XIXe siècle* (Paris, 1941); D. Sourdel,

and theoretical foundations laid by Jean Sauvaget in his 1941 monograph,[2] Eddé spins his short chapter on the Ayyubid city into an encyclopedic compendium and analysis of written sources relevant to the principality as whole when it was at its height, through an evaluation of Aleppo's political, economic, religious, and social institutions. The work offers a sophisticated model of textual criticism that is applicable to any period of research.

The goals of Eddé's study, described in detail in her Introduction, are to present a synthesis of the data available on Ayyubid Aleppo, culled entirely from the textual sources, and to situate the city in the context of its principality and the principality in a larger political context (p. 16). She deliberately eschews theoretical works and non text-based studies in favor of a purely textual approach to the topic, in spite of the availability of a wealth of art historical, archaeological, and anthropological sources. She is, moreover, careful to cite only those secondary sources whose focus areas are geographically close to and roughly contemporary with hers: comparisons with Ayyubid Egypt are kept to a minimum, there are practically no references to scholarship on medieval Europe, and Mamluk sources are carefully selected for their relevance to twelfth- and thirteenth-century northern Syria. She justifies such an approach to her topic, accepting the pitfalls in rejecting other forms of supporting scholarship, in these terms:

> Nous avons voulu au contraire rester au contact des sources au risqué d'apparaître parfois trop analytique. L'intérêt d'une telle étude n'était pas de faire correspondre des connaissances générales acquises sur d'autres terrains à la situation en Syrie du Nord, mais bien au contraire de partir des données éparpillées et fragmentées qui apparaissent dans nos sources pour aboutir à une synthèse régionale qui offer, malgré ses imperfections, sa propre originalité (p. 586).

While her selection is focused, the sources she adopts for her study are extensive, combining chronicles, biographical dictionaries, geographies, royal decrees, treaties, and coins (limited to a coin catalogue and one numismatic study in article form) and epigraphy (however to a limited degree). The Arabic sources include Ibn Shaddād, ʻImād al-Dīn al-Iṣfahānī, Ibn al-Athīr, Ibn al-ʻAdīm, and Ibn Wāṣil,

"Esquisse topographique d'Alep intro-muros à l'époche ayyoubide," *Annales archéologiques de Syrie* 2 (1952): 109–33; H. Gaube and E. Wirth, *Aleppo: Historische und geographische Beiträge zur baulichen Gestaltung, zur sozialen Organisation, und zur wirtschaftlichen Dynamik einer vorderasiatichen Fernhandelsmetropole* (Wiesbaden, 1984).

[2]Sauvaget, *Alep.*

among the chroniclers; the biographical dictionaries of Ibn al-Qifṭī and Ibn al-ʿAdīm *(Bughyat al-Ṭālib fī Tārīkh al-Ḥalab);* the topographies of al-Ḥarawī, Yāqūt, and Ibn Shaddād *(Al-Aʿlāq al-Khaṭīrah fī Dhikr Umarāʾ al-Shām wa-al-Jazīrah);* and a variety of Mamluk sources that incorporate earlier, Ayyubid material (al-Nuwayrī, al-Dhahabī, al-Qalqashandī, al-Yūnīnī, Ibn Kathīr, Ibn Khallikān, al-Ṣafadī, Ibn al-ʿImād, al-Dimyāṭī, Ibn Baṭṭūṭah, and Abū al-Fidāʾ, among others). Eddé also makes use of several sources in Persian (Ibn Bībī, for the Seljuks of Rum, and Rashīd al-Dīn, for the Il Khanids), Syriac (Michael the Syrian and Bar Hebraeus), Armenian (many brief accounts), and Latin (largely secondary sources on the Crusader states), all in French translation. Much of the quantitative (prices, salaries, revenues), enumerative (lists of settlements and public buildings), and demographic (family trees, charts of *nisbah*s and professions) data are culled with care from these sources and are tabulated in convenient forms in the many appendices that are included at the back of the monograph.

In terms of its structure, *La principauté Ayyoubide d'Alep* consciously mirrors that of the Ayyubid chapter in Sauvaget's monograph,[3] which was divided into a historical survey; an analysis of urban development; and descriptions of the archaeological remains of the city, its basic characteristics, and its physical development. Eddé divides her study into two parts: political and social history. Part One largely expands on Sauvaget's historical summary, focusing on the reigns of al-Ẓāhir Ghāzī (579–613/1183–1216), al-ʿAzīz (613–34/1216–36), and al-Nāṣir Yūsuf II (634–58/1236–60). Each chapter is subdivided into multiple sections, based on the outstanding characteristics or developments of each reign, such as the diplomatic relations of the principality under al-Ẓāhir, an assessment of Tughril's regency, a comparison of the early and later years of al-Nāṣir's reign and a description of his diplomatic and strategic failures; and the events leading up to the Mongol invasion. Eddé's unique contribution in this section is diplomatic history, a topic on which she had already published extensively. On this topic she writes a nuanced and thoroughly documented assessment of the Aleppan sultans' diplomatic relations with other Ayyubid states, the Seljuks of Anatolia, the Armenians of Cilicia, the Crusaders, and Italian mercantile states. She concludes Part One with a sobering evaluation of the collapse of Ayyubid Syria, which she suggests was due as much to structural failures (Ayyubid rivalries, al-Nāṣir's political and diplomatic inexperience, the ethnic heterogeneity of Aleppo's army) as to the Mongol invasion of 658/1260 (pp. 191–92).

Part Two is dedicated to social and administrative history in a broad sense and more fully explores themes that were merely summarized in Sauvaget. It is subdivided into three sections: administrative history (the institutions and power

[3]Ibid., 129–54.

of the state), social history (the religious and cultural life of Aleppo), and what the author calls ″the activities of the countryside and towns″ (in short, the hinterland). Section One aims at identifying the different levels and forms of power in thirteenth-century Aleppo (political, economic, and social), their institutional forms, and how they interact and intersect on the levels of officialdom and civilian society.[4] Eddé considers the institution of *iqṭāʿ* a central component in the multi-faceted power structure binding the state to its officials and the general population. The author traces the development of *iqṭāʿ* in the principality and offers promising lines of inquiry for evaluating political, economic, and social relations in the process. She suggests that as part of the process towards centralization, Sultan al-Ẓāhir strengthened the hand of the state over the powerful amirs by reassigning their *iqṭā*ʿs, which were largely important towns and fortresses, to governors (*wālī*s) or their lieutenants (*nāʾib*s), compensating amirs with *iqṭā*ʿs consisting of villages (or shares thereof) and agricultural land (pp. 281–82). In this way strategic centers came under the direct control of the sultan and agricultural land was essentially farmed out to amirs and occasionally rotated, foreshadowing the Mamluk *iqṭāʿ* system of the fourteenth century. This analysis is followed by a description of Aleppo′s defensives and a highly readable and entertaining narrative of Ayyubid warfare (pp. 291–310). Her suggestions about the long-term environmental impact of siege warfare, based entirely on written sources, may be supported by archaeological and environmental research and warrant further consideration by specialists in these fields. Military presence was not always detrimental to the countryside, however. For the author, fortresses were the expression of the power of the Ayyubid state in all its forms: they were not merely military centers but were also integral to the economic life of the countryside by generating development. Citing written sources, she claims that village markets thrived under the economic stimulus of castles nearby and that their markets often collapsed and the villages declined or were abandoned once a fortress was abandoned or destroyed (p. 298). Again, such patterns are confirmed by the archaeological record, which illustrates in sometimes vivid ways how closely garrison and village economies were intertwined in the Ayyubid and Mamluk-period Levant.[5]

---

[4]This theme has recently been the focus of a three-year joint research initiative of the French and American institutes in Cairo, called ″Exercising Power in the Age of the Sultanates″ (www.arce.org/ifao/ifao.html). The proceedings of a bi-lingual conference launched by this project and held in Amman in May, 2005, is being published by l′Institut Français du Proche Orient in Damascus and Amman (*L′Exercise du pouvoir à l′age des sultanats: Bilad al Shām et l′Iran*, ed. B. J. Walker and J-F. Salles [in press]).

[5]To cite only one example, it appears that the village of Ḥisbān in central Jordan was gradually abandoned after the relocation of the Mamluk citadel to nearby Amman in the mid-fourteenth century. The village likely supplied the garrison with foodstuffs and played a role in the processing

Eddé devotes her second section of Part Two to Aleppo's religious and cultural life, for which she relies heavily on biographical dictionaries and such entries included in chronicles in reconstructing social classes, power relations, economic activity, and demographic change.[6] One of the most interesting themes to emerge from this section is that the revival of Sunni Islam under the Ayyubids did not necessarily eradicate Shi'ism.[7] Aleppo retained its religious diversity, even while numerous madrasahs were built to promote "orthodox" Islam and the sultan ordered from time to time an attack on local Shi'ah communities. Eddé cites three different Shi'ah communities in Aleppo, all of which maintained a presence in the city throughout the period and are attested in the written sources: the *ashrāf* (direct descendants of the Prophet Muḥammad), the Imamis (Twelver Shi'is), and the assimilated Ismailis (a holdover from the period of Fatimid control of the region) (pp. 436–37).

The final section is the most innovative of the monograph and should have the most to offer social historians. It deals with what is often called the "hinterland," that is rural society and the physical landscape and resources of the countryside. Maintaining her concern with power relations throughout, Eddé carefully combs the texts for references to the countryside and the fellahin.[8] She describes the overwhelming concern for water in the sources and the methods used to capture, transport, and store it. She describes the natural resources of the countryside, including agricultural products, timber, salt, and minerals, and the exploitation of these resources by the state and *muqṭa*'s.[9] Unfortunately, many of these descriptions take the form of lists, which is often all the original texts had to offer on such subjects. Eddé also attempts to describe village-Bedouin relations (p. 500) and the ranking of settlements (pp. 570–73) through the written sources. Here, however,

---

and distribution of cane sugar for the state official stationed there. See B. J. Walker, "Mamluk Administration of Transjordan: Recent Findings from Tall Hisban," *Al-'Uṣūr al-Wusṭá* 13, no. 2 (2001): 29–33; B. J. Walker and Ø. S. LaBianca, "The Islamic *Qusur* of Tall Hisban: Preliminary Report on the 1998 and 2001 Seasons," *Annual of the Department of Antiquities of Jordan* 47 (2003): 443–71; and B. J. Walker, "Mamluk Investment in Southern *Bilād al-Shām* in the Fourteenth Century: The Case of Hisban", *Journal of Near Eastern Studies* 62, no. 3 (2003): 241–61.

[6]The author identifies twelve amirs and over 344 names of the civilian elite in the biographical entries for this study (p. 18).

[7]In this she disagrees with Sauvaget, who asserts that the madrasahs succeeded to such a degree in their proselytizing functions that Shi'i Islam survived merely as the doctrine of a weak and disappearing community that played no active role in Aleppan society (Sauvaget, *Alep,* 137).

[8]Her primary sources in this respect are Ibn al-'Adīm, Ibn Shihnah, Ibn Shaddād, and Yāqūt.

[9]The medieval texts, once again, offer tantalizing information on contemporary assessments about environmental decline. Deforestation, for example, is attributed by the Arab sources to the construction of new homes and to siege warfare (p. 497). Eddé makes the most of references, as few of them as there are, to generate a meaningful narrative.

is where over-reliance on the medieval texts and refusing to incorporate the results of archaeological and anthropological research (which has an extensive literature on the subject) weaken the narrative: the author has little to say about village or nomadic life in general, admitting that the sources are largely silent about such matters. In short, one cannot discuss the ″hinterland″ in any depth without recourse to the archaeological literature.

Her written sources, however, are strong when it comes to numbers: Eddé exerts much effort in reconstructing price lists of agricultural commodities and assessing price fluctuations of the same (pp. 554–58). Her population estimates illustrate the most creative and rigorous use of the textual material at her disposal (pp. 558–65). Eddé arrives at an estimate of 50,000–80,000 people living in Aleppo on the eve of the Mongol invasion, a number at which she arrives using a variety of methods adopted in earlier studies on Islamic cities, based on: the number of baths in the city (one bath servicing 3,000–5,000 people), the number of *masjid*s, city density calculated at 200 people/hectare (applied in studies on Nishapur, among other cities), the number and size of houses, and the size of the city′s Great Mosque. Eddé uses a combination of all of these and checks them against numbers provided by the texts, which she admits are probably exaggerated by the Arab historians.

In her intensive and extensive, I should say exhaustive, use of the available textual material Eddé is to be congratulated. It is a gargantuan task, and she makes the most of her source material to write a coherent and ambitious narrative. It is also in the exclusive use of these sources that she is to be criticized. Although Eddé justifies her methodology in her Introduction, and indeed reminds her reader of this throughout the monograph, the ″grand narrative″ suffers in places, nonetheless, because there has been no recourse to the rich scholarly literature generated by art historians, archaeologists, anthropologists, and environmental historians.[10] The treatment of Ayyubid Aleppo is, thus, uneven, with strengths in the analysis of political and economic history but a weakness in cultural history. To her credit, the author is more than aware of such deficits,[11] acknowledging throughout where her sources fail and presenting her work as only a first stage in a synthesis of available written sources on the topic (p. 15). In this regard, it is the questions that emerge from her reading of the more limited sources that are the most interesting

---

[10]The author does cite a few art historical sources, but they are out-of-date and do not reflect the best of the literature available for her study.

[11]Her goal is ultimately synthesis of the fractured written record and to let that record speak for itself: ″L′intérêt d′une telle etude n′était pas de faire correspondre des connaissances générales acquises sur d′autres terrains à la situation en Syrie du Nord, mais bien au contraire de partir des données éparpillées et fragmentées qui apparaissent dans nos sources pour aboutir à une synthèse régionale qui offer, malgré ses imperfections, sa propre originalité″ (p. 586).

and should generate scholarly research in this field for years to come. Such questions as the role of the *muqṭa'* in planting decisions, what accounts for village abandonment, how to describe political actors and action, what was the relationship between central and regional powers, and how to define Aleppo as a ″city″ are promising lines of inquiry across the disciplines.

These criticisms aside, Eddé′s monograph offers one of the best models for textual criticism in modern Islamic historiography and is the best description available to us today of Ayyubid Aleppo; it is beautifully written, exhaustive in its textual synthesis and analysis, and a truly excellent reference for the period. Mamluk scholars will benefit from the work′s holistic portrait of the principality on the eve of Mamluk annexation, which describes the institutions, personnel, settlement network, land management systems, and defensive network that were passed on to the Cairo-based sultanate. The author appropriately concludes her study with what she believes was, ultimately, the character of Ayyubid Aleppo: there was social mobility (merchants were religious scholars, scholars were soldiers, soldiers were poets), ethnic diversity and tolerance (urban neighborhoods were not segregated), and religious diversity (Christians and Shi'is were active members of their mixed communities), and the foundations were laid there for the future economic prosperity of northern Syria (through its trade with Europe) (pp. 582–86). Although the Mongol invasion dealt Aleppo a terrible blow, it was the society described by Eddé that experienced a renaissance in the fourteenth century, this time under the Mamluks (p. 586).

SHAMS AL-DĪN ABŪ 'ABD ALLĀH MUḤAMMAD IBN ABĪ BAKR IBN QAYYIM AL-JAWZĪYAH, *Al-Ṭuruq al-Ḥukmīyah fī al-Siyāsah al-Shar'īyah, aw, Al-Firāsah al-Marḍīyah fī Aḥkām al-Siyāsah al-Shar'īyah,* edited by Sayyid 'Umrān (Cairo: Dār al-Ḥadīth, 1323/2002). Pp. 286.

REVIEWED BY JON HOOVER, Near East School of Theology, Beirut

By the Mamluk era, much of the Muslim religious establishment had made peace with the political impotency of the caliphate, and it was widely accepted that the military rulers and their *maẓālim* courts performed necessary public functions that fell outside the jurisdiction of the qadi and the jurists′ *fiqh.* While not challenging the fundamental order of the Mamluk government, Ibn Taymīyah (d. 1328) and his student Ibn Qayyim al-Jawzīyah (d. 1350) contested this limitation of religious law in a number of works on *al-siyāsah al-shar'īyah* (governance in accord with

the shari'ah). These writings reconceive the *fiqh* to encompass the offices of public administration, endow the non-caliphal ruler with religious authority, and make the overall welfare of Muslim society the aim of the shari'ah.

A key work in the genre of *al-siyāsah al-shar'īyah* is Ibn al-Qayyim's *Al-Ṭuruq al-Ḥukmīyah.* This is dedicated primarily to the evaluation of evidence in court cases. In the formalistic judicial procedure of classical *fiqh,* the qadi could take only verbal testimony of reputable witnesses (and sometimes circumstantial evidence) into account. It was thus difficult to attain convictions, leading to the notion that Islamic law was inadequate in itself to maintain civil order. Rejecting these limitations, Ibn al-Qayyim draws all manner of evidence, including testimony extracted through judicial torture, into a religious framework devoted to public justice. This serves both to inform *maẓālim* procedures with religious legitimacy and guidance and to challenge the qadis to expand their range of admissible evidence.

The interest of such ideas to modern Muslims seeking comprehensive Islamicization of the political sphere is apparent. This helps explain the proliferation of editions and printings of Ibn Taymīyah's and Ibn al-Qayyim's works on *siyāsah*. The edition of Ibn al-Qayyim's *Al-Ṭuruq al-Ḥukmīyah* under review was prepared by Sayyid 'Umrān. As for text critical matters, 'Umrān tells us only that he relied on two copies (unidentified), one of which was already edited. The printing contains a number of unfortunate errors not found in previous editions (p. 9 l. 15 *hādhihi* for *hal;* p. 107 l. 15 a stray *alif* after *idhā;* p. 182 l. 3 *al-ḥukm* spelled *al-ḥukkm,* etc.), but footnotes helpfully define terms and give Quran and hadith references. In short, this text gives access to Ibn al-Qayyim's thought, but it is little more than a trade edition, and not a very good one at that. Rather than comment further on 'Umrān's work, I have judged it more useful to compile a history of the printing of Ibn al-Qayyim's text to draw attention to the numerous versions available and encourage someone to assemble a serious critical edition of this important work.

Ibn al-Qayyim's text has come into the hands of at least eight editors since 1900. Muḥammad Ḥāmid al-Fiqī's edition (Cairo: Maṭba'at al-Sunnah al-Muḥammadīyah, 1372/1953) is based on two late manuscripts. Although undated, al-Fiqī reckons that the first was copied in the late nineteenth century at the earliest. The second was copied in 1338/1919–20.

Al-Fiqī notes that the company Shirkat Ṭab' al-Kutub al-'Arabīyah—which, he adds, was established and run by Muḥammad 'Abduh—also made Ibn al-Qayyim's text available, but he regrets that it seems to have been based on a corrupt source full of omissions. The edition in question was printed at the Maṭba'at al-Ādāb wa-al-Mu'ayyad in Egypt in 1317/1899–1900. Unfortunately, it does not include any mention of its editor or manuscript source. It differs from al-Fiqī's text at many points and suffers a large omission on p. 121 corresponding to

al-Fiqī pp. 122–38 and ʻUmrān pp. 105–19.

An edition by Aḥmad ʻAbd al-Ḥalīm al-ʻAskarī (Cairo: Al-Mu'assasah al-ʻArabīyah lil-Ṭibāʻah wa-al-Nashr, 1380/1961) gives no indication of its textual sources. Perhaps al-ʻAskarī had resort to al-Fiqī's text since comparison of the first three pages in the two editions shows only very minor differences.

Muḥammad Jamīl Ghāzī's edition appeared in both Jedda (Dār al-Madanī lil-Ṭibāʻah wa-al-Nashr wa-al-Tawzīʻ, no date) and Cairo (Maṭbaʻat al-Madanī, no date). Although paginated and typeset differently, these two printings may have come out about the same time. Both include an introduction by Ghāzī dated 29 Dhū al-Qaʻdah 1397/November 10, 1977. In the preface to the Cairo printing, the publisher Maḥmūd ʻAlī al-Madanī briefly honors the passing of his father during Ramaḍān 1398/1978. This note is absent from the otherwise identical preface to the Jedda version. Ghāzī bases his text on a photograph—in the possession of a certain Muḥammad Naṣīf—of a complete manuscript in the Baghdad library Maktabat al-Awqāf al-ʻĀmmah dated Dhū al-Ḥijjah 811/1409. Ghāzī notes that this manuscript is better than the defective sources used by ʻAskarī and al-Fiqī, and Ghāzī's text does in fact differ from these two at many points.

A printing by Ibrāhīm Ramaḍān (Beirut: Dār al-Fikr al-Lubnānī, 1991) does not indicate its source. However, information in footnotes on the first three pages referring to "the printed text" (unidentified) and to textual variants mentioned by "the editor" (again unidentified) correspond to what we find in al-Fiqī's edition.

ʻIṣām Fāris al-Ḥarastānī, another editor of Ibn al-Qayyim's text (Beirut: Dār al-Jīl, 1998), criticizes the poor quality of earlier editions, but regrettably he fails to note his sources. The text itself is clearly printed and is accompanied by notes defining terms and providing hadith references. There is also a hadith index. While this edition provides hadith collections and numbers, the references in ʻUmrān are more helpful in that they also indicate the books *(kitāb)* and sections *(bāb)* in the respective collections.

Coming out in the same year as ʻUmrān's work, the text of Ṣāliḥ Aḥmad al-Shāmī (Beirut: Al-Maktab al-Islāmī, 1423/2002) is drawn from al-Fiqī and an edition by Bashīr Muḥammad ʻUyūn, which I was unable to locate. Al-Shāmī provides no publication information for ʻUyūn's edition and tells us only that the latter based his text on a number of earlier printings of Ibn al-Qayyim's work. Al-Shāmī's primary contribution is sustained attention to the structure and rational division of the text.

Also worth mentioning is the English translation of Ibn al-Qayyim's work by Ala'eddin Kharofa, *The Legal Methods of Islamic Administration* (Kuala Lumpur: International Law Book Services, 2000). The translation is serviceable if somewhat free, and it follows variously the Arabic of Ghāzī (Jedda), al-ʻAskarī, and al-Fiqī (in an undated printing by Dār al-Kutub al-ʻIlmīyah in Beirut). Kharofa's division

of the work into ten chapters is not found in the Arabic and sometimes obscures the flow of Ibn al-Qayyim's argument.

To conclude, substantial effort has been given over the last several decades to making Ibn al-Qayyim's *Al-Ṭuruq al-Ḥukmīyah* readily accessible. From a scholarly point of view, however, the situation is chaotic. Pagination varies widely from printing to printing. Very little progress has been made toward a critical edition, and no one available version is of such distinguished quality that it might serve as the reference standard until such time as there is a proper critical edition. The time is thus ripe for a disciplined attempt at a critical text.

ʻĀMIR NAJĪB MŪSÁ NĀṢIR, *Al-Ḥayāh al-Iqtiṣādīyah fī Miṣr fī al-ʻAṣr al-Mamlūkī* (Cairo: Dār al-Shurūq lil-Nashr wa-al-Tawzīʻ, 2003). Pp. 390.

REVIEWED BY STUART BORSCH, Assumption College

For any scholar in search of an up-to-date survey of the Mamluk economy, this book serves as a valuable resource. Its scale and scope cover a wide panorama of factors that drove and influenced the Mamluk economy. The title is slightly misleading, as the book is really a study of the agrarian, not urban side of the economy. However, this misnomer is a pleasant surprise for scholars, as the rural facets of Egypt's economy still remain neglected compared to the urban ones.

The first chapter is devoted to geography and offers fresh material for those interested in the subdivisions and routes of major canals in Egypt's agrarian system. It also provides a detailed survey of population levels during the Mamluk period. It also provides a very well-documented examination of plague deaths in the fourteenth and fifteenth centuries.

The second chapter explores the variations in landholding. It extensively details the function and operation of that enigmatic and elusively complicated structure: the *iqṭāʻ* system. Although not the last word in exploring this subject, the book is very helpful in outlining and clarifying areas of this method of tax farming. The book then describes the agrarian side of pious endowments *(waqf),* relating the ways in which funds were channeled from donor to tax farmer and tax farmer to the endowment. The nature of *rizq* as well as *milk* lands are also discussed here.

The third chapter is devoted to the organization of agrarian life, a subject that has been relatively ignored in previous studies. The use of specific agricultural tools is described here, as well as the way in which labor was applied to different applications. The all-important irrigation system is studied in careful detail, a

systematic if not novel approach to the structure of wet-farming in the delta and valley of the Nile. This chapter also includes a very engaging exploration of the social conflicts and problems associated with the systems of *iqṭāʿ* and *waqf*.

Chapter four serves as an encyclopedia of the different plants and animals raised in the agrarian economy of Egypt. The author provides a separate description and series of tables on the various kinds of crops grown for proto-industry and urban consumption. It also covers, in some depth, the use of animals for traction and pasture in the rural life of Egypt.

Chapter five examines, minutely, the kinds of rents or taxes imposed on peasants. Some of this is a repeat of details that can be found in other sources, but it serves well as a general outline of the organization of *kharāj, ʿushr, jizyah,* and *mukūs*. For a reader approaching these subjects for the first time, this is a valuable source of reference information.

The final chapter is perhaps the best and most original in the book. The author takes on the difficult task of describing peasant life in Mamluk Egypt. This is a very difficult area due to a paucity of sources but the author is able to extract enough information to provide a fresh and cogent look at this too-often ignored arena of life in the Mamluk Sultanate.

This book provides a valuable reference for scholars, as well as keen insight into otherwise obscure areas of Egyptian life.

ḤASAN AḤMAD JAGHĀM, *Al-Jins fī Aʿmāl al-Imām Jalāl al-Dīn al-Suyūṭī* (Sūsah: Dār al-Maʿārif lil-Ṭibāʿah wa-al-Nashr, 2001). Pp. 395.

REVIEWED BY SYRINX VON HEES, Universität Bonn

The work under review claims to present examples of al-Suyūṭī's writings on matters of sexual life. In the introduction the author states his aim in writing this book: "I consider it our obligation—we, the people of this age—to re-establish connection to and better understanding of what our grandfathers left us in the form of literary and scientific heritage. We did not comprehend all the dimensions of this legacy. In many cases we did not even look at it. I hope, that (through this book) we will undermine the wall of indifference which separates the cultivated among us from the pioneers of Arab civilization, who were more tenacious than ourselves" (pp. 18–19). The author attributes special tenacity to Jalāl al-Dīn al-Suyūṭī, especially in his writings on sexuality. Jaghām claims that al-Suyūṭī's books on erotica, characterized by the usage of explicit sexual diction, were until

now ignored in studies on al-Suyūṭī and his works (p. 25). He accuses modern scholars interested in al-Suyūṭī either of deliberately ignoring these works or of denying that these works were written by al-Suyūṭī. He argues that modern Arab scholars′ avoiding work on these books stems from religious conservatism and apparent piety, which is a late development in Arab culture (pp. 69–78). However, in the introduction he undermines his own argument by presenting the reader with a quotation from al-Jāḥiẓ criticizing his contemporary colleagues for avoiding explicit sexual terminology (pp. 23–24).

The author has used most of the studies and bibliographical works on al-Suyūṭī written in Arabic only. He points out, that in certain bibliographies, the names of some of these books were altered and others were not mentioned at all, due to the fear that they might offend the modesty of the readers (p. 69).

After the introduction, he presents the readers with a summery of al-Suyūṭī′s biography. In it he most probably overlooked a minor mistake, claiming that al-Suyūṭī lived for 92 years (p. 33). In a subchapter he gives the characteristics of al-Suyūṭī′s writings on sexuality, stating that al-Suyūṭī used the most explicit and sometimes vernacular words so as to reach the broadest public possible (pp. 63–64). He gives a typology of al-Suyūṭī′s erotic literature, saying that ″since al-Suyūṭī was an imam and a *faqīh,*″ he wrote his works according to the following schema: first Quranic testimony, second exegesis of the Quran, followed by hadith, linguistics, anecdotes and historical events, and finally poetry (p. 52). However, this typology does not apply at least to one of the books cited in this work, namely *Rashf al-Zulāl min al-Siḥr al-Ḥalāl*.

The excerpts from fourteen of al-Suyūṭī′s works start on page 81, thus comprising the main bulk of this book. Six works are completely devoted to ″the science of coitus″: *Shaqā'iq al-Utrunj fī Raqīq al-Ghunj* (pp. 81–102); *Nuzhat al-Muta'ammil wa-Murshad al-Muta'ahhil fī al-Khaṭīb wa-al-Mutazawwaj* (pp. 103-27); *Rashf al-Zulāl min al-Siḥr al-Ḥalāl* (pp. 129–63); *Al-Īḍāḥ fī 'Ilm al-Nikāḥ* (pp. 165–91); *Al-Wishāḥ fī Fawā'id al-Nikāh* (pp. 193–228); *Al-Ayk fī Ma'rifat al-Nayk* (pp. 229–39). In another part, Jaghām selects quotations on sexual life from eight works by al-Suyūṭī dealing with various subjects: *Nuzhat al-Julasā' fī Ash'ār al-Nisā'* (pp. 243–49); *Al-Mustaẓraf fī Akhbār al-Jawārī* (pp. 251–59); *Nuzhat al-'Umr fī al-Tafḍīl bayna al-Bīḍ wa-al-Sūd wa-al-Sumr* (pp. 261–66); *Kitāb al-Raḥmah fī al-Ṭibb wa-al-Ḥikmah* (pp. 267–91); *Ghāyat al-Iḥsān fī Khalq al-Insān* (pp. 293–307); *Laqṭ al-Murjān fī Aḥkām al-Jānn* (pp. 309–22); *Al-Kanz al-Madfūn wa-al-Falak al-Mashḥūn* (pp. 323–41); *Al-Muzhir fī 'Ulūm al-Lughah wa-Anwā'ihā* (pp. 343–50).

In this main part of Jaghām′s book the author does not specify the reason for selecting certain extracts and omitting others. Most of the works from which Jaghām extracted his selections were edited recently, as he mentions himself, and

the rest were printed in the nineteenth century, mainly in Egypt. In some cases, he criticizes the editors and corrects their work without referring to any original manuscript (for example, p. 95). It is evident from the footnotes that he did not use original manuscripts. His footnotes are not systematic and precise. In many cases he does not provide page numbers of the secondary literature he is citing, nor any information on the editions of primary sources he is using. Due to the lack of proper usage of quotation marks and footnotes it is sometimes impossible to distinguish between the comments of the author and the original text of al-Suyūṭī.

A work which is reproduced in toto is *Rashf al-Zulāl min al-Siḥr al Ḥalāl*. In the introductory comment on this work the author argues that al-Suyūṭī's intention in writing this book was to fight the widespread homosexual behavior of his contemporaries. This is the interpretation of Jaghām, who also claims that showing homosexuals the delights of heterosexual life is a proven cure for homosexuality in our days (p. 133). Such an interpretation and such a statement are definitely questionable. The author projected his own opinion onto al-Suyūṭī's book, which belongs to the *maqāmāt* genre; its language and message are not at all pedantic.

Jaghām, without referring to any manuscript, tries to reconstruct a work attributed to al-Suyūṭī, namely *Al-Ayk fī Maʿrifat al-Nayk.* His reconstruction of al-Suyūṭī's work is very dubious, because the excerpts he uses are derived from another book by Niʿmat Allāh al-Jazāʾirī, where the latter does not at all indicate that this material belongs to al-Suyūṭī (pp. 229–39).

Jaghām states that the medical work of al-Suyūṭī is disappointing because it is full of descriptions of superstitious practices (pp. 268–69 and 272–73). In footnotes he tries to explain to the reader the names of some spices used in medical prescriptions. However, he fails in a number of cases, as for example his fantastic explanations for *dār ṣīnī* and *qāqūlah,* which are simply cinnamon and cardamom (p. 274).

In the final analysis this work is not a scholarly contribution to our knowledge of al-Suyūṭī and his writings on erotica.

AḤMAD ḤUṬAYṬ, *Qaḍāyā min Tārīkh al-Mamālīk al-Siyāsī wa-al-Ḥaḍārī (648–923 H/1250–1517 M)* (Beirut: al-Furāt lil-Nashr wa-al-Tawzīʿ, 2003). Pp. 295.

REVIEWED BY AMALIA LEVANONI, University of Haifa

This volume is a selection of Ḥuṭayṭ's articles on important issues in the history of the Mamluk Sultanate (648–923/1250–1517). It is divided into two parts consisting

of eleven chapters, which have previously been published individually as articles. The first includes four chapters dealing with contemporary historiography, both Mamluk and European, while the second contains seven chapters on internal issues in the Mamluk Sultanate and its foreign relations with the Mongol Ilkhanate and the Crusaders. The book also includes an introduction, index, and a short biography of the author.

Part One of the book begins with a chapter on the reign of al-Ẓāhir Baybars (r. 658–76/1260–77) and one on the third reign of al-Nāṣir Muḥammad ibn Qalāwūn (710–41/1310–41). These are followed by two chapters on the treaties signed during Baybars′ reign, which coordinated land use, commercial activity, and security between the Mamluks and the Franks.

Chapters in Part Two deal with a variety of political, religious, and economic issues. These include chapters on the Mamluk Sultanate′s relations with the Kasrawānī hillmen, Cyprus, and the Kārimī merchants. Other chapters deal with issues of religious institutions under the Mamluks, such as the role of the Abbasid Caliphate and the construction and maintenance of mosques and madrasahs by the elite. The book ends with a chapter devoted to the biases of contemporary Western historiography on the Mamluks.

The rationale behind dividing the book into two parts is not clear. If a division in such a volume is necessary at all, then all chapters dealing with documents and historiography should have been systematically included in one part, and the rest, which discuss Mamluk institutions and historical events, in another. This volume relies heavily on and, in fact, summarizes Western and French research in particular, up until the late 1970s. Only rarely is a recent study mentioned and therefore the book′s contribution to the present state of Mamluk research is small. Moreover, the preface offers a promise that new data is included in the volume in addition to the chapters already published by Ḥuṭayṭ. Unfortunately, the reprinted chapters do not appear in their original format nor is any indication given as to where and when they were previously published. Thus, even the difficult task of going back to Ḥuṭayṭ′s original publications in order to discover the book′s new contributions has been rendered impossible. Despite these drawbacks, this volume serves as a testament to the author′s broad research activity. Indeed, to the present reviewer′s mind, it might have been more appropriate had this book appeared as a variorum volume in honor of Aḥmad Ḥuṭayṭ as one of the leading Arab scholars of Mamluk history.

ṢUBḤĪ ʻABD AL-MUNʻIM, *Al-Mughūl wa-al-Mamālīk: al-Siyāsah wa-al-Sirāʻ* (Cairo: al-ʻArabī lil-Nashr wa-al-Tawzīʻ, 2001). Pp. 135.

REVIEWED BY ANNE F. BROADBRIDGE, University of Massachusetts at Amherst

In this short work Ṣubḥī ʻAbd al-Munʻim discusses three aspects of Mongol-Mamluk interaction during the Ilkhanate in Iran (1258–1335): the period of hostility and warfare (1258–1317), the period of peaceful relations (1317–35), and cultural and social cooperation during this latter period. A secondary interest for ʻAbd al-Munʻim is the role that Christians played as military allies of the Mongols during the period of hostility, but this theme disappears in the two later sections. ʻAbd al-Munʻim used Arabic sources, and contemporary works either in Arabic or translated from other languages. Although he consulted neither Persian nor Armenian sources directly, he did rely on works based on them. Nevertheless this leads to a certain weakness in the analysis, for both the Armenian and Persian sources must themselves be read for proper treatment of Mamluk-Ilkhanid relations. ʻAbd al-Munʻim′s Arabic sources include all the usual chronicles, but no biographical dictionaries, which is unfortunate; nor did he include a single work by Muḥyī al-Dīn Ibn ʻAbd al-Ẓāhir, the official biographer for Baybars, Qalāwūn, and Khalīl, for no reason that I can understand.

I found the work to be creative, interesting, and thoughtful, although I did not always agree with the author′s conclusions. It does, however, have some flaws. First, it suffers from a certain simplification of the role played by religion: ʻAbd al-Munʻim′s discussion of cooperation between the Ilkhans and Christian rulers, for example, is full of interesting detail about Christian Mongols and their effect on historical events; however, he does not take into account the power discrepancy between the two sides, or the differences among types of Christians. Thus he never explains what it meant to be a vassal to the Mongols, nor does he distinguish between the Armenians (who were vassals), and the popes (who were not). Similarly he claims that unity in religion caused al-Nāṣir Muḥammad to be on splendid terms with both Abū Saʻīd and Choban, yet never explains why Muḥammad refused all of Abū Saʻīd′s attempts at a marriage alliance even though he had plenty of eligible daughters, and forbid Choban from being be buried in his own tomb in Medina. At times ʻAbd al-Munʻim also seems to tweak his historical evidence to glorify Muslims more than appropriate: he says that the Mamluks defeated the Mongols at ʻAyn Jālūt and ″saved Islam,″ after which the Ilkhan Hulegu died, but fails to mention that Hulegu was not even at ʻAyn Jālūt, or that his death was five full years later. Likewise when discussing the Ilkhanid invasions of Mamluk Syria, ʻAbd al-Munʻim makes the Mamluks look like undefeated heroes by mentioning only their victory at Marj al-Ṣuffār in 702/1303, and not the

two previous invasions (699/1299–1300, 700/1300–1), during one of which the Mamluks themselves were routed (at Wādī al-Khaznadār), while during the other no battle occurred. Surely such details should be included in a serious historical work, even though they paint a less favorable picture of the Mamluks.

A greater flaw is that ʻAbd al-Munʻim has not read extensively in the Western literature. This is an ongoing problem for Western and Middle Eastern scholars, since neither side reads enough of the other′s work (and yes, this historian includes herself). It seems sometimes that there are two parallel literatures developing, which is a shame. Here this kept the author from gaining familiarity with major ideas that would have contributed greatly to his argument. ʻAbd al-Munʻim could have benefited from the work of Charles Melville (on the Assassins, the Hijaz, and Ghazan′s conversion); Adel Allouche (Ahmad Teguder′s hostile, not friendly, intentions towards the Mamluks); Reuven Amitai (on the Cold War, Ahmad Teguder′s conversion, and many other topics), and David Ayalon (on demographics). Nor has the author read sufficiently in Mongol history, which leads to omissions or misinterpretations: he describes the center of the empire in the 1290s as Mongolia, not China, ignores the effect of Möngke′s death on the battle of ʻAyn Jālūt, and omits the Ilkhanid rebellion of 1319 when explaining why it took several years to arrange a peace between al-Nāṣir Muḥammad and Abū Saʻīd.

But despite these flaws, I still appreciated the book: I liked ʻAbd al-Munʻim′s smooth and coherent combination of topical and chronological approaches, his choice of precise historical detail, and most of all the sense this book gave me of a lively mind at work. For example, ʻAbd al-Munʻim argued that Ghazan′s attacks on the Mamluks were influenced by no fewer than six interesting factors: the flight of rebel Oirats to Egypt, the rebellion of Ghazan′s governor Sülemish, a Mamluk desire to retake Baghdad, Ghazan′s own desire to transfer the Abbasid caliphate to Baghdad, Ilkhanid disdain for the Mamluks, and finally Ghazan′s attempt to increase his separation from the Great Khan in China, with whom he had broken politically. Although I myself would offer a different interpretation for the same set of events, I finished the book feeling that Ṣubḥī ʻAbd al-Munʻim is an author with whom I would like to engage in spirited discussion.

ʿIMĀD ABŪ GHĀZĪ, *Ṭūmān Bāy: al-Sulṭān al-Shahīd* (Cairo: Mīrīt, 1999). Pp. 96.

REVIEWED BY RALPH S. HATTOX, Hampden-Sydney College

Al-Ashraf Ṭūmānbāy is one of those unfortunates who, owing to the circumstances of their public careers, get less attention than they deserve. It is easy to view his reign as something of an anti-climax, to believe that the conquest of Egypt and Syria by the Ottomans was inevitable after (perhaps even before) Marj Dābiq and the death of Qānṣawh al-Ghawrī in August 1516, and that the battles of al-Raydaniya and Giza were merely epilogues to a drama that had been played out months earlier. Ṭūmānbāy, if we give him much thought at all, is seen as at best a transitional leader, a Dönitz, whose role it was merely to hold things together until the new masters arrived.

The work at hand reminds us that that view is not entirely universal, and, if it does not contribute anything profound to our understanding of the period, it does give us a glimpse at the place this Circassian holds in the Egyptian national consciousness. ʿImād Abū Ghāzī is the editor of *Wathāʾiq al-Sulṭān al-Ashraf Ṭūmān Bāy: Dirāsah wa-Taḥqīq wa-Nashr li-Baʿḍ Wathāʾiq al-Waqf wa-al-Bayʿ wa-al-Istibdāl*. The work at hand is not, nor is it meant to be, an in-depth examination of Ṭūmānbāy's sultanate; it is rather a short summary of the events of his life, one volume in the publisher's "National Heritage: Personalities" series. This is telling, for one of the author's desires is to convey Ṭūmānbāy's importance, despite his foreign origins, as an Egyptian hero.

Abū Ghāzī begins his narrative with the scene of Ṭūmānbāy's execution; far from being a mere dramatic device, it underscores the fact that perhaps nothing in al-Ashraf Ṭūmānbāy's life was quite as important as the manner and circumstances of his death. It was in this that he became, rather than a forgettable bridge between one regime and another, *al-sulṭān al-shahīd,* a martyr not for the faith, but for an independent Egypt.

A nephew of Qānṣawh al-Ghawrī, Ṭūmānbāy was given by his uncle as a gift to Qāytbāy. He was manumitted during the brief reign of Muḥammad ibn Qāytbāy, and began his rapid ascent through the ranks when his uncle became sultan. By 1505–6 he was already commander of a thousand, and two years later he was promoted to the *dawādārīyah al-kubrá*. In this capacity he became Qānṣawh's right-hand man, overseeing collection of taxes in the Ṣaʿīd and elsewhere, acting as an intermediary with various segments of the political and religious hierarchy as well as with the populace. When his uncle left Cairo in 1516 for what was to be his final confrontation with the Ottomans, Ṭūmānbāy was the obvious choice for *nāʾib al-ghaybah* at Cairo.

For the author all this is clearly prelude to Ṭūmānbāy's months of glory, when

following Marj Dābiq he assumed the mantle of a dauntless fighter for a lost cause. This was no Dönitz, merely overseeing the surrender and transfer of power. Nor was he a Talleyrand, smoothly adjusting to and serving the new order. Indeed, when Selim offered him terms in return for his cooperation, he staunchly refused. The picture that Abū Ghāzī paints for us is that of a worthy man who rejects offers for position and power until he becomes convinced that his duty lay in assuming the sultanate and organizing resistance to the new order, not for the sake of his Mamluk comrades, but for the sake of the Egyptian people.

Of course many of the subordinates that thrust the sultanate upon Ṭūmānbāy would prove uncooperative in the coming months. Discontent and even treachery in the ranks, as well as monumental difficulties in raising the funds needed for further resistance, made an already daunting task a hopeless one. Ṭūmānbāy's fellow amirs insisted on falling back on al-Raydaniya to make their stand. This resulted, of course, in defeat, in part owing to deliberate treachery by those who sought to secure their futures through collaboration.

Ṭūmānbāy's determination to resist the Ottomans, or at least his sense that some duty obliged him to do so, went unabated following the rout. He organized resistance at Cairo where, for a short time, he and some seven thousand loyal troops, along with some dauntless Cairenes, managed briefly to eject the Ottomans. When the city was retaken, Selim's revenge on the town was frightful. Ṭūmānbāy himself eluded capture and fled south, where for some time, in the company of rebellious native elements as well as remnants of the Mamluk army, he conducted a somewhat effective guerrilla campaign. In the end, however, he decided on one last battle at Giza, and, defeated once again, fled to the Buḥayrah. He ultimately fell into Ottoman hands, either through betrayal by tribesmen, the relentless pursuit by Selim's agents, or his own decision to surrender. Abū Ghāzī discusses the circumstances of his captivity, and the question of whether he was tortured or well-treated by Selim. He concurs with those Arabic sources which maintain that Ṭūmānbāy was rather well-treated, and that Selim was even inclined towards clemency. In the end practical political policy dictated Selim's actions: he was convinced by renegade amirs that as long as Ṭūmānbāy lived he would be the focus of continued opposition to Ottoman rule.

Abū Ghāzī clearly feels something of a partisanship towards his subject. Ṭūmānbāy, he tells us, was revered in the memory of Egyptians for his qualities of kindness and humility, as well as for his courage on the battlefield. He does concede that Ṭūmānbāy had his faults, among which were some fairly brutal measures towards rebellious nomads and peasants in the Ṣa'īd when he was his uncle's henchman, and turning a blind eye to the corruption of those around him. But this work is clearly not one intended to demonstrate Ṭūmānbāy's shortcomings,

but rather to discuss his place in the national consciousness of Egypt in subsequent centuries.

There is little new that this book has to offer to the specialist concerning the last few decades of the Mamluk sultanate. It is in large part based on Ibn Iyās and Ibn Zunbul, and while it does incorporate some documentary material and later Egyptian sources and European travellers′ accounts, there is no systematic use of contemporary or modern Turkish sources. But Abū Ghāzī′s treatment of his subject offers a valuable glimpse at the reverence with which at least some modern Egyptians regard this last Mamluk sultan. To Abū Ghāzī Ṭūmānbāy was less of a Mamluk hero than an Egyptian one, who, in spite of his Circassian origins, was embraced by Egyptian public sentiment both immediately after his death and in the coming decades and centuries as a symbol of resistance to foreign occupation.

REVIEWED BY BENJAMIN ARBEL, Tel Aviv University

What is generally called the ″Levant trade,″ a term reflecting the Eurocentric character of relevant studies, has for many years attracted considerable interest among historians. This also applies to its late medieval phase, when all territories of that ″Levant″ were ruled by the Mamluks. The three most important studies on this period are Wilhelm Heyd′s old, but still useful, two-volume study of the Levant trade in the Middle Ages, published in 1885–86, and essentially based on Western sources; Subhi Labib′s book on Egyptian trade in the later Middle Ages (1965), the first serious study integrating Arabic with Western sources, but with rather limited use of European archival documents; and Eliyahu Ashtor′s book (1983), in which Arabic and Western sources were used as well, this time, however, including an impressive amount of unpublished material from a great variety of European archives.[1]

Venice and Genoa, the main protagonists of this trade, have been for decades

the favored subjects of many articles, chapters, short monographs, and publications of sources dedicated to the commercial exchange between Christian Europe and the Islamic Levant. A few other monographs were dedicated to the commercial history of single cities, such as Marseilles or Montpellier, but these were not exclusively focused on relations with the Mamluk territories. This is also the case of Carrère′s important study of Barcelona′s economy in the later Middle Ages and of Del Treppo′s classic work on the commercial expansion of Catalonia in the fifteenth century.[2] It is probably the richness of the source material, a great part of which still remains unpublished, which until now has deterred scholars from writing extensive syntheses centered on the main participants in this trade. The present volume, which focuses on Barcelona′s trade with Egypt and Syria-Palestine between 1330 and 1430, can therefore be considered, despite the rich historiography already dealing with the Levant trade, as an important breakthrough. As a matter of fact, this monumental book is the most detailed, thorough, and voluminous monograph hitherto published on the history of the Levant trade of one of the major trading centers of southern Europe in the late Middle Ages.

This impressive study is essentially based on archival material gleaned from different collections in Barcelona, particularly notarial documents and account books of private commercial firms, as well as official registers of the royal administration and of the city of Barcelona. These are supplemented by published sources, mainly Aragonese and, to a certain extent, Arabic as well, particularly those available in translation into Western languages.

The book is divided into three parts: the first deals with the infrastructure of trade in the wider sense of this term, including both institutional and technical factors. The discussion opens with an examination of the role of the Church and the papacy. With the idea of a Crusade still in vogue, trade with the Mamluks was officially banned by the Church, but tolerated in practice, in exchange for licenses sold by the papacy, and often resold to merchants directly involved in this activity.

The discussion then turns to the attitude of the Aragonese crown to commercial relations with the Mamluks and its relevant diplomatic interventions, with special attention to the change resulting from the rise to the throne of Alfonso V (1416–44). Probably because he was a bitter enemy of the papacy, this king tried to prove his loyalty to Christendom by allying himself with the Hospitallers of Rhodes, and by encouraging piracy in the eastern Mediterranean, all of which had negative repercussions on Catalan trade with the Mamluks. On the other hand, the king derived profits by issuing licenses to trade with the Muslims and by collecting

customs imposed on this activity. These two opposing interests were reflected in great instability in the commercial relations with the Mamluks, as if the crisis caused by the pepper monopoly imposed by the Mamluk sultan were not enough.

The city of Barcelona constituted another institutional factor influencing the development of trading relations with the Islamic Levant. It had much to gain from the Levant trade, and supported it by nominating Catalan consuls in Alexandria and Damascus. These consuls are the subject of a detailed examination, including their social and professional profile, their functions and prerogatives. The Catalan capital derived income from this trade through customs dues, and was often at loggerheads with the Crown concerning the right to collect dues on the goods imported to and exported from the city.

Ships constitute the last subject treated in this first part of the book. A database including all ships mentioned in the sources as operating between Barcelona and the Levant allows Coulon to draw a large picture of commercial shipping during the century under examination. Like their Genoese rivals, the Catalans preferred using round ships rather than galleys in their trade with the Levant, although the latter were occasionally used as well. Ship owners, shipmasters, and seamen then come under Coulon's close scrutiny, to be followed by an analysis of the vicissitudes of maritime traffic, the seasons of navigation, the routes followed, the organization of convoys and the duration of crossings. The last chapter of this part concerns piracy, an important factor in the activities of Catalans in the eastern Mediterranean.

The second part of this study deals with the mechanisms and objects of Barcelona's Levant trade: commercial techniques, the use of capital, and the goods imported and exported. It is mainly based on a serial and quantitative analysis of a large amount of notarial contracts preserved in the historical archives of Barcelona. Noteworthy is the preponderant role still occupied by the *commenda* contract, which was by then already in decline in other major centers of the Mediterranean trade, such as Venice, as a consequence of structural changes in the organization of international trade. The fact that this was also exceptional in Barcelona's trade with other regions suggests that it must have resulted from the conditions peculiar to its trade with the Mamluk Sultanate. According to Coulon, one cause of such conservatism was the absence of substantial colonies of Catalan merchants in Egypt or Syria, which forced merchants to continue in the old ways of pooling funds from different investors back home and accompanying their goods on their way to and from the Levant. This somewhat archaic pattern of commercial practices was also reflected in the field of maritime insurance. Premium insurance reached Barcelona's Levant trade relatively late, and its functions were partly covered by *cambium marittimun* (maritime exchange) contracts, which combined credit with an element of insurance. However, when premium insurance did become widespread in Barcelona's Levant trade in the 1420s, it must have constituted one of the

factors that brought profits derived from this activity to unprecedented levels. Further explanations for this relative conservatism include the low level of support offered to the merchants of Barcelona by the state, compared to the situation in Venice, Florence, and Genoa, as well as the lack of any infrastructure in the eastern Mediterranean, which meant that Venetian and Genoese merchants enjoyed intrinsic advantages over their commercial rivals.

The abundance of extant commercial contracts from the century between 1330 and 1430 allows the author to reconstruct the long-term trends of Barcelona´s Levant trade, partly influenced by more general developments, such as the Black Death, and partly by political circumstances in both the Iberian Peninsula and the Mamluk Sultanate. The grave commercial crisis caused by the Plague in the mid-fourteenth century was prolonged owing to the exhaustion of the Aragonese silver mines in Sardinia, conflicts between Aragon and Castile (1356–75). and the sack of Alexandria by King Peter I of Cyprus in 1365. The evidence on investments and on shipping is unequivocal in this regard. However, from the 1370s onwards, the author has traced a slow recovery which, according to him, by the turn of the century brought the scope of investments in this trade to its pre-Plague level, and by the 1420s, to well above this level. The new crisis of the 1430s was again consequent upon political developments, namely the conquest of the Kingdom of Naples by Alfonso V and its repercussion on the maritime milieu. Trade began to revive in the 1450s, but finally collapsed owing to the civil war that started in Barcelona in 1462.

The goods normally exchanged between Barcelona and the Mamluk Sultanate were similar to those which traveled on board Venetian or Genoese ships, namely various textiles, metals, dyes, furs, and foodstuff travelling eastwards, and spices, drugs, and different dyestuff that were shipped westwards. The trade in these commodities is subject to a close examination, partly incorporating data derived from studies based on Italian sources. The impact of political developments on trade in specific goods is brought to the fore. Thus, the conquest of Famagusta by the Genoese, the great rival of the Catalans, pushed the merchants of Barcelona to trade in Syria, which had an impact on the sort of goods traded by them—more ginger at the expense of pepper (1373–1415). After 1415, Rhodes, ruled by the Knights of St. John, became a key center for Catalan trade, and pepper, brought there from Alexandria, again became the prime object of the Catalan spice trade.

The changing roles of precious products exported to Mamluk lands in exchange for spices and drugs are also exposed with great clarity in this study. In the earlier period, silver mining in Sardinia provided Catalan merchants with precious metal that could be exchanged for expensive goods imported from Egypt and Syria, but when this resource had been exhausted, a substitute was found by extracting and exporting coral and coral products from the western basin of the Mediterranean.

Since most of Coulon's data on commodities moving between Barcelona and the Levant are gleaned from contracts signed in Barcelona, the book is more informative on goods travelling eastwards than on those exported from the Levant. Nevertheless a detailed discussion of the various spices, their different types, their prices, and, as much as possible, the trends characterizing the trade in these costly products between the mid-fourteenth and the early fifteenth century are also provided.

The book's third part deals with the human factor, examining the identity of the people involved in this commercial current, and the changes characterizing Barcelona's mercantile milieu during the period under consideration. A quantitative approach is here combined with individual and family histories, offering an interesting panorama of the human aspects of this trade. According to Coulon, in the earlier phases, Barcelona's Levant trade attracted a wide variety of investors, including not only big merchants, but also women, Jews (before the 1391 pogroms), *Conversos,* inhabitants of other Catalonian towns, and even foreigners, such as Genoese and Florentines. By the end of the period, however, this trade was concentrated in the hands of a restricted group of big Barcelonese merchants. Yet, the latter were unable to use their wealth to acquire political power, since the government of the city continued to be controlled by the relatively closed oligarchy of the *honrats.* The growing tensions between these two elites finally brought about the civil war of 1462–72, which also ended the prosperity of Barcelona's Levant trade.

The book is accompanied by many tables, maps, and diagrams, three appendices covering some 200 pages (pp. 673–873), three résumés (in French, Catalan, and English), and a very useful index, including personal names, toponyms, and subjects.

His thorough reconstruction of this long-term commercial activity allows Coulon to propose several new interpretations. The author discards the earlier image of this period of Barcelona's economic history as "a period of difficulties," a term coined by Cl. Carrère. According to Coulon, although the Levant trade gradually became concentrated in a few hands, its key role as an economic engine must have positively influenced Barcelona's general economic situation, particularly between 1370 and 1430.

Another interpretative contribution is Coulon's use of the Braudelian concept of "world-economy." The term was originally coined to characterize a model of economic structure of the early modern period, namely "an economically autonomous section of the planet able to provide for most of its own needs, a section to which internal links and exchanges give a certain organic unity." According to Braudel such "world-economies" always had a "center of gravity," called by him "a world-city," and sometimes several such centers which were competing

with one another for supremacy.[3] Coulon claims that the same model can be used to describe the Mediterranean economy of the fourteenth and fifteenth centuries, with Barcelona functioning, at least for a time, as one of its three main economic centers, together with Venice and Genoa. Seen from the perspective of each of the competing economic capitals, this ″world-economy″ had different colors and components, but they all contended for the domination of the lucrative spice trade with the Mamluk Sultanate. The role of the latter was essential in this system, but to a great extent passive. The Mamluk Sultanate was integrated into the world systems of the Western commercial powers and largely dependent on them. This late-medieval ″world-economy″ was, according to Coulon, a kind of laboratory, preparing the world-economies of the early modern period.

That being said, Coulon admits that Barcelona never reached the level of involvement in Levantine trade attained by its two main rivals, Venice and Genoa. According to the author, there was no continuous presence of Catalan merchants in Egypt and Syria, commercial practices employed in this trade were outdated, and the number of ships involved and the amount of capital invested was lower than those of the two leading powers. This relative weakness resulted, according to Coulon, from the status of Barcelona′s merchants in their own city as well as from Barcelona′s subordinate status in the Aragonese kingdom. Unlike the two Italian republics, Barcelona remained dependent upon the policies of a crown that did not always consider the interests of Barcelona′s merchants as paramount.

The size of the book and its great interest are my only excuses for the lengthy presentation of its content. What follows are a few critical remarks, which in no way are meant to diminish my admiration and esteem for this impressive and solid work. It is only natural that many of the following observations are inspired by E. Ashtor′s book on the Levant trade in the later Middle Ages, where Catalans, and specifically the merchants of Barcelona, occupy a central position, and with whom Coulon is occasionally conducting a dialogue, sometimes agreeing with and sometimes arguing against Ashtor′s claims. In fact it was Ashtor who already pointed to the importance of Catalan trade with the Mamluk territories during the last decade of the fourteenth century and the first decade of the fifteenth. Like Coulon, he also considered the Catalans, alongside the Venetians and Genoese, as a major trading power, distinguishing between these three and the ″smaller trading nations.″[4]

Our remarks will start with a question: is it useful to invest so much effort in investigating one commercial aspect of a single city, important as it may have

---

[4]Ashtor, *Levant Trade,* 199, 233, 236.

been? The answer, I believe, is in the affirmative for two main reasons: firstly, only in this way can one appreciate the scope, intensity, and dynamism of Barcelona's commercial contacts with the Mamluk Sultanate. The second reason is connected to Coulon's findings, according to which Barcelona was one of the centers contending for the Braudelian title of a "world-city," and that Barcelona's Levant trade was an essential component in assuring Barcelona's economic prosperity. Yet, even according to Coulon, the trade with Mamluk territories, although occupying a central place in this "world-economy," was not even the most important component of its foreign trade as measured by the capital invested and the intensity of commercial shipping. Luckily, however, Coulon is aware of this fact, and, like him, we have now to reconsider his findings in the light of studies that have dealt with the economy of Barcelona in a wider perspective. But even in a more restricted discussion, dealing with Barcelona's Levant trade, there is more to be said about the role played by other Aragonese territories in this system, especially Sicily. Some of Ashtor's remarks and his discoveries in Sicilian archives could serve as a starting point for elaborating on this issue.[5]

Not unrelated to the above is the problem of the sources. This book is mainly based on materials found in the archives and libraries of Barcelona. The use of Arabic sources is rather limited, and no use at all is made of archival material outside of Barcelona. Moreover, the extensive work carried out by Ashtor, although often cited and used throughout Coulon's book, is not always fully utilized. To give one example: apparently, no Catalan notaries were active either in Alexandria or Damascus during the period under consideration. However, Venetian notaries who were active in the Mamluk Levant also served non-Venetian clients, including Catalans. Coulon's claim that there were no colonies of Catalan merchants established in Alexandria and Damascus in the late fourteenth and early fifteenth century, on which he partly bases his explanation of the continued use of *commenda* contracts, contradicts evidence from the same period presented by Ashtor on the basis of Venetian notarial documents and Western travelogues.[6] In fact, using non-Barcelonese sources could have been very useful to bridge lacunae in the archives of the Catalan capital. This can be exemplified with respect to Coulon's discussion of goods exchanged between the Mamluk Levant and Barcelona. The author's examination of this subject is essentially founded on *commenda* contracts from the registers of Barcelonese notaries. He openly admits that this fact constitutes one of the weaknesses of his data base, since goods shipped from the Levant westward would often not be recorded in these contracts. Yet we have learned from the studies of Melis, Ashtor, and others how richly documented are the lists

---

[5]E.g., ibid., 139–40, 222, 235.

[6]Ibid., 147–48, 222–23, 232–33, 236, 340.

of ship cargoes and price lists of commodities found in the Datini archives at Prato.[7] The integration of such material would have served Coulon well.

Another observation concerns the author's calling into question Ashtor's famous thesis regarding the technological decline of Middle Eastern industries in the later Middle Ages, and more specifically, the discussion of this theme in relation to the sugar industry.[8] Great quantities of sugar were imported from the Levant to Barcelona until 1370, when imports of this product began to decline and finally disappear from the documentation. Although it is not quite clear where this sugar originated, especially since many ships stopped over in Cyprus (which was already a major sugar producer), Coulon uses this material to question Ashtor's thesis. According to Coulon, rather than any technological decline of Oriental sugar production, it was the Genoese conquest of Famagusta in 1370 that encouraged other Western powers to embark on a "second wave" of sugar plantations in Sicily and Spain. Yet such a claim is problematic, since it is based on the assumption that most of the sugar imported to Barcelona came from Cyprus (i.e., where the Genoese intervention took place), rather than from Mamluk territories, where Catalan trading activities were rising in the 1370s. Ashtor did not claim that Cyprus suffered from technological decline—quite the contrary, he mentioned Cyprus as part of the Western enterprises that were more advanced in their sugar-producing techniques than those of Egypt and Syria. The Catalans might have renounced buying Cypriot sugar after 1370, but this is not an argument that contradicts Ashtor's thesis.

Relatively little is said in this book about Catalan contacts with Egyptians and Syrians, or their relations with rival trading nations present in the Mamluk Levant. It is indeed an important chapter in the economic and social history of Barcelona, and consequently, the Mamluks and the commercial milieus of their cities occupy only a marginal place in this book. This is not to say that the author has not fulfilled his task. The book is already long enough as it is, and some work must be left for future studies. Coulon has produced an excellent study, which will long serve scholars who continue to be attracted by the fascinating world of the Levant trade.

Udovich (Princeton, 1981), 91–132. An earlier version was published as "Levantine Sugar Industry in the Later Middle Ages—An Example of Technological Decline," *Israel Oriental Studies* 7 (1977): 226–80, reprinted in his *Technology, Industry and Trade: The Levant versus Europe, 1250–1500,* ed. B. Z. Kedar (Aldershot, 1992), article 3.

SHAMS AL-DĪN MUḤAMMAD IBN ḤASAN AL-NAWĀJĪ, *Kitāb al-Shifā' fī Badī' al-Iktifā',* edited by Ḥasan Muḥammad 'Abd al-Hādī (Amman: Dār al-Yanābī' lil-Nashr wa-al-Tawzī', 2004). Pp. 424.

REVIEWED BY GEERT JAN VAN GELDER, University of Oxford

The Cairene writer al-Nawājī (d. 859/1455) is known chiefly as the author of the Bacchic anthology *Ḥalbat al-Kumayt*. Among other works of his that have been edited in modern times are an anthology of strophic poems, *'Uqūd al-La'āl fī al-Muwashshaḥāt wa-al-Azjāl,* and a short, essayistic treatise on the poetics of verse and prose, *Muqaddimah fī Ṣinā'at al-Naẓm wa-al-Nathr*. Many more titles are known to have been written by him and some are preserved in manuscripts. Ḥasan 'Abd al-Hādī has devoted himself to publishing some of these, such as *Al-Maṭāli' al-Shamsīyah fī al-Madā'iḥ al-Nabawīyah*[1] and *Ṣaḥā'if al-Ḥasanāt fī Waṣf al-Khāl*.[2] Another edition is the work under review. It has been edited before, by Maḥmūd Ḥasan Abū Nājī,[3] but the present editor seems to be unaware of this. His edition is of an altogether different order. The earlier edition is based on a single manuscript; it is only lightly and superficially annotated, and it lacks an index. In contrast, Ḥasan 'Abd al-Hādī lists 29 manuscripts, 25 of which he has been able to use. In addition, he provides a critical apparatus that has swelled the book to a size some four times as large as its predecessor. In spite of its size and its merits the edition leaves something to be desired. The various manuscripts are described but their relationships are not discussed; presumably the manuscript listed as no. 1, from the Escorial (erroneously said to be in Madrid), was used as the basis for the edition, but this is nowhere stated. There is an appendix (pp. 303–36) with variant readings. There are indexes of persons, books mentioned, technical terms, places, peoples and nations, months (one questions the use of references to Dhū al-Ḥijjah or Sha'bān), and rhymes.

Al-Shifā' fī Badī' al-Iktifā' (a somewhat flippant paraphrase would be "Quenching the thirst that on everybody's lips is: on poetic ellipsis") is a rather short treatise-cum-anthology devoted to a poetic device that was incorporated by Ṣafī al-Dīn al-Ḥillī (d. 749/1349) in his seminal *Badī'īyah;* Pierre Cachia translates it as "truncation."[4] The first example al-Ḥillī provides in his own commentary, *Sharḥ al-Kāfīyah al-Badī'īyah,*[5] is a verse by Ibn Maṭrūḥ (d. 649/1251): "I shall

[5]Ed. Nasīb al-Nashāwī (Damascus, 1982), 105.

not stop, renounce, give in / as long as I′m alive, or even when (. . . *wa-la idhā*).″ The words ″I′m dead″ are easily supplied by the attentive listener and therefore no longer needed. Al-Nawājī′s older contemporary, Ibn Ḥijjah al-Ḥamawī (d. 837/1434), quotes many more examples in his work on *badī‘, Khizānat al-Adab,*[6] and distinguishes between two kinds: ellipsis of a whole word, and ellipsis of part of a word, the latter being more difficult but also more attractive. Among his examples (and those of al-Nawājī, see p. 172) is an epigram by Ibn Makānis (d. 794/1392):

That lovely fawn! He came to visit me
shyly, at night, seeking a place to dwell [reading
mustawṭinan, with Ibn Ḥijjah].
Yet he stayed only long enough for me
to say to him, ″Come in! You′re very wel-″
(ahlan wa-sahlan wa-mar).

Arab grammarians and rhetoricians studied ellipsis in its various forms and usually called it *ḥadhf*. The term *iktifā’, ″*sufficiency,″ was used by Ibn Rashīq in his *Al-‘Umdah*[7] in the chapter on *ījāz, ″*brevity,″ as is duly mentioned by al-Nawājī; it has little to do with *iktifā’* as it was introduced into *badī‘* by Ṣafī al-Dīn al-Ḥillī. Nevertheless, al-Nawājī tries to deal with both kinds of ellipsis in his book, devoting an introductory and somewhat perfunctory chapter to cases of *ḥadhf* in the Quran (e.g., the standard example Quran 12:82, *wa-is’ali al-qaryata ″*ask the town,″ meaning ″ask the people of the town″). As for the Ḥillian sense of *iktifā’,* neither al-Nawājī nor, strangely, the two modern editors seem to have been aware that Ibn Rashīq discusses precisely this phenomenon elsewhere, in the chapter on *ishārah.*[8] Calling it a form of *ḥadhf,* he quotes some odd verses, such as the anonymous *bi-al-khayri khayrātin* [thus, not *khayran*] *wa-in sharran fā / wa-lā urīdu al-sharra illā an tā*, where *fā* stands for *fa-sharr* and *tā* for *tashā’*. These and similar verses are old: they are quoted by Sībawayh[9] and many subsequent grammarians, who had to cope with these and similar extreme distortions practised by early *rajaz* poets when in a jocular mood. No doubt to a poet and critic from the Mamluk period such whimsical use of language would have been merely a disfigurement, a form of barely acceptable poetic license, certainly not part of refined *badī‘,* and therefore to be ignored.

---

[6]Bulāq, A.H. 1291, 157–64.

[7]Ed. Muḥammad Muḥyī al-Dīn ‘Abd al-Ḥamīd (repr. Beirut, 1972), 1:252–53.

[8]Ibid., 310–11.

[9]*Kitāb Sībawayh* (Bulāq, A.H. 1316), 2:62, section ″Indicating a word by means of one letter.″

Ibn Rashīq also discusses a yet more extreme form of ellipsis: three lines attributed to Abū Nuwās in which the rhyme words are replaced by gestures indicating a kiss, ″no, no!″ and ″go away!″, respectively; the lines are also found in Ibn Dāwūd al-Iṣbahānī, *Al-Zahrah,*[10] but not in Abū Nuwās′s *Dīwān*. Again, it is disappointing to see that neither al-Nawājī nor his editors were aware of this unique case of unrhymed verse.

Al-Nawājī makes some further distinctions, between forms of *iktifā'* with or without other forms of *badī'* such as *tawriyah* (double entendre). A charming but untranslatable example of the latter, again by Ibn Makānis, is the punch line of a distich in praise of his own poetry:[11] ″Say, when those who taste it find it sweet: / This is, by God! sweet magic!″ The last words, *siḥrun ḥalā,* would immediately evoke the very common expression *siḥrun ḥalāl,* ″licit magic,, said of particularly eloquent speech. Al-Nawājī′s presentation of *iktifā'* does not make any significant improvement on that of his one-time friend (and subsequent enemy) Ibn Ḥijjah, apart from arranging his material more systematically and giving more examples. Ibn Ḥijjah, too, had pointed out that the figure could fruitfully be combined with his favorite device, double entendre. Indeed, the verse quoted above, ending in ″… to say to him: ′Come in, you′re very wel-,′″ is an illustration of this, for it could also be rendered as ″to say to him: ′Come in!′ And he went *(wa-marr)*.″

The edition is very richly annotated, with numerous references given for most of the verses quoted by al-Nawājī. Some 87 pages are filled with information on every person mentioned in the text, arranged chronologically. Much of this is rather superfluous: anyone worth his salt in Arabic studies can find information on well-known persons of the early centuries; we do not need a whole page of references for al-Bukhārī or al-Mutanabbī. However, the information on persons from the Mamluk era is by no means useless, as long as important poets such as Ibn Makānis are absent from reference works (he has no entry either in the *Encyclopaedia of Islam* or in the *Encyclopedia of Arabic Literature*).

Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	’	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	‘				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ـُو	ū	ـِي	ī
اَ	ā	ـُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	ـَو	aw	ـَي	ay
				ـَيّ	ayy

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before ″sun″ letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, mi’ah, ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shi‘i, Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

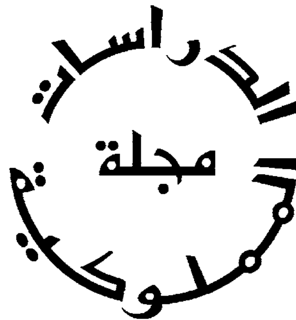
PUBLISHED BY THE MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO



Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. Submissions should be composed with current word-processing software, and if possible should use a Unicode font, such as Charis SIL (see the website below for further information). Submissions may be made via email, but authors must also send a printed copy and a labeled CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://www.lib.uchicago.edu/e/su/mideast and http://mamluk.uchicago.edu. These sites provide links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, and The Chicago Online Encyclopedia of Mamluk Studies, as well as other resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the Review.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA. The editor can be contacted by email at brcr@uchicago.edu.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig Prize for Mamluk Studies

The Prize Committee is pleased to announce that Nahyan A. G. Fancy (Ph.D., University of Notre Dame) has been named the recipient of the 2006 Bruce D. Craig Prize for Mamluk Studies for his dissertation:

"Pulmonary Transit and Bodily Resurrection: The Interaction of Medicine, Philosophy and Religion in the Works of Ibn al-Nafīs (d. 1288)"

The Committee was impressed by Fancy's thorough and careful reading of the Nafisi corpus in its context—that of the multifaceted interests of a thirteenth-century alim. His work is a brilliant example of how a dedicated effort to understand an historical actor's own categories of analysis—as opposed to the anachronistic imposition of later paradigms—can lead to real insight. The Committee believes that this is an extremely important and indeed pathbreaking work that provides the basis for thinking about the Mamluk period in a new light and contributes to the ongoing efforts to revise and correct the dominant view of the roles of Muslims in the history of science.

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2007 Prize, dissertations must be defended by December 31, 2007, and submitted to the Prize Committee by January 31, 2008. Submissions should be sent to:

Women and Gender in Mamluk Society: An Overview

On the evening of Saturday, 5 Shawwāl 919 (4 December 1513), Ghars al-Dīn Khalīl, a Cairene Hanafi deputy qadi, left home for a night vigil at the Qarāfah cemetery in Cairo.[1] His wife, expecting her husband to be absent for the entire night, sent for her lover, a certain Nūr al-Dīn al-Mashālī, himself a Shafiʿi deputy judge. Unfortunately for the two, a neighbor gave notice to the husband, who immediately rode over and found the door locked. When he broke in he found his wife and al-Mashālī in bed, embracing each other under the blanket. According to the account of Ibn Iyās, the lovers tried to settle the matter quietly by filling the husband's purse. Al-Mashālī offered the husband a thousand dinars to keep his mouth shut, while the wife offered all the household goods that belonged to her, i.e., her trousseau, in return for his discretion. But the angry husband was not tempted by gold or silver; he locked them both in the house and went over to the court of the military chamberlain to lodge a complaint. When brought before this military judge, al-Mashālī confessed to the charge of adultery, and the chamberlain ordered that al-Mashālī should be stripped, and had both of them beaten severely. The two were then led through the city, facing backwards on the backs of donkeys. Finally, they were fined 100 dinars each. But then came a bizarre twist to this story; as the woman claimed that she was penniless, the officers of the chamberlain, perhaps following standard procedure a bit too rigidly, ordered the husband to pay the fine for his wife's adultery; when he refused, he was put under arrest.

When this semi-comic sequence of events reached the ears of an infuriated Sultan Qānṣūh, he convened his council and blamed the qadis for appointing immoral deputies like al-Mashālī, and demanded that the adulterers be punished in the way prescribed by Islamic law, that is, by stoning. It was an unusual order; no stoning had taken place for many years, and apparently never during Qānṣūh's long reign.[2] But, while the sultan, representing secular authority, was pushing

[1]The following account is based Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. M. Muṣṭafá, H. Roemer, and H. Ritter (Cairo and Wiesbaden, 1960–63), 4:340–50. A short version is given by the Syrian historian Ibn al-Ḥimṣī, *Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān* (Sidon, 1999), 2:252. See also the summary in Carl Petry, *Protectors or Praetorians? The Last Mamlūk Sultans and Egypt's Waning as a Great Power* (Albany, 1994), 149–51.

[2]It is possible that no stoning took place for at least half a century, or even more. Executions for adultery were generally rare. In a study of criminal acts reported in the chronicles during the

for an Islamic punishment, several jurists issued a fatwa invalidating the verdict, arguing that al-Mashālī had in the meantime retracted his confession. In an overt struggle over the right to interpret the law, the jurists argued that the sultan was bound to act according to the Islamic law of evidence; execution would be a criminal offence, and the sultan liable for the blood money. At this point the sultan called them all senseless fools, telling one of the jurists: "God willing, I hope you go home and find someone doing to your wife what al-Mashālī did to the wife of Khalīl." Then Qānṣūh dismissed all four chief qadis, paralyzing all legal and economic activity in Cairo for three days. On Wednesday, 7 Dhū al-Qaʿdah (3 January), Nūr al-Dīn and his lover were hanged at the gate of the house of one of the jurists who objected to the death sentence. The two lovers were tied to the same rope, facing each other. Their bodies remained on the gallows for two days, until the sultan gave permission to bury them.

The account of the love and the death of the two adulterers is a good medieval story, and an excellent starting point for a survey of women and gender in the Mamluk period, if only because it serves to correct some common assumptions about the subject. One is that the study of women and gender, naturally a "private" topic, has little to offer for someone interested in politics or economics. It should not come as a surprise that a mundane love affair could turn into a constitutional crisis, pitting the sultan and the judicial elite against each other over the fundamental privilege of interpreting the law. This was not the first time issues of public morality, regulation of households, and gender boundaries were at the forefront of Mamluk politics—the reign of Shajar al-Durr, the periodic royal campaigns against vice, the processions of royal trousseaux, and the arrest of Ibn Taymīyah for his views on divorce are a few examples. Michael Chamberlain has done much to focus our attention on the elite household as the basic unit of social and political action.[3] But an analysis of gender distinctions *within* households offers an equally engaging perspective on Mamluk political and economic history.

Another common cliché is that medieval Arab authors were reluctant to speak about women, and that the domestic history of the Mamluk period will therefore always remain inaccessible. In fact, there are many Mamluk authors who speak very freely about their wives, daughters, and concubines, as well as about the wives, daughters, and concubines of friends, acquaintances, and relatives. Such descriptions are usually found in works devoted explicitly to the self-representation

reign of Qāytbāy, Petry found only one such case, when a Circassian female slave in the sultan's household was hanged for having an affair with a soldier (Petry, "Disruptive 'Others' as Depicted in the Chronicles of the Late Mamlūk Period," in *The Historiography of Islamic Egypt,* ed. Hugh Kennedy [Leiden, 2000], 187).

of the author, an unusually large number of which were produced in the Mamluk period.[4] This trend is already evident in the works of thirteenth- and fourteenth-century Syrian historians like Abū Shāmah (d. 665/1268), who includes in his work a poem he recited for his wife, al-Jazarī (d. 739/1338) in his *Tārīkh,* and al-Ṣafadī (d. 764/1363) in *Aʿwān al-Naṣr*.[5] The blurring of lines between history and autobiography, and hence the increasing representation of the domestic, is even more striking in some fifteenth-century works. The example of al-Sakhāwī's extraordinary comprehensive collection of the biographies of contemporary women is well-known.[6] Historians like Ibn Iyās (d. 930/1524) or Ibn Ṭūlūn (d. 953/1546) composed chronicles that are also semi-memoirs. Finally, the so-called chronicles of some late fifteenth-century authors, like al-Biqāʿī (885/1480) or Ibn Ṭawq (d. 915/1509), are, for all practical purposes, diaries.[7] Surprisingly, the last two works were in manuscript form until the last decade, and even now are not fully published. The perceived inhibitions of medieval authors with regard to women may be, paradoxically, due to a *modern* lack of interest in editing and publishing works that are short on political violence but strong on trivial, mundane private lives.

Given that Mamluk chronicles and biographical dictionaries have so much to say about women, it is not surprising that there are by now quite a few studies devoted to Mamluk women, beginning with Aḥmad ʿAbd al-Rāziq's *La femme au temps des Mamlouks en Égypte*.[8] Biographical dictionaries in particular were used to assess the scholarly, religious, and literary activities of Mamluk women.[9] Documentary sources were also used by historians of women, although there is still much to be done. The Ḥaram collection is very useful in giving a sense of gender relations in a particular time and place, and has been used in this way by Donald Little and, especially, Huda Lutfi, who paid unusual attention to questions of gender.[10] Endowment deeds, mainly from late fifteenth-century Cairo, are very useful in illustrating the economic participation of elite women in the economy, and are the subject of several articles by Carl Petry.[11] On the provincial level, the references to the economic activity of women in the Ayyubid documents from al-Quṣayr are also useful.[12] About a dozen Muslim marriage contracts from the Mamluk period were found in the Egyptian countryside.[13] The wide variety of

Jewish marriage contracts, divorce litigation, and other evidence from the Geniza mostly predate the Mamluk period, but serve as an essential background for comparison.

Alongside the documentary evidence, there other types of legal sources from the Mamluk period which provide access to the gender dynamics within households. These include compilations of *responsa* by contemporary *muftī*s, mostly dealing with real-life cases; and descriptions of judicial proceedings in chronicles, some of which were composed by court officials. Special attention should also be given to legal manuals that reproduce models of common documents for the use of notaries.[14] Gender issues are also discussed by the authors of prescriptive treatises, with the *Madkhal* of the Cairene Maliki jurist Ibn al-Ḥājj (d. 737/1336–37) the best known example, thanks mainly to Huda Lutfi's often-cited and articulate discussion.[15] In all these types of legal sources women occupy a prominent place, as family law (along with commercial law) were the primary responsibilities of qadis and *muftī*s.

What follows here is a survey of those aspects of the social history of women, and the social dimensions of gender distinctions between men and women, that have already been studied by Mamluk historians. The goal is to identify basic social and legal structures that appear crucial to the understanding of gender practices in urban Mamluk society. These include, in the following order: slave-girls and concubines; women in the urban economy; marriage, divorce and polygamy; educational and religious activities.[16] I will attempt, as much as possible, to cover all classes of urban society, from the royal palace to the poor, as obviously men and women interacted differently at different levels of society. I will also highlight

[16] Some of these subjects, such as marriage (but not polygamy), divorce, and the economic activities of women, are discussed in far greater detail, and from a considerably different perspective, in my *Marriage, Money and Divorce in Medieval Islamic Society* (Cambridge, 2005).

changes in the course of Mamluk history, suggesting that gender institutions underwent radical transformations during the fifteenth century.

As our opening story suggests, it is not only possible to write a history of women and gender for the Mamluk period, it may even be possible to get into the Mamluk bedroom. Mamluk authors produced quite an extensive literature on sex and erotica, which has not received sufficient attention.[17] As Robert Irwin rightly warns us, literary sexual topoi do not reflect actual sexual practices in Mamluk society, and there is definitely an element of stylization in Ibn Iyās' account. But a thorough scrutiny of the chronicles and the *fatāwá* collections will probably draw a distinction between sexual fantasies (interesting in themselves) and sexual practices. A connection between virginity and asceticism, or religious piety, crops up in a variety of contexts, and suggests that a "Christian" attitude with regard to the religious value of the sexual act may have had more influence than commonly assumed.[18] The frequent and extensive references to homosexuality in Mamluk sources have received some attention.[19] In this regard, Khaled El-Rouayheb's recent book on homosexual practices in the Ottoman period should prompt a similar project for the Mamluk period. In particular, El-Rouayheb's rejection of a "homosexual identity" in favor of social distinctions between active and passive sexual roles seems to be a useful framework of analysis for the medieval period as well.[20] Eunuchs have been studied as a social group and as symbolic mediators between spheres, not only male and female, but also the sacred and the profane.[21] A recent study of Mamluk attitudes towards hermaphrodites, another revealing

border case of ambiguous sexuality, shows a surprising development over time. While in the early Mamluk period the transformation of girls into boys is a cause for public celebrations, there are later cases in which courts are asked to confirm a female sexual identity for persons who, by all outer appearances, were physically male.[22] All in all, a history of Mamluk sexual attitudes and practices is yet to be done, probably feasible, and certainly exciting.

This essay will have comparatively little to say about material culture, although there are a few studies of objects made for, and used by, Mamluk women. The surviving artifacts of Mamluk trousseaux have been surveyed by ʿAbd al-Rāziq and in a recent extensive monograph by al-Wakīl.[23] Both could serve as a good basis for a study that explores the specific social meanings attached to these artifacts. The studies of female attire by Mayer, and more recently, by Stillman, have drawn attention to the social significance of the fashion of urban women, and the state attempts to regulate it.[24] The best known example is the very long-sleeved chemise, which was prohibited in the aftermath of the Black Death, and again by the end of the fourteenth century. The motivations for the extensive sumptuary laws of the Mamluk regime are yet to be fully explained—was it a moral reaction to luxurious consumption or immodest and seductive clothes; was it an attempt to preserve class distinction; or was it fear of cross-dressing, as Mamluk women adopted the male-style *ṭāqīyah* headdress, or the *bughluṭāq* military coat? The Mamluk sumptuary regulation is remarkably similar to that attempted in the Italian towns of the Renaissance, and has potential as a fascinating research topic.

Finally, the literary representation of women in the Mamluk period has received much scholarly attention. There are some very insightful studies on the representation of gender in medieval Arabic literature, and studies of the *Arabian Nights* occupy several shelves at most research libraries.[25] Representations of

women in Mamluk visual arts, on the other hand, have been far less explored. We have no explanation, for example, as to why Mamluk illuminations tend to show women fully wrapped and veiled, while contemporary illuminations from the eastern Islamic world mostly show unveiled women. But the study of the representation of women, whether in literature or in the visual arts, is still hampered by a lack of a coherent, specific historical context to which literary and art history studies could relate. This essay, I hope, will fill that gap.

Slave-Girls and Concubines

It is only appropriate to start our survey of Mamluk slave-girls with Shajar al-Durr, the only female ruler in Egypt's medieval history and the most famous woman from the Mamluk period. Scholarly accounts of Shajar al-Durr—of which there are quite a few, in considerable disproportion to the study of Mamluk women in general—have tended to follow conflicting modern agendas.[26] Feminist historians, such as Fatima Mernissi, have taken Shajar al-Durr as a symbol of women's independence and courage against male privilege, and, in particular, brought to the foreground her murder of Aybak as a female response to a polygamous marriage. More traditionalist historians have relegated her to the background, arguing that she was a mere puppet at the hands of the Mamluk officers, her value derived ultimately from her sexual liaison with al-Ṣāliḥ Ayyūb. Others have stressed her ethnic Turkish background, and used Shajar al-Durr's success to draw a line between an egalitarian Turkish and nomadic tradition which accepted female rulers, and a patriarchal Arab and Middle Eastern tradition which rejected them.[27] By subjecting Shajar al-Durr's historical figure to such ideological narratives, modern historians have followed the footsteps of their medieval counterparts. The later medieval chroniclers embellished Shajar al-Durr's image and added gory details (who can forget the maids who murder their victim with the famous wooden clogs?), so as to transform her story into a more universal parable of domestic strife; story-tellers recast Shajar al-Durr as a noble princess, ensuring her posthumous fame in the Romance of Baybars.[28]

From the perspective of the social historian, Shajar al-Durr's extraordinary career cannot be fully understood without looking at the institution of female slavery as a necessary complement to male slavery, which was equally integral

[26] David J. Duncan, "Scholarly Views of Shajarat al-Durr: A Need for Consensus," *Arab Studies Quarterly* 22 (2000): 51–69 (with a good bibliography).

to the working of the Mamluk military elite in its heyday. Among the military elite, female slaves and male slaves, like Shajar al-Durr and Baybars, did have quite a lot in common. Both Shajar al-Durr and Baybars were skillful political operators whose rise to power was, however, ultimately due to their place in the late sultan's household. In fact, both were among the select few who accompanied al-Ṣāliḥ Ayyūb to his imprisonment in Karak. Both were products of the same household system of slave recruitment and training, although men and women were, naturally, expected to fulfill different functions within these households, those of warriors and those of courtesans. What was unique about Shajar al-Durr's case—and in this perspective her career is unique, and deserves further study—was that she was allowed to cross the gender division within households, and to publicly take on political leadership in a way that was denied to later generations of concubines.

The recruitment of slave-girls in general, and of concubines in particular, was integral to the structure of the Mamluk military households. There are good indications that the number of female slaves in elite households was always at least as high as, and probably much higher than, the number of male slaves, and it would make sense to view Mamluk slavery as a primarily female phenomenon. Just as a select group of male slaves was trained in the military profession, a select group of slave-girls was trained to become courtesans. Tankiz, governor of Damascus for most of the first half of the fourteenth century, employed an agent in the lands of the Mongols who sought beautiful slave-girls for him. After their arrival in Damascus, some were placed in the care of Ibrāhīm Ṣārim, a famous musician, who taught the girls to play the lute.[29] These slaves were probably later enlisted in the household's musical band *(jūkah),* since during the fourteenth century every leading amir kept a band of ten to fifteen slave-girls.[30] The other slave-girls, presumably, had become concubines. Tankiz had at some point as many as nine slave concubines, each with her private retinue.[31]

The military elite regarded concubines, first and foremost, as a means to overcome the high rates of child mortality. Al-Nāṣir Muḥammad himself is probably the most outstanding example, being survived by fifteen sons.[32] The households of amirs were modeled on that of the sultan, and the role of concubines there was

similar. Sunqur al-Nūrī (d. 736/1335), a governor of several towns in northern Syria, had as many as sixty concubines. When he died he left twenty-one children.[33] A similar number of concubines were found in Qawsūn's mansion in Cairo in 742/1341.[34] Many of the amirs' wives were themselves manumitted slave-girls. Al-Nāṣir Muḥammad used to marry off his slave-girls to leading officers as means of consolidating their loyalty. There is no indication that children born of free women did better than children of concubines, and it is clear that all of al-Nāṣir Muḥammad's progeny, whether born of free women or slave-girls, were eligible to become sultans.

An anecdote regarding the household of the Amir Baktimur al-Sāqī (d. 733/1332) illustrates the parallels between the recruitment of male and female slaves. At the height of his career, Baktimur spent 10,000 dinars on the most renowned lute player of the time, a slave by the name of Khūbī. He lodged Khūbī in his mansion on the banks of Birkat al-Fīl, away from his wife, herself a former slave of al-Nāṣir Muḥammad. When the wife heard about the new and expensive concubine, she asked permission to go and meet her. In preparation for the encounter, Khūbī dressed up in white and took off all her jewelry and make-up. When the wife asked for her name, Khūbī, instead of answering, started playing the lute. As she heard the music, the lady recognized Khūbī and embraced her, explaining to the attendant slave-girls that Khūbī was her *khushdāshah.*[35] The story itself is almost certainly apocryphal.[36] The important aspect is the reference to a bond of *khushdāshīyah* among female slaves who were trained together, mirroring the more famous bonds among male military slaves.

The career of Ittifāq, concubine and wife of three consecutive sultans around the middle of the fourteenth-century, is an exceptional success story, but is also instructive with regard to the opportunities open to a slave-girl in a military household. Ittifāq's starting point was inauspicious. She was a second-generation black slave who was not considered to be strikingly beautiful. She was trained in

[33] Al-Jazarī, *Tārīkh,* 3:920.

[34] Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah,* ed. ʿAdnān Darwīsh (Damascus, 1977–94), 2:229.

[35] Al-Ṣafadī, *Aʿyān,* 2:338. Following Baktimur's death, Khūbī was sold to Bashtāk for the extraordinary price of 6,000 dinars, but al-Ṣafadī noted that her jewelry and clothes were worth more than her price. Bashtāk did not treat her as kindly, and married her off to one of his mamluks.

[36] In its main features, the story bears a suspicious similarity to an anecdote concerning Zubaydah, wife of Hārūn al-Rashīd. Zubaydah was jealous of Hārūn's favorite singer. Hārūn then asked some of his wife's relatives to come and hear his new slave singer, so as to assure Zubaydah that Hārūn was only enjoying her artistic skills. As a token of apology for her unfounded jealousy, Zubaydah sent her husband ten concubines (Nabia Abbott, *Two Queens of Baghdad: Mother and Wife of Harun al-Rashid* [Chicago, 1946], 139; Leila Ahmed, *Women and Gender in Islam: Historical Roots of a Modern Debate* [New Haven, 1992], 84).

the provincial town of Bilbays by the local female Head of the Singers *(ḍāminat al-maghānī)* who sold her to the *ḍāminat al-maghānī* of Cairo for the unexceptional sum of 400 dirhams. In Cairo she studied with a renowned lute player, and was then presented to the royal household of al-Nāṣir Muḥammad, where she acquired fame for her wonderful voice. Moreover, the sultan's son and future successor, al-Ṣāliḥ Ismāʿīl, fell in love with her and married her (the chroniclers say that he had a weakness for black slave-girls). After his deposition, she was married to his brother and heir, al-Kāmil Shaʿbān. The next sultan, al-Muẓaffar Ḥājjī, initially confiscated her property and banished her from the Citadel. Later, however, he too decided to marry her. After his death she married a civilian government official, and was eventually married off to a Marinid sultan who passed through Cairo.[37] Like a male mamluk who could hope to become sultan, a female slave of humble origins could hope to become a sultan's wife.

The possession of concubines was not restricted to the military elite, but was also rather widespread in other segments of urban society, especially in the first half of the fourteenth century. Al-Ṣafadī speaks with admiration about his friend the jurist Ibrāhīm ibn Aḥmad al-Zarʿī (d. 741/1342), who on Fridays would alternately frequent the slave market and the book market, thus cultivating the pleasures of both body and mind. His association with Turkish slave-girls was such that he learned to speak their language.[38] ʿAbd al-Laṭīf ibn ʿAbd al-Muḥsin al-Subkī (d. 788/1386), a nephew of Taqī al-Dīn, was also known to have a weakness for slave-girls. He is said to have had sex with more than one thousand.[39] In most reports on concubinage among the civilian elite, it is the sexual aspect that is emphasized.[40] The wealthier members of this class, like ʿAbd Allāh ibn Muḥammad al-Qazwīnī (d. 743/1342–43), kept a constant stock of concubines; he had four slaves who bore him children and acquired the status of *ummahāt awlād*, as well as six transient concubines, whom he would exchange in the slave market every now and then.[41]

---

[37] Ittifāq has already attracted the attention of Robert Irwin, who described her as "the Lola Montez of her age" (*The Middle East in the Middle Ages: The Early Mamluk Sultanate, 1250–1382* [London, 1986]), 130, 133). See also ʿAbd al-Rāziq, *La femme,* 285, and the sources cited there.

[40] Shihāb al-Dīn ʿAbd al-Salām Ibn Abī ʿAṣrūn (d. ca. 631/1234), a Syrian bureaucrat and jurist, had more than twenty concubines. We are told that "his limbs dried up from excessive sexual intercourse" (Sibṭ Ibn al-Jawzī, *Mirʾāt al-Zamān* [Hyderabad, 1951–52], 8:692). Ibn Daqīq al-ʿĪd, chief Shafiʿi qadi at the end of the thirteenth century, was also known to be fond of slave concubines (al-Ṣafadī, *Aʿyān,* 4:582).

[41] Al-Ṣafadī, *Aʿyān,* 2:726.

Many of these slave concubines would have been of Muslim origin. In a query sent to Taqī al-Dīn al-Subkī, an anonymous questioner expressed doubts about the legality of purchasing concubines. He states that "in our days, everyone, including the scholars and the virtuous, take slave-girls as concubines." But these men are committing a crime, for "they all know with certitude that these slave-girls must have been Muslims in their countries of origin." Al-Subkī's answer was informed by his perception of social realities. First, he noted that sale of Muslim slave-girls is legal as long as there is even the slightest possibility of them being the descendants of slaves, Muslim or non-Muslim. (In Islamic law, a freeborn Muslim could not be enslaved, but servile status is passed on in inheritance.) But his final and most decisive argument is based on the interests of the slave-girl herself. It is she who needs maintenance and protection, and if we do not allow her to be enslaved and sold, she would starve.[42] Whether many female slaves, if any, subscribed to this view, we do not know.

It should also be emphasized that not all slave-girls were concubines. In fact, concubines must have formed only a minority among the thousands of slave-girls that were sold on the markets of Cairo and Damascus. Many slave-girls served as personal attendants to female mistresses.[43] Others were employed as domestics. Al-Sakhāwī devoted a short biographical entry to Abrak al-Sinīn, his domestic servant, from her purchase in 872/1467–68 until her death in 893/1488.[44] Some were skilled professionals. Among the hundreds of slave-girls in the possession of Fahkr al-Dīn Mājid Ibn Khaṣīb (d. 762/1360), two were famous chefs.[45] The slave-girls destined for sexual services were easily distinguishable from the rest. Unlike other slave-girls, custom required that concubines should be veiled when they appeared in public; and while most slave-girls were probably black, a disproportionate number of concubines were of Turkish origins.[46]

DECLINE OF FEMALE SLAVERY?

In contrast to the first half of the fourteenth century, when the supply of slave-girls to Near Eastern cities appears to have reached a peak, the number of concubines in military households steadily decreased in the fifteenth century. By the end of the Mamluk period no one—not even the sultans—kept concubines in numbers that were even close to those mentioned for the early fourteenth century. In a study of Syrian amirs' endowment deeds from the late fifteenth and early sixteenth centuries, Michael Winter found no one who had more than one *umm walad*. Again, some of the amirs' wives were their former slave-girls.[47] The royal household underwent a dramatic shift in the latter half of the fifteenth century. Sultan Īnāl (r. 1453–61) had no concubines at all, or at least none that bore him children.[48] Qāytbāy did not have any concubines until the last years of his life. He started to take concubines when he faced a problem that no former Mamluk sultan had ever encountered: as a direct result of his marital policy, Qāytbāy found himself with no surviving children.[49]

As far as we can rely on our sources for demographic trends, there is good reason to believe that the supply of slave-girls was severely affected by the recurrences of the Black Death from the middle of the fourteenth century onwards. Al-Maqrīzī cites the records of the Bureau of Escheat for the Plague outbreak in Cairo in 822/1419, which show that slave-girls were hit more severely than any other group except children. According to the numbers cited by al-Maqrīzī, 1,369 female slaves died in Cairo during the three months of the Plague, compared with 544 male slaves; taken together, more slaves died in Cairo during this period than free adult Muslims.[50] While these numbers again indicate that female slaves were far more common than male slaves, they also affirm Ayalon's point that slaves, like all foreigners, were more vulnerable to the Plague than the native population.[51]

49 The last of Qāytbāy's children from his wife Fāṭimah died in 873/1469 (Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. William Popper [Berkeley, 1932], 8:705).

50 According to al-Maqrīzī, 1,734 free adult Muslims died in the three months of the Plague (al-Maqrīzī, *Sulūk,* 4:492; cited by Michael Dols, *The Black Death in the Middle East* [Princeton, 1977], 178).

51 David Ayalon, "The Plague and Its Effects upon the Mamluk Army," *Journal of the Royal Asiatic Society* (1946): 67–73; Dols, *The Black Death,* 185–89. For similar conclusions about the effects of the Plague on the supply of slaves in the Eastern Mediterranean, see Kate Fleet, *European and Islamic Trade in the Early Ottoman State: The Merchants of Genoa and Turkey* (Cambridge, 1999),

There are some indications of a shortage of female slaves, although these are inconclusive. The musical bands of slave-girls, a status symbol for fourteenth-century military households, disappeared. Ibn Taghrībirdī, writing in the latter half of the fifteenth century, had to explain to his readers that musical bands of slave-girls existed in the previous century.[52] In the late fifteenth century one encounters musical bands composed of Arab—that is, freeborn—singers.[53] In fact, from the second half of the fourteenth century, campaigns against rebellious Bedouin tribes often ended with the enslavement of their womenfolk and children.[54] This practice was condemned by scholars, but most probably allowed to go on because of the demands of the slave markets. White, or Turkish, female slaves became especially dear. The wars with the Ottomans may have resulted in a real shortage of non-African slaves in the last decades of the century.[55] When Burhān al-Dīn Ibn Abī Sharīf, a native of Jerusalem, came to Damascus in 904/1498–99, he had to make do with a black slave-girl.[56]

The prices of slave-girls appear to have been fairly stable, except for a possible rise at the end of the fifteenth century. The Ḥaram documents show that at the end of the fourteenth century one could still buy an Ethiopian female slave for a mere 300 dirhams (about 12 dinars), while the highest price mentioned is 550 dirhams (about 22 dinars).[57] These prices are slightly lower than those quoted for the first half of the century.[58] The evidence for the fifteenth century is too scanty

[57] Donald Little, "Two Fourteenth-Century Court Records from Jerusalem Concerning the Disposition of Slaves by Minors," *Arabica* 29 (1982): 16–49; idem, "Six Fourteenth-Century Purchase Deeds for Slaves from al-Ḥaram Aš-Šarīf," *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 131 (1981): 297–337. All these records refer to African slave-girls.

[58] A female slave-girl, who was the concubine of a murder victim, was sold in 730/1330 for 800 dirhams (40 dinars) (al-Jazarī, *Tārīkh,* 3:287). As noted above, Ittifāq was sold to the Head of the Singers in Cairo for 400 dirhams (20 dinars). In two Geniza documents dating from the early Mamluk period, the prices mentioned for an African slave-girl are 260 dirhams *nuqrah* (20 dinars)

to allow definitive conclusions.[59] Al-Zawāwī, a Maghribi mystic visiting Cairo, of whom more is said below, agreed to buy a Turkish slave-girl, supposedly a virgin, for 85 dinars. [60] Von Harff, as late as 1497, states that male and female Christian slaves are sold for 15 to 30 ducats.[61] Around the same time, a price of almost 40 dinars is mentioned in a question put to a jurist.[62] All in all, and in view of the prices paid for slaves in fifteenth-century Italian and Anatolian cities, it is likely that prices in Egypt and Syria had gone up.[63]

Fifteenth-century literary sources indicate that men of modest background kept a concubine as a *substitute* for a wife. ʿAlī al-Manūfī (d. 896/1491), for example, a poor tailor and mosque attendant, had three children from a slave.[64] ʿAlī ibn ʿAbd al-Qādir al-Ḥasanī (d. 870/1465), a mathematician of apparently modest income, never married but took a slave as a concubine.[65] The dream diaries of the fifteenth-century Maghribi mystic Al-Zawāwī reveal his preference for a concubine over a wife. When al-Zawāwī considers the prospect of marriage, the Prophet tells him in his dream that in marriage he would become a slave to his bride. The Prophet later suggested that al-Zawāwī should purchase an Ethiopian slave-girl, because the Ethiopians tend to be kinder and better companions, but al-Zawāwī was fixed on a Turkish slave, reputedly better at child-bearing, and a marker of status. When he finally made up his mind, he found an opportunity to purchase a pretty Turkish slave, who was allegedly a virgin, for an exorbitant price of 85 dinars. As is common in al-Zawāwī's diary, his long dithering came to nothing, and the sale never went through.[66]

In the fifteenth century, the attitude towards concubines had also changed, and they were—like wives—respected more for their skills and piety than for

and 25 dinars (Eliyahu Ashtor, *A Social and Economic History of the Near East in the Middle Ages* [Berkeley, 1976], 360–61; ʿAbd al-Rāziq, *La femme,* 49).

[59] Ashtor's assertion that there was no increase in the price of male and female slaves, apart from military slaves, seems to be based on very thin evidence (Ashtor, *Social and Economic History,* 361).

their looks and voice. Al-Maqrīzī went to buy a concubine when he was single. He ended up purchasing a fifteen-year-old slave-girl who had been brought up in the royal household. Al-Maqrīzī taught the girl, whom he named Sūl, to read and write and even to compose poetry. Apparently, she never bore him children. He later freed her, and she traveled to Mecca where she died at the age of forty.[67] Another striking example of this change in attitude towards concubines is the biography of Bulbul (Nightingale), a slave-girl of the Damascene scholar Yūsuf Ibn al-Mibrad. Her biography is known to us from a short work Ibn al-Mibrad composed in her memory, entitled *Laqaṭ al-Sunbul fī Akhbār al-Bulbul* (Gleanings from the life of the nightingale).[68] Ibn al-Mibrad depicts Bulbul as a virtuous, modest, and learned woman. Even when Ibn al-Mibrad's brother personally invited her to his wedding, she refused to go, claiming that she swore never to leave the house. She refused to wear an expensive *sinjāb* fur that Ibn al-Mibrad bought her as a gift, citing her master's own legal opinions against the use of this material.[69] We know that Ibn al-Mibrad often read for her, as her name appears on most of his surviving autograph manuscripts.[70] She died in 883/1479, after spending ten years with Ibn al-Mibrad and bearing him a boy and a girl.

If Shajar al-Durr or Ittifāq, singer and royal concubine of three sultans, are emblematic of successful slave-girls in the earlier period, Bulbul's biography projects very different attitudes. The ideal slave-girl was no more the beautiful and witty courtesan, but rather the pious and industrious housewife.

Women and the Economy

In his biography of his slave-girl Bulbul, Ibn al-Mibrad notes that her last act of charity was to leave a bequest for the poor, the money coming from the profits she gained as a spinner. By working as a spinner and spending her earnings as she saw fit, Bulbul resembled many free women in Mamluk urban society, who worked for wages regardless of their marital status. Medieval sources, written by and for men, do not pay adequate attention to the economic activities of women, and often leave us with a distorted image—not only of women's financial independence, but of the functioning of the economy as a whole. This was partly because the contributions of women were often carried out within exclusively female economic spheres. In the framework of a heavily gendered economy, the

boundary between economic roles was quite rigid: artisan women spun, artisan men wove; rich daughters received trousseaux, while the sons of the elite acquired positions in public institutions. As the circumstances of elite women were very different from those of women of the lower classes, the following survey will treat the two groups separately.

ELITE WOMEN, LAND, AND TROUSSEAUX[71]

In contrast to the preceding Ayyubid period, Mamluk political institutions were distinguished by the exclusion of elite women from landed revenue. Female members of the Ayyubid family received hereditary appanages as late as the middle of the thirteenth century,[72] and Ayyubid women's unusual prominence among patrons of public institutions was a tangible result of this direct access to landed property.[73] During the second half of the thirteenth century, however, the Mamluk sultans confiscated or bought much of the privately owned land and then distributed it as *iqṭāʿ*. As revenue from land was increasingly tied to military service, elite women were marginalized. The career of Khātūn, daughter of the Ayyubid ruler of Damascus al-Malik al-Ashraf Mūsá, illustrates the way Ayyubid women were stripped of their landed assets.[74] In 685/1286, when Khātūn was in her seventies, officials in the Syrian administration went to court and claimed that she had been in a state of mental incompetence *(sifh)* when she sold her lands in several villages near Damascus thirty years earlier. The proofs brought by the state's representatives were accepted, Khātūn was deemed to be unqualified to dispose of her property, and the sale was retroactively invalidated.

As more and more land was alienated in favor of the state, and as the economic activity of elite women was subject to increasing controls, the number of public institutions founded by women fell dramatically. Against the twenty-six religious and charitable institutions women established during less than a century of Ayyubid rule in Damascus, only four were founded in the following century. In Cairo the womenfolk of the royal court had more of a chance to contribute to the city's landscape, especially in the days of al-Nāṣir Muḥammad. Urdutekin

bint Nogāy, the Mongol wife of the sultan, funded the establishment of a tomb for her son by endowing tenement houses, a covered market, two bathhouses, and agricultural land.[75] Sitt Ḥadaq, a slave and wet-nurse who became the senior governess in al-Nāṣir's court, established a mosque that has survived to our day.[76] Overall, however, women's representation among the patrons of public buildings in Cairo remained low.

While elite women were excluded from control over land, they still had a claim to a share in their parents' wealth, mainly in the form of trousseaux, "personal items," or heirlooms. These trousseaux (or dowries) functioned as a form of pre-mortem inheritance reserved exclusively for daughters, through a devolutionist mechanism.[77] The trousseau was primarily a transaction between parents and daughters, not between bride and groom. Once it was donated by the bride's parents, it remained under the woman's exclusive ownership and control throughout marriage, and then again through widowhood and divorce. The absolute separation of property between husbands and wives, enshrined by Islamic law, meant that husbands had no formal right over their wives' trousseaux. The high value of these trousseaux is evident from the beginning of the fourteenth century, and should not be underestimated; for many elite women large trousseaux did mean financial security, and in some cases it was the husband who depended on his wife's trousseau rather than the other way around.[78]

A series of Ḥaram documents provides a very explicit illustration of workings of the devolutionist model in Mamluk society. When Nāṣir al-Dīn al-Ḥamawī, a wealthy merchant from Jerusalem, became terminally ill in 788/1386, he acknowledged a gift of 10,000 dirhams to his adolescent son, Muḥammad. At the same time, Nāṣir al-Dīn also acknowledged that he had endowed his daughter Fāṭimah with a trousseau, also in the value of 10,000 dirhams. Nāṣir al-Dīn noted that the money was spent on personal effects, as is the custom in trousseaux *(dhālika ḥawāʾij ʿalá ʿādat al-jihāz)*. Fāṭimah received her dowry in the form of a trousseau—"personal effects," such as copper utensils, furniture, and clothing.

But the value of her trousseau, or dowry, was exactly equal to the cash gift given to her brother.[79]

Trousseaux and grants of *iqṭāʿ* were also seen as two complementary gender-specific mechanisms of transmitting property, as is seen in the following anecdote regarding the re-distribution of *iqṭāʿ* following the outbreak of the Plague. Faced with high mortality rates among the *iqṭāʿ* holders, the vice-regent of Egypt handed over the *iqṭāʿ* of deceased soldiers to one of their surviving sons. When a soldier's widow prostrated before the vice-regent and told him that her husband left her with only two daughters, the vice-regent sold the deceased soldier's *iqṭāʿ* to another officer for 12,000 dirhams. He then gave the money to the widow, telling her to use it to provide trousseaux for her two daughters.[80]

This pattern of dividing the patrimony along gender lines between daughters and sons was common among Mamluk military and religious urban elites. Giving a trousseau to a daughter was one side of the coin, for at the same time daughters were not allowed to inherit other parts of a family's patrimony, reserved exclusively for sons. Male members of the military elite had a right to hold an *iqṭāʿ* in return for their services. Among the religious elite, sons had a similar right to inherit office from their fathers.[81] The many examples of *nuzūl,* or "handing down," of offices from fathers to sons that are found in the Mamluk sources demonstrate the gender-specific mechanism of inheritance among the elite. While the trousseau was, by definition, reserved exclusively for daughters, the right to hold office was fundamentally the prerogative of sons.

In the second half of the fourteenth century, however, the link between service and control of land began to loosen, and towards the end of the fifteenth century women appear again as major landholders. First, the Plague caused an inheritance windfall effect, benefiting those daughters of military and civilian elite households who survived. A treatise written in Damascus immediately following the first outbreak reveals an anxiety about the sudden surge in wealthy young heiresses.[82] The following decades saw a revival in female patronage of religious buildings, part of a general spate of building activity.[83] In Jerusalem, after a long

hiatus, women established at least three madrasahs.[84] In Cairo, female members of the military elite founded as many religious institutions in two decades as they had in the preceding century. These include Madrasat Umm al-Sulṭān, the most remarkable achievement of female patronage in Mamluk Cairo, established by the concubine mother of al-Ashraf Shaʿbān in 770/1368.[85]

A more long-term development was the re-entry of elite women into the land market. By and large, women were still excluded from holding official positions and collecting the tax revenues that came with them (although even this happened towards the end of the fifteenth century, when a widow of a Sufi shaykh was elected to head his *zāwiyah*).[86] Yet, the share of agricultural surplus that was channeled to these positions was gradually decreasing. More and more land was alienated to support endowments that were for the most part private or familial, although charitable in appearance.[87] The rapid growth of family endowment at the expense of *iqṭāʿ* allowed elite women greater access to landed revenue; they could—and did—become beneficiaries, administrators, and founders.

As beneficiaries, women profited from the establishment of endowments more often than not. Although many of the endowment deeds preserved in the legal literature explicitly state that males should receive twice the share of females,[88] some family endowments were intentionally designed to circumvent the Islamic inheritance law in order to improve the lot of daughters. Michael Winter concluded, based on a sample of preserved endowment deeds from late fifteenth-century Damascus, that the portions of what women obtained as beneficiaries are explicitly higher than what they would have received by the Quranic laws of inheritance. The reverse did occur, but is considerably rarer.[89]

By the latter half of the fifteenth century, elite women were often nominated as administrators of their families' endowments. It is possible to identify thirty-eight individual women who served as administrators of family endowments in late fifteenth- and early sixteenth-century Cairo, representing one-fifth of the total number of known administrators.[90] One leading example is Shaqrāʾ, daughter of the former sultan al-Nāṣir Faraj, who brought a lawsuit against an amir who refused to pay the rent on agricultural lands he had leased from her.[91] The same Shaqrāʾ also contested the control of the family's endowment with her sister's daughter Āsīyah.[92] There are many more examples from the late Mamluk period, clearly demonstrating that women were now trusted to manage family property. It should be emphasized that this phenomenon was not limited to the military elite, and therefore should not be seen as a response to political instability. It was rather a result of the general disassociation of landed revenue and service to the state, which meant that elite women were much more on an equal footing with regard to management of agricultural estates.

Fifteenth-century elite women were not only beneficiaries and administrators of endowments, but also a sizeable minority among the founders. Carl Petry has highlighted the economic career of the lifelong wife of Sultan Qāytbāy, Fāṭimah bint ʿAlī Ibn Khāṣṣbak (d. 909/1504). Fāṭimah started acquiring real estate in 878/1473, when she bought ten units of urban property and six agricultural tracts located in the Delta provinces of al-Gharbīyah, al-Sharqīyah, and al-Qalyūbīyah. According to the purchase deed, all of the six units had originally been held in the Army Bureau for distribution as *iqṭāʿ*. In the next thirty years Fāṭimah constantly bought urban and rural real estate, and continued to invest at the same rate even after the death of her husband—a clear indication that her hold over this property was real. The agricultural units formed between one third and one half of her overall investments, estimated to be several tens of thousands of dinars.[93]

Female founders of endowments appear to constitute about 15–20% of the total

Legal Norms and Social Practices," *International Journal of Middle Eastern Studies* 25 (1993): 379–406.

[90] The data was collected from Muḥammad Muḥammad Amīn, *Fihrist Wathāʾiq al-Qāhirah ḥattá Nihāyat ʿAṣr Salāṭīn al-Mamālīk* (Cairo, 1981). The name of an endowment's administrator appears routinely in the documents, mainly in connection with sale of endowed property through *istibdāl*. Carl Petry estimated that women constituted almost 30% of the endowment administrators in this period ("Class Solidarity," 133).

[91] Petry, "Class Solidarity," 130; Ibn al-Ṣayrafī, *Inbāʾ al-Haṣr bi-Abnāʾ al-ʿAṣr,* ed. Ḥasan Ḥabashī (Cairo, 1970), 471.

number of known founders in fifteenth-century Cairo.[94] As opposed to the grand institutions built following the first outbreak of the Plague, fifteenth-century elite women endowed relatively small family tombs and neighborhood mosques, of which little survived.[95] While married couples established only a small proportion of fifteenth-century endowments,[96] their mere existence demonstrates the changes that had occurred in the gender division of property among the elite. In contrast to the early Mamluk period, the lines dividing "male" and "female" types of property had become sufficiently blurred during the fifteenth century as to allow some husbands and wives to merge their assets into one marital fund.

Artisan Women[97]

The contribution of women to the urban economy has been largely marginalized by medieval and modern scholars. Most studies to date note the role of women in providing a limited range of gender-specific services.[98] We often read about women who performed services directly related to female life, such as midwives,[99] hairdressers,[100] washers of the dead,[101] and female attendants in baths and hospitals.[102] Female and male barbers performed a variety of services, like bloodletting, cleansing and whitening teeth, or removing excessive hair, mainly for women.[103] Some of these professions were considered quite profitable, and there is evidence that midwives and hairdressers were paid generously.[104] Free

[104] On the career of al-Nāṣir Muḥammad's midwife, see al-Jazarī, *Tārīkh,* 3:701. In one case, we are told that a hairdresser employed a slave-girl as her assistant (ibid., 3:939; al-Maqrīzī, *Sulūk,* 1:521).

women who provided non-skilled services, such as wet-nurses, had to compete with the unsalaried services of slave-girls.[105] Unlike later Ottoman households, there existed no class of salaried, free, domestic servants.[106] Prostitutes, who are frequently mentioned in Mamluk sources but not yet sufficiently studied, appear to have also been mostly recruited from the ranks of slaves brought to Mamluk cities. Ibn Dāniyāl's description of a Cairene procuress has been frequently translated and cited, and justly so, as it projects a very vivid image of the profession.[107]

Far less, however, has been written on the vast majority of women who worked in the production of textiles, traditionally "the main field of female remunerative occupation."[108] Spinning and embroidery were the female professions par excellence, as demonstrated in an anecdote told by the historian Ibn Kathīr. During a visit to Baalbek in 754/1353–54, Ibn Kathīr met a hermaphrodite who was brought up as a girl until the age of fifteen. Then a tiny penis appeared, and the local governor gave orders to celebrate the transformation of the girl into a man by bestowing upon him a military uniform. The young soldier boasted before Ibn Kathīr that he was "skilled in all the professions of women, including spinning, decorating with *ṭirāz* bands, and embroidery with gold and silver threads *(zarkāsh)*."[109] Girls were taught spinning and embroidery at a young age. Al-Jazarī mourns with sadness and pride two of his young nieces, who were not only beautiful and pious, but also excelled in the arts of embroidery and sewing.[110]

[110] The two sisters followed each other to the grave in 737/1336–37 (al-Jazarī, *Tārīkh,* 3:976, 980).

While most women spun at home, they did have to go out of the house to buy raw material and sell the finished product. Women congregated in front of the cotton and flax traders' shops, waiting for the carding process to be finished, and later sold the threads directly to the yarn trader, who weighed the finished product.[111] Alternatively, women brought their yarn to mosques, where they negotiated the prices with a male broker acting as their agent. The need of working women to go out was recognized by contemporary jurists. Widows and divorcées in their waiting period retained the right to leave their homes during the day in order to purchase raw material or sell the finished threads. At night these women were also allowed to go to neighbors' houses to spin together and chat.[112]

The Ḥaram documents, as studied by Huda Lutfi, are a rare indication of the extent of working women's contribution to the textile economy. While scribes identified nearly all men by their profession, they did so for only six women (about two percent), including two female water-carriers and one bath-attendant. The small ratio of women carrying occupational titles, however, is more an indication of cultural attitudes than an indication of the actual contribution of women to the workforce.[113] Lutfi tackled the problem of identifying women's occupations by examining ownership of tools, raw materials, or commercial quantities of finished products at the time of death. Even this categorization tends to underestimate female participation in the workforce, since women and men on their deathbed tended to pass on some of their possessions to relatives and friends.

Lutfi's survey shows that a large proportion of all women, maybe even the majority, were employed in the textile industry. Spinning tools, or remnants of crude or spun cotton and flax, were found in the estate inventories of 82 women, about 30 percent of all women. Some of these women owned spindles *(mirdan* or *mighzalah),* but the most frequently mentioned spinning tool was the spinning wheel (*dūlāb ghazl* or *rikkah*). This is a rare indication of the use of spinning wheels in the Mamluk period. It also shows the importance of spinning to poor

[111] ʿAbd al-Raḥmān ibn Naṣr al-Shayzarī, *Nihāyat al-Rutbah fī Ṭalab al-Ḥisbah,* ed. al-Sayyid al-Bāz al-ʿArīnī (Cairo, 1946), 69, 70; Ibn al-Ukhūwah, *Maʿālim al-Qurbah,* 225. Ibn al-Ukhūwah notes that spindle makers and flax traders have dealings mainly with women (*Maʿālim al-Qurbah,* 279).

[112] ʿAbd al-Karīm ibn Muḥammad al-Rāfiʿī, *Al-ʿAzīz Sharḥ al-Wajīz,* ed. ʿAlī Muḥammad Muʿawwaḍ and ʿĀdil Aḥmad ʿAbd al-Mawjūd (Beirut, 1997), 9:510; al-Subkī, *Fatāwá,* 2:314–20. According to the established doctrine, the permission is only granted to single women who are not entitled to marital support.

[113] The small ratio of women identified by profession is comparable with the evidence from the comprehensive Florentine Catasto of 1427. The Catasto, a census of both rural and urban population, lists about 7,000 female-headed households. But only 270 of these women carry a professional title of any sort, mainly domestic servants, religious women, or beggars (D. Herlihy, *Opera Muliebri: Women and Work in Medieval Europe* [New York, 1990], 158–62). See also, for the Ottoman period, Zilfi, "Servants, Slaves and the Domestic Order."

women, as the purchase of a spinning wheel appears to have been a substantial investment. According to a record of the sale of one poor woman's chattels, a spinning wheel, together with small quantities of wheat, cotton, and yarn, fetched 20 dirhams. All her other assets put together, that is her utensils and clothes, were sold for a similar amount.[114]

The Ḥaram documents suggest that the great majority of women worked for wages. Rather than being on the margins of the urban economy, women formed the majority of the textile industry's workforce, supplying most of the unskilled labor at the early stages of production. In the Ḥaram documents we find more than three female spinners for every male weaver, and this is most probably an underestimate. In the contemporary European textile industry, which was at a comparable technological level, one weaver required up to fifteen spinners to supply him with threads.[115]

All in all, Mamluk sources reveal widespread participation of women in the labor force, and a normative attitude towards women who worked to earn their living. The same is true for the Jewish community of the Geniza, where women's remunerative work became more widespread during the Mamluk period, eventually becoming the norm.[116] The explanation for the normative attitude towards female labor, among both Muslims and Jews, may be sought in the expansion and technological innovation of the contemporary textile industry. The volume of textile production significantly increased in the thirteenth and fourteenth centuries.[117] This was also a period of technological innovation. The introduction of the draw-loom in the middle of the thirteenth century facilitated the weaving of repeat patterns, large figures, and inscriptions.[118] The introduction of Asiatic spinning wheels, which represented a limited technical improvement

[114] Lutfi, *Al-Quds,* 64–67.

over the spindle, may also have contributed to an expansion in the production of textiles.[119] Since the vast majority of working women participated in the production of textiles, the expansion of the industry and the introduction of the spinning wheel may have meant working women had more opportunities to participate in the urban economy.

Marriage, Polygamy, and Divorce

Ṣadāq and Nafaqah[120]

Contrary to popular conceptions of marriage in traditional Muslim societies, and in spite of the emphasis placed in Islamic law on the gifts of the groom, Mamluk society was a dotal society, i.e., a society where the dowry, or trousseau, brought by the bride was the substantial gift at marriage.[121] The significance of these trousseaux for elite women has been discussed above. The grooms were required to pledge a marriage gift (*mahr* or *ṣadāq*), but it was much smaller than the dowry, and for the most part deferred as a security for divorcées and widows. The groom's marriage gifts were normally specified in cash, and divided into advance and deferred portions, with the advance payments almost always smaller than the deferred portion.[122] By the thirteenth century it had become common to divide the deferred portion into yearly installments. These methods of payment and others appear together in various combinations. Each marriage contract was different, and the parties to the contract were at liberty to choose the financial arrangements as they saw fit.

Of particular importance are marriage contracts, more common in the later Mamluk period, which designated a portion of the marriage gift as due debt *(ḥall)* "payable upon demand." This term is found in documents and legal literature from the second half of the thirteenth century.[123] By the middle of the fourteenth century it was standard practice in Damascus to designate part of the marriage

[119] Lutfi, *Al-Quds,* 297. A woman working with a spinning wheel appears in a thirteenth-century illustration of the *Maqāmāt* (Ahmed Y. al-Hassan and Donald R. Hill, *Islamic Technology: an Illustrated History* [Cambridge, 1986], 186). There are no references to spinning wheels in the Geniza (Goitein, *Mediterranean Society,* 1:99). Ibn al-Ukhūwah, writing in the beginning of the fourteenth century, discusses the proper manufacture of a spindle *(mirdan),* but does not refer to spinning wheels (*Maʿālim al-Qurbah,* 279).

[121] For dotal regimes in medieval Europe, see Martha Howell, *The Marriage Exchange: Property, Social Place and Gender in Cities of the Low Countries, 1300–1500* (Chicago, 1998), 197–212, and the references cited there.

[122] This was true also for Jewish marriage contracts. See Goitein, *Mediterranean Society,* 3:122.

[123] The earliest mention of the term comes from an Egyptian marriage contract dated 677/1278, where the *ṣadāq* is divided into a due portion of 100 dirhams and ten yearly installments of 40 dirhams (ʿAbd al-Rāziq, "ʿAqdā Nikāḥ").

gifts as payable upon demand.[124] This new feature of marriage contracts attracted the attention of Najm al-Dīn al-Ṭarsūsī (d. 758/1357), the chief Hanafi qadi of the city, who devoted a treatise to the interpretation of the clause. According to his view, a "payable upon demand" stipulation allows the wife to demand payment at any time during the marriage, and the qadi should send the husband to jail if he refuses to pay up.[125]

The other financial obligation of husbands was marital support, the husband's primary duty during marriage, and the way this obligation was fulfilled underwent significant change during the Mamluk period. Up to the end of the thirteenth century, husbands supported their wives by buying food in the market and, quite literally, putting bread on the table. From the beginning of the fourteenth century, however, we find some husbands paying cash allowances to their wives. The Egyptian moralist Ibn al-Ḥājj criticizes husbands who leave money with their wives in order to allow them to buy flax or water from peddlers.[126] Ibn al-Ḥājj also reports that wives often demand a small payment from their husband before going to bed with them, a payment which he calls a bed-fee.[127] Legal manuals from this period specifically approve of cash allowances as a permissible form of marital support.[128] The Italian merchant Frescobaldi, visiting Egypt in 1384, notes that spouses reach an agreement on a daily allowance for the wife's support. The amounts of this allowance vary according to social position, from three to one dirham a day, and less than that among the poor.[129] A century later, von Harff refers to cash payment of marital support as "the law of the country."[130]

By the fifteenth century, marital support had come to consist of a variety of cash payments. Formal settlements with regard to payments in lieu of clothing were registered before a qadi and were effectively an integral part of the marriage contract.[131] The annual payments for clothing could reach substantial sums. In a case from the end of the century, a husband paid for his wife's clothing by transferring

to her name an item of real estate.[132] Ibn Ḥajar al-ʿAsqalānī acknowledged in his will that he still owed his wife 300 gold dinars for undelivered clothing.[133] A Jewish reference is again illuminating. Rabbi David ibn Zekharya, writing in the early sixteenth century, notes that Jewish wives in Egypt and Palestine ask their husbands for cash instead of clothing, and thus make small savings. The women then buy second-hand clothes, or otherwise clothes of lesser value, and invest the remaining sum in interest-bearing loans.[134]

The spread of cash payments and allowances amounted to a significant monetization and formalization of marriage, which was characteristic of fifteenth-century marriages. A fifteenth-century husband would have usually owed his wife the deferred part of the marriage gift, an annual payment for her clothing, a daily allowance, and perhaps the rent for living in her house. In addition, she may have been entitled to demand a due portion of the marriage gift at any point during the marriage. The best illustration for the variety of debts burdening a fifteenth-century husband comes from an Egyptian document dated 861/1456, which records a matrimonial financial settlement. The husband, an artisan by the name of Mūsá al-Bardanūhī, acknowledges that he owes his wife, Umm al-Ḥasan, a total of 3,900 copper dirhams (about 13 gold dinars). These include 600 copper dirhams for the due portion of his marriage gift; 800 for the postponed portion of his marriage gift, i.e., the yearly installments; 1,500 in lieu of clothing undelivered for the past two years; and 1,000 for the sale price of textile items that belonged to her. Mūsá undertakes, in front of the qadi and witnesses, to pay the remainder of the *ṣadāq* in ten annual installments, as well as a monthly payment of 60 copper dirhams towards the other outstanding debts.[135] There is no indication that this document was drawn up as part of a divorce settlement. The couple, it seems, were expecting to continue living together, with Mūsá gradually paying off his debts to his wife.

Polygamy

The issue of polygamy appears to be one of the more sensitive subjects in the history of women and gender in medieval Islam, and the conflicting approaches to the issue are reflected, for example, in the study of polygamy in the Jewish Geniza society. In his *Mediterranean Society* Goitein claimed that "by custom, albeit not

by law, the Geniza society was essentially monogamous."[136] Mordechai Friedman, who studied the known cases of polygamy from the Geniza in far more detail, pointed out that the phenomenon was not limited to the upper classes. More often than not, the husbands were members of the lower classes of the Jewish community. Although a quantitative estimate is very difficult, Friedman argues that one cannot brush off polygamy in the Geniza society as marginal.[137]

It is even harder to say how widespread polygamy was in medieval urban Muslim society. The estate inventories of the Ḥaram are the only window through which we can have a rough impression of the extent of polygamy in a given community, and they suggest that Goitein's minimalist estimate of polygamy is closer to the mark. Out of 123 men who were married at the time of their death, only three husbands died leaving two wives. One of these men was a soldier and a resident of Jerusalem.[138] Another was an Anatolian curiosity dealer. One of his two wives bore the same geographical *nisbah* as her husband, and she is likely to have been the senior wife, since he appointed her as executrix of his estate.[139] The Ḥaram documents suggest that polygamy had to do with wealth, and that, in demographic terms, polygamy was a marginal institution in late fourteenth-century Jerusalem.

We do know, on the other hand, that polygamy was widely practiced by traveling merchants and scholars. An itinerant merchant would not expect his wife to travel with him, and upon arriving alone in a town where he might spend several months he was in need of a female consort. He needed someone to care for him—to clean the house and wash his clothes. Without some form of legal relationship, either marriage or slavery, hiring a female domestic servant would have been difficult. The account of the travels of Ibn Baṭṭūṭah is a well-studied example. During thirty years of travel, after leaving Tangiers in 1325, Ibn Baṭṭūṭah married at least ten times. In Damascus he left a pregnant wife, and learned that she had borne him a son only after arriving in India. In the Maldives he married four local women simultaneously as means of obtaining family connections that helped him in the local court. While the legal wives remained behind, Ibn Baṭṭūṭah rarely traveled without a slave-girl, and he regularly mentions purchasing them. All in all, five children are mentioned in the travelogue. None of them came back with him to North Africa.[140]

[140] R. Kruk, "Ibn Baṭṭuṭah: Travel, Family Life and Chronology: How Seriously Do We Take a Father?" *al-Qanṭara* 16 (1995): 369–84. Kruk argues that Ibn Baṭṭūṭah's account of his wives,

As with slave concubinage, the fifteenth century appears to signal a decline in the institution of polygamy. One of the most striking developments in the late Mamluk period was the transformation of the royal household from a polygamous to a monogamous institution, based on long-lasting marriages. Starting with Sultan Īnāl, Mamluk sultans had only one wife at a time, in stark contrast to the marital policy of previous sultans. Zaynab bint Badr al-Dīn Ibn Khāṣṣbak bore all of Īnāl's children, and we are told that he never married any other wife. Al-Sakhāwī specifically says that Īnāl's monogamy set him apart from previous rulers.[141] Al-Ẓāhir Khushqadam (r. 1461–67) married Shukurbāy al-Aḥmadīyah, a manumitted slave-girl of a previous sultan, when he was still a junior officer. He had concubines, but did not marry any other wife until her death in 870/1465. He then married Surbāy, one of his concubines, who was also the mother of his eldest daughter.[142] Qāytbāy (r. 1468–95) was married to Fāṭimah bint ʿAlī Ibn Khaṣṣ Bak, who was his first and only wife.[143] He entertained no concubines after their marriage in 1458, and started taking them only towards the end of his life, because he had no male heirs.[144] These "first and only wives" were also increasingly visible on the public scene, as was demonstrated in a recent study of the ceremonies associated with their pilgrimage.[145]

There is some evidence that changes in the royal household reflected general changes in fifteenth-century Mamluk society. One such change was a more restrictive attitude towards polygamy, as women often appear to actively try to prevent their husbands from taking a second wife. Restrictions on men's ability to contract new marriages or to purchase concubines were not new to Mamluk society, nor to Muslim society in general.[146] In the fourteenth century, however, stipulations against polygamy appear to have been quite rare.[147] Most of the

concubines, and children is probably one of the more reliable aspects of the travelogue.

[144] Ibn Taghrībirdī and Ibn al-Ṣayrafī, both writing in the 1470s, report that Qāytbāy had no other wives or concubines (Ibn Taghrībirdī, *Ḥawādith,* 8:630, 705; Ibn al-Ṣayrafī, *Inbāʾ al-Haṣr,* 60). He changed this policy later in his reign. His heir, al-Nāṣir Muḥammad, was born to a concubine in 887/1482–83 (Ibn Iyās, *Badāʾiʿ,* 3:197, 288).

[147] Ibn Taymīyah had to refer his readers to the "old Maghribi marriage contracts," where these

references to restrictions on polygamy come from fifteenth-century sources, such as the diary of the Damascene notary Ibn Ṭawq. In one example, Ibn Ṭawq reports that when Badr al-Dīn ibn al-Yāsūfī married the daughter of a certain Ibn Nabhān as a second wife in 886/1482, he promised her to divorce his first wife and to reside in her house. But since he was unable to divorce his first wife, the marriage was dissolved the next day. Eventually, the couple married again eleven days later, with the bride consenting to a polygamous arrangement. This time Ibn al-Yāsūfī promised, in the presence of the bride's father, not to marry a third wife and not to lodge the two wives in the same house.[148]

Polygamy was definitely a frequent reason for divorce in fifteenth-century Cairo. Najm al-Dīn Ibn Ḥijjī preferred not to consummate his marriage with his young bride and relative, Fāṭimah bint ʿAbd al-Raḥmān ibn al-Bāriẓī (d. 899/1494), because he had married a second and more mature woman. Al-Sakhāwī tells us that his second wife "took hold of his heart," and convinced him to divorce his cousin.[149] The fifteenth-century scholar al-Biqāʿī provides a rich personal description of his marriage breaking up because of his polygamy, an account recently studied by Li Guo. After marrying Saʿādāt bint Nūr al-Dīn al-Būshī, the daughter of a Sufi shaykh with a handsome position, al-Biqāʿī went on a long journey to Syria. There he contracted a marriage with a local woman, as was common practice for traveling merchants and scholars, and divorced her before his journey home. But that was not acceptable, at least not in the eyes of the young wife and her mother. The couple was divorced soon afterwards.[150]

That some wives felt they had a right to prevent their husbands from taking another wife is indicated by an intriguing incident that occurred in 876/1471, when a common woman appeared before Sultan Qāytbāy himself in order to complain that her husband had taken another wife. At the time Qāytbāy was holding sessions for the petitions of commoners, as part of an experiment in royal justice.[151] Ibn Iyās tells us that this particular petition convinced the sultan that the experiment was a waste of time.[152] Did Qāytbāy dismiss the petition because

---

stipulations were to be found (Ibn Taymīyah, *Majmūʿ Fatāwá Shaykh al-Islām Aḥmad Ibn Taymīyah,* ed. ʿAbd al-Raḥmān ibn Muḥammad al-ʿĀṣimī al-Najdī [Riyadh, 1381–86/1961–66], 32:164–65). It is interesting to note that in the Geniza the stipulation against polygamy was known as the Qayrawanese, i.e., the North African, condition (Goitein, *Mediterranean Society,* 3:149).

[152] Al-Ṣayrafī, *Inbāʾ al-Haṣr,* 391. According to another version, the husband did not take another wife, but rather had sex with his slave-girl (Ibn Iyās, *Badāʾiʿ,* 3:63).

the woman had no legal cause, or because it was petty and unworthy of his attention? In any case, the fact that a common woman had the nerve to approach the sultan on the issue of polygamy is striking. She, at least, must have believed in her right to a monogamous marriage.

A final indication of a change in the attitude to polygamy in the fifteenth century was the institutionalization of clandestine marriages *(nikāḥ al-sirr)*. According to a model document provided in a manual for notaries, a clandestine marriage contract is like any other except that it is never made public. The presence of witnesses is required, but they take it upon themselves to keep the marriage secret *(kitmān al-nikāḥ)*. The author explains that men have recourse to clandestine marriages when they are taking a second wife.[153] Evidently, it was not always easy to keep such a secret. ʿAzīzah bint ʿAlī al-Zayyādī (d. 879/1475), the daughter of a Cairene scholar, married the Meccan ʿAfīf al-Dīn al-Ījī when he visited Cairo. This marriage was kept secret from his first wife and paternal cousin, Ḥabībat Allāh bint ʿAbd al-Raḥmān, who remained in Mecca. But when the Cairene wife accompanied her husband to Mecca, ʿAfīf al-Dīn was forced to divorce her by the pressure of the first wife.[154]

Divorce[155]

As is well known, Islamic marriage law allows for a husband to pronounce a unilateral repudiation, while a wife needs either the husband's consent for divorce or the intervention of the courts. But, in spite of the simplicity of the legal act of repudiation, arbitrary unilateral repudiations were not as common as one might expect. Most husbands were deterred, first and foremost, by the financial costs of divorce. Upon unilateral repudiation husbands were expected to pay all their remaining financial obligations, including the late and due portions of their marriage gift, any arrears in payments of support and clothing, and other debts they may have incurred during the marriage. On top of these payments, husbands were also required to pay a compensation gift *(mutʿah)* to their divorcées. The divorcée had a right to this compensation as long as she did not forfeit this right in her divorce settlement, and when the divorce was not her fault.[156]

Rather than being a major mechanism of actual divorce, repudiation was more often used as a threat against a disobedient wife. Islamic Sunni law accords special

status to threats of repudiation, which are usually called divorce oaths. These oaths are considered conditional phrases, the act of divorce being contingent on the fulfillment of the condition. For example, a husband would threaten a divorce if his wife were to leave home without his permission. Threats of divorce were also used in order to deter wives from visiting a neighbor or from divulging a family secret.[157] A husband who suspected his wife of pilfering his money threatened divorce if the money was not returned.[158] Strained relations with the mother-in-law were also a common reason for pronouncing divorce oaths.[159]

By extension, divorce oaths were often used as pledges for commitments which went far beyond the domestic sphere, and had nothing to do with the wife's behavior.[160] Divorce oaths were incorporated into the oath of allegiance *(bayʿah)* used by the Mamluk sultans. Moreover, they gradually became prevalent among all classes of society, and were used in all sorts of financial, social, and familial contexts. Under certain circumstances, men were even compelled to undertake divorce oaths as part of the judicial process. The central role of divorce oaths to Mamluk society is highlighted by the challenge posed by Taqī al-Dīn Ibn Taymīyah to the validity of these oaths. Ibn Taymīyah argued that violation of a divorce oath requires an act of atonement, not the actual dissolution of marriage. After having been prohibited twice from issuing fatwas on this subject, Ibn Taymīyah was eventually arrested. The debate over Ibn Taymīyah's doctrines on divorce oaths reflects the importance of divorce as a public, and not merely private, institution.

The legal form of the majority of actual divorces in Mamluk society was consensual separation *(khulʿ),* although the formalities of divorce deeds concealed an interplay of various legal and extralegal forces. Consensual separations meant that the wife gave up her financial rights, and in particular her claim to the late marriage gift, in return for a divorce. According to the legal phrasing of the divorce documents, it was always the wives who initiated the consensual divorces; they ask for the divorce and give up their financial rights in return. But jurists sometimes expressed concern as to whether women who entered consensual separation were acting voluntarily.[161] It is clear that husbands could extract favorable divorce settlements by playing the card of custody. In Islamic

law divorced mothers lose their right of custody over their children as soon as they remarry. Mamluk *fatāwá* reveal that mothers could also lose custody if the father wanted to take the child to another locality,[162] to provide him or her with better education or living standards,[163] or if the father could demonstrate neglect on the part of the mother.[164] Divorcees could secure custody only by accepting divorce settlements in which they undertook to pay for the upkeep of the child. A common settlement of consensual separation allowed the mother to have custody for a fixed period of time (even if she re-married), and in return agreed to pay part of the child support during that period.[165]

Most divorce negotiations were informal, and the role of the courts was mainly confined to putting an official stamp on the settlements brought before them. Judicial divorce *(faskh),* the most drastic sanction a wife could hope for from the courts, was generally reserved for grass widows. But even in cases of absentee husbands, many separations were settled without recourse to such judicial intervention, since husbands often deposited with their wives a conditional bill of divorce before going on a journey. Conditional bills of divorce appear very often in the Geniza,[166] and were widely used among the Muslim majority. In such a bill, the husband made the divorce of his wife contingent on his absence for a certain period of time. If the husband was not to return, the wife had the right to confirm the divorce in court.[167]

[164] In order to demonstrate neglect, neighbors were asked to testify that they had heard the baby crying when left alone in the house (al-Asyūṭī, *Jawāhir al-ʿUqūd,* 2:239–40).

[165] Al-Fazārī, "Fatāwá," fol. 93b (wife agrees to support the child for two years); al-Ṭarsūsī, *Anfaʿ al-Wasāʾil,* 44, 47 (in return for custody rights, a wife forfeits her *ṣadāq,* support during the waiting period, and child support for seven years). For model documents, see al-Asyūṭī, *Jawāhir al-ʿUqūd,* 2:228, 240–41, 247–48.

[166] Goitein, *Mediterranean Society,* 3:155, 189–205.

[167] Ibn al-Ṣalāḥ, *Fatāwá,* 444 (no. 398), 450 (no. 411). In cases from the fifteenth century, the conditional divorce was to come into effect after a very short absence of two months or even ten days (al-Anṣārī, *Al-Iʿlām,* 267; al-Suyūṭī, *Al-Ḥāwī lil-Fatāwá fī al-Fiqh wa-ʿUlūm al-Tafsīr wa-al-Ḥadīth wa-al-Uṣūl wa-al-Naḥw wa-al-Iʿrāb wa-Sāʾir al-Funūn* [Cairo, 1352/1933], 1:267).

Divorce settlements, like so many other aspects of gender, changed in the course of the fifteenth century, especially as a result of the expanding jurisdiction of the *maẓālim* courts headed by government officials. The military courts were more resolute when dealing with husbands who failed to provide for their wives, and in general were far more interventionist in the domestic sphere. The difference of approach between the religious and the military courts is well illustrated in a tragic case of child marriage, for which we have firsthand testimony of a legal official. In 875/1470 the chronicler Ibn al-Ṣayrafī, who was employed as a deputy Hanafi qadi, received a petition from the maternal aunt of a twelve-year-old girl, whose parents were absent from the city. The aunt asked the Hanafi deputy to save the girl from poverty by marrying her off to a suitable husband. In accordance with the request, Ibn al-Ṣayrafī married the girl to a soldier in the service of one of the royal mamluks, negotiating a marriage gift of seven gold dinars, and inserting a clause forbidding the man to consummate the marriage until the girl attained puberty. Despite this stipulation, the soldier raped the girl. He continued to beat her until she accepted a consensual divorce in which she forfeited her marriage gift. The husband even lodged a complaint against the girl with the police (*naqīb*s), and she was fined a gold dinar for her supposed insubordination. When the girl returned home, her maternal aunt appealed to the *dawādār* Yashbak min Mahdī. The *dawādār* ordered the soldier to be flogged, and asked the chief Hanafi qadi, Ibn al-Ṣayrafī's superior, to invalidate the divorce settlement. The soldier also had to pay the girl four dinars, about half of the promised marriage gift.[168] It seems that in this case, the more aggressive and interventionist approach of the military court was also the more just.

The most striking aspect of Mamluk divorce, at least in the fifteenth century, was its frequency. Thanks to al-Sakhāwī's *Al-Ḍawʾ al-Lāmiʿ* we can speculate about the rate of divorce in fifteenth-century Cairo.[169] Al-Sakhāwī records the marital history of 168 fifteenth-century Cairene women, mentioning 287 marriages concluded by these women.[170] This is an average of almost two marriages per

[168] Al-Ṣayrafī, *Inbāʾ al-Haṣr,* 226–29. See translation and analysis by Carl Petry, "Conjugal Rights versus Class Prerogatives: A Divorce Case in Mamlūk Cairo," in *Women in the Medieval Islamic World: Power, Patronage, Piety,* ed. G. Hambly (London, 1999), 227–40. My interpretation of the text is substantially different from Petry's, both in its details and its overall significance. According to Petry, the case demonstrates the prerogatives of the military elite.

[169] A point made by Musallam, "The Ordering of Muslim Societies," 186–97. See also Lutfi, "Al-Sakhāwī's *Kitāb al-Nisāʾ*"; Berkey, "Women and Islamic Education."

[170] Included in the sample are only women who were born in Egypt after 790/1388, or, if the date of birth is unknown, died after 853/1450 (including those still living when the final draft of the work was completed, shortly before the author's death in 902/1497). It excludes entries copied from earlier historical works, such as the hundreds of entries for Hijazi women drawn from the biographical dictionaries composed by al-Fāsī (d. 832/1428) and Ibn Fahd (d. 885/1480).

woman, although some were married four, five, and six times. When al-Sakhāwī mentions the cause of dissolution (in 171 marriages), three out of ten ended with divorce. It is probable that the actual rate of divorce among the general population of Cairo was higher. Al-Sakhāwī was not aware of all the marriages going on in the city, and some short-term unions may have escaped his attention. It is also probable that the rate of divorce among the lower classes was higher than among the elite, as was the case in the Jewish Geniza society. The prevalence of divorce is even more remarkable if we keep in mind the high mortality rate, augmented in this period by the Plague. Death and divorce meant that marriage tended to be a much shorter affair than it is today.

Al-Sakhāwī's biographical dictionary offers quite a few examples of wives pursuing a divorce against the wishes of their husbands. When his own brother, Abū Bakr ibn ʿAbd al-Raḥmān al-Sakhāwī, became so ill as to be confined to his bed, his wife refused to accompany him to his family's quarters and kept asking for divorce. In return she forgave him any debts and even gave him financial compensation.[171] Zaynab, daughter of the chief qadi Muḥibb al-Dīn ibn al-Shiḥnah, "was not satisfied [with her husband] and they were divorced." The verb is used in the dual form, indicating a mutual action.[172] Another Zaynab, a descendant of the Banū al-Bārizī dynasty of civilian administrators, was widowed in 850/1446. She avoided remarriage for several years, until, at the request of her son, she concluded a marriage alliance with a senior government official. But she later pleaded with her new husband and he divorced her.[173]

A final observation is that for al-Sakhāwī divorce is almost always a decision taken by the couple, not by their extended families. The intervention of in-laws is rarely mentioned. The mother and brother of Qurrat al-ʿAyn bint Abū Bakr al-Sakhāwī, the orphaned minor niece of al-Sakhāwī, were influential in causing her divorce from the husband chosen for her by al-Sakhāwī himself.[174] But al-Sakhāwī generally prefers to talk about divorces caused by the absence of passion, as well as love-marriages. After her divorce from her first husband and paternal cousin, the daughter of the chief Shafiʿi qadi Jalāl al-Dīn al-Bulqīnī went on to marry an amir nicknamed ʿAddād al-Ghanam (Sheep Counter). Her first husband tried to talk her into coming back, but to no avail, as she fell "desperately in love" with

[171] Al-Sakhāwī, *Ḍawʾ*, 11:46.

[173] Ibid., 12, 49 (no. 291) (Zaynab); 10:252 (no. 1050) (Najm al-Dīn). See also Lutfi, "Al-Sakhāwī's *Kitāb al-Nisāʾ*," 114.

[174] Al-Sakhāwī, *Ḍawʾ*, 12:116 (no. 704). In a case from Syria, a marriage alliance of the Banū al-Shiḥnah and Banū al-Ṣawwāf did not materialize because of a fight between the womenfolk of the two households (Ibn Taghrībirdī, *Ḥawādith,* 8:570; al-Sakhāwī, *Ḍawʾ*, 3:113–14).

her new husband.[175] Other women chose to marry their social inferiors. Fāṭimah bint Abī al-Khayr, widow of the renowned jurist Ibn al-Humām, married one of the porters on board a ship heading to Mecca in 898/1493. Al-Sakhāwī malignly adds that it seems she was unable to control her desire and married him simply for sex.[176]

WOMEN AND RELIGION

A recurring theme of this survey is that most aspects of Mamluk society were gendered, with both men and women contributing to economic and political life, but doing so in largely separate spheres of activity. The same is true for women's participation in religious life. Because so few religious texts composed by Mamluk women have survived, it is easy to imagine Mamluk Islam as an exclusively male endeavor. But there is now sufficient evidence to show that, outside the formal and all-male madrasah system, women played a far from marginal role in religious life. They were of course recipients of religious knowledge and exhortations, through oral preaching and recitation, and, among the traditionalist Sunni elite, through reading and study of religious literature. But women were also active participants and contributors to religious life. In the transmission of hadith, a popular and non-professional pious activity, women were on equal footing with men, their prominence dependent solely on their literacy and longevity. Outside the literate and traditionalist classes, the growth of the organized mystical movements in the thirteenth and fourteenth centuries cannot be fully understood without taking into account the phenomenal spread of exclusively female Sufi institutions known as *ribāṭ*s, which are probably the most distinctively Mamluk form of female religiosity.

WOMEN AND LITERACY

The evidence for the spread of literacy among elite women is quite extensive. While a few prescriptive texts call for putting a limit on the education of girls, they do so in a context of an education system in which girls were taught by male and female instructors.[177] Moreover, these statements appear to have had no impact on actual practice among scholarly families, who took pride in teaching their daughters to read and write. Nuḍār (d. 730/1330), the daughter of the Muslim philologist Ibn Ḥayyān, copied her father's works in several volumes, and so did Fāṭimah

(d. 731/1331), daughter of the historian al-Birzālī.[178] Fāṭimah bint Kamāl al-Dīn al-Maghribī (d. 728/1328) was known for her superb handwriting.[179] Jonathan Berkey has found 411 examples of fifteenth-century literate elite women who are mentioned by al-Sakhāwī in his biographical dictionary. These women are said to have memorized the Quran, received an *ijāzah* to transmit a tradition, and studied basic works of grammar or al-Būṣīrī's ode to the Prophet.[180] In the Geniza we find private letters written by Jewish women, and there is no apparent reason to believe that Muslim women did not do the same.[181]

The problem is, of course, that nearly the entire corpus of surviving Mamluk texts has been written by men. There are a few verse fragments scattered in historical works, like al-Sakhāwī's correspondence with his neighbor Fāṭimah (b. 855/1451), daughter of Kamāl al-Dīn Maḥmūd. He quotes lines of her poetry addressed to him personally and gives titles of her poems. She sent him an elegy of 31 lines to console him for the loss of two of his brothers.[182] But for most of the Mamluk period, we have no female authors who speak to us in their own voice.[183] The absence of female authors was not simply for want of literate women; rather, the forms and the extent of female literary expression were subject to social restrictions. In a society that attached high value to texts, authorship was an empowering act.[184] When we examine the few surviving texts that were written by women, they not only show great skill, but also that the authors were very well

[178] Both died in the prime of their youth, and we owe their biographies to their mourning fathers. On Nuḍār see Th. Emil Homerin, "'I've Stayed by the Grave': A Nasīb for Nuḍār," in *Literary Heritage of Classical Islam: Arabic and Islamic Studies in Honor of James A. Bellamy,* ed. See also Dana al-Sajdi, "Trespassing the Male Domain: The Qaṣīdah of Laylā al-Akhyaliyya," *Journal of Arabic Literature* 31 (2000): 121–46. In Sung China one finds a similar gap between the spread of literacy among elite women and the few remains of their literary production (P. Ebrey, *The Inner Quarter: Marriage and the Lives of Chinese Women in the Sung Period* [Berkeley, 1993], 120–24).

versed in the Islamic tradition—further suggesting that female education, unlike female authorship, was not restricted.

Given all the other changes in gender relations towards the end of the Mamluk period, it may not be a coincidence that the foremost female author lived at the turn of the sixteenth century. Like other literate women in the Mamluk period, ʿĀʾishah al-Bāʿūnīyah (d. 922/1516) was member of a scholarly family, whose members held high positions in the religious hierarchy of Damascus. Not unusually for her class, she studied poetry, hadith, mysticism, and jurisprudence. But unlike most other Mamluk women, ʿĀʾishah was also a prolific author, and she has left us more Arabic works than any other woman prior to the modern period. Her work is underlined by a belief in the mystical quality of praising the Prophet, and motivated by a vision of the Prophet during her pilgrimage to Mecca in 880/1475. In her most famous poem, an ode to the Prophet, every verse contains an example of a rhetorical device—a literary form that required extensive knowledge of Arabic language and literature. Her Sufi compendium, a collection of insights into the mystical themes of penance, sincerity, *dhikr,* and love, suggests a very wide knowledge of Sufi literature, Quran, and hadith. Although some of her love poetry conveys an all-consuming passion towards God, ʿĀʾishah's femininity is not necessarily the defining aspect of her literary legacy. Rather, she should be seen as a well-read and active participant in the religious and literary world of her time, further indication that men and women did partake in the same religious discourses. [185]

Women and Hadith

The main venue for religious activity among the literate women of the traditionalist, and especially Hanbali, elite was transmission of hadith. This was not a marginal phenomenon; hundreds of female hadith transmitters are mentioned in the biographical dictionaries, and women were major authorities for some of the most famous scholars of the Mamluk period, such as Ibn Ḥajar al-ʿAsqalānī, al-Dhahabī, and al-Suyūṭī. In a recent study, Asma Sayeed has found that a disproportionate number of these transmitters came from the Hanbali circles of al-Ṣāliḥīyah suburb of Damascus, where a traditionalist ethos of the cultivation of the prophetic Sunnah was dominant. Like their brothers, women were brought as infants, often still in arms, to receive certificates in the hope that they would reach old age, and would be celebrated for their transmissions. Indeed, those women who did become famous owe it to their longevity; the most famous, such as Zaynab bint al-Kamāl (646–740/1248–1339) and ʿĀʾishah bint Muḥammad ibn ʿAbd al-Hādī

[185] For ʿĀʾishah al-Bāʿūnīyah and her poetry, see Th. Emil Homerin, "Living Love: The Mystical Writings of ʿĀʾishah al-Bāʿūnīyah (d. 922/1516)," *MSR* 7, [no. 1] (2003): 211–34; see also Reynolds, *Interpreting the Self,* 8.

(723–816/1323–1413), lived to their nineties, and became famous only in their sixties.

Women's study and transmission of hadith was done outside the formal madrasah system. Although they founded madrasahs, and sometimes acted as their administrators, they were always excluded from receiving a salaried position or pursuing formal studies. The evidence of *samāʿāt* (certificates of oral transmission) shows that the female transmitters held assemblies both at their own houses and at the houses of others. In these informal assemblies women and men participated alongside each other, with no formal segregation. As expected, women are the primary transmitters when they grow older, but there is evidence of continuous participation of women in the study of tradition. Although only the octogenarians made it to biographical dictionaries, women participated in the study and recitation of traditions throughout their lives.

The study of hadith, contrary to law or theology, allowed women an almost equal footing with men. Since the Prophet's wife ʿĀʾishah appears so prominently as transmitter of tradition from the Prophet, women were not at any disadvantage with regard to their trustworthiness. They were considered as reliable as men in the relation of hadith; unlike testimony in court, it did not put them in a position of power over men. For women, as well as for other pious Muslims who were not formally trained, prophetic traditions were thus the most appealing of the Islamic sciences; at an elementary level, even lay people could memorize short, popular collections. Prophetic traditions were recited in informal gatherings, especially in the Hanbali circles of Damascus, in order to make God and his Word more accessible. As we have seen, elite women were able to read extensively in other branches of religious knowledge, including history, poetry, mysticism, and even law. Informal study of hadith gave these literate women a venue to reflect and discuss their approach to religion.[186]

It should also be emphasized that the memorization itself was of secondary importance, as in this period transmission was no longer about the actual authentication of texts. Authority did not really lie with the transmitter but rather with the written text which was reproduced, and the system of *ijāzah* developed precisely when the veracity of the hadith collection was guaranteed. The prize in the transmission of hadith was the shortest possible chain of transmission achieved by old men and women who heard traditions when they were infants. It carried with it not a guarantee of authenticity but, like the visitation of tombs and the relics of saints, another kind of *barakah.*[187] For the Sunni traditionalist families, a

[187] Eerik Dickinson, "Ibn al-Ṣalaḥ al-Shahrazūrī and the Isnād," *The Journal of the American Oriental Society* 7, no. 1 (2002); discussed in this context by Asma Sayeed, "Women and Ḥadith Transmission in Islamic History" (Ph.D. diss, Princeton University, 2005).

text carried the kind of proximity to God other groups sought by venerating saints or visiting tombs.

The ideal of the pious woman who faithfully transmits the words of the Prophet harks back, of course, to ʿĀʾishah herself, and Mamluk male authors show in fact an unprecedented interest in celebrating her biography. This trend reached its peak in the fourteenth century, with the composition of specialized works dealing with ʿĀʾishah's criticisms of transmissions by male Companions of the Prophet. Al-Zarkashī (d. 795/1392) is the most prominent example of enhancing the religious prestige of ʿĀʾishah as the most reliable and useful critic of prophetic traditions, including those transmitted on the authority of the first four caliphs. Unlike earlier Sunni writers, whose works he expands, al-Zarkashī defines ʿĀʾishah's unique attributes not only as a wife and a daughter, but in terms of her religious devotion, generosity, and asceticism. The Mamluk works dealing with ʿĀʾishah emphasize her hadith transmission as well as a symbol of Sunni—as against Shiʿi—communal memory and solidarity.[188]

Women and Mysticism[189]

Outside of the Hanbali circles of Damascus and their traditionalist, anti-Sufi allies, women largely expressed their religiosity through mystical institutions. Women are often mentioned in connection with the visitation of graves, especially by the moralists who wanted them to abstain from wailing or dressing immodestly.[190] The criticisms voiced by moralists have tainted these activities as less than purely spiritual, but visitation probably represented for women a real spiritual undertaking in its own right, as much as it did for men, although the venues were often separate. The visitation of tombs was incorporated into poor women's weekly schedule, alongside their domestic chores and textile production. A few particularly vivid accounts come from the pen of the Damascene Ibn Ṭūlūn, who reports that women congregated every Wednesday near the tomb associated with the Biblical figure King Ṭālūt outside Damascus, where they listen to blind men recite the accounts of saints. The Grotto of Hunger near Mt. Qāsiyūn was the site of a similar female congregation every Friday, following the noon prayer.[191]

The most distinctive expression of the mystical activities and aspirations of Mamluk women was the exclusively female religious house, usually known as

[188] D. Spellberg, *Politics, Gender, and the Islamic Past : the Legacy of ʿĀʾisha bint Abī Bakr* (New York, 1994), 25, 54–58, 86–95, 194.

ribāṭ. The *ribāṭ* came to be identified with female piety during the Fatimid period.[192] Along with the *zāwiyah* and the *khānqāh,* the *ribāṭ* was associated with the Sufi mystical movement, but the functions of these institutions became differentiated during the Mamluk period. While the *zāwiyah* was usually linked to a specific Sufi order and the *khānqāh* to prayers for the dead, the *ribāṭ* emerged as a hospice for the needy, with social welfare as its main goal.[193] In principle, *ribāṭ*s could also be either male or female, and there were some *ribāṭ*s for men in the Mamluk period. It seems, however, that women came to be considered the natural recipients of the *ribāṭ*'s charitable role.

The establishment of *ribāṭ*s in all Mamluk urban centers reached a peak in the latter half of the thirteenth century and the first half of the fourteenth. The Ribāṭ al-Baghdādīyah, established in Cairo in 684/1285, was the most famous *ribāṭ* devoted exclusively to women. The daughter of Sultan Baybars, Tidhkārbāy Khātūn, endowed the institution for the benefit of a female mystic called Zaynab al-Baghdādīyah, after whom it was named. Zaynab had already acquired a large following among the women of Damascus when Tidhkārbāy invited her to come to Cairo. The *ribāṭ* was located next to Baybars' *khānqāh,* and was probably intended as a sister institution.[194] At least eight additional *ribāṭ*s for widows and old women existed in Cairo during the first half of the fourteenth century.[195]

Syrian cities had an even larger number of women's religious houses. Six were established in Aleppo during the thirteenth century, although there they were called *khānqāhs* rather than *ribāṭ*s. An inscription on one of the *khānqāhs*, erected by an Ayyubid princess in the first half of the century, said that it was built "for the poor women who wish to reside in it, so that they would perform the five daily prayers and sleep there."[196] In Damascus the term *ribāṭ* had come to mean a specifically female place of worship. A Damascene author, Ibn Zufar al-Irbilī (d. 726/1326), remarks that a *ribāṭ* is a *khānqāh* devoted exclusively to women *(al-rubuṭ hiya al-khawāniq allatī takhtaṣṣu bi-al-nisāʾ)*. He then enumerates

[192] Al-Maqrīzī, *Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-Āthār al-Maʿrūf bi-al-Khiṭaṭ al-Maqrīzīyah,* ed. Muḥammad Zaynhum and Madīḥah al-Sharqāwī (Cairo, 1998), 3:652.

twenty such institutions, fifteen within the city itself and an additional five in its suburbs.[197] Some of the money for these institutions came from the pockets of the womenfolk of the Damascene elite. In 730/1330, the wife of the governor of Damascus endowed the largest female *ribāṭ* in the city, next to her own tomb.[198]

The female *ribāṭ*s should be considered indications of the spread of the mystical orders during the thirteenth century. Al-Maqrīzī dwells on the authoritarian element in the Ribāṭ al-Baghdādīyah, where widows and divorcées were sometimes forced to stay during their waiting period so as to protect them from forbidden sexual contacts. But reducing the female *ribāṭ*s to their authoritarian aspects does injustice to the spiritual aspirations of medieval Muslim women. Some of the founders were female, and quite a few elite women appear to have chosen to spend their widowhood years there. Rather, women must have been moved by the same ideals of asceticism and inner reflection as men, but were not integrated into the exclusively male institutions. It is interesting to note that not all the women who took the mystical path resided in *ribāṭ*s. Ibn al-Ḥājj, writing in the first half of the fourteenth century, notes the growth of exclusively female Sufi groups in Cairo, but does not mention any association with an institution or establishment.[199] In the case of Zaynab al-Baghdādīyah, and most probably in others, the establishment of a *ribāṭ* was intended to support an already existing group of pious women.

Besides their spiritual functions, the female *ribāṭ*s catered to the needs of poor single women who were excluded from other Sufi foundations. The dual nature of the Sufi institutions that provided men both with spiritual space and with lodging options, held true for the female *ribāṭ*s. The use of the term poverty is confusing for, as demonstrated by Adam Sabra, the medieval sources do not make a clear distinction between poverty as a social phenomenon and poverty as a religious ideal.[200] A man finding himself in a strange town, or in a sudden state of destitution, could go to one of the Sufi hospices and hope to receive a bed and a meal. But these institutions were meant to accommodate men only. When a lonely woman squatted in a room of a *zāwiyah,* she was thrown out. Ibn Taymīyah, who ruled in her case, explained that her sex made her ineligible.[201] In an anecdote about a fourteenth-century Damascene scholar, it is told that he used to live near

the Ribāṭ al-ʿAjāʾiz (of the Old Women), which functioned as a washing place for poor women and their children. Whenever a woman needed soda-ash for bodily washing, or soap for laundry, she received some from the scholar's family.[202]

There was one common denominator among practically all the women who stayed in *ribāṭ*s, and that was freedom from matrimonial obligations. A woman who wanted to join a *ribāṭ* was not necessarily poor; but she almost certainly had to be single. This was true even for the women mystics who were not affiliated with a *ribāṭ*. Ibn al-Ḥājj describes pious women who choose to remain unmarried.[203] Ibn Baydakīn, a thirteenth-century author, similarly rebukes women who refrain from marriage out of misguided piety.[204] This was not about virginity in the Christian sense, although, as noted above, virginity had a certain saintly value in popular culture. Prior marriages did not pose an obstacle in the spiritual path taken by Sufi women. All contemporary sources agree that the residents of *ribāṭ*s were widows or divorcées—that is, women who were *no longer* married.

The institution appears to have fallen out of favor in the fifteenth century, when female hospices appear fewer and smaller compared with their predecessors. By the end of the fifteenth century, Damascus still had at least five female *ribāṭ*s.[205] But al-Sakhāwī tells of women, including his own mother, who used to open their private houses to widows and divorcées.[206] The reliance on this form of neighborhood charity suggests a decline in the importance of hospices. So does the late fifteenth-century account of Felix Fabri, who describes poor women lying, and even giving birth, in the streets of Cairo.[207] The prominence of the all-women *ribāṭ* was a uniquely Mamluk phenomenon; while Sufi institutions for men survived well beyond the beginning of the sixteenth century, virtually none of their sister institutions survived into the Ottoman period.

The rise and decline of the female *ribāṭ*s bear intriguing similarities to the fate of the female religious houses, especially those of the Beguines, which dotted

[207] Sabra, *Poverty*, 108.

Western European cities in the thirteenth and fourteenth centuries.[208] Like the Beguinages, the foundation of *ribāṭs* presupposes a large number of single women in the cities, and, as a necessary corollary, a normative attitude to female labor. Judging by the sheer number of *ribāṭs* founded during the thirteenth century, most of their residents must have come from the lower classes. In either case, these single women did not want, or were not able, to return to their natal families or to find a new husband. Instead, they found in the *ribāṭ* a sheltered female space, and a parallel, gendered, form of mysticism.

CONCLUSION

The primary purpose of this survey was to draw a picture of the gender boundaries in Mamluk urban society, and to suggest that the gendered spheres of women were complementary, rather than subordinate, to those of men. This was true in most political, economic, and social aspects of public life. The importation of slave-girls to be trained as courtesans paralleled that of male slaves intended for the military, and there is even a reference to a parallel female *khushdāshīyah* network. The trousseaux given at the weddings of female members of these elite households were not merely a token of affection, nor gifts meant to placate the groom, but a mechanism of pre-mortem inheritance, in direct parallel to the grant of *iqṭā*ʿ or the inheritance of office. In textile production, the most important urban industry, the contributions of female spinners were no less important than those of the male weavers, and disregarding this runs the risk of misunderstanding the urban economy as a whole. The growth of the mystical Sufi orders in the thirteenth century saw the rise not only of *zāwiyahs* for men, but also of *ribāṭs* for women, who were as actively engaged in the spiritual quest that characterized religious life of the period.

The notion of female dependence and passivity as a mark of medieval Muslim society in general, and Mamluk society in particular, flies against the evidence of the medieval sources. The principle of strict separation of property between spouses, enshrined in Islamic law but also generally accepted in practice, meant that women of all classes had a certain degree of financial independence during their marriage, whether by investing their trousseaux, lending them on interest, or, most commonly, by working for wages. In turn, this strict separation of property and female financial independence allowed for extraordinarily high rates of divorce, which were the most distinctive aspect of domestic life in the Mamluk period. High divorce rates, along with high mortality rates, meant that the reality

[208] On the Beguines, see S. Murk-Jansen, *Brides in the Desert: The Spirituality of the Beguines* (Maryknoll, NY, 1998); C. Neel, "The Origins of the Beguines," in *Sisters and Workers in the Middle Ages,* ed. Judith M. Bennett, Elisabeth A. Clark, Jean F. O'Barr, B. Anne Vilen, and Sarah Westpahl-Wihl (Chicago, 1989), 240–60.

of family life was far from any notion of domestic haven. The custody of children was often contested, and courts were often asked to enforce divorce settlements and extract arrears in maintenance payments.

A second purpose of this survey was to point out the developments in the history of women and gender during the Mamluk period. In terms of economic access, the gender division of property appears to have become less rigid in the fifteenth century. As a result of the expansion of *waqf* family endowments at the expense of *iqṭāʿ,* the link between service and landed revenue loosened, allowing many upper class women to actively participate in the real estate market. In the sphere of domestic relations, the fifteenth century marks a significant shift towards the monetization of marriage. Instead of putting bread on their wives' tables, fifteenth-century husbands often paid their wives with cash, in the form of daily stipends and clothing allowances. The pattern of polygamy also shifted, most clearly indicated by the essentially monogamous nature of the royal household in the late fifteenth century. Finally, the apparent decline in the supply of slave-girls, following a peak in the first half of the fourteenth century, meant that fifteenth-century amirs no longer boasted of dozens of concubines residing in their harems. As slave-girls became more of a rarity, attitudes towards them also changed, and they were now more often appreciated for their piety than for their beauty or their voice.

These economic and social developments are accompanied by cultural shifts. While many medieval scholars talked about women quite often, fifteenth-century authors tend to blabber about them. Any reticence about exposing the women of one's own household, as well as those of other households, completely disappears from the semi-chronicles, semi-diaries of al-Sakhāwī, al-Biqāʿī, and Ibn Ṭawq, to name just the most explicitly personal of the late fifteenth-century authors. Even the objection to female authorship appears to give way, as least in the case of ʿĀʾishah al-Bāʿūnīyah, whose mystical prose and poetry demonstrates the depth of this woman's reading and education.

Do these changes relate to more general changes in Mamluk society during the fifteenth century? It is perhaps premature to draw firm conclusions, as long as both the study of women and gender and the study of Mamluk society have yet to exhaust the rich literary and documentary sources. But one may still note that Mamluk political authority was closely related, in its symbolism, to the domestic authority enjoined by heads of households over their women and their slaves. The early Mamluk period witnessed a sharp distinction between the private and the public. The male heads of households enjoyed a great degree of autonomous power in their own households, and monopolized public power and access to landed revenue by virtue of their official positions. Relations within the domestic unit were clearly differentiated from those governing the market economy; cash

exchanged hands only at marriage's points of entry and exit. By the fifteenth century, on the other hand, the relationship between the public and the private, the Mamluk state and the households it governed, had changed. The blurring of gender distinctions within households, the increasing monetization of domestic relationships, the decline in polygamy and concubinage, all made households less autonomous, less hierarchical, and less isolated. As the autonomy of the head of the household gave way, the courts, both military and religious, adapted an increasingly interventionist approach—which had contradictory results. On the one hand, fifteenth-century wives found it easier to obtain a judicial divorce; on the other hand, the state authorities now saw it as their role to discipline disobedient wives.

The tragic tale of the two adulterous lovers which began this survey is a remarkable indication of these changes. The cuckolded husband, who, instead of seeking either private revenge or the concealment of his wife's infidelity, chooses to go over to the police station and report a crime, is definitely a product of the fifteenth century; a fourteenth-century husband would have found this behavior astounding. Before the middle of the fifteenth century it is practically impossible to find any husband who asked religious or secular courts for help in disciplining his wife. But in the fifteenth century this was a common practice, with husbands lodging public complaints about a wife who ran away from home, or about an affair she was having. It seems that the traditional mechanisms of patriarchy, like a threat of repudiation or physical violence, were now seen as less effective. The account of this adulterous relationship is so striking because it indicates the shifts—nothing less than dramatic—in the power relations within households during the Mamluk period, as well as the eventual affirmation of the role of the state in regulating the private sphere.

The Four Madrasahs in the Complex of Sultan Ḥasan (1356–61): The Complete Survey

The Complex of Sultan Ḥasan in Cairo is one of the most celebrated works of Mamluk architecture. Since the publication of the monograph entitled *Mosquée du Sultan Hassan au Caire* by Max Herz Pasha[1] in 1899,[2] several studies have addressed the building in terms of its typology, stylistic influence, patronage, and meaning. However, the monograph and the studies that followed remain without a complete survey of the four madrasahs attached to the complex. The ground floor plan of the complex, documented by the early monograph, reveals their essence and relationship to the main building but does not fully document the madrasahs as independent spatial units. This survey focuses on the four madrasahs and presents the results of a field survey with complete documentation of their floor plans and sections, published here for the first time (Figs. 1–20).[3] The drawings are supplemented in this introduction by a brief analysis and information pertaining to the assigned functions and personnel for the madrasahs provided by the *waqf* document of Sultan Ḥasan.[4]

The complex had an elaborate functional program, with a *bīmāristān,* a *sabīl-kuttāb,* a congregational mosque, four madrasahs, and a mausoleum. Its plan follows the cruciform four-*īwān* type. Four great tunnel-vaulted *īwāns* flank the main *ṣaḥn* and constitute the major order of the complex. The four madrasahs are

[1] Max Herz Pasha (1856–1919) was a Hungarian architect. He was in Egypt between 1880 and 1914. He worked for the Technical Bureau of the Ministry of Awqaf until 1890 when he joined the Comité de Conservation des Monuments de l'Art Arabe, which he later headed. The complex of Sultan Ḥasan was one of the many monuments the Comité restored during his twenty-five years of service.

[2] See Max Herz, *La Mosquée du Sultan Hasan au Caire* (Cairo, 1899).

[3] The initial survey and documentation were conducted as part of my dissertation field research in 1991 in Cairo. See Howayda Al-Harithy, "Urban Form and Meaning in Mamluk Architecture" (Ph.D. diss., Harvard University, 1992).

[4] Dār al-Wathāʾiq al-Qawmīyah in Cairo possesses two documents for the *waqf* with which Sultan Ḥasan ibn Muḥammad ibn Qalāwūn endowed his great complex in al-Rumaylah near the Citadel. The first (no. 40/6) is the original *waqfīyah* drawn up for Sultan Ḥasan. It is written on parchment, but most of it has been lost or is damaged. The second (no. 365/85) is a contemporary bound manuscript copy and a more complete document preserving the content of the original. It is this version that is fully published. See *The Waqf Document of Sultan Al-Nasir Hasan b. Muhammad b. Qalawun for his Complex in Al-Rumaila,* ed. Howayda Al-Harithy (Berlin/Beirut, 2001).

of the single-*īwān* type and occupy the corners created by the cruciform plan. These constitute the minor order in the spatial organization of the complex. Although the four-*īwān* building type has roots in Cairo going back to its introduction by the Ayyubids, none of its predecessors utilize the type with such originality. By the time the complex was built in 1356, the type had matured and was widely used in a variety of religious buildings including madrasahs, *khānqāh*s, and *zāwiyah*s. Examples include the madrasah of al-Nāṣir Muḥammad on al-Muʿizz Street (1295), its neighbor the madrasah of al-Ẓāhir Barqūq (1384–86), the *khānqāh* of Baybars al-Jāshnikīr (1307–10), and the *zāwiyah* of Shaykh Zayn al-Dīn Yūsuf (1295–1325). The plan of the complex uses a monumental version of the four-*īwān* plan in combination with the single-*īwān* type. It is therefore a masterful combination and a unique interpretation of the four-*īwān* plan. By inserting a single-*īwān* madrasah in each of the four corners as a minor order to the major cruciform one, the plan distinguishes the public zone from the private zone of each of the madrasah units and adjusts scale and accessibility. The public zone includes the *jāmiʿ,* the major teaching *īwān*s, and the mausoleum, while the madrasahs and their living units remain separate and private.

The madrasahs are dedicated to the teachings of the four Sunni schools. According to the *waqf* document, dated Saturday, 15 Rabīʿ II 760 (1359), and Thursday, 2 Rajab 760 (1359),[5] the largest of the major *īwān*s, that of the qiblah, is dedicated to the Friday *khuṭbah,* the reading of the Quran, and the meetings of the Shafiʿi students with their professor to conduct their general public lectures. The remaining three major *īwān*s are approximately equal in size. The southwestern *īwān* was dedicated to the sessions of the Hanbali School, the northwestern to the Hanafi School and the northeastern to the Maliki School.

> . . . He also dedicated the *qiblī īwān* to the delivery of the *khuṭbah,* the reading of the blessed Quran, and the meeting of the Shafiʿis with their professor to conduct their public lecture in it . . . and dedicated the *baḥrī īwān* as well to the meeting of the Hanafis with their professor to conduct their public lecture in it, and dedicated the eastern *īwān* as well to the meeting of the Malikis with their professor to conduct their public lecture in it, and dedicated the western *īwān* as well to the meeting of the Hanbalis with their professor to conduct their public lecture in it. . . . as to the place east of the mentioned *qiblī īwān,* he endowed the *īwān,* at the end of which lies the mihrab, as a mosque for God almighty where prayers are to be held, worship is to be performed, the Quran to be read, good deeds are to be offered, and noble education is to

[5] Published in its entirety in 2001; see *The Waqf Document of Sultan Al-Nasir,* ed. Al-Harithy.

> be conducted. He endowed the rest of the mentioned place as a madrasah for the pursuit of education in accordance with the *madhhab* of al-Imām al-Shāfiʿī, may God bless him, and for the lodging of the fifty individuals assigned to live in it . . . twenty five individuals from the seniors and twenty five individuals from the juniors.[6]

According to the *waqf* document,[7] all four madrasahs are treated equally in terms of personnel assigned, salaries, number of students, and their stipends.[8] Each madrasah is assigned a professor, three teaching assistants, a supervisor, and one hundred students, fifty of whom are residents. "A professor, who is a Hanafi jurist known for his piety, is to conduct the teaching of Hanafi *fiqh* in the *baḥrī īwān* designated for him above; three assistants are to be assigned to him who have the same qualifications as those required of the Shafiʿi assistants, and a hundred students from his *madhhab,* on the condition that the professor, assistants, and students conduct themselves as required of the Shafiʿis and in accordance with the restrictions and conditions outlined above. . . ."[9] Besides their stipends, the *waqf* provided students with seasonal gifts and medical care. "The measure of two head of camels, twenty head of cattle, and ten head of sheep are to be slaughtered during ʿĪd al-Aḍḥá and divided in half. One half is to be distributed to the residents of the aforementioned places, including students and staff, as the *nāẓir* sees fit. The second half is to be distributed to the orphans, tutors, supervisors, and the poor and needy outside the aforementioned places, both neighbors and strangers."[10]

Though the design of the four madrasahs is a variation of the single-*īwān* plan, they vary a great deal in size and interior organization of living units. Each madrasah has a private teaching *īwān*, a courtyard with a fountain, latrines, living units, and a large room above the *īwān* that may have served as a library (figs. 21–25). The living units range in size. The average room has an area of 10 square meters. The Ḥanafīyah Madrasah has 56 living units, the Shāfiʿīyah has 52, and the Mālikīyah has 44, while the Ḥanbalīyah has only 22 living units. Its *īwān* has an area of 30 square meters compared to the *īwān* of the Ḥanafīyah, which

---

[7] Ibid., 148–75.

[8] For details on the salaries and stipends, see Muḥammad M. Amīn, "Maṣārīf Awqāf al-Sulṭān al-Malik al-Nāṣir Ḥasan ibn Muḥammad ʿalá Maṣāliḥ al-Qubbah wa-al-Jāmiʿ wa-al-Madāris wa-Maktab al-Sabīl bi-al-Qāhirah," in Ibn Ḥabīb, *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh* (Cairo, 1986), 3:341–449.

[9] *The Waqf Document of Sultan Al-Nasir,* ed. Al-Harithy, 151.

[10] Ibid., 172–73.

has an area of 67.5 square meters. It is clear that though the *waqf* document treated the four madrasahs equally, the design seems to have accommodated the site conditions and the sizes of the madrasahs in a more hierarchical fashion that responded more to the actual following of the four madrasahs in Egypt. The Ḥanafīyah was most popular and the Ḥanbalīyah was the least popular at the time.

The Decline of the Ilkhanate and the Mamluk Sultanate's Eastern Frontier

In the period following the death of the last Mongol Ilkhan ruler Abū Saʿīd in 736/1335, the region east of the Mamluk Sultanate, from the Euphrates to the Oxus, was thrown into political upheaval. The Ilkhanate had been ruled by a dynastic line descended from Hülegü Khan, which, although witness to occasional succession disputes, had continued to provide undisputed leadership in the region since 656/1258. By the fourteenth century, dynastic succession had been settled in one branch of the Hülegüid family, through Hülegü's son Abaqa, and Abaqa's son Arghun. While this pattern helped to prevent the kind of succession crises that had occurred in the thirteenth century, it created a new problem of uncertainty when Abū Saʿīd Bahādur Khan died without an heir in 736/1335. The uncertainty of legitimate succession left several factions from among the state's military elite scrambling to maintain their privileged positions. Various families of amirs and local notables entered into alliances with each other as well as with members of peripheral lines of the Ilkhanid royal family in an attempt to enhance their prestige and legitimize their claims to authority. In particular, the military governors in the western Ilkhanid provinces, in roughly the area from Baghdad north to Mosul, Diyarbakr, and Erzurum, which formed the traditional border zone with the Mamluk state, sought aid and recognition from the sultan in Cairo. Sultan al-Nāṣir Muḥammad welcomed such overtures as an opportunity to both secure the Mamluk northeast frontier, as well as extend the authority of the state beyond the Euphrates. For a brief period, it seemed as if this had been achieved, and the name of al-Nāṣir Muḥammad was read in the *khuṭbah* in the mosques of Baghdad, Mosul, and Diyarbakr. This article is an attempt to untangle the often confusing web of political networks and allegiances in this frontier zone and to analyze the factors that led to the recognition of Mamluk authority east of the Euphrates River, as well as the breakdown in relations and the eventual reversion to the *status quo ante,* with the Euphrates dividing the Mamluk domains and the lands which would continue to look to the legacy of the Ilkhanate as a model for its geographical and political orientation.

The Ilkhanid Western Provinces

Following the second wave of Mongol migration to Iran as part of Hülegü's campaign against the Nizārī Ismāʿīlīs and the Abbasid caliph in the 650s/1250s, the territory of Arab Iraq, Diyarbakr, and the Lake Van region came to form the western frontier of the newly founded Mongol state. This state, known as the Ilkhanate, extended from the Oxus to Euphrates, with its center in the province of Azarbayjan and the urban center of Tabriz. Hülegü's army of conquest, which formed the basis of this migration, included several different tribal contingents, some of which represented older groups that had lived in Mongolia in the time of Chinggis Khan, as well as some newer, non-tribal military units. From among the older tribal groups, the Oyrat came to occupy the territory on the western edge of the Ilkhanate, adopting seasonal migration routes between summer pastures in eastern Anatolia and winter pastures in the area around Mosul.[1] These migration routes corresponded territorially with the Ilkhanid military governorship of Diyarbakr, centered in Mosul.

These provinces were overseen by amirs appointed by the Ilkhanid central authority. They were charged with maintaining security on the frontier, and keeping order among the Oyrats. However, due to the Oyrats' own internal leadership, this was not always possible. In 695/1296, the Tatar Ilkhanid governor of Diyarbakr, Mūlāy Noyan, was faced with a migration of several Oyrat military units and their households under the leadership of their chief, Ṭarqāy Gūrgān. Mūlāy confronted the Oyrats, but was defeated and could not prevent them from resettling in Mamluk Syria.[2] The frontier with the Mamluks was quite fluid, and such examples of Mongol *wāfidīyah* to Syria and Egypt were not uncommon.[3] For the purposes of this article, it is important to recognize a fundamental tension in the Diyarbakr province, which was home to large numbers of a single tribal group, the Oyrats, under the nominal authority of a non-Oyrat imperial appointee. The breakdown in central authority in the Ilkhanate after 736/1335 would lead to a parallel breakdown of this pattern of frontier administration, leading to instability and the opportunity for the Mamluk Sultanate to extend its influence in the region.

In addition to the Ilkhanid governor at Mosul, there were two other important political and military posts on the western frontier. To the northeast of Diyarbakr was the governorate of Ahlat, in the region around Lake Van.[4] In addition, the amir of the "right hand" of the Ilkhanid army, also known as the commander of

Anatolia *(amīr-i rūm)* resided in this region, west of Tabriz. It is at the intersection of these three Ilkhanid posts (Diyarbakr, Ahlat, Rūm) and three prominent political families that we will examine the role of the Mamluk sultan al-Nāṣir Muḥammad in the events on the Ilkhan frontier after 736/1335.

THE FAMILY OF AMIR SŪTĀY AND THE OYRATS

Mūlāy Noyan died in 712/1312, and his position was given to a certain Amīr Sūtāy.[5] Although Sūtāy's background is not certain, it is clear that he was not a member of the Oyrat tribe.[6] He was a stable master (*aqṭajī* [=*akhtājī*][7]), and claimed to have been present at the conquest of Baghdad in 656/1258. Al-Ṣafadī writes that he was over one hundred years old when he died in 732/1331–32.[8] During the reign of Abū Saʿīd (717-36/1317–35) he governed Diyarbakr while his three sons governed Ahlat.[9] However, when Sūtāy died, his position in Diyarbakr passed to the Oyrat amir ʿAlī Pādshāh.[10] His promotion to this post was likely related to the fact that he was Abū Saʿīd's uncle, the brother of his mother Ḥājī Khātūn.[11] ʿAlī Pādshāh came into control of the entire upper Tigris region, from Baghdad to Diyarbakr, including its large population of his fellow Oyrat tribesmen. The three sons of Sūtāy, who had served in Ahlat, opposed ʿAlī Pādshāh's authority, no doubt stung that their father's assignment had not gone to a member of the family. In particular, Sūtāy's son Ḥājī Ṭaghāy clashed with the Oyrat chief, but was initially defeated. He would have to wait three more years for the breakup of the Ilkhanate to provide him an opportunity to reclaim Diyarbakr for the descendants of Sūtāy.

[5]Ḥāfiẓ Abrū, *Dhayl-i Jāmiʿ al-Tavārīkh,* ed. Khānbābā Bayānī (Tehran, 1317 [1939]), 54; Sümer, *Kara Koyunlular,* 33.

[6]Claude Cahen has characterized Sūtāy's son, Ḥājī Ṭaghāy, as the chief Oyrat who represented the principal surviving military force of the Mongol regime in upper Mesopotamia in the 730s/1330s. See Claude Cahen, "Contribution à l'histoire du Diyār Bakr au quatorzième siècle," *Journal Asiatique* 243 (1955): 76. However, his conflict with ʿAlī Pādshāh and the Oyrats, according to Ḥāfiẓ Abrū, was based on the "ancient hatred *(kīnah)* which he held in his heart for Amīr ʿAlī Pādshāh and the Oyrat tribe." Because of this, he "raised his head in opposition to them. He committed all of his efforts to eradicating that tribe." See Ḥāfiẓ Abrū, *Dhayl,* 152. Due to this conflict of Ḥājī Ṭaghāy with the Oyrat tribe, and based on this reason given by Ḥāfiẓ Abrū, it seems safe to say that Ḥājī Ṭaghāy, and hence his father Sūtāy, were not of the Oyrat tribe.

The Chubanids

The Chubanids' eponym, Amīr Chūpān, was a member of the Suldus tribe. He ruled the Ilkhanate virtually independently after the death of Öljeytü Khan in 716/1316, and was grooming his son, Dimashq Khvājah, to follow in his place.[12] Reaction from the other amirs and from a maturing Abū Saʿīd came in the form of a purge of Amīr Chūpān and his children in 727/1327. Dimashq Khvājah was executed after being accused of having an affair with Ṭughā Khātūn, the former wife of Öljeytü[13] while Amīr Chūpān was on campaign in the east. Upon receiving word of his son's death, Amīr Chūpān took refuge with Malik Ghiyāth al-Dīn Kart in Herat. Amīr Chūpān's other son, Tīmūr Tāsh, was the Ilkhanid military governor in Anatolia, where he had claimed to be the *mahdī.*[14] After his brother was killed in 727/1327, he fled to the south and entered Mamluk territory under the protection of the amir Sayf al-Dīn Aytmish.[15] His arrogant posturing, as well as his ostentatious dispersal of riches to the other Mamluk amirs, drew the ire of Sultan al-Nāṣir Muḥammad.[16] When Amīr Chūpān was executed in Herat, Abū Saʿīd demanded that the Mamluk sultan send Tīmūr Tāsh back to the Ilkhanid court. Al-Nāṣir Muḥammad thus had his chance to be rid of Tīmūr Tāsh, and in the summer of 728/1328, Tīmūr Tāsh was strangled in Cairo.[17]

Abū Saʿīd was thus able to take greater personal control over the affairs of the Ilkhanate. Although the Chubanids were temporarily neutralized, Tīmūr Tāsh's son Shaykh Ḥasan (known as *kūchak,* "the small," or "the younger") would renew the fortunes of his family by claiming that his father was still alive and had come back after a long pilgrimage journey.[18] Shaykh Ḥasan and his brother Malik Ashraf

---

[12]An illustration of Dimashq Khvājah's position in the state is provided by Ibn Baṭṭūṭah, who arrived in Baghdad in 727/1327, coinciding with a visit by Abū Saʿīd to the city. He saw the khan and his vizier, Ghiyāth al-Dīn Muḥammad, on a boat on the Tigris. In front of them was Dimashq Khvājah who, Ibn Baṭṭūṭah wrote, held mastery over Abū Saʿīd. See Ibn Baṭṭūṭah, *The Travels of Ibn Baṭṭūṭa, A.D. 1325–1354,* trans. H. A. R. Gibb (Cambridge, 1971), 336–37. For the details of Amīr Chūpān's role in the Ilkhanate, see Charles Melville, *The Fall of Amir Chupan and the Decline of the Ilkhanate, 1327–1337: A Decade of Discord in Iran* (Bloomington, 1999); idem, "Abū Saʿīd and the Revolt of the Amirs in 1319," in *L'Iran Face à la Domination Mongole: Études reunites et présentées par Denise Aigle* (Tehran, 1997), 89–120; idem, "Wolf or Shepherd? would establish Chubanid authority in the former Ilkhanid center of Azarbayjan in the 740s/1340s and 750s/1350s. However, in the immediate aftermath of Abū Saʿīd's purge of the Chubanids, the fortunes of a different Shaykh Ḥasan began to rise.

SHAYKH ḤASAN JALAYIR

Tīmūr Tāsh's position in Anatolia passed to Shaykh Ḥasan (known as *buzurg,* "the large," or "the elder"), a descendant of one of Hülegü's high-ranking Jalayir amirs. His mother was Öljetey Sulṭān, the sister of the Ilkhanid rulers Ghazan and Öljeytü.[19] Shaykh Ḥasan was married to Amīr Chūpān's daughter Baghdād Khātūn, although Abū Saʿīd forced Shaykh Ḥasan to divorce her and then married her himself after Amīr Chūpān's execution. Shaykh Ḥasan thus had close family ties with the Chubanids and the Ilkhanid royal house, which had ensured him of a high status in the state. With the fall of the Chubanids, he became the commander-in-chief *(amīr-i ulūs)* of the Ilkhanid forces, with his base of operations in eastern Anatolia. In these last years of the Ilkhanate, Shaykh Ḥasan was in close contact with the Mamluk state. As early as 729/1328–29, after taking over Tīmūr Tāsh's position in Anatolia, his own envoys started to arrive at the court of al-Nāṣir Muḥammad.[20] Al-Maqrīzī describes Shaykh Ḥasan as the deputy (*nāʾib*[21]) of Abū Saʿīd, although they each sent separate diplomatic dispatches to Cairo. Until Abū Saʿīd's death, both sides were eager to maintain the friendly relations that had been established since the end of Mongol-Mamluk hostilities in 723/1323.[22]

THE END OF THE ILKHANATE AND UNCERTAINTY ON THE WESTERN FRONTIER

When Abū Saʿīd Bahādur Khan died on 13 Rabīʿ II 736/30 November 1335, in the words of Ḥāfiẓ Abrū, "the kingdom without a sultan became like a body without a soul and a flock without a shepherd."[23] Abū Saʿīd had no living male children. The only hope for the uncontested continuation of the dynasty was the unborn child of his wife Dilshād Khātūn. She was the daughter of Dimashq Khvājah ibn Amīr Chūpān, and had become the favorite of Abū Saʿīd in the later years of his reign. Her child would not be born until the following May, and in the intervening

months various factions maneuvered for position in the political vacuum. One of these factions was led by Abū Saʿīd's vizier, Ghiyāth al-Dīn Muḥammad, who enthroned Arpā, a descendant of Hülegü's brother, Ariq Böke.[24] Opposition to Ghiyāth al-Dīn Muḥammad and Arpā Khan came from the Oyrat amirs, led by ʿAlī Pādshāh. Not only did ʿAlī Pādshāh have the military advantage of his tribal following, but he also had a symbolic advantage as the guardian of Abū Saʿīd's unborn child, after Dilshād Khātūn had sought his protection in Baghdad.[25] It seems likely that ʿAlī Pādshāh assumed that if she gave birth to a son, he would have an undisputed claim to the Ilkhanid throne. However, before the birth, ʿAlī Pādshāh and the Oyrats raised their own Chinggisid protégé as their symbolic leader, a descendant of Baydu Khan named Mūsá.

On 27 Ramaḍān 736/9 May 1336, the two sides joined in battle at the Jaghatu River. Although the forces of Arpā and Ghiyāth al-Dīn Muḥammad greatly outnumbered the Oyrats, ʿAlī Pādshāh emerged victorious after two of Arpā's amirs defected, and after concocting a ruse which convinced both Arpā and Ghiyāth al-Dīn Muḥammad that the other had been defeated.[26] They were both eventually executed, and ʿAlī Pādshāh emerged as the apparent heir to Ilkhanid power in Tabriz. Nine days after the battle, Dilshād Khātūn gave birth to a girl, and ended the hope that a succession crisis could be forestalled by the birth of a commonly recognized male heir. ʿAlī Pādshāh attempted to rule through his Chinggisid protégé Mūsá Khan and his vizier, Jamāl Ḥājī ibn Tāj al-Dīn ʿAlī Shīrvānī, but opposition to his regime soon emerged, finding a focus in Anatolia with Shaykh Ḥasan Jalayir and the sons of Amīr Sūtāy. The end of the Ilkhanid dynasty gave rise to conflict among these representatives of the military elite who could no longer rely on a strong authority at the center to maintain the balance among their various interests, which included the Sutayid claims to Diyarbakr. It was in these subsequent conflicts that these Ilkhanid military elites looked to the Mamluks as a source of political and symbolic support, in a period when a commonly recognized ruler no longer existed to provide the political and symbolic basis for the Ilkhanid state.

The Mamluk Connection

The Mamluk view of the events in the years following Abū Saʿīd's death can be traced through the diplomatic missions and reports that reached Cairo from the east which were recorded by al-Maqrīzī in his *Kitāb al-Sulūk*. Just a week after the Oyrats' victory at the Jaghatu River, envoys representing ʿAlī Pādshāh and Mūsá

[24]Ibid., 145.

[25]Ibid., 148.

[26]Ibid., 149.

Khan arrived in the Mamluk capital. They were well received, and presented with great wealth. Two days later, the day that Dilshād Khātūn's daughter was born, the envoys rode out from the Citadel and visited the tombs of al-Shāfiʿī, Sayyidah Nafīsah, and Sultan Qalāwūn.[27] After describing the envoys' visit, al-Maqrīzī digresses to provide the background to their arrival. He explains that ʿAlī Pādshāh had persuaded the sons of Sūtāy (Sūntāy) to join with him, while at the same time promising to turn Baghdad over to Sultan al-Nāṣir Muḥammad, in return for the sultan's help against the sons of Sūtāy. Al-Nāṣir Muḥammad was delighted at this, and raised several military units to aid ʿAlī Pādshāh.[28] Meanwhile, the sons of Sūtāy had joined with Shaykh Ḥasan Jalayir in Anatolia.[29] After the battle, al-Maqrīzī writes, ʿAlī Pādshāh stood alone in charge of the *urdū,* and raised Mūsá to the royal throne.[30]

Thus, al-Nāṣir Muḥammad had entered into an alliance with ʿAlī Pādshāh, who had agreed to govern Baghdad in the name of the Mamluks in exchange for support against his rivals, the sons of Sūtāy. Following the battle at the Jaghatu River, al-Nāṣir Muḥammad's Oyrat ally ʿAlī Pādshāh enthroned a new Ilkhan, who was essentially his puppet. The Sutayids had been neutralized, and it seemed as if Mesopotamia had become, if not a province of the Mamluk Sultanate, at least a friendly vassal.

ʿAlī Pādshāh's success was short lived, however. Sūtāy's son Ḥājī Ṭaghāy turned to Shaykh Ḥasan Jalayir for help in driving ʿAlī Pādshāh out of Diyarbakr. Shaykh Ḥasan agreed, summoning a Hülegüid prince named Muḥammad from Tabriz, whom he crowned as khan, in opposition to Mūsá Khan. After entrusting Anatolia to his deputy Eretna,[31] Shaykh Ḥasan set out for Tabriz with his following of amirs and the army of Rum to confront ʿAlī Pādshāh.[32] For Shaykh Ḥasan, however, the main issue may not have been a matter of seizing power for himself, but rather a desire to limit the personal power of ʿAlī Pādshāh and ensure consensus among the amirs. Before confronting ʿAlī Pādshāh in battle, Shaykh Ḥasan called on ʿAlī Pādshāh to give up his power and allow a sultan to be named by all the amirs. He appealed to the custom of their ancestors, and their background in a common (Ilkhanid) *ulūs*. Ḥāfiẓ Abrū relates Shaykh Ḥasan's message to ʿAlī Pādshāh:

> We have all been in one *ulūs* and we know one another. The

> custom of the fathers and ancestors is clear. It is better that we all agree and seat a padishah on the throne who is deserving of the sultanate, and everyone stays on his own path and custom. Since that which you seek is that which brings discord throughout the land, in order that unlawful *(nā-ḥaqq)* blood does not flow and the country remains flourishing and inhabited, the condition we give you is to either heed my words or suffer.[33]

ʿAlī Pādshāh did not receive this ultimatum. Instead, the other Oyrat amirs replied that, "we have taken the kingdom by the power of our own hands. . . . [Shaykh Ḥasan] cannot deceive us with these fables *(afsānhā)*."[34] The Oyrat position was that their rule was justified merely by the military force they were able to command. Contrary to this was Shaykh Ḥasan's appeal to the tradition of consensus and election of the ruler by all members of the military elite. The convention of political acclamation *(quriltay)* was a tradition of nomadic steppe politics, and had precedent in the Mongol empire going back to the *quriltay* which named Chinggis Khan the ruler of all Mongols in 602/1206. Although more often than not, a *quriltay* was a symbolic confirmation of a single dominant contender for the throne, rather than an election among several candidates, it was an occasion for members of the royal family and the amirs to gather and assert their voice in the collective political enterprise. The fact that a major *quriltay* had not been held for either Arpā or Mūsá Khan meant that Shaykh Ḥasan, the *amīr-i ulūs*, had not consented to these choices for political leadership, and was asserting what he assumed to be his traditional right to take part in the process of enthroning the new khan.

With the Oyrats' refusal to compromise, both sides prepared for military conflict. In the ensuing battle at Qarā Durrah, near Ālādāgh, on 14 Dhū al-Ḥijjah 736/24 July 1336, Shaykh Ḥasan's forces, referred to by Ḥāfiẓ Abrū as the Anatolians *(rūmī),* and the supporters of Muḥammad Khan *(muḥammadīyān),* defeated ʿAlī Pādshāh and the Oyrat army.[35] Shaykh Ḥasan and Muḥammad Khan occupied Tabriz, the Ilkhanate's urban capital. Now in control of eastern Anatolia and Azarbayjan, Shaykh Ḥasan had assumed the paramount position in the Ilkhanid domains.

The defeat of ʿAlī Pādshāh meant that Ḥājī Ṭaghāy ibn Sūtāy had regained control of his father's province of Diyarbakr. Once again, his family governed both Mosul and Ahlat, while the remaining Oyrat troops came under the leadership of Shaykh Ḥasan, who established his authority in Baghdad. For the moment, it

[33]Ibid.

[34]Ibid., 152–53.

[35]Ibid., 153.

seemed as if the Mamluks had lost their influence east of the Euphrates. Initially, neither Shaykh Ḥasan nor the Sutayids made promises to govern in the name of the Mamluk sultan. Shaykh Ḥasan's nominal allegiance was to the newly enthroned Muḥammad Khan, although, in reality, Shaykh Ḥasan himself represented the real authority in the region from Baghdad to Tabriz. However, the Jalayirid amir did maintain friendly relations with al-Nāṣir Muḥammad, sending an envoy and a gift to the sultan after his victory at Ālādāgh.[36]

Shaykh Ḥasan's campaign against ʿAlī Pādshāh, and his subsequent occupation in Azarbayjan and Iraq, meant that his former post in eastern Anatolia was vacant. Shaykh Ḥasan had left his deputy Eretna in charge there before heading east, and Eretna was eager to assert his own authority. He did this in part by seeking official recognition as the ***nāʾib*** of al-Nāṣir Muḥammad in Anatolia in return for including the sultan's name on his coins and in the Friday prayer.[37] Al-Maqrīzī writes that this support from the Mamluks frightened Shaykh Ḥasan, who, later in the same year (738/1337–38), sent a messenger to the sultan requesting peace.[38] Soon after, in 740/1339–40, Shaykh Ḥasan again appealed to al-Nāṣir Muḥammad, this time asking him to send the Mamluk army to take over Baghdad, Mosul, and Persian Iraq.

At first glance, such a request seems hard to believe. Why would Shaykh Ḥasan invite the intervention of a foreign army? However, when we examine the challenges and setbacks Shaykh Ḥasan had faced since Ālādāgh in 736/1336, it seems plausible that an allied Mamluk military presence would be a welcome source of support. Shaykh Ḥasan had lost a large portion of his troops to the Chubanid amir Shaykh Ḥasan-i Kūchak. As mentioned earlier, Shaykh Ḥasan-i Kūchak claimed that his father Tīmūr Tāsh was still alive, and that he had returned from Egypt and the hajj pilgrimage to claim the rights of the Chubanids in the Ilkhanate. Although "Tīmūr Tāsh" was a Turkish former deputy of the real Tīmūr Tāsh, named Qarā Jūrī, all of Shaykh Ḥasan-i Buzurg's Chubanid and Oyrat forces left him to join Shaykh Ḥasan-i Kūchak when the false Tīmūr Tāsh appeared.[39] Shaykh Ḥasan-i Buzurg was driven out of Azarbayjan, and after an unsuccessful attempt to seek support from Khurasan in 739/1339,[40] he turned to the Mamluks. He also sought to renew his alliance with Ḥājī Ṭaghāy ibn Sūtāy, and requested that the Mamluks broker a peace between them.[41] Although it does

not seem that the Mamluk army took up Shaykh Ḥasan-i Buzurg's invitation to come to Baghdad, Mosul, and Persian Iraq, the Mamluk amir Aḥmad Sāqī did negotiate a peace agreement between the Jalayirid and Ḥājī Ṭaghāy.[42]

It is likely that the Mamluks hoped to win over Ḥājī Ṭaghāy and Shaykh Ḥasan-i Buzurg as their new frontier allies. With the re-emergence of the Chubanids, Tīmūr Tāsh's son Malik Ashraf had come to power in Anatolia. Eretna, who had governed that region in the name of the Mamluks, was marginalized, but would establish his own independent principality in Kayseri.[43] Having lost their vassal in Anatolia, the Mamluks looked to Diyarbakr and Iraq to secure their frontier against the Chubanids. In 741/1340–41, the Mamluk amir Aḥmad Sāqī rode to Sultaniyya on behalf of the sultan and demanded oaths of allegiance from Ḥājī Ṭaghāy and Shaykh Ḥasan-i Buzurg. They again requested that the sultan send the army to take over the eastern lands *(bilād al-sharq)*. The Mamluk amir insisted that they each send their sons as security of their pledge of allegiance to the Mamluks. Ḥājī Ṭaghāy sent his son Barhashīn, while Shaykh Ḥasan sent Ḥājī Ṭaghāy's nephew, Ibrāhīm Shāh, to Aleppo.[44] From Aleppo, these two traveled on to Egypt and arrived in Cairo on 6 Dhū al-Ḥijjah 741/23 May 1341. Two days later, they had an audience with al-Nāṣir Muḥammad. Barhashīn and Ibrāhīm Shāh had brought with them the qadis of Baghdad, Mosul, and Diyarbakr, and presented the oaths of Ḥājī Ṭaghāy and Shaykh Ḥasan, as well as the amirs and soldiers, who pledged to be obedient to the Mamluk sultan. They also reported that the *khuṭbah* had been said in the sultan's name in Baghdad, Mosul, and Diyarbakr. Al-Nāṣir Muḥammad then indicated that the army should be discharged to them.[45]

Thus, at the end of the third and final reign of al-Nāṣir Muḥammad in 741/1341, the Mamluk Sultanate had established its authority in Arab Iraq and Diyarbakr. With the instability arising from the end of the Ilkhan dynasty, as well as the end of effective Oyrat leadership following the defeat of ʿAlī Pādshāh, the Sutayids had reclaimed the territory they had governed for the Ilkhans. However, without Ilkhanid dynastic authority, they aligned themselves with Shaykh Ḥasan-i Buzurg Jalayir and the Mamluks to ensure their position and security. The Mamluks, having first recognized ʿAlī Pādshāh, and then Eretna as their vassals on the eastern frontier, had finally found what they must have hoped to be a more stable arrangement. The Mamluk army would march east, and from Iraq and Diyarbakr, extend their reach against the Chubanids in the very heartland of the Ilkhanate.

Such a campaign did not take place, however. Soon after Barhashīn and Ibrāhīm

[45]Ibid., 519–20.

Shāh met with the sultan, a message arrived in Cairo from the Artuqid governor of Mardin, al-Malik al-Ṣāliḥ. It informed the sultan that when the Chubanids went to fight Shaykh Ḥasan and Ḥājī Ṭaghāy, they pressed for peace, and took an oath to watch over the Euphrates for them. Al-Malik al-Ṣāliḥ added that there was no longer any use in sending the Mamluk army to the east.[46] Shortly thereafter, another message arrived from Aleppo, confirming that Shaykh Ḥasan and Ḥājī Ṭaghāy had made peace with the Chubanids. Al-Maqrīzī and Ibn Taghrībirdī both report that this so agitated al-Nāṣir Muḥammad that he was afflicted with bloody diarrhea.[47]

Al-Maqrīzī attributes the failure of the sultan to send the army to the east in support of Shaykh Ḥasan and Ḥājī Ṭaghāy to a truce they made with the Chubanids. Al-Nāṣir Muḥammad's agitation came when he realized that he would have no support from these amirs in the campaign. Such a truce is not mentioned by either the Jalayirid historian Ahrī, nor by the Timurid historian Ḥāfiẓ Abrū. Ahrī writes that the Chubanids fought an inconclusive battle with Shaykh Ḥasan-i Buzurg. The Jalayirid amir fell back to Baghdad, while the Chubanids devastated Persian Iraq.[48] According to Ḥāfiẓ Abrū, the Chubanids attacked the Sutayids in Diyarbakr, then Shaykh Ḥasan-i Buzurg in Baghdad. He was able to repel them and hold on to Arab Iraq, while Shaykh Ḥasan-i Kūchak withdrew to Erzurum, where they destroyed a city held by the Sutayids, and even defiled the grave of Ḥājī Ṭaghāy's son.[49] Thus, it is difficult to recreate a precise picture of what actually took place among these various factions. We can conclude, however, that the contacts between the Jalayirids and Sutayids, and the Mamluks were significantly disrupted by the Chubanids. The Mamluk state faced its own internal disorder following al-Nāṣir Muḥammad's death. He was succeeded by a series of short-lived sons and grandsons, most of whom ruled only nominally, with various amiral factions competing for actual power.[50] Instability within the Mamluk state, combined with a relative stability in the former Ilkhanid territory after 741/1341 led to an end to the co-optation of frontier governors which had been attempted under al-Nāṣir Muḥammad. The Chubanids under Shaykh Ḥasan-i Kūchak, and then under his brother Malik Ashraf, were able to control the center of the Ilkhanid state in Azarbayjan, and the strategic urban centers of Tabriz and Sultaniyya.

[50] Linda Northrup, "The Baḥrī Mamlūk Sultanate, 1250–1390," in *The Cambridge History of Egypt,* vol. 1, *Islamic Egypt, 640–1517* (Cambridge, 1998), 287.

Their authority there would continue until an invasion from the Golden Horde led by Jānī Beg Khan in 758/1357. The Jalayirid amir Shaykh Ḥasan-i Buzurg maintained his authority in the traditionally Oyrat territory of Arab Iraq and Diyarbakr. His son and successor Shaykh Uvays would take advantage of the instability following the Golden Horde's invasion of Azarbayjan, and reunite Tabriz and Baghdad in 759/1358, establishing an independent Jalayirid dynasty which lasted until the fifteenth century.

Further research remains to be done in order to understand the complex political dynamics in play between the Mamluk Sultanate and the successor states to the Ilkhanate. Relations continued to be maintained across the frontier, but as the dust began to settle in the years after 736/1335, it became clear that the political center of gravity east of the Euphrates remained Azarbayjan. Especially after Shaykh Uvays' re-conquest of Tabriz in 759/1358, there was little room for maneuvering on the frontier, since the provinces of Arab Iraq and Diyarbakr were more firmly tied to the center in Tabriz under Jalayirid rule. Thus, conditions more closely resembling the period of Öljeytü and Abū Saʿīd were established, leading to a more stabilized relationship between Cairo and Tabriz. Overt claims to Mamluk sovereignty in Iraq, Diyarbakr, and eastern Anatolia were no longer possible without the kind of fluidity and uncertainty that had existed in these regions immediately after the collapse of the Ilkhan dynasty.

The Mongol Invasions of Bilād al-Shām by Ghāzān Khān and Ibn Taymīyah's Three "Anti-Mongol" Fatwas

Introduction and Historical Background

The anti-Mongol fatwas of Ibn Taymīyah (d. 728/1328) belong to a precise historic context, that of the various attempts made by the Ilkhans to gain control of Syria (Bilād al-Shām) in the period following the fall of Baghdad in 656/1258 and the abolition of the Abbasid caliphate.[1] Between 658/1260 and 712/1312, the Mongol rulers of Persia would launch six separate campaigns in the region. On the two occasions when they succeeded in briefly occupying Syria, in 658/1260 and 699/1299–1300, the Ilkhans laid the foundations of an administrative system, indicating a longer-term project of incorporating the region into their empire.[2] The first invasion, led by Hülegü (r. 1256–65), was halted by the Mamluk sultan Quṭuz and the amir Baybars on 25 Ramaḍān 658/3 September 1260 at ʿAyn Jālūt.[3] This defeat did not put an end to the Ilkhans' military initiatives, but it did establish the spheres of influence of the two rival powers. The Mamluks dominated the countries of the Levant, while on the far side of the Syrian desert the Ilkhans held Mesopotamia and the Iranian plateau. No official peace having been agreed upon, the deployment of spies *(jāsūs),* skirmishes, and periodic raids by both sides kept hostilities between the two states alive.[4] In 1281,

Thanks to Jean-Claude Garcin for his comments on the draft of this paper.

[1]The literature concerning the life and works of Ibn Taymīyah is very extensive. The most comprehensive general books about this Hanbali scholar are: Henri Laoust, *Essai sur les doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad Ibn Taymīya, canoniste hanbalite né à Ḥarrān en 661/1262, mort à Damas en 728/1328* (Cairo, 1939); Victor Makari, *Ibn Taymiyyah's Ethics: The Social Factor,* American Academy of Religion Academy Series no. 34 (Chicago, 1983); H. Laoust, "La biographie d'Ibn Taimīya d'après Ibn Kaṯīr," *Bulletin d'études orientales* 9 (1943): 115–62; Alfred Morabia, "Ibn Taymiyya, le dernier grand théoricien du *ğihād* médiéval," *Bulletin d'études orientales* 30 (1978): 85–100. Ibn Taymīyah was a native of Ḥarrān, a city considered to be a Sabian city. Their presence made the city a Hanbali center. On the Sabians, see Michel Tardieu, "Ṣābiens coraniques et 'Ṣābiens' de Ḥarrān," *Journal asiatique* 274, nos. 1–2 (1986): 44.

[2]Reuven Amitai-Preiss, "Mongol Imperial Ideology and the Ilkhanid War against the Mamluks," in *The Mongol Empire and its Legacy*, ed. Reuven Amitai-Preiss and David Morgan (Leiden, 1999), 58.

[3]See Reuven Amitai-Preiss, "In the Aftermath of ʿAyn Jālūt: The Beginnings of the Mamlūk-Īlkhānid Cold War," *Al-Masāq* 10 (1990): 1–21; idem, "ʿAyn Jālūt Revisited," *Tarih* 2 (1992): 119–50.

[4]Reuven Amitai-Preiss, *Mongols and Mamluks: The Mamlūk-Īlkhānid War, 1260–1281* (Cambridge, 1995).

Hülegü's successor Abāqā (r. 663–80/1265–82) took the initiative of launching a new attack. It came to an end with the victory of the Mamluk sultan al-Manṣūr Qalāwūn (r. 678–89/1279–90) at Ḥimṣ.[5] The latent state of war between the two rival powers was not ended by the conversion of the Ilkhans to Islam, despite the attempts at conciliation made by Tegüder Aḥmad (r. 680–83/1281–84), who, having converted to Islam,[6] sent two embassies to Qalāwūn to announce his desire to end hostilities.[7] Indeed, Ghāzān Khān (r. 694–703/1295–1304), who had also converted to Islam just before his enthronement,[8] led three major offensives against Syria. The first took place in the winter of 699/1299–1300.[9] The second, which began in the autumn of 700/1300–1, ended that winter without any confrontation having taken place between the Mongol and Mamluk forces. Ghāzān Khān's third attempt to wrest Syria from the Mamluks began in spring 702/1303 and ended with the Mamluk victory at Marj al-Ṣuffār on 2 Ramaḍān 702/20 April 1303. The last Mongol invasion of Mamluk territory was undertaken in 712/1312 by Öljeitü (r. 703–17/1304–17), who was also a Muslim. These last four Ilkhanid invasions were repelled by the Mamluk sultan al-Malik al-Nāṣir Muḥammad ibn Qalāwūn, in the last two periods of his reign (698–708/1299–1309 and 709–41/1310–41).[10]

The Ilkhans' ambitions of dominating Syria are attested by the many missions they sent to the Latin West to seek an alliance with the papacy and the Christian

[5]On this invasion, see Reuven Amitai-Preiss, *Mongols and Mamluks,* 179–201; Linda Northrup, *From Slave to Sultan: The Career of al-Manṣūr Qalāwūn and the Consolidation of Mamlūk Rule in Egypt and Syria (678–689 A.H./1279–1290 A.D.)* (Stuttgart, 1998), 108–12.

[6]On the conversion of Tegüder Aḥmad, see Reuven Amitai, "The Conversion of Tegüder Ilkhan to Islam," *Jerusalem Studies in Arabic and Islam* 25 (2001): 15–43.

[7]On these embassies, see Peter M. Holt, "The Ilkhān Aḥmad's Embassies to Qalāwūn: Two Contemporary Accounts," *Bulletin of the School of Oriental and African Studies* 49, no. 1 (1986): 128–32. In 681/1282–83 Tegüder Aḥmad wrote a letter to Qalāwūn in which he complained that Mamluk spies disguised as *faqīr*s had been captured by a Mongol patrol. Although they should have been killed, they had instead been sent back to the sultan as a sign of good will; see Reuven Amitai-Preiss, *Mongols and Mamluks,* 147.

[8]On Ghāzān Khān's conversion to Islam, see Charles Melville, "*Pādishāh-i islām*: The Conversion of Sulṭān Maḥmūd Ghāzān Khān," *Pembroke Papers* 1 (1990): 159–77.

[9]There is a very good description of this campaign by Reuven Amitai, "Whither the Īlkhanid Army? Ghāzān's First Campaign into Syria (1299–1300)" in *Warfare in Inner Asian History (500–1800),* ed. Nicola Di Cosmo (Leiden, 2002): description of the campaign: 225–53; composition of the armies: 239–44; on the bibliography dealing with previous studies on Ghāzān Khān's incursions in Syria: 222, n. 7.

[10]At the time of Ghāzān Khān's first invasion of Syria, al-Nāṣir Muḥammad ibn Qalāwūn (second reign, 1299–1309) was at the head of the Mamluk armies. He was only fifteen years old. The sultan's power rested in the hands of the great amirs: Salār *(nāʾib al-salṭanah)* and Baybars al-Jashnakīr *(ustādār);* see Amitai, "Whither the Īlkhanid Army?" 226–27.

kings against the Mamluk sultanate.[11] Abāqā sent several embassies, notably at the time of the Lateran council of 1274.[12] Arghūn in turn sent several missions to the West, the most important of which was headed by the Nestorian monk Rabban Ṣawmā in 1287.[13] In 1299 he sent two letters, in Mongolian and Latin, to the papacy[14] and to King Philip IV of France.[15] Before his campaign of 1299–1300, Ghāzān Khān contacted the king of Cyprus, Henri II de Lusignan, in the hope of obtaining military assistance.[16] After his return to Persia without having

Jahrhundert anhand ihres Briefwechsels,* Studi e testi no. 291 (Vatican City, 1981), 67–82. For Hülegü's letter of 1262, see Paul Meyvaert, "An Unknown Letter of Hulagu, Il-Khan of Persia, to King Louis IX of France," *Viator* 11 (1980): 245–59; Denise Aigle, "The Letters of Eljigidei, Hülegü and Abaqa: Mongol Overtures or Christian Ventriloquism?" *Inner Asia* 7, no. 2 (2005): 143–62.

[12]See Jean Richard, "Chrétiens et Mongols au concile: la papauté et les Mongols de Perse dans la seconde moitié du XIIIe siècle," in *1274, année charnière, mutations et continuités, Lyon-Paris, 30 septembre–5 octobre 1974,* Colloques internationaux du CNRS, no. 558 (Paris, 1977), 30–44; Aigle, "The Letters of Eljigidei, Hülegü and Abaqa," 152–54.

[13]On Rabban Ṣawmā's embassy, see Morris Rossabi, *Voyager from Xanadu: Rabban Sauma and the First Journey from China to the West* (Tokyo/New York/London, 1992). Syriac narrative on this mission in: *Histoire de Mar Jab-Alaha, Patriarche et de Raban Sauma,* ed. Paul Bedjan (Leipzig, 1895); French translation by J.- B. Chabot, *Histoire de Mar Jabalaha III, Patriarche des Nestoriens (1281–1317) et du moine Rabban Çauma, Ambassadeur du roi Argoun en Occident (1287)* (Paris, 1895). There is now an Italian translation with commentaries by Pier Giorgio Borbone, *Storia di Mar Yahballaha e di Rabban Sauma: un orientale in Occidente ai tempi di Marco Polo* (Turin, 2000).

[14]Arghūn sent a letter in Latin, dated 18 May 1285 in Tabriz, to Pope Honorius IV. It is reproduced in Lupprian, *Die Beziehungen der Päpste zu islamischen und mongolischen Herrschern,* 244–46. A letter in Mongol, dated the fifth of the new moon of the first month of the Year of the Tiger (14 May 1290) in Urmiya, was sent to Pope Nicholas IV. It has been published and translated with a commentary by Antoine Mostaert and Francis W. Cleaves, "Trois documents mongols des Archives Secrètes du Vatican," *Harvard Journal of Asiatic Studies* 15, no. 3–4 (1952): 445–67.

[15]Text and commentaries in *Les lettres de 1289 et 1305 des ilkhans Argun et Öljeitü à Philippe le Bel,* ed. Antoine Mostaert and Francis W. Cleaves (Cambridge, MA, 1962), 17–53. Arghūn's letter was an answer to a promise made by the king of France to send an army should the Ilkhan launch a war against the Mamluks.

[16]After the fall of Acre and the loss of their last possessions in the Holy Land in 690/1291, the

as much as made contact with the Mamluk army, the Ilkhan exchanged letters and embassies with Pope Boniface VIII with the objective of forming a united front against the Mamluks.[17] Öljeitü too, in 1305, long before his invasion of Syria in 1312, sent a letter in Mongolian to the kings of France and England with the same purpose in mind.[18]

As can be seen, Ghāzān Khān's reign did not by any means inaugurate an era of peace. In fact, immediately after converting to Islam, he adopted the title *Pādishāh al-Islām* (king of Islam), thus making plain his ambition to assume the leadership of the Muslim world. The Ilkhan advanced religious justifications for his invasion of Bilād al-Shām in December 699/1299.[19] He accused the Mamluks of having invaded Ilkhanid territory at Mardīn, where they were supposed to have committed various acts of moral turpitude *(afʿāl-i makrūh)*. Amongst the misdeeds ascribed to them were orgies with the daughters of Muslims *(dukhtarān-i musalmānān)* and drinking sessions in mosques, all during the month of Ramaḍān.[20] A fatwa of "the imams of the faith and the ulama of Islam"[21] had entrusted Ghāzān Khān with

Franks had withdrawn to Cyprus.

[17]In spring 1302, Ghāzān Khān sent a letter to this pope in Mongol script. Text and commentaries in Mostaert and Cleaves, "Trois documents mongols," 467–78.

[18]Text and commentaries in *Les lettres de 1289 et 1305 des ilkhans Argun et Öljeitü à Philippe le Bel,* 55–85. In parallel with this pursuit of an alliance with the Christian West, the Ilkhans sent a series of letters and embassies to the Mamluk sultans inviting them to submit: Hülegü to Quṭuz in 1260; Abāqā to Baybars in 1268 and 1277; Geikhetü to al-Malik al-Ashraf Khalīl in 1293. Ghāzān Khān in turn wrote to al-Nāṣir Muḥammad ibn Qalāwūn in 1300 and 1302, again ordering the Mamluks to submit. On these letters, see Reuven Amitai-Preiss, "An Exchange of Letters in Arabic between Abaga Īlkhān and Sultan Baybars (A.H. 667/A.D. 1268–69)," *Central Asiatic Journal* 38, no. 1 (1994): 11–33; idem, "Mongol Imperial Ideology," 57–72, where several of these letters are the subject of a commentary.

[19]Beyond Reuven Amitai's studies cited in the notes above, on Ghāzān Khān's campaigns in Syria, see Angus D. Stewart, *The Armenian Kingdom and the Mamluks* (Leiden, 2001), 136–46. The author emphasizes the role played by the Armenians.

[20]Rashīd al-Dīn, *Tārīkh-i Mubārak-i Ghāzānī,* ed. Karl Jahn (s'-Gravenhague, 1957), 124. This information is confirmed by Abū al-Fidāʾ, who writes that this Mamluk incursion provided Ghāzān Khān with the pretext to invade Syria; see *Memoirs of a Syrian Prince*: *Abuʾl-Fidāʾ, Sultan of Ḥamāh (672–732/1273–1331),* translated with an introduction by Peter M. Holt (Wiesbaden, 1983), 35.

[21]Rashīd al-Dīn, *Tārīkh-i Mubārak-i Ghāzānī,* 125. The following year, in his correspondence with al-Nāṣir Muḥammad, Ghāzān Khān once more condemned the Mamluk atrocities against Mardīn and its region, and affirmed that this was his reason for invading Syria; see *Early Mamluk Syrian Historiography: Al-Yūnīnī's Dhayl Mirʾāt al-Zamān,* ed. and trans. Li Guo (Leiden and Boston, 1998), vol. 1 (English translation), vol. 2 (Arabic text), 1:181–84, 2:212–14 (Ghāzān Khān's letter); 1:194–98, 2:243–47 (al-Nāṣir Muḥammad's reply) (hereafter cited as Li Guo/al-Yūnīnī); Mufaḍḍal Ibn Abī al-Faḍāʾil, *Al-Nahj al-Sadīd wa-al-Durr al-Farīd fīmā baʿda Ibn al-ʿAmīd,* ed. and trans. E. Blochet as *Histoire des sultans mamluks,* Patrologia Orientalis, vol. 12, fasc. 3, vol. 14, fasc. 3, vol. 20, fasc. 1 (Paris, 1919–29), 20:1:549–54 (Ghāzān Khān's letter); 571–80 (al-Nāṣir Muḥammad's

his mission against the perpetrators of these offences. The Ilkhan thus presented himself as the protector of Islam. It should be emphasized that his conversion had caused a considerable stir in the Muslim East,[22] and the population of Damascus, which had suffered from the exactions of the Mamluk ruling class, was ready to come to terms with the Mongols, particularly after the *amān* that Ghāzān Khān had caused to be read in the Umayyad Mosque on 8 Rabīʿ II 699/2 January 1300, some days after his victory at Wādī al-Khaznadār on 27 Rabīʿ I 699/22 December 1299.[23]

Bilād al-Shām was not the only front that Ghāzān Khān's conversion opened in the hostilities between the two rival powers; repercussions were also felt in the Hijaz. In 702/1303, when Ghāzān Khān was in the Najaf region, just before his last invasion of Syria, he issued a decree in support of the sayyids and guardians of the Kaʿbah in which he declared his attachment to the two holy cities. He planned to organize a caravan under the protection of the amir Quṭlugh-Shāh[24] and a thousand horsemen, which would bear a cover *(sitr)* for the Kaʿbah and a decorated *maḥmal* in his name. Twelve gold tomans were to be distributed to the governors of Mecca and Medina as well as to the Arab notables and tribal shaykhs.[25] Quṭlugh-Shāh's defeat at Marj al-Ṣuffār in April 702/1303, however, obliged Ghāzān Khān to renounce these plans. The Ilkhan's death in 703/May 1304 finally put an end to his ambitions.

Ghāzān Khān, having officially converted to Islam in 1295, attacked Syria three times. His first invasion, during the winter of 699/1299–1300, was to some extent a success, as he temporarily occupied Syria. The occupation of Damascus resulted in a crisis in the city which illuminates a number of aspects of social solidarities there, as has been demonstrated by Reuven Amitai in an article published in 2004.[26] In the present article, I propose to analyze the three so-called

---

reply).

[22]The account of Ghāzān Khān's conversion is reported by al-Jazarī, on the authority of ʿAlam al-Dīn al-Birzālī, in his "Jawāhīr al-Sulūk" (Bibliothèque nationale MS arabe 6739, fols. 155v–157v), and by the Persian sources, particularly Rashīd al-Dīn, who gives a very different version; see Melville, "*Pādishāh-i islām,*" 159–77.

[23]See the discussion on this confrontation in Amitai, "Whither the Īlkhanid Army?" 221–64 (see also the bibliography, note 7).

[24]In the sources, this person's name appears in two forms: Quṭlugh-Shāh or Quṭlū-Shāh. In this article I have adopted the former, which corresponds to his exact title.

[25]Charles Melville, "'The Year of the Elephant' Mamuk-Mongol Rivalry in the Hejaz in the Reign of Abū Saʿīd (1317–1335)," *Studia Iranica* 21 (1992): 207.

[26]Reuven Amitai, "The Mongol Occupation of Damascus in 1300: A Study of Mamluk Loyalties," in *The Mamluks in Egyptian and Syrian Politics and Society,* ed. Michael Winter and Amalia Levanoni (Leiden and Boston, 2004), 21–39. The author studies the cases of the Mamluk amir Sayf al-Dīn Qipchāq, Arjuwāsh, the governor of the citadel, and a major religious authority of the city, Ibn

"anti-Mongol" fatwas issued by Ibn Taymīyah. When read in the context of the historic circumstances in which they were written, these fatwas inform us as to Ibn Taymīyah's attitude in face of the danger represented by the Mongol attempts to gain control of Bilād al-Shām. They reveal the great Hanbali scholar's view of the Mongol regime as well as his position regarding Shiʿism and certain religious communities in Bilād al-Shām, whom he considered dissidents from Sunni Islam; in other words, these fatwas acquaint us with Ibn Taymīyah's thinking at a crucial point in the region's history. In order to properly understand the argument that Ibn Taymīyah develops in these texts, they must be read, not only in the light of the events that took place in the region as we know them from the historical sources, but also in relation to the terms of the *amān* that Ghāzān Khān caused to be read to Damascus's population in the Umayyad Mosque. By means of that *amān,* Ghāzān Khān expressed his vision of the role that the Persian Ilkhanate should play in the Muslim East.

Sources and studies

There is no critical edition of Ibn Taymīyah's fatwas. The Riyadh edition, published in thirty volumes, is regarded as authoritative today.[27] The three fatwas in question are to be found in volume 28 *(Kitāb al-Jihād).*[28] They differ considerably in length. The first is seven pages long,[29] the second is unusually long for a document of this kind at thirty-five pages,[30] and the third is eight pages long.[31] It is possible, on the basis of the content of the fatwas, which includes numerous references to historic events attested in the chronicles, as well as the names of persons and places, to give an approximate date for the three documents. As is shown below, the order in which they appear in the Riyadh edition does not correspond to the chronological order in which they were issued.

Despite their historic interest, these three fatwas have not been the subject of many studies. The first reference to Ibn Taymīyah's anti-Mongol fatwas appears in Henri Laoust's *Essai sur les doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad Ibn Taymīya,* published in 1939.[32] Laoust uses various passages from the fatwas to

Taymīyah.

[27] *Majmūʿ Fatāwá Shaykh al-Islām Aḥmad ibn Taymīyah,* ed. ʿAbd al-Raḥmān ibn Muḥammad ibn Qāsim al-Najdī al-Ḥanbalī (Riyadh/Mecca, 1381–86/1961–67, repr. 1417/1995). Old edition, also not critical: Ibn Taymīyah, *Kitāb Majmūʿ al-Fatāwá* (Cairo, 1326–29/1908–11). In this edition, the anti-Mongol fatwas are located in vol. 4, *Kitāb al-Jihād,* 289–302.

[28] *Majmūʿ Fatāwá,* 28:501–52.

[29] Ibid., 501–8.

[30] Ibid., 509–43.

[31] Ibid., 544–51.

[32] Henri Laoust, *Essai sur les doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad Ibn Taymīya, canoniste*

illustrate the thinking of their author, but without engaging in a systematic study of them.[33] Thomas Raff's short monograph,[34] published in a very limited edition, dates from 1973. The writer presents the historic context in which Ibn Taymīyah's action took place, and then proposes an analysis of the second fatwa, long extracts from which he translates into English. Thomas Raff assumes that the fatwa was issued shortly before the battle of Marj al-Ṣuffār (2 Ramaḍān 702/20 April 1303): "Ibn Taimiya devoted his efforts to inciting the fanaticism of Mamluk troops for the crucial day, i.e. the Battle of Marj as-Ṣuffār, by making exhortations to them and even participating in the combat himself."[35] Thomas Raff's analysis, which is not thematically structured, is at times somewhat confused. In addition, he commits some errors of interpretation regarding the Mongol culture and political regime that Ibn Taymīyah denounces. His study's principal aim is to present the Hanbali scholar as a fervent partisan of jihad, when in fact, as we shall see, his position was a far more subtle one, arising from the circumstances the people of Damascus were faced with due to the state of war. Jean Michot addressed the issue of these fatwas, especially the second one, in his translation of Ibn Taymīyah's *Lettre à un roi croisé,* and in a twenty-page article, both published in 1995.[36] Paradoxically, he does not study the legal arguments deployed by Ibn Taymīyah. While Jean Michot's two publications are founded on an immense erudition, they essentially seek to highlight the role played by the Hanbali scholar their author terms "the great Damascene teacher"[37] during this time of crisis, when Muslims of the city came to seek his advice on how to face aggressors who had converted to Islam. We are, nevertheless, indebted to Michot for having established the correct reading of a defective spelling, something Thomas Raff had failed to do. This reading allows us to understand a passage of the second fatwa which had until then remained obscure: "*aḥkām al-mushrikīn—kanāʾisan—wa-jankhiskhān malik.*" Jean Michot demonstrates that the word *kanāʾisan* is in fact a corruption of *ka-yāsā,* the manuscript form of which is very similar.[38] This

hanbalite né à Ḥarrān en 661/1262, mort à Damas en 728/1328 (Cairo, 1939).

[38]See the clever reading of this passage in Michot, "Un important témoin," 346.

renders the phrase comprehensible: "that which, of the rules of the associationists *(aḥkām al-mushrikīn)*—such as the *yāsā (ka-yāsā)* of Chinggis Khan, king of the polytheists—is most gravely contrary to the religion of Islam."[39] This reference to the *yāsā* enables us to understand Ibn Taymīyah's argument when he refutes the political regime of the Mongols and their version of Islam.

In addition to Ibn Taymīyah's fatwas, this article will analyze the text of the *amān* to Damascus's population issued by Ghāzān Khān and the letters exchanged between the latter and sultan al-Malik al-Nāṣir Muḥammad. These texts have been transmitted to us by a number of Mamluk chronicles, some contemporary with the events and some slightly later.[40] It is, however, the historians of the Syrian school who are richest in detail concerning the occupation of Damascus. The principal source for the period is al-Birzālī, but the text is not very accessible.[41] For this reason I have relied here on the *Dhayl Mirʾāt al-Zamān* of Quṭb al-Dīn al-Yūnīnī (d. 726/1325–26), whose authorities for the events of the period in question are al-Birzālī (d. 739/1338–39) and al-Jazarī (d. 739/1338–39).[42] In all the sources, the text of the *amān* appears to have been faithfully transmitted, with few divergences.

[41] Al-Birzālī, "Muqtafá li-Tārīkh al-Shaykh Shihāb al-Dīn Abī Shāmah," Topkapı Sarayı MS Ahmet III 2951/1–2; on the poor state of the manuscript, see Little, *An Introduction to Mamlūk Historiography,* 46–47, and Northrup, *From Slave to Sultan,* 41. On the events of 699/1299–1300, see Li Guo/al-Yūnīnī, 1:132–65, 2:97–127. See also J. Somogyi, "Adh-dhahabīs Record of the Destruction of Damascus by the Mongols in 699–700/1299–1301," in *Ignace Goldziher Memorial Volume,* ed. S. Löwinger and J. Somogy (Budapest, 1948), 2:353–86 (hereafter cited as al-Dhahabī). As Reuven Amitai points out ("The Mongol Occupation of Damascus," 26, n. 22), the translation of al-Dhahabī's *Tārīkh al-Islām* is not always an exact translation of the manuscript in the British Library (MS Or. 1540, fols. 123a–131a). The sources for the events in question here have been analyzed in Little, *An Introduction to Mamluk Historiography,* chapter 1, and in Li Guo/al-Yūnīnī, 1:54–80.

[42] Li Guo/al-Yūnīnī, 1:139–41, 2:102–4. It seems that Ibn al-Dawādārī and *Beiträge*'s author did not utilize Quṭb al-Dīn al-Yūnīnī, but rather his source, al-Jazarī.

The Mongols, the new dissidents of Islam

The fatwas and the status of the combatants

The context is one of war. The principal objective of Ibn Taymīyah's three fatwas is, *a priori,* to determine the status of the soldiers who were fighting, at the end of the thirteenth century and the beginning of the fourteenth, in the armies of the two sides. In 658/1260, when Hülegü had attempted to seize Syria, fighting his soldiers did not pose any particular legal problem as the Mongols were at that time considered infidels. It was a question of repelling invaders who, like the Christian Franks, sought to capture a part of the Islamic territory, the *dār al-islām*. Jihad against the invaders was entirely legitimate. But when, forty years later, Ghāzān Khān attacked Bilād al-Shām, most of his soldiers were converts to Islam like himself. The Muslims who came to Ibn Taymīyah in search of a legal opinion did not know what stance to adopt towards this new kind of aggressor: what did the imams have to say about these Tatars (i.e., the Mongols) who were advancing towards Syria, given that they had pronounced the two declarations of faith *(shahādatayn),* claimed to follow Islam, and had forsaken the unbelief *(al-kufr)* which they had initially professed? In their ranks were Mamluk prisoners who fought against their Muslim brothers under duress; what was to be done? The Tatars were Muslims like the Mamluks; what was the status of the Mamluk soldier who refused to fight? What was the status of the Mamluk soldiers who had voluntarily joined the ranks of the Tatars?

Ibn Taymīyah was well aware of the danger that Ghāzān Khān's attacks represented, not just from the military point of view but, most of all, because many Muslims did not understand why they should fight against Muslim armies whose leader enjoyed great prestige. He had officially converted to Sunni Islam before becoming Ilkhan, he treated his Persian subjects well, and he was coming to Syria in order to put an end to the tyrannical rule of a military caste. Ibn Taymīyah's fears were also expressed by the sultan al-Malik al-Nāṣir Muḥammad in his reply in Muḥarram 701/September 1301 to a letter that Ghāzān Khān had sent him in Dhū al-Ḥijjah 700/August 1301.[43] The sultan accused his correspondent of stressing his conversion to Islam only to gain a tactical advantage, and lamented that the majority of the heroic troops (that is, the Mamluks) believed his conversion was sincere, and thus refused to fight him.[44]

Ibn Taymīyah's answer to those who sought his opinion on the matter was decisive: the Mongols must be fought, just like all the groups whom it is lawful to fight. He defines these groups in his three fatwas. All of Ibn Taymīyah's arguments are aimed at bringing the Mongols within the scope of one of these categories.

[43]Li Guo/al-Yūnīnī, 1:181-84, 2:212; Ibn Abī al-Faḍāʾil, 20:1:571-80.

[44]Li Guo/al-Yūnīnī, 1:195, 2:224; Ibn Abī al-Faḍāʾil, 20:1:574.

Some of the groups that must be fought are classified as *bughāh,* a term which in the early years of Islam designated those who rebelled against legitimate authority.[45] Ibn Taymīyah also includes in the category of groups to be fought those who fail to perform any one of the requirements of Islam, such as the performance of the five canonical prayers, the payment of legally-required tax *(al-zakāt),* fasting *(al-ṣawm),* and the pilgrimage to Mecca *(al-ḥājj)*. Those who do not take part in jihad against the infidels *(al-kuffār)*[46] in order to make them submit and pay the poll-tax *(al-jizyah)* must also be fought. Those who engage in adultery *(al-ziná)* and the consumption of fermented drinks *(al-khamar)* must be harshly repressed as they contravene the divine order. These last two acts fall into the category of offences canonically disapproved in the Quran *(ḥudūd Allāh)*. Also amongst the groups that must be fought are those who do not order good and forbid evil *(al-amr bi-al-maʿrūf wa-al-nahy ʿan al-munkar),* since for Ibn Taymīyah this duty is another form of jihad.[47] In the second fatwa, Ibn Taymīyah includes in the category of groups that must be fought those who deny the free will of God *(al-qadar),*[48] his decree *(al-qaḍāʾ),* his names and his attributes, as well as those who display innovation *(al-bidʿah)* contrary to the Quran and Sunnah, those who do not follow the path of the pious forebears *(al-salaf),* and an entire assemblage of Muslim religious movements which Ibn Taymīyah considered deviant with regard to scriptures and to the consensus *(al-ijmāʿ)* of scholars in the religious sciences. As can be seen, this definition of the groups to be fought is a very broad one. Ibn Taymīyah takes the view that every community which is a cause of disorder on the earth[49] must be fought, on the basis of the principle that disorder is more to be

---

[45]The term *bughāh* also refers to those who overstep the limits in following their own interpretations of the canonical texts. It is not permitted to fight them without having first attempted to bring them back to the straight and narrow. According to Ibn Kathīr, at the time of Ghāzān Khān's third attempt to conquer Syria, the feelings of Damascus' population towards the Mongols were the same. People asked themselves: why fight them? The Mongols were Muslims; they were not rebels *(bughāh)* against al-Malik al-Nāṣir Muḥammad's authority since they had acknowledged his power. See Laoust, "La biographie d'Ibn Taimīya d'après Ibn Katīr," 131.

[46]In the Quran, the term *kāfir* (plural, *kuffār*) designates: "Those who disbelieve in that which We have given to them" *(li-yakfurū bi-mā ataynahum);* see Quran 30:34. A more general use of the word to mean "infidel" subsequently became very common. Generally speaking, a *kāfir* is one who rejects a true message although knowing it to be true, whether he is polytheist, Jewish, Christian, or indeed Muslim; see W. Björhman, "Kāfir," *Encyclopédie de l'Islam,* 2nd ed., 4:425–27.

[47]In his theory of jihad Ibn Taymīyah notes that the Kharijites called themselves *ahl al-daʿwah;* see Laoust, *Essai,* 362–63.

[48]This refers to theologians who proclaim the principle of God's free will; see Josef van Ess, "Ḳadiriyya," *Encyclopédie de l'Islam,* 2nd ed., 4:384–88.

[49]On Ibn Taymīyah's conception of grievous sin *(fisq)*, see Laoust, *Essai,* 190, 260, 313, 421, 455, n. 4.

feared than death; the public manifestation of heresy is thus to be more rigorously fought against and punished than silent heresy.[50]

The composition of Ghāzān Khān's armies particularly inspired Ibn Taymīyah's anger. In their ranks, he writes, fight infidels *(al-kuffār),* polytheists *(al-mushrikūn),* and Christians. The Mongol armies were indeed made up of elements of diverse origins. They included Christians such as the Armenians and Georgians, as well as Muslim soldiers who, serving local sovereigns (the sultans of Rūm and Bilād al-Shām's principalities), had no choice but to join the Mongol war machine. Reuven Amitai, however, has shown that these forces played only a secondary role in comparison to that of the original Turco-Mongol troops from Inner Asia.[51] Ibn Taymīyah criticizes the make-up of armies for what was, in his eyes, an even more serious reason. Side by side with the Mongol soldiers fought Mamluk amirs and troops who had voluntarily joined the ranks of the invaders. Ibn Taymīyah considered them apostates who must be made to pay the prescribed penalty.[52]

The Mongol ranks included a certain number of renegade Mamluks *(al-munazzifūn),* led by the former governor of Damascus, Sayf al-Dīn Qipchāq al-Manṣūrī (d. 701/1310–11).[53] In 1298, at the end of the reign of Sultan al-Manṣūr Lāchīn (1296–99),[54] news of a new Mongol attack on Syria reached Cairo. A group of high-ranking Mamluk amirs, led by Sayf al-Dīn Qipchāq, fled along with their men to the Persian Ilkhanate, hoping thereby to escape the order for their arrest issued by Mengü-Temür al-Ḥusāmī, Sultan al-Manṣūr Lāchīn's *nāʾib* in Damascus.[55] Sayf al-Dīn Qipchāq and his amirs were well received on their arrival in Ilkhanid territory, and were immediately sent to Ghāzān Khān's court (the *ordo*) where the

[50]Laoust, *Essai,* 364, n. 2.

[51]See Amitai, "Whither the Īlkhanid Army?" 223–25.

[52]Thomas Raff (*Remarks,* 50) writes that Ibn Taymīyah considered the Rāfiḍī (i.e., the Shiʿites) apostates, but the Hanbali scholar does not use the term *al-murtadd* for any Shiʿite. He criticizes the Shiʿites for helping the polytheists, Jews, and Christians to fight the Muslims and compares them to the Kharijites. However, the Jews and Christians seem not to have been considered apostates by Ibn Taymīyah. See *Majmūʿ Fatāwá* (Riyadh/Mecca), 28:530.

[53]Sayf al-Dīn Qipchāq had been captured in the battle of Elbistan in 1276, and was subsequently enlisted among the mamluks of Qalāwūn; see Amitai-Preiss, *Mongols and Mamluks,* 174, n. 68. He was governor of Damascus from 697/1297 to 698/1298; see his biography in Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah* (Hyderabad, 1348–50/1929–32), no. 612, 3:213–15.

[54]On al-Manṣūr Lāchīn's reign, see P. M. Holt, "The Sultanate of Manṣūr Lāchīn (696–8/1296–9)," *Bulletin of the School of Oriental and African Studies* 3, no. 6 (1973): 521–32.

[55]In Cairo, at the same time, a conspiracy of amirs ended the rule of al-Manṣūr Lāchīn, who was killed along with his *nāʾib*. When Sayf al-Dīn Qipchāq and his amirs came to know of this, they realized that their desertion had served no purpose; see Amitai, "The Mongol Occupation of Damascus," 22–23.

Ilkhan received them in person. Sums of money were paid to them in accordance with their military rank, and they were given Mongol women in marriage. Sayf al-Dīn Qipchāq married the sister of one of Ghāzān Khān's wives.[56] At the battle of Wādī al-Khaznadār, the Mongol troops were led by Sayf al-Dīn Qipchāq and the Mongol amir Quṭlugh-Shāh (d. 707/1307).[57] The new Mamluk soldiers helped Ghāzān Khān gain victory on 27 Rabīʿ I 699/22 December 1299.[58] At the beginning of Rabīʿ II 699/late December 1299, shortly before the Mongol armies entered Damascus, Ibn Taymīyah went to meet Ghāzān Khān with a delegation of Damascene notables. There he saw the Mamluk renegades in the enemy army, which may explain his resentment towards them.

In the second fatwa, the list of those who must be fought due to their collusion with the Mongols is longer and somewhat different. Apart from non-believers of all kinds (*al-kuffār*, *al-mushrikūn*, *al-fussāq*, etc.) and the Mamluk renegades, he cites various categories which do not appear in the other two fatwas. He denounces persons ranking amongst "the worst of the innovators", such as the Rāfiḍī (i.e., the Twelver Shiʿites), whose heresies had been influenced by those who are amongst "the worst of all creatures: the freethinkers (*al-zindīq,* plural *al-zanādiqah*), hypocrites, who do not inwardly believe in Islam."[59] Ibn Taymīyah considered that the *zanādiqah* weakened Sunni Islam by divulging the heresies uttered by the Shiʿites.[60] Amongst the dissenting Muslims who must be fought, Ibn Taymīyah cites the extremist Shiʿites *(ghulāt al-shīʿah),* in other words the

[56]Sayf al-Dīn Qipchāq was accompanied by ten amirs and his entourage of some 500 soldiers; see Amitai, "The Mongol Occupation of Damascus," 23–24.

[57]See his biography in Ibn Ḥajar al-ʿAsqalānī, *Durar al-Kāminah,* no. 648, 3:225; see also David Morgan, "Ḳuṭlugh-Shāh Noyan," *Encyclopédie de l'Islam,* 2nd ed., 5:559.

[58]On the ambiguous role Sayf al-Dīn Qipchāq played during this battle, see Amitai, "The Mongol Occupation of Damascus," 25.

[60]Laoust, *Essai,* 366.

Ismāʿīlīyah and Nuṣayrīyah of Syria,[61] the Jahmīyah,[62] the Ittiḥādīyah, believers in mystic union *(waḥdat al-wujūd),* and disciples of Ibn ʿArabī and Ibn Sabʿīn,[63] designated as *ahl al-bidʿah.* In this second fatwa, the Ilkhan's Christian allies are omitted from the list of groups to be fought although they are denounced in the other two fatwas. It may be supposed that in drawing up this long fatwa, Ibn Taymīyah's objective was to set out his view of the Mongol regime, which he saw as undermined by Shiʿah subversion, and to denounce Syria's Muslim sects, against whom he was engaged in a relentless struggle because he considered them a danger to Sunni Islam.

JIHAD AGAINST THE MONGOLS FROM THE LEGAL POINT OF VIEW

Ibn Taymīyah, in order to justify the practice of jihad against Muslim invaders, relies on the Quran and the Sunnah of the Prophet, but he also sought out historic events from the early years of Islam which could serve as paradigms to support his argument. A case in point was the reign of the fourth caliph, ʿAlī ibn Abī Ṭālib (656–61). It was during this period that the first great sedition *(al-fitnah)* in the history of the Islamic community took place: the Battle of the Camel in November/December 656 and the Battle of Ṣiffīn in July 657, which in turn led to the emergence of the Kharijites.[64] The precedents established by these famous battles enabled the Hanbali scholar to draw a distinction between different kinds

---

[61] This was an extreme Shiʿite sect in Syria and southern Turkey, named after Muḥammad ibn Nuṣayr al-Fihrī al-Numayrī, a disciple of the tenth or eleventh Twelver imam; see Shahrastānī, *Le livre de religions et des sectes,* trans. Daniel Gimaret and Guy Monnot (Paris, 1986), 542, n. 255. Laoust (*Essai,* 124–25) refers to this text. This fatwa was edited and translated into French by M. S. Guyard, "Le fetwa d'Ibn Tamiyyah sur les Nosairis," *Journal asiatique* 18 (1871): 158–98. It was issued after the raid by Baybars (d. 676/1277) on the Ismāʿīlīyah fortresses in Syria; see H. Halm, "Nuṣayriyya," *Encyclopédie de l'Islam,* 2nd ed., 8:148–50. As Yaron Friedman points out, Ibn Taymīyah confuses the Nuṣayrīyah and the Ismāʿīlīyah in this fatwa, no doubt because in the eleventh and twelfth centuries the Nizārī branch of the Ismāʿīlīyah had taken over a number of fortresses in the mountains where the Nuṣayrīyah lived, the Jabal Anṣarīyah; see Yaron Friedman, "Ibn Taymiyya's *Fatāwá* against the Nuṣari-ʿAlawī Sect," *Der Islam* 82, no. 2 (2005): 353. It is the only branch of the *ghulāt* still in existence; see Kais M. Firro, "The ʿAlawīs in Modern Syria: From Nuṣayrīya to Islam via ʿAlawīya," *Der Islam* 82, no. 1 (2005): 1–31.

[62] Jahm ibn Safwān (d. 128/746) is the presumed founder of the Jahmīyah sect. From the doctrinal point of view, they held that the Quran had been created, and denied the existence of the attributes of God. They are known primarily from the works of their critics, such as the Hanbalis, foremost among them Ibn Taymīyah, who associates them with the Qādirīyah and the Muʿtazilah; see W. Montgomery Watt, "Djahmiyya," *Encyclopédie de l'Islam,* 2nd ed., 2:398–99.

[63] On this personage, see A. Faure, "Ibn Sabʿīn," *Encyclopédie de l'Islam,* 2nd ed., 3:945–46.

[64] On ʿAlī's caliphate, see H. A. R. Gibb, "ʿAlī," *Encyclopédie de l'Islam,* 2nd ed., 1:392–97; E. Kohlberg, "ʿAlī b. Abī Ṭālib," *Encyclopaedia Iranica,* 1:843–45. On the Kharijites, see G. Levi Della Vida, "Khārijites," *Encyclopédie de l'Islam,* 2nd ed., 4:1106–9.

of rebellion against the authority of the caliph.

Ibn Taymīyah links those rebels, who introduced sedition into the Islamic community in its early years, with the events taking place in his time. Islam, after six centuries of undivided supremacy, was being shaken by these new Muslims whose political ideology permitted them to strike deals with Christians, the heretical sects of Islam, and the Shiʿah. Ibn Taymīyah's principal grievance with the Mongols of Iran was their collusion with—in his view—all these infidels. He uses this as the basis for justifying jihad against those who declare that it is permitted "to kill the best of the Muslims."[65] Since Bilād al-Shām was the scene of a new *fitnah,* he reasons, the Quranic prescription must be followed: "And fight them until persecution is no more, and religion is for Allāh."[66]

The battles which took place during ʿAlī's reign allowed Ibn Taymīyah to draw a distinction between the different internal conflicts suffered by the young Muslim community. Scholars in the field of religious science had not come to any consensus *(al-ijmāʿ)* as to the position to take regarding the adversaries in the battles of the Camel and Ṣiffīn. The believers were free to side with either camp. The Battle of the Camel, which set ʿAlī against ʿAʾīshah, had seen several of the Companions of the Prophet, including Ṭalḥah and al-Zubayr, take the side of his widow and as it happened, the battle came to an end with the death of those two Companions. At the moment of confrontation between ʿAlī and Muʿāwiyah, there were those who protested against human arbitration between the two parties, citing the Quranic verse: "And if two parties of believers fall to fighting, then make peace between them. And if one party of them doeth wrong *(baghat)* to the other, fight that which doeth wrong *(allatī tabghī)* till it return unto the ordinance of Allāh."[67] Conversely, Ibn Taymīyah states, there was indeed consensus among the believers to support ʿAlī in his struggle against the Kharijites. Among their ranks there was no Companion of the Prophet. Since they called for obedience to the prescriptions of the Quran, they could not be excluded from the Islamic community. However, they asserted what was not permitted, that part of the Sunnah of the Prophet contradicted the Book of God. Ibn Taymīyah's reasoning is straightforward: since the *ijmāʿ* of the scholars called for the Kharijites to be fought, it was all the more legitimate to pursue jihad against the Mongols who, while adhering to the laws of Islam, continued to follow the precepts of Chinggis Khan.

At the top of the hierarchy of the groups to be fought within the army of Ghāzān Khān are the Mamluk renegades *(al-munazzifūn)*. Ibn Taymīyah relies

[65] *Majmūʿ Fatāwá,* 28:505.

[66] Quran 2:193.

[67] Quran 49:9.

on the position of the pious forebears *(al-salaf),* who at the beginning of Abū Bakr's caliphate (632–34) termed those who refused to pay the *zakāt* (the legally-mandated alms) apostates, even though they fasted, prayed, and did not fight against the Muslim community. Ibn Taymīyah recalls that according to the Sunnah of the Prophet, the penalty set out for the apostate *(al-murtadd)* is harsher than that which applies to those who are unbelievers *(al-kāfir al-aṣlī)*. The apostate must be put to death, even if he is incapable of fighting, whereas many jurisconsults do not decree the execution of the unbeliever.[68]

The question of the Mamluk prisoners who were forced to fight in Ghāzān Khān's army was a delicate point for Ibn Taymīyah. Many Muslims were unsure as to whether it was justifiable to kill Mongol soldiers who were Muslims, or worse still, their Mamluk brothers who had been taken prisoner and impressed into the enemy army. Here too, Ibn Taymīyah has recourse to the outstanding events of the first centuries of Islam. He uses the Prophet's first great battle against the Meccans, that of Badr in 624, to justify jihad against Ghāzān Khān's soldiers. During that famous battle, a Companion of the Prophet and several of his followers had been taken prisoner. Ibn Taymīyah considers that if, as at Badr, the Mamluk prisoners fighting in the Mongol army are killed in the battle they will be considered martyrs for God's cause.

As can be seen, Ibn Taymīyah uses the classic procedure of reasoning by analogy in his argument to justify jihad against the Muslim Mongols, transposing to his own time the known cases of *fitnah* that had pitted different groups of Muslims against one another. By virtue of this relatively simple argumentation, the Hanbali sage establishes a typology of the sorts of *bughāh* that must be fought, in order to convince those Muslims who were still hesitating to take up arms to repel Ghāzān Khān's armies. The Mongols are likened to the Kharijites, while the renegade Mamluks, the *munazzifūn,* are relegated to an even worse status, that of apostates *(ahl al-riddah).*

A Tract against the Mongol Regime

Ibn Taymīyah had numerous contacts with the Mongol authorities, which he reports in his fatwas. His claims are borne out by the historic sources, which give many details on the matter. These contacts are undoubtedly the source of his information on the Ilkhanid political regime and various aspects of Mongol culture. Ibn Taymīyah did not have the opportunity to have a long conversation with Ghāzān Khān; he met the Ilkhan briefly when, accompanied by a group of religious figures from Damascus, he went to meet him on 7 Rabīʿ II 699/1 January 1300 to ask him to spare the lives of the city's civilian population (that is, to

[68] *Majmūʿ Fatāwá,* 28:534.

grant them his *amān*).[69] Contemporary historiography has until now maintained that this was the only occasion on which Ibn Taymīyah met Ghāzān Khān.[70] Jean Michot, in 1995, drew attention to the fact that the two might have met again subsequently and suggested that the question deserved to be studied.[71] He based this on the evidence of the Ilkhan's minister Rashīd al-Dīn, who reports a meeting between them which supposedly took place on 9 Rabīʿ II 699/3 January 1300 at the Ilkhan's encampment at Marj al-Rāhiṭ.[72] The Mongol sovereign asked his visitors: "Who am I?" They replied as one voice, listing his genealogy as far back as Chinggis Khan. In reply to his question as to the name of al-Malik al-Nāṣir Muḥammad's father, they said, "al-Alfī".[73] The Mongol sovereign then asked them the name of the father of "al-Alfī," a question which the Damascene notables were unable to answer. Ghāzān Khān's noble lineage thus could not be compared with the ancestry of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Alfī, that is, the son of a Turkish slave, with no noble lineage.[74] By establishing Ghāzān Khān's prestigious *nasab* in contrast to that of the Mamluk sultan, Rashīd al-Dīn clearly sought to elevate the Ilkhan's prestige in the eyes of the Damascene delegation. This lack of lineage was proof that the Mamluk regime was a mere product of chance, devoid of any right to rule.[75] Given that the Mamluk sources do not mention this meeting between Ghāzān Khān and Ibn Taymīyah, one may question whether it in fact took place. Rashīd al-Dīn might have confused Ibn Taymīyah's meeting with Ghāzān Khān with the discussions the scholar held with various Ilkhanid authorities, such as his interview with the great amir Quṭlugh-Shāh which took place after Ghāzān Khān's withdrawal from Damascus. Indeed, in his second fatwa, Ibn Taymīyah remarks that a Mongol leader addressed him, saying, "Our king is the son of a king, the son of seven generations of kings, while your

[69]The interview took place in the village of Nabk, near the Ilkhan's camp at Marj al-Rāhiṭ; see Li Guo/al-Yūnīnī, 1:138–39, 2:101–2; *Kanz,* 20; *Beiträge,* 66. A detailed account of the meeting is given in Ibn Abī al-Faḍāʾil, 14:3:475. The interpreter reported Ghāzān Khān's words to the delegation of notables, informing them that the *amān* they had come to ask for had already been sent to Damascus before their request.

[70]Laoust, *Essai,* 117–20; Raff, *Remarks,* 20–24.

[71]Michot, *Lettre à un roi croisé,* 75, n. 125.

[72]Rashīd al-Dīn speaks of a delegation of notables from Damascus (Ibn Taymīyah's name is not mentioned), received by the Ilkhan on 6 Rabīʿ II 699/31 December 1299. He specifies that the notables had come to meet the Mongol army in order to make their submission *(īlī kardand);* see Rashīd al-Dīn, *Tārīkh-i Mubārak-i Ghāzānī,* 128.

[73]Ibid.

[74]The term "al-Alfī" refers to the fact that the sultan Qalāwūn had been bought for a sum of one thousand dinars. Rashīd al-Dīn thus emphasizes that the Mamluk sultans, of servile origin, had in the beginning been mere chattel.

[75]Rashīd al-Dīn, *Tārīkh-i Mubārak-i Ghāzānī*, 128.

king is the son of a client."[76]

Jean Michot assumed that the bulk of the exchanges between Ibn Taymīyah and Ghāzān Khān occurred in the course of the interview Rashīd al-Dīn recounts between these two great figures of the age. He based his hypothesis on a later writer, Ibn Yūsuf al-Karamī al-Marī (d. 1033/1624), who reports the explicit evidence given by the Syrian historian Shams al-Dīn al-Dhahabī (d. 748/1347–48) to the effect that the Hanbali scholar had two meetings with the Ilkhan.[77] But the second meeting Michot refers to in this regard does not appear to have happened at the time of Ghāzān Khān's first invasion of Bilād al-Shām, but rather during his third and final incursion into the region.

Caterina Bori has recently edited and translated a short biography of Ibn Taymīyah which had hitherto remained unpublished.[78] This work, written by Shams al-Dīn al-Dhahabī, clearly states that Ibn Taymīyah met the Ilkhan a second time: "at the time of Ghāzān Khān, he (i.e., Ibn Taymīyah) was very active. . . . He met the king twice *(ijtamaʿa bi-al-malik marratayn)*."[79] As Bori notes, Shams al-Dīn al-Dhahabī's remarks as to Ibn Taymīyah's activity refer to the third invasion of Syria and the famous battle of Shaqḥab (2 Ramaḍān 702/20 April 1303) in which Ghāzān Khān and his army were defeated.[80] Ibn Taymīyah took part in this battle, bearing arms and urging the combatants to engage in jihad. During the fighting he issued a fatwa exempting the Mamluk soldiers from the ritual fast during the month of Ramaḍān.[81] Given the circumstances of Ibn Taymīyah's meetings with Ghāzān Khān, he can hardly have had the opportunity to engage in a long conversation which could be the basis of his knowledge of the Mongol regime. Ibn Taymīyah did, however, have closer contacts with Ghāzān Khān's two great amirs, Quṭlugh-Shāh (d. 707/1307) and Mulāy (d. 707/1307),[82] and with

[81] The fast had begun on 1 Ramaḍān 702/19 April 1303, on the eve of the battle. Ibn Taymīyah relied on a hadith of the Prophet dating from the year of the conquest of Mecca to excuse the combatants from the ritual fast; see Laoust, "La biographie d'Ibn Taymīya d'après Ibn Katīr," 132.

[82] The name of this figure appears in different forms in the Arab sources consulted. Li Guo/al-Yūnīnī gives it in the form Būlāhim or Būlāy, 1:163–64, 2:124; *Beiträge,* 78–79 (Būlay); *Kanz,* 36

various major figures of the Ilkhanid state, including the viziers Saʿd al-Dīn and Rashīd al-Dīn and other important persons[83] such as the Armenian king of Sīs.[84] The historical sources report many details of Ibn Taymīyah's encounters with Quṭlugh-Shāh, which took place on 21 Jumādá I 699/14 February 1300,[85] and the amir Mulāy, when Ibn Taymīyah visited him in his tent and negotiated the release of numerous prisoners.[86] On this occasion he had a discussion with the amir about the murder of al-Ḥusayn, the grandson of the Prophet, by Yazīd ibn Muʿāwiyah on 10 Muḥarram 61/10 October 680. Not wishing to displease Mulāy, Ibn Taymīyah was reserved in giving his views on this topic.[87] Ibn Taymīyah's information on the Mongol regime was undoubtedly based on the discussions he had with important figures in the Ilkhanid state rather than on the conversations he may have had with Ghāzān Khān.

From a reading of these fatwas, it appears that Ibn Taymīyah was well-informed as to the political views of the Ilkhans, but he interprets them according to his own interpretive system—that of the rigorist Islam he symbolized—and from a polemical perspective. Ghāzān Khān, in his three attacks on Syria, was continuing the policy of his predecessors Hülegü and Abāqā, but he portrayed his arrival in Bilād al-Shām as being in the name of Islam. Before analyzing the way Ibn Taymīyah describes the Mongol regime in his second fatwa, it is necessary to consider the *amān* Ghāzān Khān caused to be read in the Great Umayyad Mosque on 8 Rabīʿ II 699/2 January 1300, before the entry of his troops into Damascus.[88]

Ghāzān Khān, Leader of the Muslim World

Following his official conversion to Islam, Ghāzān Khān wished to present himself as leader of the eastern Muslim world. Some Persian sources adopt millenarian motifs in dealing with his conversion.[89] He is depicted as renewing Islam, while

(Bulāy); Ibn Abī al-Faḍāʾil, 14:3:504–5 (Mūlāy); Rashīd al-Dīn, *Tārīkh-i Mubārak-i Ghāzānī*, 130 (Mūlāy).

[83]According to Li Guo/al-Yūnīnī (1:158, 2:119), those present included: the treasurer Sharīf Quṭb al-Dīn and his secretary *(al-mukātib)* Ṣadr al-Dīn, Najīb al-Kaḥḥāl al-Yahūdī, the *shaykh al-mashāʾikh* Niẓām al-Dīn Maḥmūd, and the *nāẓir al-awqāf* Aṣīl al-Dīn ibn Naṣīr al-Dīn Ṭūsī.

[88]The decree had been promulgated on 5 Rabīʿ II 699/30 December 1299, just before the delegation's mission to Nabk on 7 Rabīʿ II 699/ January 1300. Li Guo/al-Yūnīnī, 1:142, 2:104.

[89]Melville, "*Pādshāh-i islām,*" 170.

his great amir Nawrūz, who had encouraged him to convert, is described as a second Abū Muslim.[90] After the Abbasid conquest of Syria and Egypt, Abū Muslim had wanted to put an end to the curses uttered against the family of the Prophet.[91] The famous Iranian theologian Nāṣir al-Dīn al-Bayḍāwī in his *Niẓām al-Tawārīkh*[92] also highlights the figure of the Ilkhan after his conversion to Islam: "Ghāzān Khān has rendered obsolete the bravery of Rūstam [the legendary champion of Iran], the generosity of Ḥātim al-Ṭāʾī [the epitome of magnanimity in pre-Islamic Arabia],[93] and the justice of Anūshirvān [one of the outstanding pre-Islamic Iranian monarchs]." As Charles Melville quite rightly notes, "Ghāzān Khān puts a seal on these separate strands of Irano-Islamic history."[94] Ghāzān Khān also had black banners made, resembling those of the Abbasid caliphs, and made Christians and Jews pay the poll tax *(al-jizyah),* from which they had been free since the abolition of the caliphate at Baghdad.[95] The Ilkhan intended, by this series of symbolic actions, to pose as leader of the Muslim community. One can even see in the coupling of Ghāzān Khān and the amir Nawrūz a desire to present the Ilkhanid Islamic regime as successor to the Abbasid caliphate. By denouncing, as we have seen, the misdeeds committed by the Mamluks at Mardīn, he based the legitimacy of his Syrian campaign on Islam. Ghāzān Khān's position as "king of Islam" *(pādishāh al-islām)* is clearly visible in the text of his *amān* to the population of Damascus, which is laden with Quranic quotations cited in support of his claims.[96]

The text of the *amān* starts with a preamble quite similar to those that open the letters the khans sent to the popes and to Western and Muslim rulers. It begins by praising God: "By the power of God Almighty,"[97] followed by the names of

[90] Melville, "*Pādshāh-i islām,*" 170.

[91] Jean Calmard, "Le chiisme imamite sous les Ilkhans," in *L'Iran face à la domination mongole,* ed. Denise Aigle, Bibliothèque iranienne 45 (Tehran, 1997), 281.

[92] It is a universal history. Three sets of manuscript versions exist, which have been studied by Charles Melville, who shows that the second set was drawn up by al-Bayḍāwī himself at the beginning of the reign of Ghāzān Khān. Al-Bayḍāwī was undoubtedly in Tabriz and witnessed the events himself; see Charles Melville, "From Adam to Abaqa," *Studia Iranica* 30, no. 1 (2001): 70. On the different versions, see idem, "From Adam to Abaqa: Qāḍī Baiḍāwī's Rearrangement of History, Part II," *Studia Iranica* 35, no. 1 (2007), in press.

[96] Li Guo/al-Yūnīnī, 1:139–42, 2:102–4; *Kanz,* 20–23; *Beiträge,* 66–68; Ibn Abī al-Faḍāʾil, 14: 3:476–81.

[97] Despite its clearly Islamic tone, the text of the *amān* is in line with the documents of Mongol chancelleries. *Beiträge*'s author and Li Guo/al-Yūnīnī, who transmit the text in its entirety, differ only in a few minor details. Conversely, in the text transmitted by Ibn al-Dawādārī and Ibn Abī

the addressees: "The amirs of ten thousand *(umarāʾ al-tūmān),* of one thousand, of one hundred, and all our victorious troops: Mongols, Persians,[98] Armenians, Georgians, as well as all those who have come under the yoke of our obedience (*ṭāʿatnā)* should be informed."[99] There then follows Ghāzān Khān's declaration, divided into three parts.

The first part is dedicated to recalling the great event for the Islamic world that was represented by the Ilkhan's official conversion to Islam just before his enthronement. Shaykh Ṣadr al-Dīn Ibrāhīm ibn Saʿd al-Dīn Muḥammad, who had heard his profession of faith, had recounted it five years earlier on his return from the pilgrimage, in the Ribāṭ al-Sumaysāṭī beside the Umayyad Mosque in Damascus. The text of the *amān* emphasizes that Ghāzān Khān had been chosen by God, who had illuminated his heart with the light of Islam. This claim is illustrated with a Quranic quotation: "Is he whose breast God has expanded unto Islam, so he walks in a light from his Lord?[100] But woe to those whose hearts are hardened against the remembrance of God! Those are in the manifest error."[101]

Ghāzān Khān then denounces the Mamluk regime whose governors *(al-ḥukkām)*[102] had left the way of Islam *(khārijūna ʿan ṭarīq al-islām):* they are no longer tied to the commandments of Islam *(bi-ḥukm al-islām).* By their lack of faithfulness to each other, they sow disorder among the population.[103] This last claim is also illustrated by a Quranic quotation: "When one of them turns his back, he would hasten about the earth, to do corruption there and to destroy the tillage and the

al-Faḍāʾil the eulogy of God which opens the text of the *amān* includes the additional sentence fragment: "Through the power of God Almighty and the good fortune of the reign of the sultan Maḥmūd Ghāzān" *(bi-quwwat Allāh taʿālá wa-iqbāl dawlat sulṭān Maḥmūd Ghāzān).* This second part of the eulogy could be described as a calque of the preambles of the letters sent by the Mongol khans. The Mongolian equivalent of the introduction of Ghāzān Khān's *amān* would be *möngke tenggri küčündür qaʾan-u süü-dür* (with the force of Eternal Heaven, with the good fortune of the great khan). Here the great khan is replaced by Ghāzān Khān himself.

[98]Li Guo/al-Yūnīnī, 2:102 *(al-bārik),* perhaps for *al-tājīk; Beiträge,* 62, and *Kanz,* 20 *(al-tatār);* Ibn Abī al-Faḍāʾil, 14:3:477 *(al-tāzīk).*

[99]Li Guo/al-Yūnīnī, 1:139–40, 2:102; *Beiträge,* 62; *Kanz,* 21; Ibn Abī al-Faḍāʾil, 14:3:476.

[100]This sentence implies: "Is it he who has remained a non-believer?"

[101]Quran 39:22.

[102]The term used in the sources is neither *al-malik* nor *al-sulṭān,* terms which designated the supreme holder of power in the Mamluk state; *al-ḥukkām* (Li Guo/al-Yūnīnī, 1:102; *Beiträge,* 62; *Kanz,* 21; and Ibn Abī al-Faḍāʾil, 14:3:476) is a term which rather alludes to the governors appointed by the Mamluk sultans. Blochet's translation is thus not entirely accurate. But it may be possible that Ghāzān Khān employes this term to testify to the superiority of the Ilkhanid regime compared to that of the Mamluks.

[103]Ghāzān Khān here denounces the rivalries and treachery between the various amirs and their houses of mamluks, which led to considerable instability in the power structure.

stock, and God loves not the corruption!"[104] Ghāzān Khān alludes here to the instability of power in the Mamluk state at the time, notably due to the youth of the sultan al-Malik al-Nāṣir Muḥammad.[105] He also criticizes the Mamluks for violating the wives of the Muslims and their goods: justice and equity were absent from the kingdom. Ghāzān Khān's aim is to justify his Syrian campaign: "our fervor for Islam has urged us to march against this land with a host of soldiers in order to put this aggression to an end and pull this tyranny away."[106] A further Quranic quotation is enlisted to support this claim: "Surely God bids to justice and good-doing and giving to kinsmen; and He forbids indecency, dishonor, and insolence, admonishing you, so that haply you will remember."[107] He had come to spread justice *(al-ʿadl)* and charity *(al-iḥsān),* an assertion illustrated by a prophetic hadith saying that those who render justice with equity (*al-muqṣitūn*) will enjoy God's favor.[108]

The text of the *amān* presents Ghāzān Khān as a sovereign boasting all the qualities of the ideal prince portrayed in the Islamic "mirrors for princes" genre. As his resounding victory over the rebellious enemy *(al-ʿadūw al-ṭāghīyah)* shows, he is aided by God: "tore them utterly to pieces"[109] and then "the truth *(al-ḥaqq)* has come, and falsehood *(al-bāṭil)* has vanished away; surely falsehood is ever certain to vanish."[110] Ghāzān Khān is thus presented as the protector of his new subjects, the Muslim populations of Bilād al-Shām. Here we again find the image, presented in both the "mirrors" literature and the prophetic traditions, of the sovereign as shepherd of his flock. It is the duty of the Ilkhan to punish those of his soldiers who had carried out reprehensible acts against the population: "In the confusion, some soldiers engaged in pillage; they have been killed as an example, so that they may cause no harm to the men who practice different religions *(ahl al-adyān),* under the pretext that their beliefs are different from theirs, whether Jewish, Christian, or Sabean,[111] as since they pay the poll tax *(al-jizyah),* defending them is one of the legal obligations *(al-waẓāʾif al-sharʿīyah)*."[112] In this case, the authority invoked in support of this declaration is a hadith of the

[104]Quran 2:205.

[105]On the lack of sultan's authority, see Peter M. Holt, *The Age of the Crusades: The Near East From the Eleventh Century to 1517* (London, 1986), 107–13.

[109]Quran 39:19.

[110]Quran 17:81.

[111]Here the term Sabians perhaps is an allusion to the Sabians of Ḥarrān; see Tardieu, "Ṣābiens coraniques et 'Ṣābiens' de Ḥarrān."

[112]Li Guo/al-Yūnīnī, 1:141, 2:103; *Beiträge,* 62; *Kanz,* 22–23; Ibn Abī al-Faḍāʾil, 14:3:480.

Prophet: "The imam in charge of people is their shepherd, and every shepherd is responsible for the flock he has under his command."[113] As can be seen, Ghāzān Khān in this *amān* follows the Mongol tradition that puts all religions on the same footing, all the more important since there were Christians amongst his soldiers and he undoubtedly hoped to win the Christian populations of Bilād al-Shām over to his cause.

Although he is not mentioned by name in the sources,[114] it would appear that Ibn Taymīyah was one of the group of religious figures who attended the reading of this *amān,* as well as the official proclamation, also at the Umayyad Mosque, of the *firmān* naming Sayf al-Dīn Qipchāq representative *(al-nāʾib)* of Ghāzān Khān in Syria and governor of Damascus, a position he had held before fleeing to Ilkhanid territory. The aim of these texts was to convince the people of Damascus that the Ilkhan had come to Syria to protect the civilian populations, victims of the Mamluk regime. Ibn Taymīyah's second fatwa is to some extent a response to the Ilkhanid political ideology, as he saw it through his personal contacts with various Mongol authorities. The official texts which had been read in public during the brief occupation of Damascus in 1300 confirmed for Ibn Taymīyah the danger posed to Islam should Syria come under the control of the Mongols, despite the fact that the latter were themselves Muslims. The letter Ghāzān Khān addressed to al-Malik al-Nāṣir Muḥammad, some months later, doubtless reinforced Ibn Taymīyah's beliefs in this regard.[115] On 16 Dhū al-Ḥijjah 700/20 August 1301 a meeting took place in the Citadel of Cairo between the envoys of Ghāzān Khān, including the qadi Ḍiyāʾ al-Dīn Muḥammad, a descendant of the Prophet, and the great Mamluk amirs. Ḍiyāʾ al-Dīn Muḥammad made a short speech, studded with Quranic citations, about peace and consensus between Muslims. It was well received by those present. The qadi prayed for the sultan al-Malik al-Nāṣir Muḥammad and then for Ghāzān Khān. The envoys then presented a letter from the Ilkhan sealed with his seal. On 18 Dhū al-Ḥijjah 700/23 August 1301, the letter was read before al-Malik al-Nāṣir Muḥammad, the great amirs, and the rank-and-file Mamluk soldiery.[116] In it, Ghāzān Khān recalled that all that had passed between him and the Mamluk sultan was nothing other than the application of the decree of God

[113]Al-Bukhārī, *Al-Ṣaḥīḥ* (Bulaq, 1311–13/1893–95), Aḥkām, 1, Istiqrāḍ, 20; Muslim, *Al-Jāmiʿ al-Ṣaḥīḥ* (Istanbul, 1334/1916), Imārah, 20; Ibn Ḥanbal, *Al-Musnad* (Cairo, 1313/1896), 54, 111.

[115]On these events and the letter see Li Guo/al-Yūnīnī, vol. 1; *Kanz;* Ibn Abī al-Faḍāʾil, 20:1: 547–54. According to Ibn Abī al-Faḍāʾil, the letter was in Mongol script; see ibid., 549. The text of this letter sometimes differs slightly from al-Yūnīnī's version. We use here the account of this Syrian historian.

[116]Li Guo/al-Yūnīnī, 1:181, 2:243.

and of his free will *(qaḍāʾ Allāh wa-qadarihi)*.[117] The Ilkhan reminded the Egyptian sovereign that the basis of the confrontation between the two parties was the Mardīn affair which had taken place during the month of Ramaḍān the previous year, when Satan had entered the city.[118] Once again, a Quranic verse was used to support Ghāzān Khān's statements: "[They, i.e., the Mamluks] entered the city, at a time when its people were unheeding."[119] Ghāzān Khān added: "It was the rule of Islam [to be understood as he who directs the *ummah*] to fight against rebels *(ḥukm al-islām fī qitāl al-bughāh)*."[120] For Ghāzān Khān, the rebels in question were the Mamluk soldiers, who were to blame for the disturbances in Mardīn.

THE MONGOL POLITICAL ORDER AS SEEN BY IBN TAYMĪYAH

Ghāzān Khān's arguments against the Mamluks are a mirror image of the criticisms Ibn Taymīyah levels against the Mongols; here, the *bughāh* are the Mamluks themselves. For the Hanbali scholar, the danger was pressing, and in the fatwa he therefore presents the Egyptian sultans as the true champions of Islam. According to Ibn Taymīyah, they are part of the group made victorious whom the Prophet referred to when saying: "A group of my community will never cease to show their support for the victory of right, and neither those who oppose them nor those who betray them shall cause them any harm, until the hour passes."[121] From Yemen to Andalusia, Ibn Taymīyah observes, the Muslim world was weakened by disunity, the poor participation in jihad against the Franks, Tartars, and sectarian religious movements. Worse still, those who were in authority in Yemen had sent a message of submission and obedience to the Ilkhans.[122] Similarly, in the Hijaz, the people were straying and the believers were being degraded, all the more so since Shiʿism was gaining the upper hand.[123] Ibn Taymīyah here refers to the difficulties the Mamluks had encountered in imposing their rule in the cities of the Hijaz and Yemen, a region with a long tradition of Zaydī Shiʿism. Since the conquest of Yemen in 569/1174 by Saladin's son Tūrān-Shāh, it had been the duty of the "Sultan of Islam" to protect the holy places of the Hijaz and settle succession disputes between the *sharīf*s (descendants of the Prophet) of Mecca and Medina. Ibn Taymīyah saw Ghāzān Khān's claims over the holy places, as well as those of Öljeitü at a later stage, as a grave danger for Sunni Islam, and for

[123] Ibid.

this reason he argued in favor of the Mamluk regime. The Mongols looked down on al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Alfī's lack of noble lineage. But in a polemical spirit, Ibn Taymīyah retorted that Ghāzān Khān's ancestors were without doubt all sons of kings, but they were all sons of infidel kings. There was nothing to be proud of about being the son of an infidel king; a Muslim Mamluk is better than an infidel king.[124] In Ibn Taymīyah's view, the Mongol dynasty of Iran is thus personified by infidel kings and impious Muslims.

Through his contacts with a number of high-ranking figures in the Ilkhanid state, Ibn Taymīyah gained information about the Mongol political ideology. The Hanbali scholar reproaches the Ilkhans for not fighting on behalf of Islam, but rather in order to gain the submission of peoples, whoever they might be: "Whoever enters into their obedience of the Age of Ignorance *(al-jāhilīyah)* and into their infidel way *(al-kufrīyah)* is their friend *(ṣadīquhum),* even if he is an infidel *(al-kāfir),* a Jew, or a Christian. Whoever refuses to submit is their enemy *(ʿadūwuhum),* even if he were to be one of the prophets of God."[125]

This second fatwa, indeed, represents the world order as the Mongols imagined it: they were invested with the mandate of eternal Heaven *(möngke tenggeri)*. The realization of this world order involved drawing a distinction between peoples "in harmony" *(il)* and those in a "state of rebellion" *(bulgha)*.[126] In 1246 the great khan Güyük had sent a letter to Pope Innocent IV, of which we have a Persian copy. He wrote, "By divine power *(bi-quvvat-i khudāy),*[127] from the rising to the setting of the sun, all territories have been granted to us. . . . You must now say, with a sincere heart, 'We are in harmony with you *(īlī)*' . . ., then we will know of your submission. . . . And if you do not observe God's order, and contravene our orders, you will be our enemies *(yāghī)*."[128]

The Ilkhans adopted for themselves the idea of the heavenly mandate enunciated by the great khans. In a letter in Arabic which Hülegü addressed to the Ayyubid ruler of Syria, al-Malik al-Nāṣir Yūsuf, inviting the latter to join his forces with Hülegü's, he wrote: "We have conquered Damascus by the sword

---

[124] Ibid., 542.

[125] Ibid., 525. Giovanni de Plano Carpini, citing the laws and ordinances *(leges et statuta)* of Chinggis Khan, was one of the first writers to mention this obligation of submission; see Iohannes de Plano Carpini, *Ystoria Mongalorum*, vol. 1 of *Sinica Franciscana*, ed. P. Anastasius Van den Wyngaert (Quarrachi-Firenze, 1929), 64.

[126] On these two terms see Gerhard Doerfer, *Türkische und mongolische Elemente in Neupersischen* (Wiesbaden, 1963–75), vol. 2, no. 768 and no. 653.

[127] The original Mongolian text probably included the formula *möngke tenggeri küncündür* (with the force of Eternal Heaven), the Turkish equivalent of which appears in the preamble to the letter: *mängü tängri küncündä* (in the Latin version: *dei fortitudo*).

[128] Here the term *yāghī* is an equivalent to classical Mongol *bulgha*.

of God *(fataḥnāhā bi-sayf Allāh),* we are the army of God *(naḥnu jund Allāh)*."[129] As the letter was addressed to a Muslim sovereign, the term *Allāh* replaced the Mongolian *tenggeri* so as to make sense in the addressee's culture. The intention is to affirm that the Mongols enjoyed a divine mandate.

The concept of Eternal Heaven was readily understood by the Christians, and by the Muslims, as a metaphor for a personalized God. But the *tenggeri* of the mediaeval Mongols referred as much to the physical sky as to the supernatural entities that might reside there, and was not worshipped at all. As for the term *möngke,* it does not evoke the Christian idea of an eternity with neither beginning nor end, but rather solidity and durability.[130] In the *Secret History of the Mongols,*[131] the influence of this concept is clearer from the reign of Chinggis Khan's successor Ögödei on, and we subsequently find the formula repeatedly used to indicate that the ruler enjoyed the protection of the *tenggeri*.[132]

This Mongol political theocracy was, of course, sharply rejected by Ibn Taymīyah who found in it a weighty argument against Ilkhanid Islam. The Tatars may have pronounced the Muslim declaration of faith, he writes, but they have deviated from the laws of Islam *(khārijūn ʿan sharāʾiʿ al-islām)* by keeping their ancient beliefs from the Age of Ignorance. One observes that Ibn Taymīyah is addressing the same reproaches to the Ilkhans that Ghāzān Khān levelled against the Mamluks in his *amān*. The Hanbali scholar explains the deviant theology of the Mongols as follows: "It is that the Tatars believe grave things about Chinggis

Khan. They believe that he is the son of God, similar to what the Christians believe about the Messiah *(al-masīḥ)*. The sun, they say, impregnated his mother . . ., he was a bastard *(walad ziná),* despite which they hold him to be the greatest messenger of God."[133]

The reference to Chinggis Khan as the son of God is based on the Mongols' legend of their origin. According to that legend, Alan-Qʾoa, their mythical ancestor, gave birth to three sons after the death of her husband. A being with "pale yellow" skin had crept into her tent three times and its light had penetrated her stomach.[134] Since the *tenggeri* was seen by Christians and Muslims as a personalized God, there was only one step needed to consider Chinggis Khan the son of God. This, for Ibn Taymīyah, was a grave heresy. But, worse yet in the eyes of the Hanbali scholar, since the Mongols considered Chinggis Khan son of God, they elevated him to the rank of a law-giving prophet. Thus the greatest of their leaders in Syria, writes Ibn Taymīyah, when he addressed the Muslim envoys and was trying to find common ground with them declared, "Behold two very great signs *(āyah)* come from God: Muḥammad and Chinggis Khan."[135]

The information Ibn Taymīyah relied on in denouncing Mongol Islam was based on his interview with the Mongol amir Quṭlugh-Shāh, converted to Islam under the name Bahāʾ al-Dīn.[136] He declared to Ibn Taymīyah he was a descendant of Chinggis Khan and that his illustrious ancestor had been a Muslim *(kāna musliman)*.[137] He also said that God had sealed the line of prophets with Muḥammad and Chinggis Khan, the king of the earth *(malik al-basīṭah);* anyone who did not obey him was

[133]*Majmūʿ Fatāwá,* 28:521–22.

[134]The Mamluk historian al-ʿUmarī (d. 1349) reports this legend, which undoubtedly circulated orally in the Muslim East and whose origin is to be found in the *Secret History of the Mongols;* see al-ʿUmarī, *Das Mongolische Weltreich: al-ʿUmarī's Darstellung der mongolischen Reiche in seinem Werk Masālik al-abṣār wa mamālik al-amṣār,* ed. Klaus Lech (Wiesbaden, 1968), Arabic text: 2–3. Thomas Raff sees in this legend the concept of the immaculate conception, which exists in both Christianity and Islam and would on this basis be present also in the Genghiskhanian tradition. This analysis is not quite accurate, as Raff (*Remarks,* 46–47) repeats the point of view of the Muslim authors themselves. The present writer has shown elsewhere that this legend is part of a wider context of miraculous births attributed to heros in the East since antiquity. The legend was subsequently Islamized by the Timurid historical tradition, since Timur was presented as the descendant of Chinggis Khan. On the development of this myth, see Denise Aigle, "Les transformations d'un mythe d'origine: l'exemple de Gengis Khan et de Tamerlan," in *Figures mythiques de l'Orient musulman,* ed. D. Aigle, Revue des Mondes musulmans et de la Méditerranée 89–90 (2000): 151–68. Ibn Taymīyah muddles Alan-Qʾoa, the mythic ancestor of the Mongols, with Chinggis Khan's mother.

[135]*Majmūʿ Fatāwá,* 28:521.

[136]According to Thomas Raff (*Remarks*, 46), the leader here is Ghāzān Khān himself at the time of the interview at Nabk.

[137]*Beiträge,* 76; *Kanz,* 32. According to Li Guo/al-Yūnīnī (1:157, 2:119) Chinggis Khan was not a Muslim.

considered a rebel *(man kharaja min ṭāʿatihi fa-huwa khārijī)*.[138] Here again one notes that Ibn Taymīyah's arguments against the Mongols are the same as those used by Ghāzān Khān to denounce the Mamluk regime.

Religious tolerance, or rather the Mongol khans' pragmatism displayed in dealing with the various religious communities of their empire, was another basis for polemics against the Mongols. All the sources are indeed unanimous that Chinggis Khan made it a rule not to give any religion pre-eminence over any other and granted tax immunity for the churchmen if they accepted Mongolian authority.[139] Ibn Taymīyah describes the Ilkhanid regime in the following terms: "Every person who lays claim to a branch of learning or to a religion, they consider him a scholar, whether the jurist *(al-faqīh),* the ascetic *(al-zāhid),* the priest *(al-qisīs)* and the monk *(al-rāhib),* the rabbi *(danān al-yahūd),* the astrologer *(al-munajjim),* the magician *(al-sāḥir),* the physician *(al-ṭabīb),* the secretary *(al-kātib),* or the keeper of the accounts *(al-ḥāsib)*. They also include the guardian of the idols *(sādin al-aṣnām)*."[140]

In the categories listed by Ibn Taymīyah we find the representative authorities of the three monotheistic religions found in the Ilkhanid empire, but also representatives of important positions in every princely court: administrative officials, physicians, and those charged with determining whether the conjunction of the stars favored the prince in his political and other actions. The reference to the guardian of the idols has a polemic function here. Ibn Taymīyah emphasized the Mongols did not make any distinction between believers who had been granted a divine book and others.

Ibn Taymīyah issues fatwas to construct a typology of religious matters *(ʿibadāt wa-sāʾir al-maʾmūr)* amongst Adam's progeny *(min Banī Ādam)*.[141] He considers that every act of worship whose origin is a divine order includes three categories *(aqsām):* the rational *(ʿaqlī),* the confessional *(millī),* and the legal *(sharʿī)*.[142] He considers the rational to be "what the followers of reason among the sons of Adam agree on, whether they have been granted a book or not."[143] The confessional is "what the believers of varied religious confessions *(ahl al-milal)* granted a divine book agree upon," in other words both Muslims and Quranic People of the Book

[143] Ibid.

(ahl al-kitāb).[144] The legal is "what is exclusive to the followers of Quranic law."[145] Lastly, Ibn Taymīyah deals with the question of royal politics *(siyāsāt al-malakīyah)* which come not under a confession or a divine book, but in which the rational and the legal are necessary.[146] To illustrate this type of government, the Hanbali scholar gives the example of the Chinggiskhanid regime.[147]

Chinggis Khan had conceived a law, the *yāsā,* according to "his reason *(ʿaqlihi)* and his own opinion *(dhihnihi)*."[148] On this basis Ibn Taymīyah develops an argument that the Mongols were guilty of blameworthy innovation *(al-bidʿah):* "He has caused men to leave the ways of the prophets in order to take up that which he has innovated: his way of the Age of Ignorance *(sunnat al-jāhilīyah)* and his infidel law *(sharīʿatihi al-kufrīyah)*."[149] With this reasoning, Ibn Taymīyah argues against the Mongols' political system. The Ilkhans' Islam, according to Ibn Taymīyah, exposes the Muslim religion to a grave risk because in it the rational *(al-ʿaqlī)* had replaced the legal *(al-sharʿī)*.[150]

The Mongols of Iran were promoting a modern Islam: they advocated religious freedom and claimed to follow the *yāsā*, the law established by Chinggis Khan. In other words, although they had converted to Islam, the Mongols did not comply with the principles of Islamic law. Ibn Taymīyah denounces a form of Islam where the authority of the *yāsā* perpetuates submission to an indeterminate divinity, the *tenggeri,* at the cost of strict obedience to the shariʿah.

As we can see, this second fatwa goes far beyond a normal fatwa. It is an outright condemnation of the politico-Islamic order founded by the Ilkhans. The Hanbali scholar seems to synthesize all the information which he can gather on

---

[144]The Quran and Islamic tradition thus designate the Jews and Christians, holders of an ancient book. The designation was later applied to the Sabeans (Ṣābiʿūn) of the Quran (the Sabeans of Ḥarrān were considered star-worshippers) and to the Zoroastrians; see G. Vajda, "Ahl al-Kitāb," *Encyclopédie de l'Islam,* 2nd ed., 1:272–74.
